(4) Legislation respecting these functions, difficult as it is, is relatively easy as compared with the enforcement of legislation, that is, the effective discharge of these functions in their most minute ramifications and for the public welfare.

(5) When a form of government, such as ours, provides for legal changes, by the process of discussion and open decision, to fit social changes, then effective and wise administration becomes the central prerequisite for the perdurance of government and society—to use a metaphor, becomes a foundation of government as a going concern.

(6) Unless the members of an administrative system are drawn from various classes and regions, unless careers are open in it to talents, unless the way is prepared by an appropriate scheme of general education, unless public officials are subjected to internal and external criticism of a constructive nature, then the public personnel will become a bureaucracy dangerous to society and to popular government.

(7) Unless, as David Lillenthal has recently pointed out in an address on the Tennessee Valley Authority, an administrative system is so constructed and operated as to keep alive local and individual responsibilities, it is likely to destroy the basic well-springs of activity, hope, and enthusiasm necessary to popular government and to the flowering of a democratic civilization.

The validity of these axioms may be illustrated, though not proved, by reference to the fate of that great society, the Roman Empire of antiquity, which perished from the earth. Historians of the decline and fall are fairly well agreed that in the latter years of the Empire, its administrative system, which had grown ever more complicated and centralized in the days of prosperity, at last destroyed local autonomy, proved to be incompetent for its tasks, and sank into ruins with the society which it had once powerfully helped to sustain.

If these things be true and of good report, it follows that this occasion, which may seem trivial amid the rush and roar of affairs, will receive a strange elevation at the hands of those historians who, in distant years, seek to trace the trajectory of our civilization. At all events, we may be well assured that good work, honestly done, with an unflinching interest in the public welfare, is worthy of great talents and high aspirations, brings its own rewards and satisfactions, and somehow anchors itself in the economy of universal history. With this assurance and under this sign, the new society, launched today, may look forward to a service which will not end until the language of the Gettysburg address is heard no more on this continent.

## The Price of Liberty

## EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

EDITORIAL FROM THE WELLSBURG (W. VA.) DAILY HERALD  
OF JANUARY 13, 1940

Mr. SCHIFFLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wellsburg (W. Va.) Daily Herald of January 13, 1940:

[From the Wellsburg (W. Va.) Daily Herald of January 13, 1940]

A short time ago Joseph Stalin, dictator of Communist Russia, was reelected to his seat on the Moscow municipal soviet. His majority was exactly 100 percent—every vote was cast for him. According to the press dispatch telling of this it was obvious that the most strenuous methods were used by officials to get out the largest possible vote.

Those who have watched the technique of dictatorship can judge what those methods were—you support the man in the saddle "or else." And this little event, while it didn't make the headlines, is a biting commentary on what happens when the people surrender their rights and liberties to iron-clad political rule. No one attempts to win over the opposition by argument, as in a democratic nation. After all, machine guns, exile, and brutal persecution are temporarily more effective instruments for keeping in power. The man who raises his voice in dissent gets short shrift indeed.

Here in America we pride ourselves on the fact that we may still speak our minds—that no man is master of our destinies; that the forces of dictatorship have been kept firmly in leash. But pride in this is not enough. It cannot too often be repeated that the price of liberty is eternal vigilance at home. We can unconsciously surrender rights until one day we awake to realize, too late, that liberty is gone.

America watches events abroad with wonder and horror. Let America also learn from them.

for the Continuance of Civil Liberties and  
Human Rights

## EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE,  
JANUARY 13, 1940

Mr. OLIVER. Mr. Speaker, under permission extended to me by unanimous consent of the House to extend my remarks, I am pleased to incorporate herewith a statement which I broadcast over station WCSH, Portland, Maine, on Saturday, January 13:

Citizens of the first district, through the generous courtesy of radio station WCSH, it is my great good fortune to be enabled to resume my customary practice of delivering fortnightly reports to you upon the progress of events during this, the third session of the Seventy-sixth Congress, wherein I have the honor of serving as your Representative.

It is, indeed, a great privilege to be able to talk to you over the air upon these occasions and to have such opportunities of reporting upon my stewardship of the office to which you elected me. Yet I find myself wishing it were possible for me so to report to you, each and every one of you, face to face—to discuss matters with you, to solicit your inquiries and your opinions and so learn how better I might serve your interests and the best interests of all our citizens. The microphone of a radio station is, after all, a distressingly cold and unresponsive audience. And there's a very old and very, very true saying that what really counts is not what a man says but how

he looks when he says it. For, my friends, not all the eloquence of all the words of all the languages known to mankind can hope to surpass that of the clasp of a friendly hand or the brotherliness of an honest smile.

But, though circumstance denies us that handshake and that smile and compels me to say it with but voice alone, wherever you may be listening—in a home of the city or the country, in your automobile upon the highway or upon a ship at sea, wherever the magic of radio carries these words of mine—here, in the dawn of a new year, permit me to extend to each and every one of you, ladies and gentlemen, my sincerest wishes that yours may prove a happy, a most prosperous, and, above all, a peaceful 1940.

Some wag has suggested that Mr. Roosevelt, since he has usurped the role of holiday changer, well might try his hand at giving us 366 New Year's Days in this year of 1940 and so make the whole just one great day of repeated resolution to keep America out of war, to keep our nose out of foreign entanglements, and our pocketbooks closed to dishonest foreign beggars, to cut out the conglomeration of bunkum and hocus pocus best known as political promises, to devote all our energies toward curing America's own ailments, to thinking more about the American citizens who need our aid here and less about the South American citizens who'd like to have us mind our own business, and, among other things, to start doing something truly beneficial for American unemployed, something honest and aboveboard about adequate care for our aged citizens, and something about a genuine, instead of a phoney, system of social security in this land of ours.

As I say, some wag made this meritorious suggestion; and it is a most meritorious suggestion. Such a repeated declaration of purpose and a resolute determination to realize it would go far in dispelling the clouds of political hocus pocus and bunk with which we have been regaled for this past decade. You may expect, ladies and gentlemen, that this next 6 months will mark the height of political activity on both sides as we go down the stretch toward the national campaigns and elections of 1940. Every issue confronting us—and there are many of vital importance to every single citizen of this great country of ours—will be handled and tossed around with this political year in mind. Jockeying for position and maneuvering for political advantage will be the order of the day, each and every day as the congressional session unfolds. Such a political background is not conducive to constructive results in the interests of our people. It is regrettable that we cannot approach our social and economic problems in a nonpartisan spirit—particularly in view of our many vitally important problems. For in such an atmosphere first things just cannot come first while procrastination and postponement are substituted for action which might be of political embarrassment. But this is the system of government under which we are pleased to operate, and we would not change it under any circumstances, especially as we review the terrible development in other portions of the globe where dictatorships prevail both by compulsion of the will of the people and also under the guise of military necessity. In this connection it is interesting to refer to a letter received recently from a keen, intelligent, and sincere constituent, who wrote as follows:

"After following the proceedings of Congress by reading the CONGRESSIONAL RECORD the last 2 years, I have been forced to the conviction that the first and most important of the business of the present Congress is a radical revision of its rules of procedure, designed to abolish the practice so generally prevalent of making long speeches to empty benches, thus delaying important legislation. I was afraid last fall that those 'talk-a-heaps' would delay matters until we were forced into another World War. Time and quick action is of more consequence than speech making under present-day conditions, and unless Congress makes radical changes in their rules, quick action is impossible. 'Cause it has all been done that way' is no reason to perpetuate mistakes and blunders. It has seemed to the man on the street that Congressmen and lawyers are too firmly wedded to precedent. What was best 200 years ago does not make it best today. Think it over. Talk it over outside with other of your Members. This is a time for quick action on many important measures. Time wasted on useless speeches may destroy our Government and must be stopped if we save it. This is the considered opinion of the average citizen."

To his most pertinent comment, I replied as follows:

"This will acknowledge receipt of your communication of January 4, and will express to you my genuine pleasure at hearing from you once again."

"The suggestion which you make, namely, to curtail debate and useless talk in the House of Representatives has often occurred to me during the past 3 years, but I suppose that such a drastic application of gagging would partake of the nature of dictatorship. I am sure that we would not welcome such a development especially in view of conditions now prevalent in the rest of the world. I also find strict adherence to precedent just because it is precedent most distasteful, and certainly feel that we must break away from the past if we ever intend to meet the unbalanced economic conditions which prevail in this country today. In any event, you may rest assured that I keenly appreciate the viewpoint which you have expressed."

Because I feel as he does, that time will not wait forever for us to meet our problems while we play politically. I am particularly disturbed by our unemployment and our insecurity conditions.

With critical conditions confronting us, during the past few days, we of the Congress have had an overabundance of opportunity to harken to the words of our No. 1 political leader. His address upon the state of the Union, his Budget message, and the talk he

delivered before the group attending the \$100-a-plate Jackson Day dinner; all these leave us with one question in our minds—what, if anything, was Mr. Roosevelt talking about? He talked a lot, but he said nothing of domestic importance. He left us wondering why he bothered to talk at all.

The President devoted his address to the Congress upon the state of the Union to a great many things. He paid lip service to the political trend of the times, but he very carefully avoided all suggestion of specific remedies for the unemployment situation in America. He talked a lot about foreign situations and troubles, but he very carefully evaded mention of adequate care for America's aged. He put forth a sales talk in the interest of his good-neighbor policy toward foreign nations, but he neglected to tell us how he proposed to adjust American economy in order to take care of the American needy. He mouthed pretty phrases of warning about the peril of our children in the face of foreign threats, but he very thoughtfully ignored the threat to those same children created by the stupendous national debt his administration has amassed. And he talked about the need for adequate defense, but he said nothing about the need for adequate economic adjustment to provide the American people with a just share of the productive wealth of their own Nation.

No, my friends, Mr. Roosevelt did not say anything of domestic importance, although he talked a lot.

Our unemployed, our elderly veterans, our underpaid millions, and, finally, our undernourished economy as a whole need action more than words. Words and the soothsaying of political leaders and sneers will constantly din our ears for the next 10 months; but what about our people who, shunted off in the nonproductive area of unemployment and poverty, are clamoring—and rightfully so—for action? To them words and political mouthings are just so much drivel.

So today, as we start the legislative juggernaut, creaking and groaning through the maze of appropriation bills for 1941, we should be marking for first consideration that type of legislative proposal which has some possibility of coping with our half-starved economy. Lack of jobs, lack of use of our productive plant structure, lack of an adequate vehicle for the financial distribution of our production—all tie together as the No. 1 issue of the day. But we stall while we fret and fume over the tax load and the Budget deficits. These cannot be satisfactorily or permanently dealt with until we put our people back to work. Work is the basis of the greatness of this Nation, and work is the only preservative for the continuance of our freedom and our liberty.

Therefore work is the issue. Our youth, our middle-aged, and our elderly citizens have no fear of the future if work is available to all those who are willing and able to apply themselves. Deny to any one of this group the right to work and by that token you deny them the fundamental right to enjoy the liberties and rights of this great Nation of ours. Of what avail is it to prate smugly about civil rights and freedom and at the same time refuse to face the fact of unemployment as it exists today in this Nation. How terribly disconcerting and downright discouraging it is to pass off with a nonchalant shrug of the shoulders and a mere passing word of comment the menace of idleness which has existed in America during the past decade. During the month of December just passed, our productive volume reached and passed the production of 1929. Think of it, 1929, the peak year of economic activity in the United States, and we exceeded this volume in 1939 and yet we have 10,000,000 unemployed and millions more just existing on the ragged edge of necessity. Balanced budgets, relief from taxation, a terrific load of bureaucracy, international complications, national defense, farm problems—certainly all these and many others comprise a tremendous headache for our national body politic and economic, but none of them nor all of them equal in importance the unemployment crisis. From idleness stems all of these other important issues. But let the people go to work and we need have no fear as to the solution of all our other ills. Keep people out of work for another decade or less and we shall have no democracy; but we shall have a demoralized and chaotic people; and we shall indeed have lost our priceless heritage of life, liberty, and the pursuit of happiness.

So it is that in the light of unemployment, words and political pap are peculiarly inappropriate and unseemly. That is the reason why I personally resent the ballyhoo of the past 2 weeks in Washington. That is the reason why I find it difficult to smile and applaud when able, capable, and intelligent leaders of our Government joke and jest while our people wait expectantly for action.

The first week of this session was, as usual, devoted to the President and nothing of fundamental interest occurred other than the recording of more words for political digestion. The second week, just ended, saw the House pass the antilynching bill, which has become somewhat of a perennial for the Senate to filibuster against and ultimately defeat. We also have considered, discussed, and passed an appropriation bill providing funds to replace dollars already expended by the Navy and Coast Guard incident to their patrol activity of our neutrality position. Also we have provided for large-scale war maneuvers for our Army and our National Guard. These activities meet with the general approval of our people, as was figured by the President when he ordered them by Executive decree just before the special session of Congress convened last fall. In view, however, of the conditions existing overseas no one will make an issue over the expenditure of this quarter of a billion dollars.

In the meantime, however, Budget difficulties mount as one department after another feels the pinch occasioned by dollars going

into defense items. Watch for repeated assaults as one worth-while Federal service after another puts the heat on for a replacement of funds which have been operated upon by the Bureau of the Budget and the President. This is all part of the political strategy. Cut down on regular services of the departments and thus shift the blame of Budget deficits on Congress, as it, responding to public pressure and requests, endeavors to replace existing cuts.

If people were working and creating national income our tax income as a result of increased production would balance our worth-while and constructive outgo. Unemployed people, through no fault of their own, constitute the drag which gives us our fiscal headache. How long are we going to endure and tolerate such a needless, such an absurd situation where people who will work are denied that opportunity? Please, do not be bored if during these next few months I continue to stress this unemployment menace.

Until 2 weeks from tonight. Good wishes and goodnight.

## For the Relief of the Distressed and Starved Women and Children of Poland

### EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

Mr. FISH. Mr. Speaker, I have introduced in the House a resolution providing \$10,000,000 for the relief of the distressed and starving women and children of Poland, which is similar to the resolution I introduced in 1924 to provide foodstuffs for the starving women and children of Germany, which was adopted by the House of Representatives.

One-third of the population of Poland are literally starving, without proper food or clothing, and in view of the fact that there seems to be no immediate prospects of improvement of these conditions among the Polish people who have always been the friends of the United States, we should contribute of our surplus foodstuffs in the United States as we have done previously in Belgium, when it was under German rule during the World War, and as we also did in the case of Austria, Poland, and even Soviet Russia, and now very properly, in Finland.

#### House Joint Resolution 412

Joint resolution for the relief of the distressed and starving women and children of Poland

*Resolved, etc.*, That the President is hereby authorized, through the American National Red Cross or such agency or agencies as he may designate, to purchase in the United States and transport and distribute grains, fats, milk, and other foodstuffs and clothing for and adapted to the relief of the distressed and starving women and children of Poland. That there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, to be expended under the direction of the President, a sum not exceeding \$10,000,000, or so much thereof as may be necessary, for the purpose of carrying out the provisions of this joint resolution: *Provided*, That the President shall, on or before December 31, 1940, submit to the Congress an itemized and detailed report of the expenditures and activities made and conducted through the agencies selected by him under the authority of this joint resolution.

The names of two American Presidents, Woodrow Wilson, who stood firmly at the Paris Peace Conference for the establishment of a strong, free, and independent Poland, and of Herbert Hoover, who rushed vast quantities of food supplies to the starving Polish people after the armistice, are held in the highest honor by the people of Poland.

The memory of the valiant and distinguished services of two Polish patriots, Gen. Casimir Pulaski, who was killed at the Battle of Savannah, and Gen. Thaddeus Kosciuszko, who was the engineer who built the defenses at West Point during the Revolutionary War, has been a strong bond between the Polish and American people for the last 150 years.

There are millions of American citizens of Polish origin in the United States who have contributed through their industry, ability, and loyalty in making for the development and progress of America and in maintaining our free institutions and American system of Government.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. THOMAS D. WINTER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

## ARTICLE FROM THE BAXTER SPRINGS (KANS.) CITIZEN

Mr. WINTER. Mr. Speaker, under leave granted to extend my own remarks in the RECORD, I include the following article published by the Baxter Springs Citizen on Monday, January 8, 1940, containing copy of letter written by Evan Just, secretary of the Tri-State Zinc and Lead Ore Producers' Association, protesting against the "virtually unqualified endorsement of the reciprocal-trade program" by Senator BENNETT CLARK, of Missouri:

[From the Baxter Springs (Kans.) Citizen]

## ORE PRODUCERS' SECRETARY SENDS A LETTER TO CLARK ON SUPPORT OF TRADE PROGRAM

Evan Just, Miami, secretary of the Tri-State Zinc and Lead Ore Producers' Association, protested against the "virtually unqualified endorsement of the reciprocal-trade program" by Senator BENNETT CLARK of Missouri, last week. The protest was sent in a letter to the Senator. The text of the letter follows:

"Senator BENNETT CHAMP CLARK,

"Senate Office Building, Washington, D. C.

"DEAR SENATOR CLARK: On behalf of the zinc mining industry of southwestern Missouri, we protest against your virtually unqualified endorsement of the reciprocal-trade program. Our protest is based upon the following circumstances connected with our own experience:

"First, we cannot see that the unconditional extension of the benefits contained in a single treaty to all countries except a few on the blacklist results in equivalent benefits being obtained by this country. An analysis of our import and export trade indicates a disproportionate increase in imports from as against exports to the beneficiaries of this policy. In the case of zinc and manganese in the Canadian and Brazilian treaties respectively, the trade-agreement negotiators violated their own stated policy of making the concessions in treaties with countries furnishing the principal sources of our imports. In the case of zinc serious damage was done to the domestic industry by the reduction in the Canadian agreement, and the principal beneficiaries were countries to whom the concession was a free gift.

"Second, in the case of zinc we have discovered in the course of a year's negotiations that the reduction was made with a very immature and impractical understanding of the zinc industry and its problems. Even as late as a special hearing given the zinc industry in September this was strikingly evident. We can demonstrate that this ignorance was not due to failure of the industry and of the Bureau of Mines to lay the facts before the trade-agreements organization. Our experience indicates beyond all doubt that the publicity ament careful and competent study given each item before inclusion in a treaty is largely poppycock.

"Third, in the case of zinc, the trade-agreements group not only violated their stated policy as given above but they insisted on numerous occasions to Senators and Congressmen who were anxious about zinc that 'no harm would be done to any established domestic industry.'

"Serious harm was done to the zinc industry, and a year of painstaking efforts on the part of the industry to improve understanding of its plight has not resulted in anything but genteel evasions. Also, there were repeated assurances given by high officials to our Senators and Congressmen before the treaty was completed that could be given no logical interpretation except that zinc would not be affected. How else could one interpret the following reply given to Congressman SCRUGHAM, of Nevada, by Harry Hawkins: 'I don't think you have any cause to worry?' The conversation was entirely about zinc; and knowing it was not the policy to make any specific promises in advance (until inspired by the political strength of copper), one could only conclude that the intention was to give an indirect assurance in regard to zinc. Certainly you were given that impression, as was also Senator LEE, Senator ELMER THOMAS, Senator KING, Congressman SCRUGHAM, and Congressman DISNEY.

"Fourth. These trade pacts are treaties. To call them agreements and fail to have them ratified by the Senate is a paltry evasion of a constitutional obligation.

"We realize that a Senator is responsible to a great variety of people as well as to his own conscience, and that it would be improper for us to ask for your outright antagonism to the entire trade-treaty program. However, it is our belief that the treatment

we have received at the hands of the trade-agreements organization warrants more extensive qualification of your endorsement of the program.

"Respectfully and sincerely yours,

"EVAN JUST."

## Finland Pays Her Debts

## EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

## EDITORIAL FROM THE MANKATO (MINN.) FREE PRESS

Mr. CASE of South Dakota. Mr. Speaker, under permission granted to extend my remarks, I offer the following editorial from the Mankato (Minn.) Free Press:

## WHY WE'RE FOR FINLAND

Does it pay to pay your debts?

Well, just take a poll of American public opinion and note how decisively it favors Finland in that plucky little nation's battle for existence against mighty Russia.

Why the contrast between the relative indifference over Germany's invasion of Poland last autumn and the vigorous condemnation of Russia's similar course now? Well, Finland is the only one of our European debtors that has met its obligations, incurred during the World War and after, on the line without defaulting, whimpering, or crying.

We admire that kind of square dealing.

And that offers a suggestion to England and France why we're not as sympathetic with their cause as they seem to think we ought to be. We haven't forgotten how readily and willingly they welshed on paying the millions that saved them from defeat in the last war.

## The Internationalism of the Administration

## EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

SPEECH OF REPRESENTATIVE HAMILTON FISH, PRESIDENT OF THE AMERICAN GROUP OF THE INTERPARLIAMENTARY UNION, AT THE ANNUAL MEETING OF THE GROUP, HELD ON MONDAY, JANUARY 15, 1940

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered before the American Group of the Interparliamentary Union at the annual meeting January 15, 1940:

I have no ambition to continue as president of the American group for another term. I have recently become the ranking minority member of the Committee on Rules, and, with my other duties as a member of the Committee on Foreign Affairs, I have enough responsibilities already.

I confess that I have no faith in the foreign policies of the Roosevelt administration, which, I believe, will eventually involve us in the European war if it is prolonged. I hold strong convictions that the internationalism of the administration, its provocative policies toward certain nations, and its so-called "measures short of war," are leading us directly into foreign entanglements and wars.

Consequently I have decided not to be a candidate for reelection as president of the American Group of the Interparliamentary Union, so that I will be free to openly oppose the administration's internationalism without fear of misunderstandings in foreign nations.

Holding such sentiments, I feel it would be for the best interests of the union during the balance of this administration's tenure in office to have as president of the American group a Member of Congress who would be more in sympathy with its foreign policies.

I shall, however, be glad at all times to cooperate with the union in all of its efforts to promote arbitration, mediation, and world peace, and to keep America out of foreign wars.

If there is any Member of Congress who can exert more influence toward keeping America out of foreign wars, I will gladly support him. That is the single greatest issue before the American people and transcends all party lines.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

STATEMENT BY HON. AUGUSTINE LONERGAN

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement made by former Senator Lonergan, of Connecticut, at a meeting of New England businessmen at Greenfield, Mass., in February 1938 on the subject of reciprocal-trade agreements.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

#### THE TRADE-AGREEMENTS PROGRAM AS A PART OF THE FOREIGN POLICY OF THE UNITED STATES

The part which the trade-agreements program plays in the consistent foreign policy of the United States relates to an easement of restrictions to international trade for the definite purpose of bringing about commercial and more peaceful relations with all countries on the basis of equality of treatment. In its broader aspects this program envisages the following 5 declarations of the 14 which Secretary Hull gave to the press in July 1937 in his clarifying exposition of the existing foreign policy of the United States:

First. We constantly and consistently advocate the maintenance of peace.

Second. We advocate steps toward the promotion of economic security and stability the world over.

Third. We advocate adjustment of problems in international relations by peaceful negotiations and agreements.

Fourth. We seek effective equality of commercial opportunity and urge upon all nations application of the principle of equality of treatment.

Fifth. We advocate lowering or removing excessive barriers in international trade.

The trade-agreements program of the United States is a practical application of these enduring principles. I might say that it is generally recognized that if these points had been an important part of the foreign policy of the United States and other important trading countries during the past two decades, many of the recent international frictions might have been allayed or avoided. Administration leaders are convinced that trade agreements made in a fair, just, and friendly way afford the best foundation on which to build permanent and peaceful relations with foreign countries. On the material side, the trade-agreements program is based upon the principle that international trade—incoming as well as outgoing—is an important factor in obtaining and stabilizing business recovery.

Some narrow-minded and extreme nationalists have been inclined to scoff at the peace aspect of the trade-agreements program. They say that trade agreements have no relation whatever to peace and point to present world conditions. This short-sighted criticism, however, generally comes from those who are not in favor of the program under any circumstances. The administration only claims that this program is one which fosters conditions conducive to peace. Secretary Hull has frequently stressed this point. Other members of the Cabinet have also publicly spoken regarding this matter. For example, the Secretary of War, Mr. Woodring, back in May said, among other things:

"Our armament policy must be accompanied by a wise and constructive foreign policy. Merely to rearm will not protect our peace and our freedom. We should disapprove continued aggression, help remove existing economic tensions, and continue our encouragement of world disarmament agreements."

"For the world to continue to rely solely on a constant expansion of its military forces and a constant addition to its military might can lead only to one conclusion—war and social revolution."

"Our national defense does not rest entirely on our Military Establishment. Economic, financial, and social problems play a very important role in the maintenance of our peace and our security. A prosperous, law-abiding nation, peopled with happy, contented citizens, will never be a dangerous neighbor."

"Viewing the world scene, I am thoroughly convinced that the removal of unreasonable trade barriers and the restoration of normal, friendly processes of international commerce offer the most satisfactory basis for a return to a stable structure of business, of peace, and of democratic government."

In considering the present causes for certain tendencies in the realm of international affairs, no one, of course, contends that a more liberal trade policy, at this juncture of world events, will turn soldiers from their threatened march to the battlefield. This, however, does not alter the fact that unfair restrictions to international trade have long been and will continue to be an incentive to war. The seeds of war have been sown in the fertile soil of restrictions and embargoes during the last two decades. A halt to these war-breeding and unreasonable self-sufficiency movements should have been called long ago.

It is held that economic disarmament, the counterpart of military disarmament, though belatedly applied, should remove some of the war-provoking causes, all too prevalent in the world today. There is no question but that trade agreements are alleviating some of these disturbing tendencies. As I have stated on other occasions, this program is being carried out under President Roosevelt and Secretary Hull in a careful and cautious way. It is a sane middle course between ostrich nationalism and mere sentimental internationalism. This program is the application of a policy of enlightened self-interest whereby we reduce trade restrictions on selected products, and in turn obtain the removal of trade barriers against our products. It is a live and let live proposition for the mutual benefit of all.

Under trade agreements encouraging progress has been made toward economic disarmament. Agreements have been concluded with 18 countries and negotiations are under way with 3 others. In addition, a new agreement is being negotiated with Canada. About 60 percent of our foreign commerce is carried on with the 21 countries involved. The record of the commercial results of the program thus far should clearly indicate the benefits to American workers, farmers, and manufacturers and the country as a whole.

According to the Department of Commerce, the trade with agreement and nonagreement countries has been as follows:

*United States foreign trade with trade-agreement countries, and with all others, fiscal year 1937-38, compared with preagreements period, calendar years 1934 and 1935*

[Millions of dollars]

	Comparison of last 12-month period, ending June 1938, with preagreement period, calendar years 1934 and 1935			
	1934 and 1935 annual average	Fiscal year 1937-38	Change	
			Value	Percent

Total, all nonagreement countries.....	1,077.0	1,383.7	306.7	28.5
Total, all countries.....	1,851.4	2,361.3	509.9	27.6

Briefly, this table shows that during the latest 12-month period, ending with June 1938, the relative increase in value of American exports, as compared with the 2-year preagreement period, has been about the same as that recorded during the calendar year 1937—namely, an increase of 66.2 percent over 1934-35 to the agreement countries and of 47.7 percent to nonagreement countries. Compared with the basic preagreement year 1934-35, the value of American imports during the fiscal year ending June 1938 increased by 26.2 percent from the agreement countries and at the slightly higher rate of 28.5 percent from the nonagreement countries as a whole.

In terms of dollars, United States exports during the past fiscal year to the 16 countries and their colonies with which agreements were in operation during the greater part of that period were greater by about \$500,000,000 than the average annual exports to the same countries during the preagreement year 1934-35, while the year's increase in imports into the United States from the same countries was greater by about \$200,000,000. Everyone realizes that only a part of the increases in trade in recent years are attributable to the trade-agreements program. No one pretends to claim that factors other than trade agreements have not influenced this favorable picture, nor can anyone deny but that they have been important.

While I do not wish to make a local issue of this program, all New England has an enormous stake on both sides of our foreign trade. For example, the hardware industry of Connecticut utilizes material from several foreign countries and in turn exports the

finished products to various parts of the world. Many of the typical and diversified industries of New England need and must have raw materials and semimanufactures from foreign countries as well as from other domestic areas if they are to operate at anything near normal capacity. On this phase of the import side the program has reduced the duties on materials of positive interest to New England industries—manganese, flax, ball bearings, coal-tar dyes.

The concessions obtained for New England export products, such as are produced in Connecticut, includes a long list of products too numerous to mention. A few examples are as follows:

*Increased imports of American products into Canada such as are produced in Connecticut and other New England States on which that country granted concessions*

	1935 (pre-agreement year)	1937 (second agreement year)	1937 gain over 1935
Rubber manufactures.....	\$1,294,000	\$2,172,000	\$878,000
Office machinery.....	1,295,000	1,962,000	667,000
Sewing machines and parts.....	417,000	754,000	337,000
Tools.....	451,000	753,000	302,000
Brass products.....	1,712,000	2,657,000	945,000
Radio and wireless apparatus.....	1,855,000	2,923,000	1,068,000
Aircraft, engines, and parts.....	422,000	1,830,000	1,408,000
Watches, cases, and parts.....	174,000	371,000	197,000
Clocks, movements, cases, and mechanisms.....	183,000	246,000	63,000
Textile machinery.....	2,084,000	3,489,000	1,405,000

We now recognize that both sides of the street must be cleared if we are to have unimpeded two-way traffic. The program is removing barriers to trade in both directions. In order to obtain the many concessions on our exports it has been necessary to make some concessions to foreign countries. Certain very carefully guarded reductions in duty have been made on products which are produced in Connecticut—tobacco, laces, watches. I know there have been many misapprehensions regarding the imports of certain products included in the agreements thus far negotiated, or in agreements expected to come into effect in the future. The inveterate enemies of tariff reduction have created unreasonable fear regarding the probable effects of each and every agreement of any importance. The results of the agreements thus far negotiated indicate that the misapprehensions have had no foundation whatsoever. Those who would seek to obstruct this program, which means much in the way of material benefits as well as strengthening the world's resistance to war, are motivated by purely selfish considerations. I have confidence that those administering the program are carefully pursuing a policy calculated to redound to the benefit of Connecticut and the Nation as a whole.

### Democracy

#### EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

RADIO ADDRESS BY MISS JEANNETTE RANKIN

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Miss Jeanette Rankin, former Congresswoman from Montana, which was delivered at Helena, in her home State.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I congratulate the business and professional women on the subject under consideration this year. "Democracy" is the vital concern of the world.

In 1916 we were listening to the same propaganda that we hear today. We were told it was a war to make the world safe for democracy. If there is any ideal for which we should be willing to sacrifice, it is the ideal of democracy. Today the only real difference in our situation is in mechanical developments. In 1916 I talked from the street corners; now it is over the radio. This is symbolical. We have developed new mechanical devices faster than we have improved our social conduct. Governments still cling to the war system, and the problems of 1916, unsolved by the war, are here today.

We have a moral responsibility to help correct the unspeakable conditions that exist in the world. Our first duty is to understand the problem. But how can we understand the problem when apparently every day the issues are changed? It is difficult for us in

Montana to understand what is going on in the United States. How many would trust their judgment on the issues in Louisiana State politics? And when we cannot see clearly issues involved in disputes in our own country, how can we understand the issues without knowing what is really happening underneath, the secret treaties, the commitments which are involved in the difficulties that have been vexing Europe a thousand years?

Every student of foreign affairs presents a different picture. Each day a new situation is described on the radio, yet some suggest that we go to Europe to decide the century-old problems on the basis of unknown facts.

War always creates more conflicts than it solves, because the method itself is wrong. It violates moral laws which have been accepted as correctly stated for the individual, and therefore cannot be broken by a group of individuals, although the group is as large as a state or a nation.

Our forefathers left Europe largely because they wished to get away from the military system and the age-long sufferings. They established this Government on great fundamental principles of democracy. Experience made them know that neither the Union nor the sovereign States could survive if allowed to settle their disputes by war, so war between the States was outlawed. They recognized war as incompatible with democracy.

We failed in one instance to abide by the Constitution, but today public opinion is crystallized against settling disputes between the States by war. We have, in fact, for over 100 years, outlawed war between the United States and Canada. Norway and Sweden have done the same. Belgium and Holland, in the midst of the warring countries, have given up the war method. If the war method can be abolished on one border, it can be abolished on all borders.

We tried to help Europe in 1916 by using their war method, and today we realize how pitifully it failed. War, as a method of settling disputes, always fails. We must use the right method if we are going to convince the people of Europe that we believe in our ideals of democracy.

There are many definitions of democracy. Lincoln said, "The government of the people, for the people, and by the people." Jefferson said, "It is the will of the people substantially expressed."

Democracy is not concerned with the form of government; democracy must spring from the hearts of the people. If we want to preserve democracy for future generations, we must insist on democracy at home. If democracy is good for us, it must be good for the rest of the world. Therefore, they must be permitted to work out their own problems without our interference.

The United States is the most powerful Nation. Our geographical position makes us safe from attack. No nation or group of nations can successfully attack us. That is not an exaggeration. No military man of any rank will sign a statement saying this Nation can be successfully attacked.

The great military lesson of the last war was learned by the failure of England to land troops and make a permanent base at Gallipoli. When we know that troops cannot be landed on an enemy shore and that a nation cannot be subdued without troops, then we can begin to reason without fear of attack.

The difficult process of getting troops from the ship to the shore leaves them so exposed that a very little military activity can destroy them. With all the new inventions and mechanical devices, soldiers still have to walk the gangplank from the ship to the shore.

Near the end of the last war we sent 300,000 men to Europe in 1 month. It was considered a miraculous thing to do. We sent them over 5,000 and 7,000 at a time in the ships of all the countries. We sent over their food; we did not send over their guns. We had a friendly sea and modern ports in which to land them.

An army of 300,000 men is no force at all to come against the United States. It would take millions of men to make any impression on this country. They could not come, as we did, 7,000 at a time, for our ports are fortified. They would have to bring their army all at one time, together with their food and all their military supplies. Fifty thousand men at one time would take all the boats of Europe.

I was telling this to an American Legion man the other day, and he said that if they came over 50,000 at a time, that the police could take care of them, but if they came over in 6,000 loads, the Boy Scouts could handle them.

If Canada or Mexico permitted an enemy of the United States to establish a base on their land, they would be offering their country for the battlefield, and no government would voluntarily do that.

Charles Lindbergh said that there is no danger of attack by airplane because the planes in Europe are made for short distances and heavy loads. Besides, militarists know there is no military value in bombing civilian populations unless they rush in with troops.

Any country using South America as a base will have to bring troops in boats. Brazil is as far away as England. I cannot quite see a foreign enemy army marching up the Isthmus of Panama.

From time immemorial, governments have threatened the people with attack. It is the easiest way to arouse them to make the sacrifice that war demands; but we in the United States need not fear—Germany will never be able to come over.

Our concern should be, how are we going to keep our democracy and help other nations to develop theirs? A democracy can only be preserved by use. When we belittle our representative government and fail to support and direct it, we are headed toward a dictator.

If we want to preserve democracy for future generations, we must do our individual part by expressing our opinion now. Our interest is not with the forms of governments, deplorable as some of them are, but with our moral responsibility to help, by our example, the men and women in every country to abolish the war system and build democracy.

And, remember, we have no moral power unless we have moral integrity.

Our responsibility is to say, "We do not like your Hitler methods of violence; therefore we are not going to use violence. We shall cease preparing to use violence. We shall have everything that money, science, and ingenuity can devise to protect our shores from invasion. You can't come here, and we are not going to Europe to decide your century-old problems on the basis of the changing and unknown facts by a stupid, undemocratic method."

An expressed public opinion is the only power in the world that can keep us out of war. Good intentions or clear opinions are of no value unless expressed; so I am asking you to write to the President, to the Senators, and to the Congressmen. If you feel, as many do, that there is something fine in our civilization which will be lost in war, that killing young men is a permanent injury to the race, then express that opinion. Send cards, letters, petitions, and telegrams, and keep it up. Each one listening is a part of public opinion. You can help.

Your opinion expressed in Washington immediately is going to help to decide the fate of civilization. Mothers alone can prevent our entering the war if they will express their opinions now.

### Highway Deaths

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

EDITORIAL BY CARL GOERCH

Mr. REYNOLDS. Mr. President, in view of the fact that there are killed annually upon the highways of the United States more men than were killed during our entire participation in the World War, and in view of the further fact that approximately 1,000,000 persons are injured annually upon the highways of the United States, many thousands of whom are seriously and permanently incapacitated, the subject of preserving life upon the highways is a very interesting one to the American people.

I therefore ask unanimous consent that there be published in the Appendix of the RECORD a very able editorial by Hon. Carl Goerch, publisher and editor of the State magazine, published in my home State at Raleigh, N. C., entitled "How To Stop Highway Deaths."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[The State, Raleigh, N. C.]

#### HOW TO STOP HIGHWAY DEATHS

Everyone is greatly perturbed about the number of deaths that occur every year on the highways of our State.

And rightfully so, because these deaths represent a needless slaughter of human lives.

Various suggestions have been brought forward to remedy the situation, but we believe that the most practical one of all has been completely ignored.

The automobile manufacturers and the makers of tires can't be blamed for traffic accidents, because they certainly have done their share in improving their products and in making them safer.

Some people claim that our roads are to blame; that they are out of date and that they should be widened and straightened in many places. But even if we spent many millions of dollars for that purpose, we'd still continue to have accidents.

What, then, is the solution?

It's perfectly simple.

We know of a plan which, if adopted, would surely reduce our highway fatalities by 50 percent and possibly even more than that. Here it is:

Tell all the highway patrolmen to take their cars to a paint shop and have them repainted black, without any insignia or special marking whatsoever.

Then enforce the law.

If a man exceeds the speed limit, arrest him. If he goes around a curve at 40 miles an hour when the highway signs say the limit is 30 miles an hour, arrest him. If he passes a car on a hill, arrest him. If he is driving on the wrong side of the highway, arrest him. If he is otherwise reckless in the operation of his automobile, arrest him.

There's the solution to your problem. And we insist that it is an effective one.

"But," Mr. Motorist will holler, "we don't want speed cops traveling over the State in disguise, or hiding up lanes, or otherwise sneaking up behind us."

Of course he doesn't. And the pickpocket, the burglar, the murderer, and every other form of criminal objects to a police officer going around as a plain-clothes man, too.

The most ridiculous thing we know of—in connection with law enforcement—is for a highway patrolman to be riding up and down our highways in an automobile which can be identified half a mile away. Of all the absurd things, that absolutely heads the list.

It is an assured fact that when you see a highway patrolman you're going to drive carefully. But with the small number of patrolmen now at work, you see one of them only infrequently, regardless of how much patrolling they may be doing. On the other hand, if you weren't sure that the car ahead of you or behind you wasn't a patrol car, the chances are that you'd drive much more carefully all the time.

That, it seems to us, is a logical conclusion.

Summing all this up, therefore, we arrive at the conclusion that a large part of the responsibility for so many deaths upon the highways of North Carolina rests with the men who are supposed to see that our laws are enforced.

Let the patrolmen park their cars behind country stores, tobacco barns, or other places where they can't be seen. And then, when an automobile whizzes by at 70 miles an hour, let them start out after it.

Let them be so disguised on the highways that nobody would be able to recognize them or their cars.

Let them see that every violation of our traffic laws is strictly enforced.

Let Mr. Motorist howl all he wants to about these regulations. What right has he to howl, anyway? If he obeys the traffic laws, nobody is going to bother him; if he violates them, then he deserves no more consideration than does the man who violates our laws against theft or murder.

So let him howl!

You can straighten out all the curves you want to, you can widen the highways from Murphy to Manteo, but you never will be able to reduce the death rate on our highways in North Carolina until you adopt some such plan as we have outlined above. Now let's see whether our enforcement officers have nerve enough to put something like this into practice.

### Proposed Loan to Finland

#### EXTENSION OF REMARKS

OF

HON. WILLIAM H. KING

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

ARTICLE BY WALTER LIPPMANN

Mr. KING. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Walter Lippmann which appears in this morning's issue of the Washington Post. Mr. Lippmann discusses the situation in Finland, and indicates that neutral nations—referring to Norway and Sweden—will be in danger if Finland shall be destroyed.

Without expressing any opinion as to the accuracy of the statements made or the conclusions drawn by Mr. Lippmann, I regard the article as of such importance that it may be properly considered by American citizens and also by the Congress of the United States. I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 16, 1940]

#### THE CASE FOR A FINNISH LOAN

The current news can be read only by keeping before one's eyes the map of Europe as a whole. We see then that there are three

points of extreme tension. First, the frontier of Finland on the Karelian Isthmus and in the area between Lake Ladoga and Lake Onega; second, the Netherlands-Belgium frontier, with Germany between the Ardennes Mountains and the North Sea; third, the region occupied by Hungary, Rumania, and Bulgaria.

There is great tension at these three points, because here are the three gateways through which the Nazi-Bolshevist aggression can be extended. The Finns are defending the gateway to the whole Scandinavian world; the Dutch and the Belgians, with the Allies behind them, stand at the gateway of western Europe; the Hungarians and the Rumanians, with Italy, Turkey, and the Allies behind them, hold the gateway to the Danube Valley, the Balkans, the eastern Mediterranean, and the Near East. If these three gates can be locked and bolted, the war can be limited to the struggle between the Allies and Hitler's Germany; if one or more of these gates is forced by the Nazis or the Bolsheviks, or both, the war will engulf the whole of Europe and may become a world war.

#### HITLER MAY SEND ARMY INTO SWEDEN

If we look further into the situation at these three gateways we find that at two of them the small countries involved can count upon the immediate military assistance of great powers. If the Netherlands is attacked by Hitler, the Belgians, reinforced by the military force of France and Britain, will move instantly into the breach. If the Bolsheviks and Nazis strike at southeastern Europe, they will encounter somewhere and somehow the Italians, the Turks, and the French Army now gathered in Syria under General Weygand.

But if the Soviets break through the Finnish defenses, the position of Denmark, Sweden, and Norway will be desperate. For if Russia gets within striking distance of Sweden, the probabilities are at least 10 to 1 that Hitler will send an army through Denmark into Sweden to occupy it before Stalin can get control of the indispensable Swedish iron ores.

The position of Scandinavia is like that of Poland; the victory of one partner in the "unholy alliance" between Moscow and Berlin will cause the other to move in also, and, as in the case of Poland, the Allies cannot easily intervene to avert the catastrophe. No doubt they would try. But before they could hope to do very much Denmark, Sweden, and Norway would be a shambles.

The fact that the Scandinavian countries cannot be reinforced effectively and quickly enough by the Allies is the reason why it is of such urgent importance that the Finns be given the arms which they can use so well, to hold the gateway. The Finns have demonstrated that they have an excellent strategic frontier. The arrangement of lakes, forests, and railroads is such that not only the whole of Finland but the whole of Scandinavia can be defended on the short Mannerheim line in the Karelian Isthmus and on a front of about 60 miles between Lake Ladoga and Lake Onega. If the Finns can stand in these two sectors, the front is too narrow for the Russians to bring into action their immensely superior numbers.

#### NORTHERN NEUTRALS' FATE HANGS ON FINN DEFENSE

On the other hand, if the Russians get through either of these two narrow entries into Finland, then it is difficult to see where they can be stopped until they reach the Swedish frontier. If they are not stopped before they get to the Swedish frontier, it will be as necessary for Hitler to move into Scandinavia as it was for Stalin to move into Poland. It will then be necessary for the Allies to move in also. For they can never permit Hitler or Stalin to establish naval and air bases in Scandinavia. Upon the successful defense of Finland, therefore, hangs the fate of the three northern neutrals, whether they are to be occupied and pillaged and brutalized like the Poles and the Czechs and whether they are to become one of the great battlefields of the war.

The Finns have proved their military capacity, and their judgment may be relied upon. They tell us that a credit of \$60,000,000 will enable them to resist for 4 months. They must have this credit in the United States, because that is the only country where the arms and ammunition they need can be sold to them at once. They can get something, but probably of second quality, from the more or less obsolete stocks in France, Britain, Italy, and Spain. But the only place where they can get the kind of superior weapons which their small army must have in order to deal with the terrible mass of the Russian Army is from the American factories that are making arms for the American Army. The American Army is willing to let the Finns take prior delivery on certain of its own orders. It is acting on the very sound theory that the American Army is not going to engage in this war and can, therefore, safely wait a few months for a few hundred guns and the ammunition that goes with these guns.

#### FINNS DEPEND UPON UNITED STATES CREDIT

But these arms cannot be delivered unless the Finns pay cash to the manufacturers, and the Finns cannot pay cash unless the American Government gives them credit.

This is the practical issue which is presented to the administration, the Congress, and the people. If by any chance the decision is against helping the Finns now, Congress may be sure of one thing; it will soon be confronted with the same issue but in a much more acute and embarrassing form. For if public sentiment is aroused now to the point where it wishes to see the Finns helped, what will be the state of public opinion if Finland is devastated, its army exterminated, its people starved and enslaved, and then if Denmark, Sweden, and Norway are overrun by the Nazis and the Bolsheviks?

If ever there was a case where a stitch in time may save nine, it is the case of Finland today. For today the whole catastrophe can still be averted by supplying the Finns with arms; if this is not done, an infinitely more complicated problem, involving both Germany and Russia, will confront the American people.

## Federal Housing Administration

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Herald Tribune of January 8, 1940, entitled "Building Activity and the F. H. A."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune]

#### BUILDING ACTIVITY AND THE F. H. A.

The Federal Housing Administration, according to an announcement by its head, Stewart McDonald, ended the year 1939 with more than \$3,000,000,000 of home-financing insurance on its books. Of this total, approximately \$960,000,000 was written during 1939—establishing a new F. H. A. record.

One of the outstanding features of last year, it is emphasized in the financial and business reviews now appearing, was the continuance of the recovery in residential construction. At the bottom of the 1929-33 depression home building fell off to an annual rate of only slightly more than \$250,000,000, and this area was among the last to feel the recovery urge. Residential building continued well below the \$500,000,000 level until 1936, but its rise to \$801,000,000 that year and to \$915,000,000 in 1937 had much to do with the approach to prosperity in those 2 years. Moreover, where so many series in the business indexes turned sharply downward in 1938, residential building enjoyed an even better year than in 1937, with contracts totaling \$984,000,000; and now, with only about 10 days' figures missing, it is clear that last year has not only far surpassed 1938 but that it has been easily the best year since 1929. With total building contracts of \$1,340,000,000, it has run some \$200,000,000 ahead of 1930—previously the best 12 months of the last decade. The \$1,340,000,000 figure lags, of course, far behind those of the 1920's, when the annual average was well above the \$2,000,000,000 level, and when 1928 produced a peak of \$2,788,000,000.

There is no question that the F. H. A., which substituted the long-term amortized mortgage for the old short-term first- and second-mortgage set-up so widely used in the 1920's, deserves much of the credit for the revival of residential building in the last 2 or 3 years; and if such construction has not yet soared to the high levels of 10 and 15 years ago, there are some aspects in which the present situation is distinctly preferable to that one. In the first place, it is quite probable that, so far as actual home ownership is concerned, the country is closer to the position reached in the 1920's than the mere totals for building contracts suggest. Of the F. H. A. insurance, only \$112,500,000 has been issued in connection with large-scale projects. Small home mortgages have accounted for \$1,975,000,000 of the \$3,000,000,000 total, with property-improvement loans accounting for the remainder. Final figures for the year may show that the number of single-family dwellings erected during 1939 actually exceeded that of 1929, which was featured to a substantial extent by large-scale building operations. Again, the F. H. A. has measurably raised the standards of building construction; and, although its specifications and inspection service may not be foolproof, there is little doubt that there is less shoddy construction today than there was before this agency was created; and, finally, speaking generally, it may be said that little of the construction of 1939 was attributable to such boom phenomena as we witnessed in Florida and other widely scattered sections of the country at various times between 1925 and 1929.

All this is not to say that the F. H. A. is the perfect instrument for the financing of residential building. Being a political creation, it has the faults that stem from that fact. The most conspicuous example is the overly attractive terms offered, particularly in the case of small dwellings, which require a down payment of only 10 percent of the purchase price. A serious depression in the near future might conceivably result in a demoralizing volume of repossessions. With this and certain other minor reservations, however, it will, we believe, be generally agreed that the Federal Housing Administration is one New Deal agency that has abundantly justified itself.

## Citizenship for People of Guam

## EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

## RESOLUTION BY THE YOUNG MEN'S LEAGUE OF GUAM

Mr. GIBSON. Mr. President, I ask unanimous consent that there may be printed in the RECORD a resolution adopted by citizens of Guam relative to citizenship for the people of that island.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas a bill providing for the granting of United States citizenship upon certain inhabitants of the island of Guam and to extend the naturalization laws thereto, introduced by the Honorable Senator MILLARD E. TYDINGS, of Maryland, and the Honorable ERNEST W. GIBSON, of Vermont, is again pending before the Congress of the United States; and

Whereas the people of Guam still and will ever retain their cherished desire and aspiration to obtain recognition as United States citizens through necessary legislation by the mother country to whose flag they have, for the last 41 years, proven allegiance and loyalty both in time of peace and in war; and

Whereas by virtue of the provisions embodied in article IX, paragraph 2, of the Treaty of Peace concluded at Paris in December 10, 1898, they consider themselves entitled to such rights and privileges as are afforded by and which are the heritage of free American Government; and

Whereas the people of Guam have accepted American sovereignty without question—our parents who were living when that memorable occasion took place wherein Guam was taken under the United States sovereignty in 1898, welcomed and were highly satisfied with the terms of the treaty and other original acts of government assuring Guam and people that justice and right shall prevail; and

Whereas it is the consensus of opinion of the people of Guam and others who are concerned that the time has come when our cause should be given due consideration, for generations past up to the present moment, including the 41 years of American sovereignty, our people have been deprived of their just share, namely, to enjoy in common the blessings for which the stars and stripes and its ideals stand for—to perpetuate that measure of individual and inherent rights of free people under our common nation; and

Whereas the Honorable Secretary of the Navy, since 1901, recommended to both President and Congress the right and obligation to effect satisfactory settlement of our civil rights and political status and since then to date have repeatedly recommended legislation to this effect commending on and recommending our being peaceful, law abiding, loyal, and worthy; and

Whereas we have proved all these as enumerated in the foregoing and are ready to repeat and continue doing so in order that "right shall ever be the master of might"; and

Whereas it is common knowledge that it has been the policy of the United States of America to encourage the Americanization of all persons residing permanently within American jurisdiction so as to be able to properly gain proper citizenship in the greatest democracy of all time—our common Nation—to which our people of Guam have unquestionably been loyal since the year 1899, when American sovereignty was first officially established over Guam and people: Therefore be it

*Resolved by the Young Men's League of Guam, an original and one of the leading civic organizations in Guam, whose membership, composed of 100-percent citizens of the United States and/or Guam, at its meeting held on October 23, 1939, That we endorse wholeheartedly with full appreciation for the high American idealism that prompted unselfish action and effort, measures introduced in the Congress of the United States by the honorable Senators TYDINGS and GIBSON, that will secure and effect the early consummation of the civil rights and political status of the people of Guam; and be it further*

*Resolved, That as a mark of our respect, admiration, and appreciation to both of these distinguished gentlemen who champion the cause of our people, this resolution be spread in the minutes of this organization as a permanent record; and be it further*

*Resolved, That copies thereof be forwarded to each of the Senators above-mentioned and to those interested in the welfare of Guam.*

B. J. Bordallo, president; Jose Salas, vice president; F. T. Flores, treasurer; H. J. Johnston, secretary; V. Blaz, sergeant at arms; A. P. Cruz, librarian; F. T. Ramirez; V. P. Herrero; Jose L. G. Bitanga; Juan Indalecio; Jesus M. Camacho; Jesus C. Borja; V. Rosario; Silvino T. Quenga; J. A. Perez; J. C. Torres; V. U. Atoigue; Raymond F.

Underwood; V. U. Zafra, manager of sports; A. C. Suarez; H. T. Sablan; Vicente C. Reyes; H. W. Elliott; P. B. Leon Guerrero; Joaquin L. Flores; F. B. Leon Guerrero; G. L. Salas; Leonardo P. ## Associate Justice Frank Murphy

## EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

## EDITORIAL BY RAYMOND MOLEY

Mr. BURKE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a portion of an editorial appearing in Newsweek for January 15, 1940, in reference to the qualifications of Frank Murphy for the office of Associate Justice of the United States Supreme Court.

There being no objection, the portion of the editorial referred to was ordered to be printed in the RECORD, as follows:

[From Newsweek of January 15, 1940]

MURPHY AND JACKSON

A fair knowledge of Frank Murphy's record as a judge of the recorder's court in Detroit encourages the belief that, as Justice of the Supreme Court, he will do much better than some of his critics predict.

When Murphy was elected to the recorder's court his colorful personality and his war record—factors which should not weigh heavily in the selection of judges—were inordinately stressed. Friends of the court were perturbed about what he might do with the job. There were fears that he might institute drastic and possibly unsound reforms. But as judge he showed an extraordinary capacity to learn. He was not only a humane judge—everyone expected that of him—but an efficient and highly intelligent one. The same capacity for growth marked his career as mayor of Detroit and as Governor of the Philippines. It can conservatively be said that he has always done better than all except his warmest friends ever expect him to do.

As a Supreme Court Justice, Frank Murphy will, in general, show sympathy for the legislation of the past 7 years. But he will be watchful of the rights of minorities as against bureaucratic oppression. And he can be counted upon to resist the efforts of the more fervid reformers on the Court to tell him what to think.

## National Sojourners

## EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

## ADDRESS BY HON. PAUL V. McNUTT

Mr. RANKIN. Mr. Speaker, under permission given me to extend my remarks in the RECORD, I am inserting the very able address of the Honorable Paul V. McNutt, delivered to the National Sojourners here in Washington on last Saturday, January 13.

It is one of the most masterful discussions of the great questions now confronting the American people that has yet come to my notice.

I believe it expresses the views of an overwhelming majority of the patriotic people of this country who are interested in restoring prosperity, maintaining American independence, and helping to promote the peace of mankind.

The matter referred to follows:

Brother Toastmaster and brethren, many years ago (more than I care at the moment to admit), I took part in an amateur performance of the play *Brother Officers*. Little did I think then that the title of that play would have a particular significance. I was not old enough to be a Mason, and the black clouds of the World War had not yet appeared upon the horizon. The term "National Sojourners" was not even a name to me, but during the years I have had the privilege of membership in the organization it has come to have great significance. The double bond of brothers-in-Masonry and brothers-in-arms is a tie of unusual strength; a source of inspiration and satisfaction.

It has been the lot of our generation to live in an epoch characterized by the happening of the unbelievable. Governments, like men, have been helpless to predict and prepare for the turn of events. It is little wonder that the relations between nations have been marked by confusion, uncertainty, and bewilderment. The last decade was born in the misery of world-wide depression. Each year brought another tragic chapter—10 years of chaos, havoc, and destruction. And today, once again in our lifetime, we find whole continents stricken with the plague of war. Men are dying in battle; the independence of small nations is threatened—some nations already have been swept from the map—"liquidated," as some would say.

Tonight I would like to discuss American foreign policy. That policy is not the product of accident nor of ignorance. We know that stable, lasting peace can be had only if treaty rights are respected and if there is a full flow of trade between countries. These are the two rocks upon which our foreign policy is founded. Through our reciprocal trade treaty programs we have laid the foundation for world-wide economic peace. In our uncompromising opposition to aggression, we have laid the foundation for world-wide political peace.

The relationship of these two aspects of our foreign policy will seem clearer if we examine each one separately. Let us first turn to the reciprocal-trade treaties, of which we hear so much today.

#### I. RECIPROCAL-TRADE TREATIES

After the first World War, many thousands of miles of tariff walls were constructed throughout the world. Economic isolation became the basis of the foreign policies of many countries. How thoroughly was the ground plowed, how diligently was it cultivated, how deep were the seeds sown for the inevitable crop of extreme political and economic nationalism of these unhappy years! Through our own tariff action we, too, contributed to this process.

In the thirties, however, America sought to turn the tide which had blocked world trade and had bottled up the economic life of 200,000,000 Europeans. In vain did our Government seek to batter down the barriers to world commerce. Too long had these walls been standing and too virulent were the infections of international distrust and hatred that had bred in the festering pools of stagnant business. The fate of Europe was sealed.

Tirelessly, however, did our State Department strive to relieve the tensions by encouraging peaceful trade relations. To start again the flow of the beneficent stream of world commerce became a major policy in our foreign relations. It was a policy designed to start the western world on the long road to prosperity, and prosperity is the only circumstance under which we can hope for a lasting peace. The reciprocal-trade program was calculated to eradicate the conditions which breed political and economic monstrosities and which kindle the fires of international dissension and hatred. It was a common-sense policy based upon the principle that men do not attack those with whom they have profitable trade relations nor do nations go to war with good customers.

International commerce has been for centuries one of the greatest civilizing influences in the world. It banishes prejudice and distrust. It cultivates toleration and understanding. From the time of the first merchant adventurer in the eastern Mediterranean, wandering from ancient Sidon and Tyre and later from Rhodes and Carthage, the trader has broken down cultural barriers and ideological prejudices. Thousands of years ago Solomon and Hiram of Tyre set the pattern for international commerce when they discovered the reciprocal advantages of a trade agreement.

World economy has become highly complicated since the days of Solomon and Hiram. Simple barter is possible only within narrow limits. Capitalism, however, has made it possible to obtain far greater advantages by the proper manipulation of its machinery. One of the most delicate and sensitive parts of the capitalistic mechanism is the valve of foreign trade through which surplus production can escape the walls of economic nationalism and allow the return flow of needed materials. It is this type of engineering that the reciprocal-trade negotiation accomplishes. Not until we have cleared the channels of commerce between nations will any of them in this complex world economy completely realize the advantages which the capitalistic system is capable of bestowing. It is significant that it is in those nations where these advantages of capitalism are not obtained that democracy has died.

The reciprocal-trade treaty is a rational tool for the performance of a scientific job. It takes out of the realm of politics the difficult task of balancing the economic and industrial order of our own country with those of other nations. It leaves to deliberation and discussion the task of giving and obtaining tariff concessions which will tend to raise rather than impair the standard of living in both nations. It is a job for the experts.

But world trade had too long been strangled, and with depression and despair came dictatorships and demagogues, imperialism, and aggression. In a world so disrupted by war and chaos it is difficult to follow the course of peaceful trade. With much of Europe our trade is gone. With South America, however, potentialities for the commercial intercourse of peace are almost unlimited. To be sure, not everything can be exchanged. Many agricultural products of the Argentine cannot profitably be imported. But the manganese, coffee, and rubber of Brazil can be the consideration for the petroleum, heavy goods, and manufactured articles of our own country. Already a 28-percent increase in exports to Latin America has been achieved. Unlike the temporary increase in trade during the first World War, the trade treaties are laying the groundwork for permanent relations with our southern neighbors. In the negotiation of these agreements the interests of both labor and agriculture can be adequately protected. In many particulars the production of the South American republics is complementary rather than competitive with ours. It is this situation that is capable of exploitation to the mutual advantage of all concerned.

No opportunity should be spared to cement our relations in other respects with the republics of the New World. The contact of our cultures is bound to prove an intellectual stimulus for both civilizations. The vast opportunities for mutually beneficial exchanges in art, literature, and education have been recognized but recently. They have been exploited scarcely at all. It is no reflection on any of us to recognize that mutual business advantage will be derived from continuous and increased contacts between people of different but complementary cultural and economic heritage.

#### II. NEUTRALITY

Our diplomatic as well as our trade relations with the Old World during the past few years have involved many grave and delicate problems. The thirties will forever be characterized as a decade of international duplicity and brigandry rarely equaled in any era. From the first Japanese invasion of Manchuria to Russia's thrust at Finland a succession of ominous enterprises has caused many sleepless nights for the President and his Secretary of State. Treaties have been repudiated, national boundaries violated, moral and legal rights of nations and of individuals flaunted. Might has supplanted right; justice has given way to lawless greed. Every canon of international decency has been defied; every tenet of interstate morality denounced.

Throughout this besmeared and murky era there has been one voice that has never failed to cry out against aggression and wrong, one foreign office that has invariably sought to ward off disaster from the weak. Had other governments been as strong and as unswerving in their devotion to ideals, as courageous and as scrupulous in their observance of the law, much of the havoc and devastation of the past 7 years would have been avoided.

Never once in those tragic years did America neglect to invoke the sanction of written treaties against the nation which broke them. Times there were when ours was the only protest raised in defense of the victims of tyranny. The world will never know whether the bloody sword of Japan might not have been sheathed in the East had the other parties to the Nine Power Pact insisted, with our State Department, upon the observance of the territorial integrity of China. The world will never know whether the failure of ruthless aggression in the Orient might not have stayed the hand of Italy in Africa. We shall never know the extent to which the success of Japan and Italy may not have induced Russia to deceive the democracies and by that betrayal give Hitler his supreme chance to overrun Poland. The chain of cause and effect here can never be accurately traced. One thing we know, however, at every stage of this monstrous drama the voice of the Government of the United States has been raised in protest.

Nor have ours been weak protests. It has required courage on the one hand and skill on the other to be effective yet not belligerent. These have been perilous years. Except for the fateful years from 1914 to 1918, at no time have such forces of destruction been unleashed upon the world. Only by the most adroit and skillful handling of our foreign relations have we been able to fortify ourselves in the armament of peace. It is little less than a miracle that in these trying years we have avoided the dangers which have threatened momentarily to enmesh us in the web of foreign entanglement.

It is not an easy thing to keep out of such a war. No one knows this better than Americans. No nation was ever more determined to remain at peace than this Nation 23 years ago. It is the paradox of history that we have been drawn into war under the administration of our greater peace-loving Presidents. It was so with Lincoln, and it was so with Wilson. It was only by superhuman efforts, by negotiation and forbearance, by concessions and threats, that war was averted for nearly 2 years after the sinking of the *Lusitania*. Woodrow Wilson fought bitterly against war and all but succeeded in staving it off. His will to peace, like Lincoln's before him, was unshakable. But the will to peace is not enough. Peace is not a thing which can be had for the asking. Nations do not remain at peace merely because they desire it. Neither is it a simple matter of isolation. Whether we wish it or not, we live

dangerously as part of the economic and political world. We can no more avoid the impact of world forces today than we can avoid the sun that shone over the Orient yesterday, and which will shine over Europe tomorrow.

But America is fortunate. Both by location and by natural endowment, we are in a favored position. Ours is the problem of defending this position under conditions that are spiritually tolerable, of maintaining it in a manner compatible with those tenets of decency which we regard as essential to our national integrity. This is the great issue presented by the European war. It is the more complicated because, beyond that of 1917, the present conflict is an ideological struggle. It is a struggle which imperils every proposition in the code by which human beings have made progress in 3,000 years. From a war in which stakes are so high, it is difficult to remain aloof.

A realistic appraisal of the course steered thus far by America reveals it as one of the greatest achievements of our times. It is a course characterized by sagacity and wisdom, and, above all, by a recognition of the weakness as well as the nobility of the American character. It has recognized that there is a valid distinction between indifference and neutrality. The Government, as well as the American people, has not been indifferent to the struggle in Europe nor to its outcome. At the same time, there has been a sincere and successful attempt to remain neutral in deed and act.

So, too, our attitude has been one that distinguishes between objective impartiality and the ability and duty to distinguish between right and wrong. The Government has been impartial in its diplomatic intercourse but has not hesitated to permit the mobilization of the moral forces of the country against aggressors. The course pursued has tended to satisfy the intellectual and spiritual conscience of the people and yet avoid commitments calculated to draw the Nation into the vortex of hostilities. The regulation of travel in war zones, and of shipping to belligerents, removed at once the likelihood of serious international incidents. At the same time, public opinion has sufficient latitude for adequate expression of moral indignation against international aggression. In this way has the emotional balance of the Nation been made more stable and thus better able to resist the stimulus of repeated provocation.

The realistic nature of our foreign policy is evidenced by the greatest of all preparation for the maintenance of peace; namely, by strengthening our national defenses on land, on the sea, and in the air. America is preparing for any eventuality. The events of the past 10 years have convinced even the most sanguine idealists that in the world of today, a military and naval establishment second to none is the only insurance against war. Americans are a peace-loving people. But we can never again be hoodwinked. We have learned well the lesson of preparedness. Never again will we scrap our vessels or reduce our armed forces to a level where our national safety is threatened. Peace we want and peace we hope to maintain, but we have served notice on a warring world that ours is a positive peace, a strong peace, a peace that it would be folly for any to jeopardize.

The policy thus pursued so successfully is unique in diplomatic history in several respects. In the first place, it is a thoroughly honest policy. No effort has been made to deceive the totalitarian aggressors. Japan in the Far East, Germany and Russia in the West, have no illusions about our sympathies. They know that America will never condone imperialistic policies, even if successful. They know that the Nation's good will is with the victims of their tyranny both within and without their borders. They have seen us give sanctuary to those who have fled that tyranny. They have seen us give aid to the homeless victims of their military invasions. They have suffered the loss of favorable economic relations with our people.

On the other hand, the democracies have been heartened and strengthened by our manifest sympathy for their cause. They have been materially aided by the availability of our resources, provided they assume the risk of obtaining them. At the same time, both those nations whose policies we approve and those we abhor realize that we are firmly determined to remain apart from their struggle. They know that our neutrality is strong and that we will defend it. They have found us impervious to their propaganda. They recognize that we have passed judgment, both on the merits of the current struggle and on the question of our own participation in it. They know, too, that our people are united and that their will is unbreakable. And, as they have come to realize these things, the danger of our becoming embroiled in their struggle has steadily diminished.

To accomplish this in such a world is a singular and unprecedented attainment. Not the least valuable of this program has been the enterprise to consolidate the forces for peace in the entire Western Hemisphere. All the world now recognizes that the Americas present one solid, united front against war and aggression. The traditional doctrine which originated with President Monroe has received its greatest test and has attained its greatest triumph. Of the many achievements of the administration of President Roosevelt, history will record none in such glowing terms of approbation as that of the Department of State during the troubled years of 1938 and 1939.

Ours has been a brave, strong policy and a farsighted one. It has required wisdom and insight in its conception; courage and strength in its execution.

It is a policy that only a forthright nation could adopt; only a strong nation pursue. It is consistent with the finest traditions

and the noblest instincts of a free people. It is a performance which will make our children proud they were born Americans.

In civilization, America has a mighty stake. Amidst the confusion and groping, the turmoil and fury, it is ours to hold fast to the gains of the centuries. Ours to preserve man's passion for democracy. Avoid the conflict we will, if possible. In the end, liberty may remain only here. Again ours may be the task of keeping this precious flame lighted to restore a torn and bleeding world when the forces of destruction are spent—to help all mankind again to find the path which leads to peace and freedom. No nation could have a nobler destiny.

## The North Discovers the South

### EXTENSION OF REMARKS

OF

### HON. LUTHER PATRICK

OF ALABAMA

### IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

ARTICLE FROM THE WALL STREET JOURNAL OF JANUARY 8, 1940

Mr. PATRICK. Mr. Speaker and fellow Members of Congress, I arise today as a representative of all of Dixie. We had grown into advanced maidenhood without any encouraging courting. And now, behold; this is an article appearing in the Wall Street Journal regarding Birmingham, Ala. At last, at long last, the North has discovered the South.

The article is as follows:

[From the Wall Street Journal of January 8, 1940]

NATURAL RESOURCES MAKE BIRMINGHAM INDUSTRIAL CENTER—NEAR VAST DEPOSITS OF IRON ORE, COAL, LIMESTONE, AND DOLOMITE—CITY'S GROWTH STILL RAPID

BIRMINGHAM.—Juxtaposition in this area of vast deposits of iron ore, coal, limestone, and dolomite has provided the foundation in Birmingham for the South's principal industrial center.

On this base there has developed since the city was founded in 1871 a diversified body of 478 manufacturing establishments and 58 mining operations, currently employing some 63,000 wage earners, paying them at the rate of \$70,000,000 a year, and sending to market 2,300 products with a value normally exceeding \$275,000,000 annually.

In addition the area provides employment for around 60,000 other persons in public utility, railroad, professional, and service occupations to provide a total normal annual pay roll of around \$140,000,000 a year. Few, if any, other industrial areas can show such growth in such a short period—growth which is the natural result of the unusual combination of natural resources and favorable geographic position enjoyed by the city and its environs.

#### STILL GROWING

This development, furthermore, has been continuing right up to the present, with population of the area within a 100-mile radius of Birmingham growing more rapidly during the past 10 years than any other similar area in the Southeast, to the point where it now totals 1,800,000 people.

Since 1930, population of the State of Alabama has increased by some 300,000, of which 120,000 was in Jefferson County, wherein Birmingham is located, and with much of the balance coming in nearby counties. Such expansion during a period in which business generally has been depressed can mean only that the potentialities of the Birmingham district are just beginning to be fully realized.

With the principal raw materials for the production of iron and steel available here, Birmingham is the natural southern center for location of new plants manufacturing those products made of iron and steel which the region requires. Among them are such products as farm and garden implements, can factories, washtubs and buckets, stovepipe, trailers, metal cabinets, toys, and a multitude of other products made of iron or steel which can find a market on the farms and in the cities of the South.

#### THE STEEL INDUSTRY

Faith of the steel industry in this market is indicated by the recent investment by United States Steel Corporation of \$29,000,000 in a huge new plant to manufacture tin plate here—a plant which employs 2,500 men, uses 1,223,000 tons of raw materials each year, and produces 200,000 tons of finished tin plate annually. Furthermore, the Birmingham district produces about 60 percent of all the cast-iron pipe used in the United States while its five cast-iron plants with a total capacity of 450,000 tons per year are capable of supplying the entire cast-iron-pipe requirements of the United States; the 18 blast furnaces of the Birmingham area produce in normal times 2,500,000 tons of pig iron a year with value of that commodity shipped out of the Birmingham area in 1937

amounting to \$16,000,000; and the area's production of coke in a normally good year amounts to some 3,500,000 tons with shipments going to 33 States, Canada, Mexico, and Cuba.

But while Birmingham is predominant in the South as an iron and steel center the area surrounding the city is also rich in other raw materials which help to make the city an attractive place for location of many other types of plants.

Such raw materials include cotton, average annual production in Alabama being approximately 600,000 tons, and cottonseed oil; lumber, the State having approximately 21,000,000 acres of timber of which 4,000,000 acres is virgin stand with the total available estimated at 40,000,000 board feet; dairy products; cattle; and farm products and vegetables, including peanuts and sweetpotatoes—both of which are becoming more important as industrial raw materials.

#### VARIED INDUSTRIES

These raw materials provide opportunities for manufacturers of furniture, other wooden articles, and paper; for milk-condensing plants; for packing plants; and for processors and canners of other farm products.

Likewise, Birmingham is accessible to sources of semifabricated raw materials. Alabama is an important textile State with 64 textile mills located within 75 miles of Birmingham and turning out a wide variety of products which are the raw materials for garment manufacturers; coke, which has many metallurgical uses, is available in large quantities in the Birmingham district; and pig iron, the raw material for many industries, is at hand here.

Byproducts of existing plants in the area, many of which are used in the chemical industry, include tar, benzol, sulfate of iron, ammonia solvent naphtha, carbolic acid, sulfate of iron, toluol, naphthalene, ground open-hearth basic slag and others. Blast-furnace slag, produced at the rate of approximately 1 ton per ton of pig iron, is available for manufacture of brick, tile, concrete, lime, and cement.

#### FUEL SUPPLIES

Birmingham is particularly well situated as far as fuel supplies for manufacturing plants are concerned. The city is in the center of the Alabama coal fields and good steam coal is delivered here at from \$2 to \$2.25 per ton. The district is also one of the largest coke-producing centers of the country. Both byproducts and natural gas are available. Byproduct gas is supplied from the many byproduct plants in the district and is sold at very reasonable rates by the Birmingham Gas Co., while natural gas is provided by the Southern Natural Gas Corporation, whose main line from the Monroe, La., field passes through the city. Electric power is available at low rates, large steam-electric plants at the mine mouth supplementing hydroelectric power developed in the State.

Other factors affecting plant locations such as labor supply, wage rates, transportation facilities, taxes, and water supply are also favorable in the Birmingham area.

There are 20 railroad lines into Birmingham in 9 systems, including the Alabama Great Southern; the Atlantic, Birmingham & Coast Railroad; the Central of Georgia; the Illinois Central; the Louisville & Nashville; the Mobile & Ohio; the Seaboard Air Line; the Southern; and the St. Louis & San Francisco. Birmingham is well situated geographically as a distribution center for the South and is also accessible to the major northern cities.

#### WATER TRANSPORTATION

Water transportation for heavy, slow-moving, and bulky commodities is available from Port Birmingham just west of the city on the Warrior River to Mobile, a distance of 410 miles, and from there via freighter to any port in the world or by barge to New Orleans, the intercoastal canal, and the waterways of the Mississippi and its tributaries. Uniform minimum depth of 8 feet is maintained on the Warrior River, while work now under way will deepen the channel to 9 feet, reduce the number of locks, and further straighten the channel. The Federal barge lines provide regular service from Port Birmingham to Mobile and New Orleans. Sea-going barges are also used on the river, being towed direct to Gulf ports without rehandling. Some of the larger companies maintain their own barge lines.

Birmingham also has excellent express service, with 35 express trains leaving the city every day; it is a center of truck and bus transportation. There is a modern \$1,000,000 airport.

The labor supply here is very large, with the Negro and white population of surrounding counties providing a reservoir on which to draw. There is an unusually large surplus of white female labor, due to the fact that most of the industries now established in the district provide employment for men only. Millinery, shirt, and garment plants which have located in the area in recent years have found these women learn quickly, are efficient and intelligent.

#### WAGE RATES

Wage rates range upward from 30 to 35 cents an hour for common male labor, primarily colored, of which there is a large quantity available. Somewhat better, partially skilled male labor can be had at from 35 to 45 cents an hour. The many foundries, machine shops, and fabricating plants in the area have developed a large supply of skilled labor, typical rates for which are as follows: machinist, 78 to 97 cents; boilermaker, 93½ to 97 cents; electrician, 66½ to 93½ cents; pattern maker, 78 to 97 cents; carpenter, 70 to 84½ cents; and riveter, 71 cents. The district is generally open shop and indications are that it will so remain.

Property taxes are based on assessments which are required by State law to be made at 60 percent of fair cash value, a provision which is liberally construed. Tax rates per \$100 of assessed value

in Birmingham, Bessemer, and Fairfield are as follows: State, 65 cents; county, \$1.15; city, \$1.50; school district, 30 cents; and total, \$3.60. The rates in Jefferson County, outside of municipalities, are: State, 65 cents; county, \$1.15; school district, 30 cents; and total, \$2.10.

Liberality with which the 60 percent required is construed is reflected by the fact that assessed value of Birmingham property in 1936 was \$160,000,000, as against an average assessed value of \$316,000,000 in the 15 cities of the United States in Birmingham's population class.

Per capita tax revenue in both Alabama and Birmingham are relatively low. Birmingham had the lowest per capita revenue receipts from all sources in 1936 among 65 cities in the country with a population of 125,000 or more, the Birmingham total being \$24 in that year as against \$35.56 in 1926, and it also had the lowest per capita cost of government, including operation, maintenance, and interest, of any of the 65 cities. Only 7 of these 65 cities had a lower per capita net debt than Birmingham in 1936.

### Relations With Russia

#### EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

EDITORIAL FROM THE DALLAS MORNING NEWS OF JANUARY 5, 1940

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave granted to extend my remarks, I submit herewith a very able and timely editorial from the Dallas Morning News upon the question of maintaining diplomatic relations with Russia:

[From the Dallas Morning News of January 5, 1940]

#### RELATIONS WITH RUSSIA

Despite the wholesale condemnation by Americans of Russia's aggression against Finland, there is no real reason to regret our recognition of the Soviet Government or to break off relations now. The main purpose in our maintaining diplomatic and consular services in Russia, as in other countries, is not to give moral approval of the type of government in force, but to look after the interests of our Government and the personal and commercial interests of our citizens.

Resolutions demanding that the State Department yank the United States Ambassador home from Moscow and close all its offices in Russia are ill-advised. We would gain nothing—and neither would the Finns—from such an official gesture of nose-thumbing. On the other hand, individual Americans in Russia and American companies doing business in or with Russia might be seriously inconvenienced and might even suffer heavy losses as a result.

Though we have no Ambassador in Berlin at the moment, we still maintain formally friendly relations with both Germany and Japan, which are as much aggressors as Russia; and we did not break off relations with Italy because of popular disapproval here of her conquest of Ethiopia. If we severed relations with every nation, some of whose official acts we do not like, we might almost as well abolish our State Department.

If Congress wants to help Finland, that is another matter. In making further loans or in giving other help that can be extended without violating our neutrality, the United States may be able to help the Finns, whose courageous defense of their homeland has won world-wide admiration. But only harm would come from boarding up the United States Embassy in Moscow.

### Pricing of New Wealth is Basic American Issue

#### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

EDITORIAL BY O. L. BROWNLEE

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

by O. L. Brownlee from the Sioux City Tribune, Sioux City, Iowa, entitled "Pricing of New Wealth is Basic American Issue":

[From Sioux City (Iowa) Tribune]

PRICING OF NEW WEALTH IS BASIC AMERICAN ISSUE

The major basic problem with which this country must deal—it is both political and economic—concerns the pricing of the new wealth as it comes out of the ground at a level which will supply a solid foundation for the national income necessary to support the Government and maintain 135,000,000 people at an American standard of life or at least in a happy frame of mind.

During the first 150 years of mad nation-building on this continent the American people produced new wealth in such profusion that scientifically managed distribution was of secondary importance. They chopped down forests, plowed up prairies, dug into the earth for minerals, and turned out new wealth in such volume that everybody was fairly prosperous even under our ruthless economy.

Nobody paid any attention to the relationship between the amount and price of the new wealth produced and the price and volume of wages and the amount of collective income. We had so much that it just wasn't necessary.

Labor complained and organized because it felt it was not getting its share. Farmers complained and organized to fight for a larger share of the country's prosperity.

Capital and industry and business generally organized and fought back to hold the advantages they had contrived to gain through privileges obtained from Government in the way of favoring laws. Management brains was on the side of the privilege seekers who did not hesitate to buy legislative brains when they needed such services.

Finally, however, when we had overrun the last frontier, when production of new wealth became stabilized and growth of population began to level off, our indifferent, lackadaisical economic system caught up with itself and we found ourselves in a heck of a fix.

Before we realized it we had a condition in which one-third of the population was "ill-fed, ill-housed, and ill-clothed" and economically beyond the point of self-help.

And all because the new wealth—the real wealth—we produce has not been equitably distributed. It has not been equitably distributed because it was not properly priced in the beginning. And our system of "gyp and gouge" has operated to despoil millions of their savings when they did manage to accumulate something. The problem has been further complicated by the growth of technology.

Let's see if we cannot get at the fundamentals of this thing and come to understand it better.

The process of creating wealth starts with the production of raw materials—crops, minerals, forests, fisheries, etc.—which are obtained from God's good earth. There is no other source of new wealth. We create additional value through the operations of labor, capital, and industry in processing, transporting, and merchandising the raw materials obtained from the ground.

Without raw materials, however, there would be no call for the services of capital, machinery, or labor. They would have no function to perform. If production of raw materials stopped, the whole process of creating wealth and adding value thereto would cease.

That is the most fundamental thing in our economy.

The producers of new wealth—the farmers, miners, fisheries and forestry workers—are also a dominant factor in the consumer market for the goods produced by capital, machinery, and labor in processing raw materials.

Agricultural production roughly represents 70 percent of all the new wealth called into existence each year, and, with about two-fifths of the Nation's population engaged in or dependent upon agriculture, farm buying power largely determines the industrial demand for minerals and other raw materials. It is the chief market for industrial goods and labor.

There is not—there cannot be—any disagreement of thought up to that point.

It is here, however, that thought divides, one faction or element contending that cheap prices for foodstuffs and other raw materials will result in a wider diffusion of processed goods and larger demand for labor, the other element or faction contending that higher prices for basic raw materials will increase primary buying power and therefore lead to greater demand for the products of industry and labor.

Up to this time in our history, however, we have alternately had high prices and low prices for basic raw materials and consequent instability of business of all kinds.

There has been so much confusion—so many complexes have developed concerning agriculture and the national attitude toward the materials of new wealth generally—Congress has been unable—or unwilling—to enact adequate stabilizing price legislation.

Neither statesmen nor economists have developed a formula for gearing the agricultural cogwheel to the mechanism of national economy which has as yet been expressed in law.

But such a formula is in the process of evolving and application. It will all come about within the course of months, a few years at most, because there is no other way out. It is a case of necessity, and necessity is the mother of invention.

In broad and simple terms it all comes down to this: A dollar of farm income yields a dollar of factory pay rolls and \$7 of national income. That simple equation supplies the base for the legislation the country must have.

The statistical record proves that simple statement beyond refutation. It is admitted and agreed upon by some of the Nation's most eminent economists and industrial engineers.

It becomes apparent then that the amount of primary barter credit we create each year depends upon two things, viz:

The number of units of new wealth produced—farm products, minerals, timber, fisheries, etc.—multiplied by the price per unit received for them by the producer.

A couple of examples will clarify that.

Suppose, for instance, that a farmer takes 1,000 bushels of corn to market and receives 80 cents per bushel, or \$800 for it. He thereby attains \$800 of barter power, he will have the means to satisfy \$800 of wants or to purchase that amount of the products of other men's labor.

In the very nature of things, as revealed by the statistical record, his \$800 would yield \$800 of factory pay rolls and, when turned over in the channels of commerce for a year, \$5,600 of national income which would be widely shared.

But, if the farmer receives only 40 cents per bushel for his corn, or \$400, he will have only \$400 worth of barter exchange with which to go into the market to purchase the goods produced by the capital and labor of other men.

Here is another example showing how the formula functions when applied to the whole Nation:

The Agricultural Yearbook for 1935 shows that in 1928 total production of all grains, corn, wheat, oats, rye, barley, and flax was 5,333,000,000 bushels and for 1932 it was 5,253,000,000 bushels and the production of other crops was about the same in both years.

Yet, in 1928, agricultural income was \$11,700,000,000 and factory pay rolls amounted to \$11,200,000,000 and national income was \$82,100,000,000; while in 1932 farm income was \$5,331,000,000, factory pay rolls amounted to \$5,500,000,000, and national income dropped to around \$39,000,000,000.

We produced approximately the same number of units of new wealth both years but in 1932 the price per unit fell to approximately half the price producers received in 1928.

Neither Republicans nor Democrats nor Socialists nor mugwumps can laugh that off.

We could fill pages with farm yield, mineral production, labor wage records, and national income figures covering year after year—since the statistics have been kept, in fact—to pile proof upon proof of the accuracy of the 1-1-7 formula.

So what? you say, and well you might say it.

The problem now becomes one of translating economic fact into terms of law—and that isn't so easy as it might sound to someone who never attempted it.

But it can be done and it must be done before there can be stable prosperity in the United States or in the world.

Whoever finally writes the legislation by which a proper price base for raw materials can be placed under the business operations of the Nation must cast out of his mind all the various complexes that have been developed to bemuse and confuse sound thinking.

And the first complex that must be discarded concerns surpluses. There is not now and there never was a surplus of the materials from which all forms of wealth are fashioned.

There is underconsumption, yes; but it is due to lack of consumer purchasing power and not because we have too much.

Wealth consists of things and there never will be too many things to satisfy human wants. Crops, minerals, and timber are only the materials of which things are made. To contend that we have too many things, or the materials of which things are made, is tantamount to saying that we have too much wealth—

And that's plain silly.

## Elimination of Stream Pollution

### EXTENSION OF REMARKS

OF

### HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

#### EDITORIALS FROM THE CINCINNATI ENQUIRER

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert the following editorials on the subject of the elimination of stream pollution from the Cincinnati Enquirer, one of the leading newspapers not only of the Ohio Valley but of the Nation, which carries at the head of its editorial column the platform of Cincinnati, Ohio, the first provision of which is as follows:

Building of a system for sewage disposal and use of all means to purify the Ohio, the Miamis, and other streams in the Cincinnati area.

To the Ohio Valley, as to many other congested areas of our country, the elimination of the stream pollution is a matter of supreme importance. There is a general desire in this section, as in the other affected areas, that some remedial legislation may be passed at this session of Congress.

The editorials are as follows:

[From the Cincinnati Enquirer of April 27, 1939]

#### THE SENATE ACTS

Another milestone in the march toward civilized regard for the purity of the Ohio River and its tributaries was passed yesterday when the Ohio State Senate approved unanimously this State's participation in the eight-State compact for the relief of stream pollution.

The action reflected an awareness, on the part of the whole State senate, of the broad issue of public welfare involved in putting the compact to work. It reflected also the individual effort of proponents of stream purification; to name one prominently active—Senator Fred G. Reiners, author of the bill.

Coincidentally the senate passed the bill of Senator Roy N. Merryman to qualify the authority of the State board of health with respect to mine drainage. This bill was made a companion measure to approval of the interstate compact in order to allay fears of Ohio mine interests that they would be severely affected by the campaign against pollution. Its passage does not materially diminish the satisfaction created by the senate's agreement upon the interstate compact.

The compact goes now to the house, where no opposition is expected. The representatives seem already to be impressed with the need for immediate action to relieve stream pollution, and Governor Bricker has given the measure his unqualified indorsement.

The completion of legislative action upon the bill at the earliest practicable moment is very much to be desired. Speedy approval by the house and the Governor would lend valuable impetus to the drive to clean up the streams which furnish the water of life to millions of people.

Cincinnati thanks the State senate for its appreciation of our plight and its agreement that the situation must be remedied now. This city will thank the house of representatives for undelayed concurrence.

[From the Cincinnati Enquirer of May 3, 1939]

#### ACTION AT WASHINGTON

Senate approval of the Barkley-Spence stream-pollution bill makes it reasonably certain that this important measure will be enacted at this session of Congress. Already it has been indicated by influential Members of the House that no obstacle to prompt approval will be interposed. Thus, the way is clear for one of the largest single steps in the campaign to cleanse the major rivers of the country.

By rejecting the drastic, coercive bill of Senator BENNETT CLARK, of Missouri, the Senate emphasized its preference for the principle of voluntary cooperation which underlies the Barkley-Spence bill. Thus, the Federal Government will make the maximum contribution to stream purification, without encroaching on the rightful jurisdiction of States and local communities.

The Barkley bill, now ready for action in the House, will give the Federal Government two major responsibilities in connection with stream purification. A new division of stream-pollution control will be created, to act as a clearing house for technical information on this problem. In addition, appropriations are authorized, to be used as grants-in-aid to local communities and industries, enabling them to install plants for treatment of waste.

In other words, the pending measure will use financial resources of the Federal Government as a stimulus to local governments, thus hastening the purification of streams by adding to the incentive of the municipalities. This is a sounder principle than attempting to give a Federal agency coercive power over cities and industries.

Now that definitive congressional action is certain within a month or two, it is all the more important that Ohio and other States of the valley should proceed quickly to carry out the implications of the interstate compact already negotiated. And it is likewise important that Cincinnati speed its plans for at least the first unit of a complete sewage-disposal system.

[From the Cincinnati Enquirer of May 6, 1939]

#### A NEW ERA DAWNS

After many decades of inaction and tolerance of constantly increasing stream pollution, remedial effort by the various States is becoming gradually more extensive. Including the Ohio River Valley Water Sanitation Compact, interstate agreements to control and correct the flow of sewage in four of the Nation's major river basins have been approved or under consideration in 15 States and the District of Columbia, according to a survey made by the Council of State Governments.

The Ohio Valley compact, on its way to ratification by Ohio and already approved by the Legislatures of Indiana and West Virginia, represents the most ambitious of the interstate antipollution undertakings. Intended to restrict pollution of the river throughout the entire Ohio River watershed, this compact was advanced as a safeguard of the health of the millions of people in

Ohio, Illinois, West Virginia, Indiana, New York, Kentucky, Tennessee, and Virginia who are dependent upon the Ohio and its tributaries for their water.

Meanwhile, West Virginia, Virginia, Maryland, Pennsylvania, and the District of Columbia have linked themselves in the Potomac Valley Conservancy District for the abatement of pollution of the Potomac River watershed, subject to ratification by the State legislatures. Four States—New York, New Jersey, Pennsylvania, and Delaware—have set up an interstate administrative agreement for the correction of pollution within the Delaware River drainage basin. In this case the State health departments are proceeding by agreement, and ratification by State legislatures is not necessary. Minnesota, North Dakota, and South Dakota have approved a tri-state compact for the prevention of pollution of the Red River of the North.

Compacts of this type, supplemented by the assistance of the Federal Government as contemplated under the Barkley bill recently approved in the United States Senate, provide ground for belief that the day of unrestricted pollution of American rivers has set, and in its place is dawning an era of proper regard for the purity of the streams we depend upon for the water of life.

[From the Cincinnati Enquirer of May 16, 1939]

#### GOING AFTER POLLUTION

The "floating laboratory" which the United States Public Health Service stream-pollution survey is placing in service on the middle third of the Ohio River this summer will be a highly valuable instrument for determining the sources and extent of pollution of the river. It should play an important part in setting up the factual foundation for the planned widespread attack upon pollution under the Ohio Valley stream-pollution compact and the supplemental aid of the Federal Government.

The chief value of the "floating laboratory"—converted to the purpose from a double-decked quarterboat of the United States Army engineers—lies in its mobility. It is equipped and manned to make exhaustive tests of the bacteriological and chemical pollution of the river at any point. This has a number of advantages, among them being the fact that samples of the water undergo changes in transit if they must be carried from distant points on the river to a laboratory station.

Plans for the use of the "floating laboratory" dovetail, however, with arrangements for an elaborate system of sampling stations. Nine regular sampling stations have been planned for use in the Cincinnati pool, dependent upon motorboat sample collection. Ten stations are scheduled for operation in the Huntington-Ironton section. The Maysville-Carrollton stretch of the river is to be studied more intensively than other sections of the river, since pollution conditions are acute here. Intensive study also is planned in the Huntington-Portsmouth stretch of the river.

The present pollution survey of the river, made possible by the Rivers and Harbors Act of Congress in 1937, differs from previous stream surveys in that it is addressed to the practical phases of river purification. It is aimed to provide specific data upon which remedial measures may be based. Thus it assures intelligent, coordinated action against pollution when the interstate machinery for its remedy is ready to begin functioning.

[From the Cincinnati Enquirer of May 20, 1939]

#### TIME FOR ACTION

Legislative action to pave the way for remedy of the pollution of the Ohio River and its tributaries is nearing consummation, thanks to a widespread recognition of the menace it presents to the health of the Ohio Valley's millions of residents. On two fronts—in the State legislatures and in Congress—action is being impelled by determination no longer to tolerate the use of the Ohio River as—to quote an official report—"an open sewer."

Most heartening to the cause of stream purification is the progress which has been made toward adoption of the Ohio Valley stream-pollution compact, designed to link the efforts of 8 States in curbing the abuse of the river. This week the Pennsylvania House of Representatives approved the compact by a vote of 204 to 0. Both branches of the New York Legislature have voted favorably upon the proposal, effective upon passage of the State's general appropriation bill. Indiana and West Virginia have completed ratification of the compact.

The stage is set now for final legislative action in Ohio. The bill to ratify the compact, previously approved unanimously by the State senate, is scheduled for consideration in the house of representatives next Tuesday. Members of the lower house, alert to the pressing need for action against the health menace, should send the measure to Governor Bricker without a dissenting vote. At the same time the house should concur in the senate action upon the Merryman bill qualifying the authority of the State board of health over mine drainage. Approval of this measure, regarded as harmless to the cause of stream purification, is designed to dispose of opposition to the interstate compact.

In Congress legislative achievement on the subject of stream purification also is near at hand. The House of Representatives is prepared to act upon the Barkley-Spence antipollution bill, which already bears Senate approval. The people of the Ohio Valley look to the various capitols—State and National—to see their health accorded long overdue protection. No legislator should wish to see them disappointed.

[From the Cincinnati Enquirer of May 26, 1939]

## MOVING ALONG

Only the signature of Governor Bricker is needed now to subscribe Ohio to the interstate pollution compact, thanks to the progressive spirit demonstrated by the general assembly in its almost unanimous approval of the Reiners-Deddens bill. Governor Bricker informed the Enquirer yesterday that he will sign the bill immediately. His activity in pressing for its passage deserves high commendation.

Ohio's ratification of the eight-State compact—an accomplishment in which the sponsorship of the Hamilton County legislators, Senators Fred G. Reiners and Representative W. H. Deddens, was highly effective—marks another milestone in the march toward a standard of tolerable purity of the Ohio River and its tributaries.

First Indiana, then West Virginia, then New York, and now Ohio have this year agreed formally to the terms of the interstate compact, and prospective action in Pennsylvania and Illinois extends hope that there will soon be valley-wide approval of the project.

The interstate compact, born of long study and conference, is designed to be an effective instrument in remedying the serious pollution situation which has developed in the Ohio Valley. It provides for a concerted program of State effort to curb the hitherto unrestrained pollution of the river and its tributaries. The benefit, naturally, will be accumulatively greater downstream, but the interstate compact recognizes on behalf of the States along the headwaters of the river that they are faced with a civilized obligation to the people of the lower river regions.

This is a factor in Pennsylvania's consideration of the pact. One official there sought to argue that the State should not undertake the expense of the stream purification program, since it was not extensively affected by the pollution of the river. It was to the credit of the Pennsylvania House of Representatives that they voted unanimously to support a more civilized attitude. The Ohio Valley now looks hopefully to the Pennsylvania Senate and Governor.

### For the Relief of the Anguished, Stricken, and Starving People in War-Torn and Martyred Poland

## EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

Mr. TENEROWICZ. Mr. Speaker, I am today introducing a joint resolution providing \$15,000,000 to relieve distress and starvation and prevent epidemics from spreading in war-stricken Poland.

The need for this appropriation at this time is imminent. At present there are about 150,000 people in the city of Warsaw alone who are starving. Warsaw is devastated. Sixty-five percent of the buildings in the city have been destroyed by fires and bombings. The consulate general at Warsaw is even now in the process of rearranging its files, which were damaged during the bombardment of Warsaw. Housing for this pain-wracked army of civilians is almost negligible in the face of this bitter winter season, and the coming of spring bodes no great hope, because unless medical supplies are gotten there in time, general epidemic may result.

Already the Poles of America have responded generously to the distress of their homeland. However, I feel that private contribution will not suffice in the face of this historic and colossal emergency.

House Joint Resolution 430

*Resolved, etc.,* That the President is hereby authorized, through the American National Red Cross or such agency or agencies as he may designate, to purchase in the United States and transport and distribute grain, fats, milk, and other foodstuffs and clothing for and adapted to the relief of the distressed and starving men, women, and children of Poland. That there is hereby authorized to be appropriated, to be expended under the direction of the President, a sum not exceeding \$15,000,000, or so much thereof as may be necessary for the purpose of carrying out the provisions of this joint resolution: *Provided*, That the President shall, on or before December 31, 1940, submit to the Congress an itemized and detailed report of the expenditures and activities made and conducted through the agencies selected by him under the authority of this joint resolution.

## Vermont

## EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

Mr. PATRICK. Mr. Speaker, there is a State in this country that goes by the name of Vermont. Vermont means "a green mountain," but that does not tell very much of the story. It is lashed on the west by a lake named Champlain—brother, do not leave off the "l"—and is lashed on all other sides by the New Deal. It produces Republicans, Yankee literature, community music, maple sirup, and a peculiar dialect. It is the most conservative State there is, and regards any new laws or revamping program with the same address and disdain that a staid family exhibits toward the accidental son of the family black sheep. If someone says, "You are Vermontish," he means you are as conservative as a turtle in a mill wheel. Vermont produced Calvin Coolidge, one man who, though conservative enough himself, had too much sense of advancement to submit to two terms as President of this country under Republican management.

There are so many rocks in Vermont that you can stand on any spot in the State and fill your apron without moving out of your tracks. This was ground for some foolish pun about Vermont being a rock-ribbed Republican State; but of course the rocks have nothing to do with it. You would like the Vermonters very much, whether or not you agreed with them. They are the kind of folks you refer to as the "salt of the earth," but they are not built for speed. They are great in their ideas of staying out of the ditch, but once in they are not worth a cent at figuring how to get out—and that is how that is. The idea the Vermonters have is that you should not bother any too much about the poor and the mediocre but should legislate only on behalf of the "right people"—and should do as little of that as you can possible get by on. When the old gospel of "root hog or die" was doing its stuff in the land it caught a deep hold in the make-up of Mr. and Mrs. Vermonter, and has been handed down to and through all the Green Mountain Boys who have since come and gone along. So we do not blame anybody; there is nothing we know of on this green earth that is more natural and honest than the conservatism of the Green Mountain people, and we are perfectly willing to accept nature as she stands. It merely means that, as lawmakers, it is up to the rest of us to prepare and administer to Vermont progressive and forward-moving legislation very much as castor oil is given to a 4-year-old boy—and for about the same reason. Selah.

## President Roosevelt's Message

## EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

## EDITORIAL FROM THE BLOCK NEWSPAPERS

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following editorial, which appeared in the Block newspapers of recent date in

which the President's message to the Congress is analyzed. This very carefully written editorial follows:

[From the Block newspapers]  
PRESIDENT ROOSEVELT'S MESSAGE  
(By Paul Block, Publisher)

We have always had high respect for the office of the President of the United States, but, at times, have found it necessary to disagree with the views and actions of various Presidents. In the case of President Roosevelt we have had to disagree frequently because of his apparent dislike of industry and businessmen. This attitude is most unfortunate, since it, more than anything else, is responsible for the lack of confidence in Mr. Roosevelt and his administration which businessmen have.

And so if we do not agree wholly with President Roosevelt's message to Congress, it is only because it seems so clear from his words that his greatest concern seems to be about the war in Europe rather than the serious economic problem which faces us at home.

We fully appreciate the gravity of the wars in Europe and Asia and their effects on our country and our people. Few will quarrel with the President's insistence on adequate defenses. Nor can we deny that complete isolation, as Mr. Roosevelt indicated, is unthinkable in a world where the relationship among nations is more intimate and more interdependent than ever.

It is rather on the means by which he proposes to pay for the needed defenses that we differ. Taxes added to the present burden will only work greater hardships on business and consequently produce greater unemployment among workers.

Could not the President have agreed that for every dollar spent for national defense a dollar would be cut out of the extravagant expenditures of the administration? Could he not have said, for example, that while there were approximately 500,000 persons employed in the executive branch of the Government when he took office there are now well over 900,000, an increase of some billion dollars a year in the cost of government? Could he not have promised to reduce his staff to its former size, urging Congress to use the saving for defense?

And if the President is so concerned about national defense, what is to be said of the condition in which the country enters a war period? Thanks to New Deal spending, the national debt is greater than ever before in history. Despite New Deal panaceas, millions continue without jobs. Certainly this is an unsound internal condition constituting a real obstacle to national defense.

Nor does our grave domestic situation make us any more secure against the intrusion of alien philosophies. As the President himself well pointed out, dictatorship gains a hold only when democratic action has failed. Should not war conditions therefore focus his attention more than ever on the prompt solution of our troubles here at home? To neglect them is to hide one's head ostrich-like in the sand just as much as the complete isolationist whom Mr. Roosevelt so effectively scored with the same comparison.

But perhaps the most controversial portion of the message was that which dealt with the reciprocal-trade treaties. My newspapers have already made plain their opposition to some of the harm created by these treaties and we have supported these views with facts and figures. Many, and especially the farmers, declare that the treaties have not helped our agricultural interests, as the President claims. During years when we were producing and destroying agricultural surpluses, we were importing the same commodities in increasing amounts from abroad. If the treaties are as flexible as the message indicated, why were they not sufficiently elastic to allow us to change our imports to commodities we do not produce in excess of our needs?

And what is the furious rush about these treaties, the "emergency" about which the President speaks? The usefulness of the pacts as forces for peace is certainly questionable. And since it has taken long months to negotiate many of the treaties, it would hardly seem ruinous to take the short additional time necessary to pass them through Congress.

For his eloquent appeal for national unity Mr. Roosevelt is to be praised. The plea, however, sits somewhat strangely on his tongue. We, with the President, abhor doctrines which set class against class. We agree that angry controversy wins less than calm consideration. But is he not the man who said he would bring business to its knees? Is he not the man who spoke of economic royalists? Does one not recall hasty remarks about a horse and buggy or an attempted purge meted out as the reward for independence?

Mr. Roosevelt could have proved the sincerity of his desire for national unity and recovery if he had announced in his message that the indictment and the threats against business which constantly come from the various branches of his administration would be postponed, at least temporarily. Had he done so he would have acted in the interest of both business and of labor, for as business is helped workers are helped as well.

If it has seemed that we disagree with much of what the President said, it should be remembered that we applaud him for his earnest devotion to the cause of peace and for his proper concern in our national defense. Only because we feel he has consistently failed to reach a solution of our first and most vital problem—national recovery—do we take exception to a considerable part of his message.

## Mr. Hull's Able Defense

### EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

EDITORIAL FROM THE CHATTANOOGA TIMES

Mr. KEFAUVER. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following editorial from the Chattanooga Times:

[From the Chattanooga Times of January 13, 1940]

MR. HULL'S ABLE DEFENSE

The basis of the fight against the Administration's reciprocal-trade program is political and economic, chiefly political. Two developments at the House Ways and Means Committee's hearing on Thursday are especially revealing; they showed first, that the facts are almost entirely with the administration, and especially with Secretary of State Cordell Hull, who defended the trade agreements program ably and, second, that group interests form an unenlightened amalgam which has as its front House Members who will try to use the devices of partisanship to make up for what they lack in information.

Under the Trade Agreements Act sponsored by Secretary Hull, the administration has negotiated 22 agreements with other countries covering about 60 percent of the total American foreign trade. Supporting Mr. Hull's statements as to what has happened to trade under those agreements is the prestige of his office and his own reputation as one of the best-informed men in this country on tariff matters. He is, to be sure, a low-tariff man. But in his present fight, he is armed with information showing that in 1937 and 1938, this country's exports to countries with which it has trade agreements increased 61 percent, while exports to "nonagreement countries" rose only 38 percent.

The charge of his opponents that imports increased during that period to the injury of American growers and producers can certainly not be supported if Mr. Hull is correct in saying that in the 2½ years after passage of the Smoot-Hawley Tariff Act, farm income fell from \$11,200,000,000 to \$4,700,000,000, and that, exclusive of benefit payments, it increased in the 5 years to 1938 to \$7,600,000,000. As a matter of fact, the Republican opposition and their Democratic associates have at no time seriously challenged Mr. Hull's figures with figures of their own on which anyone can rely.

Indeed, one of the complaints of the Republicans is that in his present fight Secretary Hull has all the governmental statistics-gathering machinery at his disposal. In other words, the Republicans feel the reciprocal-trade program ought to be wrong and unsound, and they are certain it has injured the country, but they cannot discover precisely where it has hurt or figures and facts which would support their contentions and their fears. Meanwhile Mr. Hull not only cites figures to prove his own contentions but also demonstrates that his opponents are "unscrupulous" in their "misuse of material facts."

For instance, Representative KNUXTON charged in a statement recently that cattle imports have increased 600 head under a particular change in the tariff rate. Informing the committee Thursday that the actual figure is 300, Mr. Hull expressed the hope that Mr. KNUXTON would withdraw his assertion, since it was inaccurate. Agreeing to do so, Mr. KNUXTON commented that "I know that in fencing with you we will have to be twice armed with facts." "With emphasis on the facts," Mr. Hull replied.

That exchange is by no means trivial. Crediting Mr. KNUXTON with having merely been uninformed, the position he took suggests the underlying fabric of the opposition. Whatever opposition exists is reflected by the statement of Representative TREADWAY to the effect that he is responsible not to one man (President Roosevelt) but to the people of his district, and that he will continue to hold his views, "especially since the elections are about to come off."

The political nature of the opposition provides the administration with an excellent opportunity to reeducate the American people on the subject of eliminating trade barriers. The admirable statement Mr. Hull made before the committee on Thursday, coupled with President Roosevelt's defense of the reciprocal-trade program in his opening message to Congress, indicates the administration will make a determined fight to preserve its program. Much more is at stake than whatever benefits accrue from reduced tariffs in the next few years. If this country attempts to withdraw into economic isolation behind high tariff walls, the inevitable result will be not only to set in motion the chain of circumstances and events which brought on the last world depression, but also to bar whatever hope exists that

the United States can take the lead after the present war in restoring the only sort of world economy in which either peace or a decent standard of living can be maintained.

### Financing the War Against Poverty

#### EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

Mr. VOORHIS of California. Mr. Speaker, the first step in keeping America out of Europe and Asia wars is to realize that we have a war of our own to fight. It is a war for democracy, freedom, and justice. It is the war against the dread specter of unemployment, the war to make possible plenty and hope. We cannot run away from this war and we cannot be neutral in it.

Basically our trouble is that our economy does not balance. We could produce abundance and all our producers would like to. We could consume abundance if our people had the money to buy it, but they do not. And one main reason is that a considerable proportion of the savings of the country does not go promptly into investment. People would like to invest, but they do not. The reason they do not invest, of course, is that they do not think it would be profitable. And the fundamental reason why it might not be profitable is because the consumer market could not today absorb the increased production without which new investment would be worthless.

So we are in a vicious circle and can only break it by bold and resolute action. For before this battle is won we must have all our people back at work, our industry running profitably, our farmers receiving their just share of income, and our older people must be retired on a decent national pension system.

Commenting on the President's message, the Philadelphia Record had the following to say:

If the administration decided to end unemployment—to fight the depression as other nations are fighting wars—and announced boldly that its policy shall be "a job for every American," our unemployment rolls would begin to vanish as if by magic.

The experience of Sweden proved that. Long before half the unemployed had been put on public-works projects, purchasing power of the nation rose to the point where private employers hired the remainder to manufacture the consumers' goods for which a demand had been created. Prosperity was bought and the price was cheap.

I agree with the Philadelphia Record. There is not one bit of doubt, in my mind, but that we can win this war. The first and most obvious thing to do is to revise and improve our tax structure. In my judgment, our taxes are today too light on money that is not spent or invested, on inheritances, and probably on individual incomes, and they are too heavy on money that is spent and invested; that is, on consumers and upon small competitive businesses. How stupid to tax consumers' purchases when the main thing we need is more consumer buying power.

And how necessary and just for us to secure funds for our own struggle against unemployment by taxing excess profits now being made by shipping American resources abroad for use in foreign wars. We should increase inheritance taxes, partly to secure more revenue and partly to check the trend toward monopoly.

A national pension system for the aged can justly be financed in part by a form of taxation where all will contribute toward their own future security. But to win our war requires a tax and pension system which can shift some \$6,000,000,000 annually from the pools of stagnant savings into the stream of active consumer buying power. General taxes cannot do this job.

Boiled down to its simplest terms we must do three things to win the war against unemployment and poverty.

First, increase the volume of credit actively available for competitive production and social investment and increase the volume of money in the hands of consumers of goods in sufficient amount to secure full production and full employment.

Second, establish and maintain a sufficiently effective and scientific tax program and pension and social-security system so that once full production has been brought about it can be maintained, with a balanced Federal Budget and a dollar of stable buying power.

Third, as soon as unemployment appears, put every unemployed person to work, creating needed social capital for public health, flood control, soil and water conservation, slum clearance, or national defense—hospitals, dams, highways, and schools.

#### FEAR OF DEBT OUR GREATEST OBSTACLE

The one serious obstacle in the way of this program, upon which the hope of democracy depends, is fear of debt. That fear must be removed. And I am convinced not only the fear but the necessity of increasing public debt can be done away with by a simple, sensible application of sound monetary principle. The Constitution says, "Congress shall coin money and regulate the value thereof." And the principle I would apply is that money should not be a commodity created at the price of increasing debt by private dealers in money, but a national medium of exchange to facilitate the transfer of goods from producers to consumers. Therefore, the volume of money in active circulation must bear a steady and scientific relationship to the flow of goods and services.

Whenever an additional volume of active money is required for the health of our whole national economy, that money should be created debt-free by the Congress instead of being borrowed into circulation by selling bonds to banks.

I do not believe for a single moment that either gold or any other type of backing is necessary to give the money of a great nation a stable value. The value of money depends simply upon the relationship between the volume of money in circulation and the velocity of its turn-over compared to the output of real goods and services. Nevertheless, there are still a good many people who feel that to back money with gold or silver makes it safer and sounder. We who believe in monetary reform can today meet those people on their own ground. We have at this moment \$1,500,000,000 of idle silver seigniorage lying in the Treasury. We have \$282,000,000 of completely idle gold in the same place. We have a stabilization fund of \$1,800,000,000, which is several times as large as is necessary, and of which at least a billion dollars could be put to better use.

In addition, by slight changes in the present law, we could replace all outstanding gold certificates with United States currency, which is really all the gold certificates amount to anyway, since the gold which belongs by law to the United States cannot be used for their redemption. Then on the basis of a 40-percent gold backing we could have available a credit or monetary base of many billions of dollars with which to finance the war on poverty. That is to say, if instead of requiring 100 percent gold backing, as now required behind gold certificates, we required only 40 percent gold backing, as is now required behind Federal Reserve notes, there would be abundant funds to finance this war on poverty, to secure a sharp increase in our production, and thus to bring our Budget into balance at a high level of production. Indeed, by this method, we would balance our Budget immediately by the simple process of making a constructive use of this gold for which the American people have actually paid so handsome a price.

These are the methods we should use to finance the war on poverty and unemployment. We should use them now.

America cannot go bankrupt financially unless we first go bankrupt spiritually. We have the greatest store of natural resources, the most skillful hard-working people, the finest governmental structure, and the greatest national tradition of any nation in the world. We have a Constitution which says Congress shall coin money and regulate its value. We also have over \$17,000,000,000 of gold which our people have

bought and paid for but which lies idle and useless in the Kentucky hills, while the Bureau of Engraving and Printing continues to grind out interest-bearing bonds on the same presses that could be turning out non-interest-bearing currency backed by the most ample reserve any nation has ever had in all the world's history.

But if, under these circumstances, Congress exercised the sovereign right of the Nation to create its own money, then the mystery of money would disappear, and no longer would the financial pundits be able to deceive the people into thinking that fiat credit created by banks is sound money while national currency created by the people's Government is not.

How tragic a thing it is that men's energies must go to waste, their children must go uneducated, and that even democracy must be put in jeopardy, all because we do not know how to write figures in books in the proper places, and because we let the wrong people write them down. The fear of the Lord is the beginning of wisdom, and I think we have reason to feel that fear so long as we permit this situation to continue.

### The National Defense

#### EXTENSION OF REMARKS

OF

HON. B. FRANK WHELCHER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

Mr. WHELCHER. Mr. Speaker, there is a matter to which I wish to call the attention of the Congress, and that, briefly stated, is the matter of national defense. Of course, I want it understood that we should now, as in the past, join forces with those peoples, or nations, that seek peace through treaty. This is desirable, and I favor it. But, we must not overlook the fact that a greater portion of the world today believes in the doctrine that force makes right. A number of the most powerful nations of the world believe, and practice, the doctrine of "let him take who has the power, and let him keep who can."

Facing a condition of this kind, it is the part of wisdom that we adequately prepare our national defense. You may ask, "Who is going to attack us?" I tell you that I do not know, but as just stated, there is, as the situation now stands, always a possibility of attack from some foreign power, and it seems to me that it would be better for us to arm on the possibility of attack than to remain unprepared on the theory that no one will ever attack us. This is just plain common sense. When war intrudes its unwelcome presence there is no substitute for preparedness, and with an adequate national defense, we can then state to the trouble makers of the world: "There is nothing over there that we want by way of aggression, and there is nothing over here you can get." They will understand this.

### Finland's Heroic Stand

#### EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

ADDRESS BY COL. FRANK KNOX

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Col. Frank Knox, publisher, the Chicago Daily News, at the dinner given by the Chicago chapter of the American-Scandinavian

Foundation in honor of His Excellency, Hjalmar J. Procope, Minister of Finland, Chicago, Ill., on January 12, 1940:

World history provides few great epics: The Greeks at Marathon; Sobieski and Hunyadi Janos at Vienna; William III and the Dutch against Louis XIV; Washington at Trenton; the Texans at the Alamo; and today the Finns in their heroic stand against Stalin's Russian hordes.

Each of these great epic struggles had tremendous consequences. Each marked a turning point in human affairs. An inscrutable Providence appears to permit the dark forces of reaction, the malignant power of brute force, the thrusts of benighted ignorance to extend their sway for a time, and then, in its own good time, it likewise provides a counterbalance. It raises up a race of men of heroic mold, superbly led, who, with incredible courage, smash their way to victory, and save human progress and civilization.

We are living through such an epoch right now.

We have, all of us, thrilled as we read of that meager band of Greeks who met the Persians beside the Aegean and saved that incomparable thing which was Greece for the ages.

Some of us have stood outside the walls of Vienna and swept with our eyes the field where stood Sobieski, the Pole, and Hunyadi John, the Hungarian, who flung back the Turkish horde that threatened a Christian civilization.

We have turned the pages of Motley's Rise of the Dutch Republic and felt something of the spirit of William III as he battled Louis XIV and gave a new meaning to liberty. What American is there who does not glow with patriotic fervor as history tells the glamorous story of Washington and his ragged patriot army, crossing the Delaware, to attack Trenton and make ultimate victory for the American Colonies certain? Who can read of the desperate band of Texan heroes who held the Alamo until the last one was sacrificed on the altar of country and not be a better patriot?

Today we read of Mannerheim and the Finns as they battle for their homeland in the snows of arctic winter against the conscript minions of a Stalin, with the same surge of admiration, the same thrill of pride in human courage, the same sense of epic achievement as that which flooded our hearts as we read of other heroes of other days.

No man may measure now the full significance of what is happening today on the border of Russia, where the fighting manhood of Finland is mobilized and where already thousands of Russians have fallen before the mighty prowess of a little nation, fighting for its own, armed with the courage that will not know defeat.

Already the guns of the Mannerheim line, the rifles of the skiing patrols, the machine guns that swept the frozen surface of Lake Ladoga, have punctured the fiction of Russian military power. The "red" army, apparently menacing as it marched in serrated ranks through the "red" square of Moscow, is shown to be a helpless, leaderless mob in the field, confronted by a determined, well-led, disciplined foe. No longer need the rest of the world fear Russia militarily—that bogeyman of international chancelleries has been vanquished by the resolution and the rifles of Finns, defending their country from spoliation.

Outnumbered fantastically, facing attack from the best troops that Russia could command, little Finland has made giant Russia give ground, until today, the Russians are driven back to their own lines on their own soil, and most of Finland is freed of the invader.

Your Excellency, Chicago pays homage to you as the splendid, typical representative of small but heroic Finland. We are honored to have you as our guest. We say to you that your brothers in arms who fight with Mannerheim and his commanders are fighting the battle of human freedom for all of us. We cherish the record you are making. We would aid you in every way that we can. Already a generous public is contributing to funds for Finnish relief. This will continue so long as your need may require. We delight to bring help and succor to those who cannot fight but only suffer behind your lines.

But some of us are not satisfied to give aid solely to your civilian population. We know that your land does not lack the ordinary needs of peacetime living. We know you for a self-supporting, self-respecting, self-contained people who pay your debts. But we know also the needs of that thin line of men with rifles and machine guns in their hands who man your trenches and face the full force of enemy fire.

We know these men need ammunition, need shells for their artillery, need planes to meet the attack from the air, need bombs for the planes to drop on enemy objectives. We know you want military material far more than you want food, or supplies for the civilians.

The American people, in my judgment, want their Government to find a way to help you win. If we can continue to supply 85 percent of the import needs for military uses of a Japan, using our American-made planes, equipped with American-made bombs, to ruthlessly slaughter defenseless Chinese women and children, surely we can find a way to help gallant Finland, fighting the cause of human liberty, confronting the red monster of communism against frightful odds.

Men will prate of neutrality, but how can we be neutral in our attitude when on one side we see a monstrous, tyrannical, bloody-handed dictator attempting to impose his will by brute force in order to destroy a free people; and, on the other side, we see a little nation of free men, outnumbered a hundred to one, fighting for their homes, their firesides, their national existence, and their liberties?

Shame on any American who can make himself be neutral in his thinking under such circumstances. He would be a poor American even for the defense of his own land and his own liberty.

There is a proposal now pending in Congress for the extension of a loan of many millions to your country. We helped you before with a sizable loan to help defray the cost of your fight for freedom a generation ago. You have met every obligation you then incurred, despite the fact that others, more able to pay than you, defaulted. We know your honor as a debtor, no less than we know your valor as a people. The granting of additional credits to you now will meet with overwhelming popular acclaim. And we must find a way to turn those credits into the military supplies you most need. In that way alone can we make our words of praise for your bravery truly meaningful.

Your Excellency, not Chicago, not Illinois, not just the United States, but the whole world, wherever men are free and prize their liberty; wherever liberty maintains its altars; wherever tyranny is hated and good will and peace are exalted; there you will find the friends of Finland. There you will encounter the sentiments to which I am trying to give feeble expression. There you will meet with the acclaim which the imperishable needs of your soldiers deserve. And everywhere you are honored as representing men who choose rather to die as free men than to live as slaves. Your cause cannot fail. We hail you victorious!

### The Rocks of Loose Fiscal Policy

#### EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

RADIO ADDRESS BY HON. ALLEN T. TREADWAY, OF MASSACHUSETTS, JANUARY 15, 1940

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over N. B. C. Blue Network—WMAL—Monday, January 15, 1940:

Good evening, friends of the Star Radio Forum, in his memorable economy message to Congress on March 10, 1933, President Roosevelt uttered the great historic truth which I have chosen for my subject tonight. On that occasion the President said:

"Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger." But have we avoided this danger?

Since 1933 Mr. Roosevelt has sent seven Budget messages to Congress. In turn, each has shown a huge deficit, each has added billions of dollars to the national debt.

Since the fiscal year 1932 annual Federal revenues have tripled, yet Mr. Roosevelt's seven Budgets to date show a combined net deficit of roundly \$24,000,000,000.

With the new Budget for the fiscal year ending June 30, 1941, we are approaching the statutory debt limit of \$45,000,000,000. And once more the Nation is asked to contribute new taxes—this time to the extent of \$460,000,000 a year.

Is it not, then, the patriotic duty of every citizen to inquire earnestly at this moment into the spending policies of the Federal Government?

The question is far above partisanship. For if we are approaching "the rocks of loose fiscal policy" against which the President so emphatically warned in 1933, the interests of every citizen is identical. Such a disaster would be no respecter of person, position, or party. In a very literal sense, we would all be in the same boat.

The dangers of reckless spending are known to the President. In his 1932 campaign he warned eloquently against these dangers. His words are worthy of repetition today:

"Now, the credit of the family depends chiefly on whether that family is living within its income. And this is so of the Nation. If the Nation is living within its income, its credit is good.

"If, in some crisis, it lives beyond its income for a year or two, it can usually borrow temporarily on reasonable terms.

"But if, like a spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxing to the limit of the people's power to pay, and continues to pile up deficits, it is on the road to bankruptcy."

With that statement there can be no disagreement. But how are we to square the record of these last 7 years with such strong warnings against fabulous spending? Are we to assume these self-evident truths of 1932 and 1933 are no longer valid? If that be the case, when did the historic fundamentals of public economy cease to operate?

But, of course, we cannot make so violent an assumption. For in every message, and often in the public forum, the administration

spokesmen have assured us that ultimately the Budget would be balanced.

First, we would have a balanced Budget when the "emergency" passed. But when the first emergency had passed a second was at hand, then a third. Whatever the nature of these successive crises, they were all alike in one important respect. The only possible solution suggested by the President was more spending, more lending, more taxes, more deficits, and more debts. Taxes were increased again and again, and still the deficits continued.

At length we were told that spending could not be reduced, but that, with business recovery, increased revenues would balance the Budget.

Now the President tells us frankly in his current messages, that although industrial activity has attained the boom levels of 1929, we still need \$460,000,000 a year in additional taxes to keep the 1941 deficit down to roundly \$2,500,000,000.

These facts all point clearly in one direction, namely, that the Federal fiscal program is out of control.

The one and only reason the Budget has not been balanced during the last 7 years is because the administration never has tried honestly to balance it, either by reducing expenditures to the level of anticipated revenues or by increasing taxes sufficiently to meet current outgo. Instead, those in authority have preferred to indulge the hope that eventually a rising national income would make possible sufficient revenue to meet expenditures. That is gambling with national solvency.

On this point, too, I may cite no less an authority than President Roosevelt, himself. In his stirring economy message of March 10, 1933, the President said:

"Upon the unimpaired credit of the United States Government rest the safety of deposits, the security of insurance policies, the activity of industrial enterprises, the value of our agricultural products, and the availability of employment. The credit of the United States Government definitely affects these fundamental human values. It therefore becomes our first concern to make secure the foundation. National recovery depends upon it.

"Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger."

No one can say exactly how much national debt a nation safely may carry. But history has demonstrated many times that every nation has a limit beyond which it dare not go. No nation can afford to gamble on this vital point. It can never be safe as a matter of public policy to see how close we might come to the absolute debt limit without overreaching it. In such a gamble the chances of a miscalculation are all too frequent; and a serious miscalculation could be disastrous beyond the imagination.

Wise policy demands, therefore, a reversal of prevailing tendencies in Federal finance. For, in the end, every national problem before us today—unemployment, agricultural dislocation, national defense, social security, even the preservation of representative government itself—all these problems reduce ultimately to the overall problem of orderly Federal finances.

The last 7 years have amply demonstrated that none of our other national problems can be solved on a sound and permanent basis so long as we continue to drift in the dangerous shoals of loose fiscal policy.

Mr. Roosevelt at one time acknowledged this fundamental principle. In a radio address from Albany, N. Y., July 20, 1932, he promised "an immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus, and eliminating extravagance, to accomplish a saving of not less than 25 percent in the cost of Federal Government."

At that time the Federal Government was operating on a Budget of \$4,000,000,000 a year. A reduction of 25 percent would have meant a Budget of \$3,000,000,000 a year. That was the promise.

But today the record shows that Mr. Roosevelt's seven budgets have averaged a little more than \$8,000,000,000 a year. Instead of a net reduction of 25 percent the Nation has been given a net increase of 100 percent annually in Federal expenditures.

Throughout these years only about 55 percent of these vast Federal expenditures have been covered by revenues. The remaining 45 percent have been financed through the increase of the public debt.

On the basis of the 1941 Budget, the end of the Roosevelt administration will find us with a national debt of \$347 for every man, woman, and child in the country, or approximately \$1,500 for the average family. The per capita debt in 1932 was but \$131.

At the moment the administration properly is building up our national defenses; but nothing has been done toward strengthening our most vulnerable flank—our fiscal position. Yet a strong fiscal position is no less vital to national security than adequate strength in arms and men.

While from the military standpoint we are today better prepared than in 1918, we are, from the financial standpoint, in a much more vulnerable position. At that time we had a national debt of only 1 1/4 billion dollars and we faced no difficulty in raising twenty-five billions during the subsequent war emergency. Today it would not be so easy to raise a comparable amount, when we already have a budgeted debt approaching forty-five billions.

In 1918 our sources of revenue were as yet largely untapped. Today they have been almost completely exhausted. Then we had no unemployment problem, no dislocation of business and industry, no farm problem. Today all these problems are with us, despite 7 years of New Deal panaceas and pump-priming schemes.

We can never achieve real national security or lasting recovery until our national finances have been put upon a sound basis.

The country was told repeatedly over a period of 5 years that great economies could be realized through reorganization of the executive bureaus and departments. About a year ago Congress passed a reorganization bill giving the President broad authority to consolidate and regroup the Federal agencies; and under that authority the President transmitted his first reorganization scheme to Congress on April 25, 1929.

In that message he predicted a saving of between fifteen million and twenty million dollars a year. But what are the actual results?

The answer is found in the official reports of the United States Civil Service Commission. These records show that during the first 4 months following the President's reorganization plan no less than 47,187 civil employees were added to the Federal pay roll.

To put it another way, employment in the executive branch increased from 885,766 on April 30 to 932,953 on September 1. Because of this hasty expansion of the Federal bureaucracy the monthly pay roll for the executive branch increased from \$133,000,000 in April to \$141,000,000 in August. Here is an increase of more than \$8,000,000 a month in the executive pay roll, or roundly \$100,000,000 a year—all within the space of 4 months in 1929.

That is a typical experience under the New Deal—a promised saving of \$20,000,000 a year in April turned out to be in September an actual increase of \$100,000,000 a year, with 47,187 persons added to the pay roll.

Such pay-roll expansion has been the unbroken record of the Roosevelt administration. As of February 28, 1933, the executive rolls carried only 563,487 names. To that pay roll the Roosevelt administration has added more than 370,000 full-time workers. Today the Federal pay roll carries, in peacetimes, approximately 20,000 more names than at the peak of the war expansion in 1918.

Such recurring evidence of runaway bureaucracy in the Federal establishment gives substance to the growing belief throughout the Nation that the New Deal administration is powerless to control its expenditures or to bring the Federal Budget into balance. This opinion, in turn, leads to a growing conviction that only through a change of administration may Federal finances be put in order and the Federal credit soundly protected.

Because it is obvious that Budget management is completely out of hand in the executive branch, it is essential that the Congress assume leadership toward sound fiscal management. A beginning in this direction has been proposed by Senator HARRISON of Mississippi, chairman of the Senate Committee on Finance. Senator HARRISON proposes creation of a special joint committee of the House and Senate to inquire into the whole question of taxes, spending, and deficits.

Such procedure was recommended by Secretary of the Treasury Morgenthau last year when he appeared before the Ways and Means Committee of the House. Such a joint committee, Secretary Morgenthau said, "would in effect be a lens through which all appropriation and revenue measures could be viewed in relationship both to what the Nation needs and what the Nation can afford."

I am gratified to note that active steps looking to the creation of such a joint committee have now been taken.

In connection with the President's proposal for \$460,000,000 in new taxes, the committee properly could inquire, first, how far we might go in reducing wasteful and unnecessary expenditures before piling on additional burdens of taxes.

The Federal tax structure already is oppressive and has been a serious drag on solid and sustained economic recovery.

Recent polls of public opinion show that 61 percent of the people favor less Federal spending.

With this fact before us it would seem a betrayal of the whole process of representative government to go on imposing new taxes and additional spending.

By evasion, by tricky devices of bookkeeping, and by some questionable methods of public accounting the New Deal has ignored public opinion on this great issue of reckless spending for 7 years. But the day of reckoning is approaching. America demands less spending.

The people demand relief from burdensome and crippling taxation. The country at large demands ordinary prudence and responsibility in the conduct of the public business.

Above all, the country demands honest bookkeeping and honest statements of account from year to year.

The joint committee might inquire also into the Roosevelt theory that huge Federal deficits are of themselves stimulants of recovery. Let us not forget that the highest national income ever enjoyed by this Nation was \$82,700,000,000 in 1929, at a time when our Federal Budget was less than half the New Deal average.

Why, we may ask, does Mr. Roosevelt assume that a nation may squander itself into prosperity? If that theory worked, would not every nation have adopted it long ago? And would not the whole world today be enjoying everlasting prosperity and peace instead of universal bankruptcy and war?

Indeed, the figures which disprove the squander theory are already at hand.

In the 10-year period 1919-29, this country spent an average of \$19,000,000,000 a year for durable goods—new plants, new equipment, new homes, new systems of transportation, and other such forms of capital goods.

But since 1933 our expenditures for this type of goods have averaged only about \$11,000,000,000 a year. We have, therefore, a deficiency of roundly \$8,000,000,000 a year for 7 years, or a combined deficiency in this New Deal era of \$56,000,000,000.

To put it another way, under the economic restraints of New Dealism we have managed somehow to get along with fifty-six

billion less of capital equipment than we would have purchased under normal conditions.

As an offset against this tremendous air pocket in our national economy, the Roosevelt administration has spent roundly \$28,000,000,000 in these 7 years for its theoretical recovery programs.

In short, the New Deal has driven out of the market \$2 of private buying and private investment for every Government dollar spent in "priming the pump."

We see, therefore, that with all its fabulous spending and all its reckless ventures, the New Deal actually has replaced in terms of purchasing power only about half of the spending it has driven to hiding through its destructive policies against private enterprise.

How long, at this rate, will it take to get our 9,000,000 unemployed back to work?

A week ago tonight President Roosevelt boasted in his address before the Jackson Day dinner here in Washington that he had achieved a happy state of immunity against public criticism. His words well may prove of great historical significance. He said:

"And when you have learned not to worry about all these things, there is really a lot of fun in this job."

Perhaps that honest confession explains in some measure the fiscal policies of the New Deal over the last 7 years.

Certainly the prodigious spending of public funds without thought of taxes or debts is a very enjoyable enterprise—particularly if no sense of deep moral responsibility to the next four or five generations mars the fun.

But there is more to sound public finance than an attitude of imperious indifference to public opinion on the part of the Chief Executive.

And that is the grave problem which confronts the Congress today.

Federal finances are out of control.

Federal spending is on a runaway basis.

Federal bureaucracy is rampant, headstrong, always grasping for more and more power over the daily lives of the people, and for more and more from the Public Treasury.

Against this situation, a sense of faithful public service and proper administrative responsibility somehow must be mobilized. If the engineer has taken his hand off the throttle and is on a care-free joy ride with the Federal taxing power, then Congress must undertake seriously to interpose some measure of public responsibility.

President Roosevelt's formal abdication of official responsibility for sound fiscal policy marks a dangerous failure of government.

Such is the record of these 7 years. After strong campaign pledges to economy and lower taxes, Mr. Roosevelt has given seven successive deficits.

He has piled up a mountain of debt which mortgages the future of 30,000,000 American families for a century to come.

Every year under the New Deal has brought more Federal taxes, and every year of New Deal economy has brought a larger Federal pay roll.

When and where shall this runaway bureaucracy be brought under control?

At the present rate of production, our national economy cannot carry more taxes.

If order and stability are to be achieved in Federal finances, they are to be achieved only by a curtailment of extravagance, waste, and reckless squandering.

This can be accomplished. But it can only be accomplished under some other administration. The New Deal has demonstrated through 7 years it has not even a will to balance the Budget.

In conclusion, therefore, I call upon the President and every officer of his administration once more to heed the warning uttered by Candidate Roosevelt in 1932, when he said with such force and eloquence:

"Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger."

## Actions Speak Louder Than Words

### EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

Mr. WOODRUM of Virginia. Mr. Speaker, a few days ago in presenting to the House the emergency supplemental appropriation bill for the strengthening of our national defense, in commenting on the necessity to hold down expenditures and try to begin on a program that will ultimately lead to a balanced Budget, I said it would take "more than words." That definite affirmative action was called for. As I have been somewhat active among those taking such a stand, I hope I may with pardonable pride, and to keep the record straight, here record some actual accomplishments along this line.

I am chairman of the subcommittee handling the independent offices appropriation bill.

At the request of the gentleman from Colorado, Chairman TAYLOR, I have acted as chairman of the deficiency subcommittee. During this present Congress—that is, the first session of the Seventy-sixth, which began January 1939, and up to the present time, I have conducted hearings and managed on the floor of the House and in conference 13 appropriation bills. This includes the emergency deficiency bill which has just passed the House, and the independent offices bill, which is presently being taken up in the House.

With exception of the 2 latter bills, the 11 bills passed in the first session have become laws.

The 11 bills in the first session which have finally become laws, when they were reported to the House by the committee, involved something around four and one-half billion dollars and included not only regular items for post offices, pensions, and so forth, but eight hundred and seventy-five million deficiency for relief in 1939, as well as nearly two billion for the 1940 relief program. These 11 bills, when reported to the House, were two hundred and eighty-six million plus—lower than the Budget estimates—and when and after they had passed the Senate and finally become law were eighty-two million plus under the Budget. So there is eighty-two million definitely accounted for.

The emergency deficiency for defense which has just passed the House is seven million plus under the Budget.

The independent offices bill just reported to the House is in the aggregate about a billion dollars. As reported it is ninety-four million plus under Budget estimates. These two bills show a potential decrease of another fifty million—or in the present session up to date a decrease under the Budget in these bills of \$183,000,000.

In addition to these specific and definite savings, it is fair to call attention to the greatly reduced Budget item for relief in 1941. The estimate for the next fiscal year is approximately \$1,125,000,000, as against almost twice that much in the current year. Many of us feel confident that the constructive work done by the W. P. A. investigation, over which I presided, had much to do with making possible much of the reduction. Evidence at hand shows the reforms written into the current relief act have taken many undeserving off the rolls and spread the available funds much further among the needy.

The Budget just presented to Congress by the President, if adhered to, will reduce the national deficit in the fiscal year 1941 to one billion seven hundred million, as against four billion in 1940, the current year. That would be an accomplishment of which the executive, legislative, and administrative branches of the Government could be proud.

Yes; it takes more than words to do the trick.

### That Our Nation May Survive

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

Mr. THORKELSON. Mr. Speaker, there is an oriental custom of settling debts on the first of the year. This may very well be employed by Members of Congress to square up and set right such publications as, for some reason best known to themselves, presume to revile Members with whom they do not agree.

I believe the American people are beginning to appraise the evil of a national press owned or controlled by enemies of the United States. No one should forget those who lost their lives in the World War and the part our un-American press played in alining us with England. We, the people,

should not forget how we were deceived by false propaganda and distortion of news published then, as now, in a press that does not dare to come out and tell the truth; a press that dares not commend a person who expresses faith in the fundamental principles of this Republic, but will, instead, lend its pages to unjust personal attacks and abuse of anyone who exposes those engaged in sabotage of government and industries; a press that is held in no greater esteem by the craft itself than the toast which I now quote:

#### CHOKING THE PRESS

Mr. ———, a former editor of a New York paper, at the annual press dinner, in 1920, held in New York City, when toasting the independent press, said:

"There is no such thing in America as an independent press, unless it is in the country towns. You know it and I know it. There is not one of you who dares to write his honest opinions, and if you did, you know beforehand that it would never appear in print. I am paid \$150 a week for keeping my honest opinions out of the paper I am connected with—others of you are paid similar salaries for similar things—and any of you who would be so foolish as to write his honest opinions would be out on the streets for another job.

"The work of the New York journalist is to destroy the truth, to lie outright, to pervert, to vilify, to fawn at the foot of Mammon, and to sell his race and his country for his daily bread. You know this, and I know it, and what folly is this to be toasting an independent press.

"We are the tools and vassals of the rich Jews behind the scenes. We are the jumping jacks; they pull the strings and we dance. Our talents, our possibilities, and our lives are all the property of these men. We are intellectual prostitutes."

This was 20 years ago and the press is less free today than it was then. Let me quote another comment:

What is the first duty of the press to the Nation that endows it with freedom?

Isn't it to guard jealously such a state, since only that endowment makes it possible for the press to live and function?

When such a free press fails to perform that patriotic duty, isn't it a traitor to the state that created it?

And doesn't it destroy itself?

Hasn't the national press of the United States failed in loyalty to the people's representative republic by allowing its facilities to be used to give aid and comfort to communistic enemies working for the overthrow of the Government?

Our press is free—to betray us. It hides the news instead of broadcasting it. It clogs the channels of publicity with anti-American propaganda. It sells its columns to an alien enemy. Judas-like it betrays its Creator for 30 pieces of advertising silver, and like Judas commits suicide.

The truth of this is self-evident and is as appropriate today as it was 20 years ago. The daily press and magazines are now attempting to arouse hatreds by publishing atrocity stories and British propaganda, as they did in 1916 and 1917, which were later found to be pure fabrication. We must therefore be careful to properly estimate the value of all news by considering its source. We have absolutely nothing at stake in Europe and a gradually decreasing interest in the Orient, which will be entirely abolished in 1946, when the Philippine Islands receive their independence.

All the war talk now going on in Federal departments and the requests for wartime power are an attempt to consummate Federal control over our industries. If this is granted to one department, others will ask for the same, with the ultimate result that we will be working under war regimentation. This is what the administration wants, and it is what Congress should not grant. It is also a subject upon which the people should express themselves in a most forceful manner. The invisible government's owned and controlled press will, no doubt, attempt to popularize the song *Onward Christian Soldiers*; and I say, let us sing it, but let us march against those invisible rulers in our Government who are now engaged in bringing about our destruction.

Nothing can be said in defense of the anti-American owners and editors of magazines and daily papers who, in their attempt to please these masters, designate those who select to respect their obligated duty to this Government as anti-racial, anti-Semitic, Nazi, and Fascist. Those who profess Christian faiths should not be led astray nor allow themselves to be influenced by such malignant propaganda that originates in minds black with hate.

To better define Semite, I quote from Webster's International Dictionary:

SEMITES—NL (Semita fr. LL Sem, Shem, from Gr. SEM):

1. One of the descendants of Shem.  
2. A member of a Caucasian race, now chiefly represented by Jews and Arabs, but in ancient time including also the Babylonians, Assyrians, Aramaeans, Phoenicians, and various other peoples in southwestern Asia. Cf. Semitic languages.

The term "Semite" is used both in an ethnological and in a linguistic sense. As originally employed by J. G. Eichorn at the close of the eighteenth century, it embraced the peoples grouped in Genesis x as the sons of Shem. Since, however, it has been ascertained that the peoples thus grouped do not belong to one or even to allied races, the ethnological application of the term "race" has been modified to designate a race distinguished by the following features: Dolichocephalic skulls; curly and abundant hair; slightly wavy or straight strong beard, the color predominantly black; prominent nose, straight or aquiline; oval face.

Jew—Original: One belonging to the tribe or Kingdom of Judah; after the return from the Babylonian captivity, any member of the new Hebrew state; hence, any person of the Hebrew race or people or anyone whose religion is Judaism. The Jews of today do not uniformly reveal a pure Semitic type, but show evidences of intermixture in the various countries where they dwell. As a rule, they are shorter than the native population and, especially in northern Europe, more brunet.

This definition is clear and furnishes information that may be employed to clarify this discussion. The Jew is a descendant from the tribe of Judah, and his religion is Judaism. The Arabs are the descendants of Shem, inhabit Arabia and Egypt, and their religion is Mohammedanism. Inasmuch as Mohammedanism and Judaism have never been mentioned, religion is not involved in this controversy.

The term "antiracial" can refer to every nation in the world, and for that reason is so ambiguous that I shall defer my remarks on this.

The term "anti-Semitic" is used by the Communist Jew to mislead the people and protect himself. It may be compared to a communistic Norwegian using the term "anti-Scandinavian" to mislead the people and protect himself. Both terms, as I have inferred, are employed to mislead the public, a red herring used by the Communist. If either is a Communist, it would be much more honorable for him to say anti-Jew or anti-Norwegian, instead of using the general designation including other people in the same race classification.

The fact is that the Jews themselves are anti-Semitic, for they are now fighting in Palestine and Arabia against the Arabs, who, of course, are Semites. The only anti-Semites in the United States are those who are now furnishing money and war material to the warring Semitic states of Arabia and Palestine. I have always looked upon these appellations with indifference, for I realize all of them are employed by the Communist Jew as a cloak to shield his own subversive activities. However, the irresponsible manner in which these unwarranted accusations are tagged on to patriotic American citizens leads me to quote from a book by J. Soltin, *The Struggle Against Anti-Semitism*, published by Jewish Buro of the National Committee, Communist Party. This pamphlet is the text of a report delivered at the National Conference of Jewish Communists held in New York, December 24, 25, and 26, 1938:

We, Jewish Communists, have to render account to ourselves concerning the contributions we have made through our work among the Jewish masses toward the accomplishment of this great task of the present moment. The Jewish Communists must be in the front ranks of the fighters for a constructive program in the unions that will create harmony among the workers in the industry. We, the Jewish masses, have a particular reason to be among the warmest and most devoted friends of the Soviet Union. If we should regard the Soviet Union from no other than the Jewish standpoint, every Jew would find himself in the ranks of the friends of the Soviet Union, for the example set by that country to the nations of the world in solving the Jewish question is of inestimable value. In the Soviet Union, the condition of the Jews is constantly improving. It is the only country where the welfare of the Jews rises in the same degree as the welfare of the entire country, where the culture of the Jewish masses is in the midst of a mighty upsurge. The Soviet Union is building Biro-Bidjan as the future Jewish Soviet Republic despite great difficulties. \* \* \*

We base our approach to Jewish culture squarely upon the teachings of Lenin and Stalin, which are already being carried out in the life of the Soviet Union, where national cultures of peoples, among them also Jewish culture—socialist in content and national in

form—are being built with greatest devotion and enthusiasm. We heartily appreciate President Roosevelt's decision to prevent the deportation to the Hitler inferno of the 15,000 German and Austrian refugees who are now in this country on tourist visas. But we maintain that our country can and should contribute more than this toward the solution of the refugee problem. We must insist that the age-old American tradition of asylum for all victims of political and religious persecution be revived. We must insist upon a liberalization of the immigration laws so that the quotas from the Fascist countries are raised and the unused remainder of the quotas for other countries be made available to refugees. \* \* \*

We Jewish Communists have not, however, taken full advantage in our daily work of the influence and prestige of our party among the Jewish masses. Knowing that a great, strong Communist Party is the strongest bulwark for the Jews, and all oppressed groups, against the attacks of all their enemies, we have not done enough to build our party among the Jewish masses. We have not exerted enough effort to convince the most militant elements among the toiling Jews to recruit them as members of our party. We are neither aliens nor guests in America. In a country whose people "are descended from immigrants and revolutionists," as President Roosevelt aptly put it, all national groups, including the Jews, have contributed their share, and consequently have a right to enjoy everything created by our American civilization and culture. The American Nation, forged through generations of struggle in a New World, is not a nation of Nordics or Anglo-Saxons. Every conscientious American historian emphasizes the fact that America is the greatest "melting pot" of peoples and races who joined hands to build a new country where they might enjoy the fruits of their labor.

I shall not waste many comments on this quotation, but I believe it is well for the writer to bear in mind that this country was developed from the grass roots to the magnificent structure we now have by a people that subscribed, first, to Christian philosophies, and, second, to the fundamental principles of this Republic. I, with many others, was privileged to come here, to take my place and join hands with other patriotic Americans to maintain the civilization we now have and under which we have enjoyed the blessings of liberty. No one is asked to come to the United States to build a new country, and certainly no people are asked to build a national group of their own, for that leads to dissension and antiracial agitation. I believe the majority is satisfied with this country, the country we have had until the new planners came in with their own philosophies, spreading dissension and hatreds.

However, the article which I have quoted identifies the source of the many appellations which are employed by this self-identified group of Communists, to cast ignominy upon those who denounce communism. It is from this source that the words "antiracial," "anti-Semitic," "Nazi," and "Fascist" originate.

I have often wondered why those who support the fundamental principles of this Government are smeared and ridiculed by a people that by their own statement, "cannot assimilate." I quote from *You Gentiles*, by Maurice Samuel:

We cannot assimilate: it is so humiliating to us that we become contemptible in submitting to the process; it is so exasperating to you that, even if we were willing to submit, it would avail us nothing. A century of partial tolerance gave us Jews access to your world. In that period the great attempt was made, by advance guards of reconciliation, to bring our two worlds together. It was a century of failure. Our Jewish radicals are beginning to understand it dimly. \* \* \*

We, Jews, we, the destroyers, will remain the destroyers forever. Nothing that you will do will meet our needs and demands. We will forever destroy because we need a world of our own, a God-world, which it is not in your nature to build. Beyond all temporary alliances with this or that faction lies the ultimate split in nature and destiny, the enmity between the game and God. But those of us who fail to understand that truth will always be found in alliances with your rebellious factions, until disillusionment comes. The wretched fate which scattered us through your midst has thrust this unwelcome role upon us. Wherever the Jew is found he is a problem, a source of unhappiness to himself and to those around him. Ever since he has been scattered in your midst he has had to maintain a continuous struggle for the conservation of his identity.

I respect the frankness of the author but I cannot believe that his expressions are approved by or even are fair to those of his own race who are willing to join hands with other American citizens as individual units to promote the general welfare of all the people. No one in becoming a citizen is asked to change his identity by intermarrying or even by

changing his traditional customs. As a matter of fact, we have many nationalities in the United States today who intermarry among their own people, speak their native languages, and observe their own customs, yet, in spite of that they assimilate with other American citizens.

However, the author states the case fairly, for it is the continual struggle of this communistic minority to conserve identity by enforcing its own philosophies and customs upon the majority that is responsible for Jewish migration. This is borne out by the fact that there are 200 national and over 300 State organizations in the United States that promote and operate in the sole interest of this minority, at the expense of all the people in the United States. Of these 200 national organizations, 166 are located in New York. The philosophy under which this group operates is clearly expressed by Justice Brandeis in his book *The Jewish Problem—How To Solve It*, copyright 1934:

Let us all recognize that we Jews are a distinct nationality of which every Jew, whatever his country, his station, or shade of belief is necessarily a member. \* \* \* Organize, organize, organize—until every Jew in America must stand up and be counted—counted with us—or prove himself, wittingly or unwittingly, of the few who are against their own people.

One may well ask, What does the Justice of the Supreme Court mean when he classifies his own race as a "distinct nationality"? Does he mean to infer that they are not a part of the American people? Why must they "stand up and be counted" and "organize" in America, and why must those who choose to remain with the American people be looked upon as "against their own people"? Statements like this are responsible for world dissension. It is a statement that never should have come from Justice Brandeis or any other Justice of the Supreme Court or any other court in the United States of America.

I may say, at this point, that it is this attitude on the part of the communistic Jews which is the underlying cause for Jewish migration, for no majority of gentiles will ever submit to an overlordship, be they Jews or any other race. Progress in the world has been carried forward under Christian leadership on the principles advocated by the Nazarene, who came from Galilee and not from Judea.

Before I begin my discussion on Nazi, allow me to give a brief sketch of Europe and particularly Central Europe. The Zionist headquarters and the home of the Jews have for several centuries been located in Germany, now in New York. It was there the Jew enjoyed most favorable and pleasant surroundings. He controlled money and the power of gold, and therefore the military and industrial structure of Germany. In the secret report on the Balfour declaration, issued by Mr. S. Landman, February 22, 1935, and March 1, 1935, he admits that the greatest obstacle to American aid in the World War was the pro-German sympathy of the American Jews. It was for that reason Justice Brandeis' help was needed. Quote:

#### ZIONIST MOVEMENT AS THE KEY

Malcolm said further: "You are going the wrong way about it. The well-to-do English Jews you meet, and the Jewish clergy, are not the real leaders of the Jewish people. You have forgotten the existence of the principle of nationality. Do you know of the Zionist Movement?"

Sir Mark Sykes admitted comparative ignorance of Zionism, and Malcolm continued, "You can win the sympathy of Jews, everywhere, in one way only, and that way is by offering to try and secure Palestine for them \* \* \*."

Malcolm pointed out the influence of Judge Brandeis of the American Supreme Court, and his strong Zionist sympathies. If Sir Mark Sykes could obtain from the war Cabinet an assurance that help would be given toward securing Palestine for the Jews, it was certain that Jews in all neutral countries, especially the United States, would become pro-British, and pro-Allies. This appealed to Sir Mark, but he saw grave difficulties. In the first place, France was counting on the Sykes-Picot Treaty. France would have to be persuaded to support the idea of Palestine for the Jews. Then there was the Vatican (Sir Mark himself was a Catholic), which would not support a scheme which meant placing the Christian holy places under Jewish control. Malcolm replied that these difficulties must be overcome if the Allies wanted the help of the United States. Palestine meant Jewish support, which was becoming increasingly necessary.

The invisible rulers of England lived up to their reputation and so did their brothers in Germany. The English war

Cabinet, for the loan of gold and aid to involve the United States in the World War, betrayed the Arabs and forced Colonel Lawrence to repudiate a promise, which he had made to them for their help, in fighting for England against the Turks and Germans in Arabia and Egypt. Through Zionistic influence the communistic Jews in Germany, in collusion with others in France, England, and the United States, sacrificed Germany for 30 pieces of Palestine silver, and so lived up to their tradition of 2,000 years ago. This is not all, for if our own officials will consult intelligence reports of the past 25 years, they will find that secret aid was given by financial communistic Jewish interests in New York through the Rhein-Westphalian Syndicate, Nya Banken in Sweden, and other financial institutions to Kerensky, Lenin, and Trotsky for sabotage of the Russian Army, and, as I have said before, to promote communism in Russia. At the end of that revolution, the Russian Government became and is now ruled and dominated by communistic Jews, with the exception of Stalin himself, who is a Russian Communist. All atrocities and the unwarrantable sacrifice of innocent people must be charged first to those who furnished the money, and, second, to four of the most vindictive destroyers the world has ever known: Stalin, Lenin, Trotsky, and Bela Kun.

I shall now briefly compare the three dictators.

Mussolini has banished the Communists, the Maffiosi, and communism in all shades and forms. He has not attacked or destroyed churches or interfered with sacred worship. To him private initiative is the primary interest, and he favors private enterprises employing fewer than 500 persons. Mussolini is a democratic dictatorial leader.

Hitler has eliminated the Communists, consolidated Germany and German industries under Government supervision. He has tried to restore the former boundaries of Germany, with partial success. He has destroyed communistic meeting places. From reports there is no evidence that the Germans have abandoned Christian worship or forsaken their churches. It is, however, well to bear in mind that socialism is the philosophy of Karl Marx and Engels, and Germany is a national socialistic state. Hitler is the dictator of Germany.

Stalin has banished practically all Christians from his Government, destroyed all Christian places of worship, openly denying Christian worship. I do not believe there is a complete record of the lives that have been sacrificed, but the score is high. The Third International, a newspaper published in Moscow, admits Bolshevik responsibility for the loss of the following lives:

One royal family and 7 innocent persons, 28 bishops and archbishops, 6,775 priests, 6,575 teachers, 8,800 doctors, 54,850 officers, 260,000 soldiers, 150,000 police officers, 48,000 gendarmes (detectives), 355,250 intellectuals, 198,000 workers, 915,000 peasants.

Stalin, as the records show, liquidated the officers of the Russian Army, and the result of this is clearly evident in the present Russian fiasco in Finland, for an army cannot be led to victory by communistic sausage makers, except at a great sacrifice. I sincerely hope that the white or Christian Russians will join the Finns to fight the Russian Communists, for they can then even the score of the past 20 years. There can be no peace in the world until communism is eradicated and its rulers rendered innocuous. There can be no peace in Russia until majority rule is established or until the Russians themselves eliminate the communistic oligarchy that now controls the Government.

I have in my possession a number of letters which on examination of the officers and board of directors reveal a predominant Jewish background with a sprinkling of gentiles to give the organization a nonsectarian appearance. Not even one of the members has said, "I love and honor this Republic, and I am opposed to the Communist and to communism in all forms." The names on the letterheads are generally well known and are more or less prominent in organizations which promote race dissension. The sole aim of these deceptive organizations is to combat anti-Semitism, nazi-ism, fascism, and what they designate as "antiracial." It is unfortunate that Christian teachers and clergy allow their names to be used in organizations that advocate hatreds, which is so diametrically opposed to the teachings of Christ. It should be

clear if these self-appointed fighters for "human rights" would subscribe to the fundamental principles of this Republic as laid down in the Constitution of the United States they could disband tomorrow, for they would then be in complete accord with those whom they arbitrarily designate as anti-Semitic, antiracial, Nazi, and Fascist.

I shall now quote one of these letters from the Nonsectarian Anti-Nazi League to Champion Human Rights. This organization was founded by Samuel Untermyer in 1933. Its championship of human rights consists in declaring "Nazi Germany is an enemy of civilization. Refuse to trade with the enemy." There are over 700 similar organizations in the United States:

SEPTEMBER 11, 1939.

Now that war is being waged against Hitler, the fight against nazi-ism must go on with even greater energy and determination.

Recently Nazi-inspired incitements to racial hatred in our country have become so serious that our league is now leading the fight against the so-called Christian Front and others. We must be constantly on guard against the great danger that may soon confront the American people by a unified front of all those who directly oppose democratic government and rule their own people through barbaric dictatorships.

In order to be fully efficient, our bureau of propaganda investigation has been increased fivefold to expose Nazi lies and ties. Hundreds of thousands of our leaflets, *What Is the Coughlin-Inspired "Christian Front,"* are distributed weekly at Coughlinite and other street mass meetings. Our legal committee is constantly in action against their organized thuggery and violence. That our work is successful is best proved from the lips of the enemy, as, for example, when Fritz Kuhn testified before the Dies committee that "the Non-Sectarian League is persecuting me."

Our league is now raising a special fund of \$250,000 to finance a Nation-wide campaign to combat "Naziphobia" and its activities in the United States, and also to enlighten the public at large to show them that any form of dictatorship means slavery, destitution, and complete destruction. We must stop nazification.

The war has made the emergency much greater. We appeal to you to stand by us by contributing as generously as possible, so that together we can wipe nazi-ism off the face of the earth.

Please mail us your contribution immediately. Accept our thanks and gratitude for your cooperation and generous support.

Very truly yours,

PROF. JAMES H. SHELDON,  
Chairman, Board of Directors.  
SIMON M. GOLDSMITH, Treasurer.

I now claim that this letter and other quotations furnish incontrovertible evidence that the communistic Jew and his sponsors are anti-Americans, who disseminate racial antagonism and hatreds which may bring about internal strife. The fact that these people advocate "fight," and then bring in the Christians, no matter what group, is an open attack on the great majority of American people, and can only lead to "barbaric dictatorship" by this minority group. This letter also reveals premeditation, for their own bureau of propaganda investigation has been increased fivefold. It also shows that their own legal committee is interfering with article I of the Bill of Rights, by distributing their own leaflets interfering with free speech. Furthermore, the letter alleges interference with the normal process of the law, in its reference to Mr. Kuhn and the Dies committee. The letter further reveals that this league is raising \$250,000 for a campaign which can only promote and increase racial hatreds. It also shows collusion and fraud in that it uses the present war in Europe as an incentive or emergency to collect money in a deceptive manner. This money they allege will be used to wipe national socialism off the face of the earth.

The strange part of all this is that Dr. J. L. Magnes, whom I shall soon quote, admits that the Jews are Socialists and the founders of nazi-ism.

The attitude of the members in these groups is dominated first by their own philosophy—socialism—and second, by personal hatred of Hitler. With this I take no issue, because it is their own business. I, with many others, sympathize with Finland at the present time, and I am also denouncing the Government of Russia. That is my personal opinion, that I with others have a right to express. I realize, however, that I have no right to organize or finance groups through which I may visit my personal hatreds upon the Russian people—people who may be innocent—because of my dislike for the Russian Government. I also recognize that I have no right to advocate boycott and persecution of innocent people to satisfy a personal grudge, and it is an enemy act to declare

a nation with which we are at peace "an enemy to civilization." Such activities by any group are embarrassing to the Government of the United States and unfair to the majority of our people as they may actually furnish cause for war. Why any private group, like the nonsectarian and other organizations masquerading under charitable names, should be permitted to operate its own intelligence service, is a question that should be investigated by Congress. It also may be well to investigate where these groups get the money to run their own governments within the United States.

It is the overbearing attitude of these groups that is responsible for much of the dissension that confronts us today, for they attempt to enforce their own minority views not only on the majority, but even on the Government itself.

In order to make this clear, I shall quote from a speech given at the first Jewish Labor Congress, January 16, 1919, at New York City, by Dr. J. L. Magnes:

The Jewish people, traditionally and through its experience, knows the meaning of internationalism, and it must apply the method of internationalism to its own national life as well, sharing the destiny of every people, free and oppressed, in freeing the world in order that it itself may be free. \* \* \*

It was Friedrich Julius Stahl, a born Jew, who laid down the classical theory of the German Nationalstaat based upon conservative Christianity and the politics of power. It was Benjamin Disraeli who is the father of the latter day Tory democracy of England. Just so, when the Jew gives his thought, his devotion, his spirit, to the cause of the workers and of the dispossessed, of the disinherited of the world, the radical quality within him there, too, goes to the roots of things, and in Germany he becomes a Marx and a Lasalle, a Haase and an Eduard Bernstein. In Austria he becomes a Victor Adler and a Friedrich Adler; in Russia, a Trotzky.

Just take for the moment the present situation in Russia and in Germany. The revolution set creative forces free, and see what a large company of Jews was available for immediate service. Socialist revolutionaries and mensheviks and bolsheviks, majority and minority Socialists—whatever they be called; and I assume that it is not a question at all at this moment of agreeing or disagreeing with anyone of them—Jews are to be found among the trusted leaders and the routine workers of all those revolutionary parties.

It is interesting to note that the speaker claimed the credit for the German Nationalstaat, or the National Socialistic Government of Germany. That is recognized, but why do they now shout "Nazi" at their own creation? Rabbi Magnes says:

In Germany, now that the first free glow of the revolution is passing, the anti-Semites are beginning to talk of the "Judendemo-kratie." Suppose anti-Semitism does lift its ugly head in Germany and the Jews there and here and everywhere be made to suffer because of the prominence of Jews in the glorious German revolution. \* \* \*

Among the world's great revolutionaries and servants and dreamers of new heavens and a new earth are the Hebrew prophets.

It is also known that the same crowd of communistic Jews set up the Russian Government: Lenin (Goldman), Trotsky (Bronstein), and Bela Kun (Cohen). And it is they and their communistic associates who are the Russian Government and responsible for all the atrocities committed both in Russia proper and in Siberia. I was particularly interested to read an article which appeared in the Washington Post last Sunday, January 14, 1940, describing the life in one of these prison camps. It is hard to believe that such inhumanity can happen even in Russia, in spite of the fact that the government is communistic.

However, the speaker also recognized that he does not express the sentiment of all his own people, for he says:

There are some among us who say that we ought not to admit this, because it will lead to anti-Semitism. I answer, What if it does?

In other words, this rabbi did not care, but was perfectly willing to bring about what he and his own people complain of today, "anti-Semitism," or anti, or racial antagonism. The sole responsibility for this must therefore be assumed by those to whom I have referred in this discussion because they stand convicted by their own books and speeches.

I believe the American people are charitable and willing to share the good things that they have with all people. But is it too much to expect in return from those people their compliance with the fundamental principles of our Government? Is it too much for the American people who pay the expenses of this Government to ask Congress to allow them to be secured as fully as the international financiers? Is it fair to

leave the American people with inflated currency and give the gold-secured currency to the international financiers? Is it fair for this group, after having been so secured, to use the power of this gold and credit to force their wishes, the minority wishes, upon the great majority of the American people who are in reality the creators of the structure in which we live?

I realize that through certain international influences much pressure is employed by foreign nations to compel America to open her doors to European refugees. But is it not the first duty of Congress to protect the people it represents, the people who work, pay the expenses, and die in the defense of this Nation? And is it not well for Congress to consider the facts which I shall now set forth, before more immigrants are permitted to enter the United States, particularly when we bear in mind that we have approximately 12,000,000 unemployed, or 20,000,000 unemployed or on part-time employment?

Let us now compare the areas, populations, and density of population in several countries now headlining the papers:

	Area in square miles	Population	Density of population per square mile
Union of Soviet Socialist Republics.....	8,095,728	170,467,068	21
French Republic.....	4,900,101	113,284,436	23
Finland.....	147,761	3,834,662	25

Germany.....	225,568	79,600,000	352.7

<sup>1</sup>Estimated.

You may find it illuminating to examine this table. We have next to the highest density of population. Germany has 352.7 persons per square mile, and we have an average of 41.3 persons per square mile. But that is not a valid reason why we should open our doors to the Communists expelled from Germany and Italy.

The question may be asked: Why should the British Empire, France, and other European nations urge the United States to open its doors to these fugitives? If these deportees are undesirable to Britain, with a density of 31, to France, with 23, and to the U. S. S. R. with 21, they are much less desirable to the United States, with a density of 41.3. This is particularly true in view of the fact that many of these emigrants have criminal records.

Has the Department of Labor enforced the immigration law? No, for there is no evidence of it. This is clearly evident in the recent Harry Bridges fiasco, which was nothing but a whitewash for a Communist, and the Secretary of Labor knows it. This neglect of duty and violation of the law is not only cause for action against the Secretary of Labor, but should, if Congress has the interest of the people at heart, terminate in removal of all officials involved in protection of the Communists.

I admit that I suspected the sincerity of the Dies committee in its investigation of communism, and my suspicion was clearly justified in the early investigation, for no effort was made to investigate the Communists or their hired gentle front. The recent articles released in the Liberty Magazine, by the gentleman from Texas, MARTIN A. DIES, shed much light on this investigation, and identify those who attempted to shield the Communists by directing investigation into barren fields. I appreciate Mr. DIES' position, for he had to choose between "Rome and Caesar." He was obligated to perform a sworn duty on one hand, and to please a leader on the other, an unfortunate position indeed for the chairman of a committee to which his country had advanced \$100,000 to learn the truth.

The gentleman from Texas [Mr. DIES] also appeared to be confused in his use of the terms "fascism" and "nazi-ism," and indeed this is not strange, for these terms are intended to create confusion. After considerable uncertainty he finally corrects himself in these remarks:

Many people have overlooked the fundamental and important fact that nazi-ism, fascism, and communism are offshoots of Marxism. Hitler, Lenin, and Mussolini borrowed the fundamentals of their

cults from Karl Marx, the greatest expounder of the philosophy of materialism the world has yet produced.

Marxism, as applied in Germany, is disguised under the name of nazi-ism; in Italy it masquerades as fascism; and in Russia it is communism. But fascism, nazi-ism, and communism are merely different cults of the same pagan religion of materialism and godlessness as enunciated by its chief and most illustrious apostle, Karl Marx.

Mr. DIES then describes his difficulty in organizing his committee and the effort he made to secure the help of the F. B. I.:

I particularly asked J. Edgar Hoover and the Department of Justice to assign to our committee investigators to assist us in conducting the investigation.

Much to my surprise, the heads of the Departments refused to comply with my request and with the resolution of the House of Representatives. They did not even take the pains to assign a good reason for refusing to carry out the wish of the House of Representatives.

In other words, the Department of Justice and the F. B. I. dealt the gentleman from Texas [Mr. DIES] a hand from a "cold deck," for their interest was not in exposing communism but was instead to prevent exposure of this un-American tribe. Is it any wonder that the people are sick and disgusted with this crowd of paid subversionists? The gentleman from Texas [Mr. DIES] now finally begins to understand, for he makes this statement:

It was beginning to dawn on me what the committee was up against. The executive branch of the Government refused to carry out the expressed wish of the House of Representatives contained in the resolution authorizing the investigation.

In the second installment in January 1940, Mr. DIES relates a conference, from which, after discussing the committee's investigation with the President, he draws this conclusion:

There was but one construction that I could place upon the President's conversation, and that was that he expected me to lay off the C. I. O. and devote most of the investigation to fascism and nazi-ism.

It was now clear to me that if I persisted in my determination to expose communism, especially as it existed in the C. I. O. and certain so-called liberal organizations, I would incur the wrath and displeasure of my own administration.

This was not long in manifesting itself. Administration spokesmen, such as Madam Secretary Perkins and Harold Ickes, began to ridicule the committee as witch hunters and "red baiters." Newspaper columnists in Washington who are known to be close to the administration took the hint and joined in the campaign of ridicule and abuse which was largely directed at me. The whole radical press broke out in what appeared to be a concerted drive to destroy the investigation in the very beginning.

The criticism to which the gentleman from Texas [Mr. DIES] refers comes from the Communists and communistic publications, and is the same filth that has been employed to smear and ridicule all patriotic groups that attempt to expose communism.

Now, what are the facts? The Department of Justice finished an investigation of the German bunds in the United States, in the early part of 1938, and reported in 1939. This report fills 14 volumes, and may be found in the Department of Justice. I was interested in this investigation, and inserted a complete résumé of the report in the CONGRESSIONAL RECORD July 19, 1939. Is not it a bit strange that the President should insist that the Dies committee cover the same field in its investigation that had been covered by the F. B. I. only 8 months previously? Why did not the F. B. I. make this report public? Why was it not given to the Dies committee? Why is not the Department of Justice investigating the Communists instead of investigating the mail and magazine subscriptions of patriotic private citizens? Have we reached the point where the Communists in the Government are so powerful that orders are given to the F. B. I. to persecute loyal citizens, who are now giving their time and effort to restore sound government? If this is true, and it seems to be, is not it time that Congress itself begin to investigate these paid employees who in neglecting their obligated duty aid our enemies in sabotage of the Government?

Those who are inclined to pass by this issue lightly should scrutinize the records of the Socialist, the Bolshevik, and the Communist and observe the destruction that these carriers of evil philosophies have brought about. Their road to rule and

ruin is paved with skeletons, and their history is written with the blood of innocent Christian men, women, and children. It is the duty of all who have obligated themselves to preserve, to protect, and to defend our Government to inform themselves and warn the people of these destroyers who are now actively engaged in our midst.

The recent report of the F. B. I., in which they, in an underhanded manner, intend to convey the impression that the Christian people are engaged in destruction of their own Government, is an insult to the intelligence of our people. Why do not the Department of Justice and the F. B. I. investigate the non-Sectarian League and its seven or eight hundred affiliates that are engaged in spreading dissension and hatreds? Why does not the Department investigate the many other Jewish organizations, set in a gentile frame, that are engaged in the same activities of spreading dissensions and hatreds, not only in their books but through the mail? It should also be of interest to the Department of Justice and Intelligence Departments that the personnel of these anti-American organizations are interlocked with 516 listed Jewish organizations, and God only knows how many more. This is a fruitful field for income-tax inquiry, because there are funds in New York City that pay for this propaganda, and the Justice Department should investigate these and collect their income taxes.

No one can deny that great injustice has been visited upon many patriotic citizens who have come out clearly and fearlessly in defense of our Government and for the welfare of our people. The fact that these communistic commentators resort to character destruction and personal abuse instead of intelligent criticism is no more than what may be expected of them. They, no doubt, realize that it would be dangerous to ridicule the principles under discussion, and such liberty on their part would not sit well with the American people who are opposed to subversion and destruction of their Government.

The subjects of these vindictive attacks are, of course, at a disadvantage for not having access to the daily press; they must tolerate this criticism as a part of the game. I am, however, sure it is a sacrifice all patriotic citizens are willing to endure if it can only restore sanity and soundness in the Government.

On the first reading of these remarks it may appear that I have been too frank in my expressions. With that I shall take no issue. The point to bear in mind is that this discussion is based, not upon my opinion, but, instead, upon the published statements of those I have discussed. I am not asking for anything new. I am instead imploring you to preserve, protect, and defend the Government which has carried you safely for 152 years. It is yours—the soundest, the most practical and liberal government any nation has ever had, and I appeal to you to protect it with your life, that we and our Nation may survive.

### Political Privileges in Public Office

#### EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

ARTICLE BY H. ELIOT KAPLAN

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article by Mr. H. Eliot Kaplan entitled "Political Privileges in Public Office." There being no objection, the article was ordered to be printed in the Record, as follows:

#### POLITICAL PRIVILEGES IN PUBLIC OFFICE

(By H. Eliot Kaplan)

The approval by President Roosevelt of the Hatch bill on August 2 released a great deal of loose talk about the futility of any law which attempts to curb pernicious political activity among governmental employees. Equally loose thinking was indulged in by the misinformed and uninformed as to the right of the Congress to impinge upon the political privileges of civil-service employees under our democratic system of party government.

That President Roosevelt saw fit when signing the Hatch Act to issue a long statement of explanation of what the new law does and cannot do, attested to the general concern with which not only the general public but public employees viewed the implications of the law. The principle of the Hatch law was well expressed by the President in this short paragraph:

"In applying to all employees of the Federal Government (with a few exceptions) the rules to which the civil-service employees have been subject for many years, this measure is in harmony with the policy that I have consistently advocated during all my public life, namely, the wider extension of civil service as opposed to its curtailment. \* \* \* It is my hope that if properly administered the measure can be made an effective instrument of good government."

#### PROVISIONS OF THE LAW

What are the provisions of this law which has caused so much discussion in political circles and among political scientists, students of government, public employees all over the country, legislators, and editors? Specifically in connection with Federal funds or activities the law forbids:

- (1) Intimidation or coercion of others for the purpose of interfering with their votes in national elections.
- (2) The promise of employment, compensation, or other benefit as a reward or consideration for political activity or the support of or opposition to any candidate or party; and the deprivation of such employment, compensation, or benefit (including work relief) on account of refusal to give such support.
- (3) Levying of political assessments on or soliciting contributions from persons paid from relief funds.
- (4) Disclosure of the names of persons receiving employment or benefits from relief funds to any political candidate, committee, or campaign manager.
- (5) Use of funds appropriated for relief or for public works for the purpose of interfering with the right of any individual to vote as he chooses at any election.
- (6) Use of official authority or influence by any administrative or supervisory officer to interfere with an election or influence its results.
- (7) Activity in political management or political campaigns on the part of any person employed in an administrative or supervisory capacity.

So far as concerns the employees in the Federal executive civil service, actually all that the Hatch law does is to extend to the entire Federal civil service the prohibitions against political activity, political coercion, and solicitation of campaign funds which under the civil-service law have long been applied to persons in the competitive service. Indeed, these prohibitions would already have been applied to more than 90 percent of the employees excepted from the civil-service rules since 1933, had they not been kept out of the competitive service by acts of Congress under the plea of emergency.

#### BACKGROUND OF THE HATCH ACT

Restrictions on the political activities of public officeholders are not new or even recent. Such restrictions were applied to certain public officials, such as judges, court clerks, and police officers, long before the civil-service laws were adopted. These inhibitions were invoked either by statute, administrative rule, or as part of a code of ethics in actual practice.

The earliest civil-service laws prohibited political considerations in appointments and promotions, and prohibited political assessments of employees in the competitive (classified) service. Beyond these inhibitions the earlier laws did not go. But even before civil-service laws were considered, political statesmen appreciated the necessity for keeping the political activity of public employees within reasonable bounds. As long ago as 1801 Thomas Jefferson in attempting to stop electioneering by governmental employees had the following order proclaimed by the heads of the Federal departments:

"The President of the United States has seen with dissatisfaction officers of the general Government taking on various occasions active part in elections of the public functionaries, whether of the general or of the State governments. Freedom of election being essential to the mutual independence of governments \* \* \* so vitally cherished by most of our constitutions, it is deemed improper for officers depending on the Executive of the Union to attempt to control or influence the free exercise of the elective right. \* \* \* The right of any officer to give his vote at elections as a qualified citizen is not meant to be restrained, nor however given, shall it have any effect to his prejudice; but it is expected that he will not attempt to influence the votes of others nor take any part in the business of electioneering, that being deemed inconsistent with the spirit of the Constitution and his duties to it."

Even Andrew Jackson as early as 1812 wrote to President-elect James Monroe:

"The chief magistrate of a great and powerful nation should never indulge in party feelings. His conduct should be liberal and

disinterested; always bearing in mind that he acts for the whole and not a part of the community."

In 1841 Daniel Webster, then Secretary of State, issued at the direction of President Harrison an order prohibiting political activity by Federal employees. In 1887 President Hayes issued an order against political activity of Federal employees and prohibiting political assessments. President Cleveland in July 1886 issued an Executive order forbidding political activity of employees in the Federal civil service, but lacking statutory authority, its application to employees outside of the competitive civil service became difficult to enforce.

#### ACTION BY T. R. ROOSEVELT

Later President Theodore Roosevelt, augmenting the Executive order of President Cleveland, sought to differentiate between classified (competitive) and unclassified employees. He required a much stricter compliance on the part of the classified employees, but believed that for most employees in the unclassified service, who were viewed as political appointees, the restriction should be modified so as to preclude the unclassified employees from engaging in offensive or pernicious political activity, and to prevent the unclassified employees from coercing the political action of the classified employees.

Under the Executive order of President Franklin D. Roosevelt, of June 24, 1938, active participation of a classified employee of the Federal Government in political management or in political campaigns is specified as one of the causes for which the Civil Service Commission may request the Comptroller General to withhold payment of salary.

#### RESTRICTIONS ON EMPLOYEES

It is section 9 of the Hatch law that is of particular interest to the civil-service employees. This section will be interpreted, undoubtedly, as similar to the civil-service rule against political activity. The latter has long been construed as prohibiting the following activities by Federal employees, directly or indirectly, in National, State, and local politics:

- (1) Candidacy or service as a delegate to any political convention.
- (2) Service on any political party committee, or holding political-party office.
- (3) Organizing or conducting political rallies.
- (4) Making political speeches.
- (5) Soliciting or helping to get out votes, or soliciting political campaign contributions.
- (6) Service as an election official.
- (7) Publishing any statement or letter for or against any political party, candidate, or faction.
- (8) Organizing or leading political parades.
- (9) Distributing political campaign literature.
- (10) Running for nomination or election to any public office.

The potency of the old political-activity rule of the Civil Service Commission had been greatly diluted by the extensive exemptions from the competitive service made by the Congress since 1933. Prior to the Hatch law we had the anomaly of 550,000 employees restrained from political activity, while at the same time such activity was permitted for more than 300,000 others. Most of the latter positions were in the same departments or agencies as the former, and the types of positions were quite similar. If the political restraint were sound for part of each department's staff, it was equally sound for the other. It is difficult to see how any departmental staff could be freed from political influence or coercion when so large a portion of the employees were permitted to indulge in political activity. This is particularly so when we realize that the excepted class of positions would normally have been in the competitive service had the positions not been excepted because of emergencies.

#### ATTITUDE OF EMPLOYEES

Many leaders of the civil-service employee groups are of the opinion that the Hatch law seriously abridges the inherent citizen rights of civil employees. Others pretend to be greatly offended by this "denial" of equal rights of citizenship because it interferes with their own game of exploitation of the civil service for selfish purposes. It is doubtful, however, whether the rank and file of public employees have any serious objection to such restraints. Most of them welcome the law privately, although for strategic reasons they appear publicly to be against such restrictions. Take, for example, the experience in New York City with the new law against employee contributions to political campaigns. When the provision was first proposed in the new charter a few years ago the employees were alarmed at the intrusion upon their "political rights" as citizens. In reality the employees supported the law at the polls largely because of the new "freedom" the new charter held out to them. Today none of the employees in New York City shed tears over their legal inability to make campaign contributions to political war chests. The same reaction will follow the application of the Hatch law.

The argument against permitting political activity among public employees was cogently expressed by Theodore Roosevelt when he was on the United States Civil Service Commission:

"A man in the classified service has an entire right to vote as he pleases, and to express privately his opinions on all political subjects; but he should not take any active part in political management or in political campaigns, for precisely the same reasons that a judge, an Army officer, a Regular soldier, or a policeman is barred from taking such active part."

When he later became President he did make a distinction between those serving in the classified and unclassified services, claiming that the latter, appointed for political reasons and having to do

with the determination of political policies, should be excepted from that rule. He never advocated the exception of routine administrative positions from the political-activity rule. There is no doubt what his stand would have been on a measure like the Hatch law. Indeed, the very nature of the Government service today, with the new social agencies created under the welfare and economic programs during the last decade, calls more than ever for impartial administration of these agencies, and elimination of undue political activity has now become imperative.

#### PROBLEM OF INTERPRETATION

In seeking to abridge the political activity of public employees, some legislatures undoubtedly will go to extremes. Little distinction, it is feared, will be made between the right of employee groups to support or oppose issues in which they may be directly and vitally concerned and their support of or opposition to a particular candidate deliberately opposing or favoring their cause. The issue may not directly, or even indirectly, involve the political party itself. How is the distinction to be made?

Equally difficult will be the problem of distinguishing between public expression of employee attitudes on nonpartisan policies by responsible representatives of the employee organizations and prohibited political activity. Where does the former end and the latter begin?

These problems are not easy of solution, and the line may be difficult to draw. It would seem, however, that both prudence and practicality will largely contribute to and determine the solution. So long as the actions of the employees or their representatives are not offensive to the public; so long as employees can justify concerted action because the issue involved peculiarly and directly affects their interest; so long as their participation does not become pernicious and obtrusive, the public will pay little attention to them. Like all disciplinary laws, the rigidity of enforcement of the Hatch law will depend on the public's attitude, which in turn will depend on the conduct of the employees and the sagacity and good faith of the politicians.

#### RIGHTS OF EMPLOYEES

The right of public employees to engage in political activity on the same basis as is accorded to all other citizens has been a topic of discussion among political leaders, public employees, and members of the legal fraternity. Often they rush to the conclusion that any such inhibitions against public-employee participation is in violation of our fundamental law—diametrically opposed to the Bill of Rights, the Magna Carta, and even the Sermon on the Mount. Not infrequently our political scientists add to the confusion by their failure to distinguish between the relationship of the State to its citizens generally and the relationship of the employee to the State.

The validity of laws restricting public employees from engaging in undue political activity or making contributions to political-party campaign funds has often been attacked by the uninformed. They fail to appreciate that the rules against political activity are not discriminatory in a legal sense; that they affect equally all persons within the classification of public employees. These laws do not deprive the employees of "fundamental" rights. They leave the employee free to vote as he pleases and to express his views privately. They do, however, prevent persons while in the service of the Government from using their official positions and money contributed by the public for the benefit of any political party.

#### ATTITUDE OF THE COURTS

The right of the Congress or the State legislatures to provide any reasonable restrictions on the activities of public employees, including prohibitions against political activity, has long been recognized by the courts. The United States Supreme Court has sustained the power of the Congress to prescribe rules of conduct for officials and employees of the Federal Government (*United States v. Wurzbach*, 280 U. S. 396). As long ago as *Ex parte Curtis* (106 U. S. 371) the power of the Congress to provide any reasonable conditions for public employment was clearly recognized by the Court. The right of the State legislatures similarly to prescribe conditions for employment by the State has been upheld (*Atkins v. The State of Kansas*, 191 U. S. 207; *People v. McCullough*, 254 Ill. 1, 98 N. E. 156; *McAuliffe v. Mayor of New Bedford*, 155 Mass. 116, 29 N. E. 517; *Gianatasio v. Kaplan*, 257 N. Y. 531).

The issue of prohibiting political activity of employees of the State was squarely decided by the Supreme Court of Oregon in 1931 in the case of *Stowe v. Ryan* (296 Pac. 857), where the court upheld the action of the civil service commission of Multnomah County (Portland) in removing an employee from office for violating the State law prohibiting employees from engaging in political activity. It was urged upon the court that such prohibitory statute was unconstitutional, as it deprived the employee of certain rights as a citizen of the State. It was attacked also as invalid class legislation, and repugnant to the Bill of Rights provisions of the Federal Constitution. The Oregon court sustained the power of the State to prescribe the conditions of service and the rules of conduct for its officers and employees to the extent that it may become necessary to promote efficiency and integrity in the discharge of their duties and proper discipline in the public service.

In the light of these decisions there can be little doubt of the validity of legislation prohibiting political activity or political contributions on the part of public employees, whether elected, appointed politically, or serving as a result of competitive tests.

#### WHAT THE PUBLIC EXPECTS

In discussions of this subject much attention has been given to the inherent political rights and privileges of employees. Unfortu-

nately little attention has been given to the rights and welfare of the public. The public is obviously interested in having the employee do his work well; in having the employee give his time and energies to the public service, not to tasks designed to benefit political organizations. Our taxpayers can hardly be expected to be enthusiastic over compensating employees for political service, rather than for public faithfulness. Nor would the public be enthralled by the spectacle of officers and employees in the public service wrangling among themselves in political factional fights, party conventions controlled by public officeholders, and political clubhouses run by public employees. Moreover, from the public employee's point of view, undue political activity invites political reprisals and results in friction and hardship to the employee himself. It is difficult to see how legitimate activities of public employees will suffer under the Hatch law. The law will hardly be construed or applied as prohibiting organized employees from protecting their rights or interests in matters directly affecting their own working conditions, grievances, and general welfare. If this may be viewed as wishful thinking or implied winking at strict and rigid legalistic interpretation and construction of the Hatch law, let us be reminded that even in application of law there is still practicality and wisdom.

#### WISDOM OF THE HATCH ACT

With the tremendous growth of our public services and the placing of new responsibilities on Government, with its regulatory and supervisory powers over private business and our new social services, the need for nonpartisan, impartial administration becomes increasingly imperative. Patently, the wisdom of the Hatch law prohibiting undue political activity of public employees can hardly be challenged.

We must take away from those who are manning our administrative agencies the right to influence unduly, if not actually to interfere with, our free elections, if our democratic system is to succeed and the free will of the people is to be made known. Democracy will succeed only if this problem can be adequately solved by proper integration of our political-party system and an impartial, disinterested public service.

### Dare We Break the Vicious Circle of Fighting Evil With Evil?

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

ADDRESS BY DR. HARRY EMERSON FOSDICK

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered on February 19, 1939, by Dr. Harry Emerson Fosdick:

For some of us it is easier to believe in the Christian theology than in the Christian ethic. A generation ago many were saying, "We cannot believe your Christian ideas of God, but the ethical principles of Jesus are the hope of the world."

Today, however, it is the ethical principles of Jesus that are difficult.

By the Christian ethic I mean no mere ordinary, humane decency, loving those who love us, but rather the radical, sometimes incredible, demands of Jesus that we love our enemies, that if smitten on one cheek we turn the other also, or if compelled to go 1 mile we go 2 instead, that we do good to those who hate us and pray for those who spitefully use us and persecute us. There is the rub today.

The reason for this is the extraordinary vividness with which a powerful temptation assails us all, the temptation to resist evil with evil. When on the western prairies a conflagration starts, men fight fire with fire, burning a swath across which the advancing flames cannot leap. What is thus well done in the physical world we are continually tempted to do in the moral world. We fight evil with evil.

#### WE COPY THOSE WE HATE

In war, if one side uses poison gas, the other side may at first be horrified, but in the end we all succumb. It takes poison gas to fight poison gas. If one side uses conscription, which is of the essence of dictatorship, the other side, being a democracy, at first is shocked, but in the end copies the technique of the enemy. It takes conscription to fight conscription.

In personal relationships we are habitually tempted to meet bad temper with bad temper, resentment with resentment, sometimes chicanery with chicanery, and in all this we are morally sustained because we think we are resisting evil—as, indeed, we are, but with evil.

At that crucial point Jesus parts company with us. It is there that his revolutionary ethic begins.

Listen to him: "How can Satan cast out Satan?" Hidden away in the third chapter of Mark's Gospel that searching question stands, summing up, I think, the essential meaning of Jesus' way of life. "How can Satan cast out Satan?" How can evil be the cure of evil? How can two wrongs make a right?

No question could be more pertinent to our modern world, where today violence rises on every side, ill will is rampant, aggressive iniquities must be resisted by good men, and the temptation to fight evil with evil is almost irresistible.

Nevertheless, the question of Jesus haunts the Christian conscience and in quiet moments of insight reveals a strange, uncanny common sense—How can Satan cast out Satan?

#### ANSWERING EVIL BY MORE EVIL

In the first place, how can the vicious circle of evil answered by more evil, answered by more evil, answered by more evil still, ever be broken unless, somewhere, someone refuses to go on with it?

Watch this vicious cycle of wrong answering wrong. Iniquity rises, demanding that we fight back. So, following the pattern of the natural ethic, against which Jesus took his revolutionary stand, we fight bitterness with bitterness, hatred with hatred, violence with violence, evil growing in a mounting crescendo as wrong answers wrong.

This process is afoot everywhere, from international relationships, where they bomb our cities and kill our women and children, and so we bomb their cities and kill them, to personal relationships, where we say, He has been unjust—I will show him, I will pay the devil in his own coin.

In this regard how like we human beings are to dogs. For one dog barks and the other barks back and the first barks more loudly and the second becomes more noisy still, in amounting crescendo of hostility. So one man excused his terrier to the exasperated owner of another. "After all," he said, "the dog is only human."

#### THE TRAGEDY OF NAME CALLING

From the time, as children, we fell into angry name calling, each trying to lay his tongue to some more stinging epithet, we all have faced this elemental problem, and now that, more mature, we are more dignified, our resentment taking a colder form but remaining still resentment quite unredeemed, who does not know that vicious circle of bitterness answered by bitterness, answered by bitterness again? It is the tragedy of the world.

Shakespeare dramatized this in Romeo and Juliet, which, far from being a drama of romantic love alone, is first of all a play about a feud—the house of Capulet against the house of Montague. The first and last words of the play concern the feud, one house against the other, hating each other, meeting violence with violence, evil growing by what it feeds upon, and two wrongs never coming out right. Remember Mercutio, slain in the duel and in the insight of his dying moment crying, "A plague o' both your houses!"

#### "GIVE ME THY HAND"

In the theater one sees people go out before the final scene, as though, the love poetry being over, they thought the play was done. Shakespeare would have disliked that. It is the final scene, the climax of the play that he was driving at, where Capulet and Montague stand ashamed and penitent, their long and bitter feud stopped in midcourse by a love that broke the vicious circle of its hate. In that final moment of the play, when a Christian might kneel as before the mystery of the cross, Capulet says, "O brother Montague, give me thy hand."

So Shakespeare, after his own fashion, dramatized what the Christian ethic would say that the world's feud can never end and the vicious circle of wrong answering wrong come to a close until somewhere, somebody refuses to go on with it. Jesus meant this by his homely saying that if a man is smitten on one cheek he should not smite back, starting thus an endless chain of retaliation.

Let him try a new technique. Better, he would say, that one adventure on a revolutionary ethic and, if two blows must be given, take both rather than give one. Let him see if he cannot thus break the endless sequence of fighting evil with evil, whereby we always become the evil that we fight.

This, of course, is what the pacifists at their best are driving at with reference to war. The most shameful aspect of our present international situation, I think, is the way we ape the enemies we hate.

#### ARE WE "YES MEN" TO DICTATORSHIPS?

The dictatorships say war, so we say war. They build vast armaments, so we build vast armaments. Step by step, day by day, we become their "yes men." They say, dictatorial control of the Nation for the sake of war's efficiency. So in Washington we propose bills that provide, on the day of war's declaration, that the Nation shall conscript life, property, labor, conscience.

The dictatorships say, let the War Department determine the foreign policy. So we, too, against the tradition of our people and the very words of our Constitution, say the same thing, and in Washington—witness the proposition for the fortification of Guam—not so much the civilian representatives of the people as the Army and the Navy begin to initiate, and so ultimately to predetermine, our foreign policy.

#### WE FIGHT EVIL WITH EVIL AND BECOME THE EVIL THAT WE FIGHT

What ayes we are. We copy those we hate. We fight evil with evil and become the evil that we fight. We will conquer them, we say, and so first of all we let them make us in their image.

All this we do, thinking Jesus to be a visionary idealist. He is not. His ethics show a more realistic insight into what is going on in this modern world than does our boasted hardheadedness.

Despite their governments, the people of all the nations, in their hearts and homes, want peace. Somewhere, sometime, millions of men and women must stand up and cry, "We're through; we will not go on forever with war causing more war, causing more war, causing more war still."

If someone says, "But we may be compelled to go to war." I ask only that the meaning of that be realistically faced. For in the war you say America is compelled to enter, every cruelty that human beings, implemented with unprecedented instruments, can inflict on human beings will be inflicted. In that terrific wrestling bout no holds will be barred. The word "sacred" will be dropped from the human vocabulary, and neither child nor woman, home, church, school, honor, nor pledged faith will be respected.

#### NO ONE CAN REALLY WIN A WAR

If we are the apes of our enemies in peacetime, in wartime we will be apes indeed. Every cruelty they devise we will match. Every devastation they inflict on human beings we will equal. In the end no barbarity will be beneath us.

The boys we bore in travail and reared in love in our homes, schools, and churches will become the "yes" men of the enemies we fight, in every dastardly deed they do. They will be compelled to.

And when it is over, in a world where all agree that no one can really win a war, with civilization, it may be, wrecked, with a thousand new problems raised for every one solved and countless hatreds engendered for every one satisfied, I can think of only one factor that still will stand quite unimpaired, namely, the strange man of Galilee whom many call a visionary idealist still asking with infinite sorrow, "How can Satan cast out Satan?"

Let us take a further step and note that whether or not this principle of Jesus that evil is not to be fought with evil appeals to us, depends primarily on what it is that most of all we want. Do we really want to cast out Satan? Do we most of all desire to get rid of the evil of the world? Multitudes of people want something else altogether—their own prestige, personal or national, their gain and profit, their vengeance even, or their private conquest. Of course, to such Jesus' ethic is preposterous.

#### THE SUPREME AIM OF JESUS

We cannot see His meaning truly any more than we can see the windows of a Gothic cathedral until we go inside, and from within His life understand what most of all He wanted. Above all else He wanted to rid the world of its evil. Whatever it cost, whether it brought Him to the cross or no, somehow to rid the world of its evil was His passionate desire. If that is what a man wants, then evil is not an instrument to use.

It is only in the light of this supreme aim and motive of Jesus that one can see His ethical principles as reasonable. If one wants most of all to cast out Satan, then an alliance with Satan is no means to that end.

#### THE FOLLY OF VINDICTIVENESS

Translate this into personal life and its truth is clear. A man does a wrong to us; what do we want? It may be that our first impetuous desire turns to vindictiveness—an eye for an eye and a tooth for a tooth.

So one man I know of had an enemy. For years financially he laid for him until he got him, sold him out, lock, stock, barrel, house, and furniture, and, with a satisfaction which only the vindictive know, cried, "My God! but that's conquering!" If a man wants that, then Jesus' ethic is preposterous.

When, however, a man did Jesus a wrong, Jesus felt concern for the man. There are different ways in which one can intimate the presence of need and none more unmistakable than to be unfair, unjust, ungenerous. When a man does a wrong it is as though he flew unwittingly a flag of distress and uttered a cry for help.

Evildoing may be variously interpreted. It may cry to us, "Revenge." It may say, "Ignore me." It may say, "S O S"; there is a need to be met, a deep want in this man's life, an evil that by good will, perchance, you may help to cure.

So when the Samaritan villagers used Jesus despitefully, He was sorry for the villagers. When Judas betrayed Him, He was heartbroken because He could not help Judas. It was the wrong-heartedness itself He wanted to get rid of, the unkindness and bitterness He wished to banish from the earth. When one takes the measure of this supreme motive, Jesus' ethic becomes not preposterous but inevitable. Satan cannot cast out Satan.

#### RISK AND SACRIFICE ARE NECESSARY

If someone says that this ethic is risky, that it is bound to cost sacrifice and when used on some people is sure to fail, I answer, of course it is. During the last blizzard, we are told, a woman living on a branch of the Ohio saw a poor dog drifting on the ice floes and, touched with pity, ran to the stream, with difficulty launched her boat, fought for 2 hours before she reached the dog and brought him safely back. Then he bit her and she died of rabies.

There are human curs like that. Of all men in history, do you think Jesus did not know it? But He would say, I think, "Take it any way you will, human life is risky; you cannot avoid risk in life, and the salvation of the world depends on men and women who will take this risk, to face ill will with good will, to try to break the vicious circle of evil's sequence, where wrong answers wrong, and when two blows must be given to take both rather than give one."

#### A MINISTRY OF GOOD WILL

If we say, in certain personal relationships this ethic can be made to work and it was only of these individual relationships that Jesus was thinking, I suspect that shows how little we know about Jesus' world. He was not tucked off in a forgotten corner of the earth. He lived on one of the major highways of the Roman Empire. Every breath of news, I suspect, from the Thames to the Euphrates soon or late came to Nazareth.

He lived in a violent generation when force ruled the world and might made right as terribly as it does today. He lived in a nation seething with violent revolt. He dealt not only with Sadducees, compromising with Rome; not only with Pharisees, waiting for their supernatural Messiah to come from heaven and redeem them; but with zealots, fiery, militant, revolutionary rebels, crying out for bloodshed to make right their heinous wrongs.

This public situation, so dreadfully like ours, Jesus had in mind when He turned His back on revenge and bloodshed and based His ministry on undiscourageable good will.

It was this public situation He faced in the temptation at the beginning of His ministry, when the devil, as it were, showed Him all the kingdoms of the earth and said, "All these things will I give Thee if Thou wilt fall down and worship me."

How perennial a temptation that is. How terribly it assails us all today. To join forces with the devil to beat the devil, to fight evil with evil—ah, Christ, how did You resist the pressure of it in Your time, and how in a world like this do You expect us to follow You?

#### SATAN CANNOT CAST OUT SATAN

Yet when in calmer moments one faces the facts, one wonders if he is not right. Satan cannot cast out Satan. All history is a running commentary on that. The means determine the end. Everlastingly that is true—the means determine the end. We of all generations should understand that.

Did we not fight a war to make the world safe for democracy? We were resisting evil. We prided ourselves on that. We were morally indignant against a real wrong and sacrificially devoted to a holy cause. We would make the world safe for democracy. Conscripted to make the world safe for democracy. Poison gas, bombing of open cities, blockades that starved millions, to make the world safe for democracy. Dictatorial control of the whole Nation's life—even of what we ate and wore—the very suspension of the Bill of Rights, to make the world safe for democracy. And in the end a treaty, the only kind of treaty modern war can issue in—vengeful, selfish, cruel—to make the world safe for democracy.

#### THE SANEST REALIST OF US ALL

So we woke up to find the world less safe for democracy than it had been in generations. We discovered that war, being essentially totalitarian and dictatorial, cannot defend democracy, but that the means determine the end. Ah, Christ, You are not a visionary idealist; You are the sanest realist of us all. Satan cannot cast out Satan.

Let us take a further step and note the positive power of this ethic when it is put to work. For it is not weak, as the average man thinks, but very strong. Of all ridiculous beatitudes, some would say, the most incredible is the one where Jesus sums this ethic up and the faith on which it is built: "Blessed are the meek, for they shall inherit the earth." What nonsense, says the average man.

Yet would you stake your credit upon the opposite? Blessed are the Hitlerers for they shall inherit the earth! Would you? Grant him every temporary victory you think possible. Would you say that in the long run he will inherit the earth? I know no intelligent person who thinks that. All history rises up against that.

#### EMPIRES BUILT ON FORCE FADE AWAY

Like children's sand houses built upon the shore, age after age the tides of destiny have risen and wiped out the empires built on force. Of all contrasts in history none could be more disproportionate than that between the Roman Empire on one side and Calvary's cross upon the other. Yet the Roman Empire has fallen and many another empire since, like children's blocks toppling in a row, but still that cross stands and haunts the conscience of the world.

So I think Jesus sat many a day upon the hills above Nazareth and looked across the plain of Esdraelon, stretching mile after mile before his gaze. There the historic battles of the world had been fought. There the empires of the Euphrates and the Nile had clashed. Age after age violence had met violence and kings and pharaohs had fallen in futility, and Satan had never cast out Satan yet.

It was from that vision, not first of an ideal but of the facts, that Jesus went out, I think, determined, though he died for it, to introduce into the world a new and revolutionary ethic—meet ill will with good will, dare to break the vicious circle of evil answering evil, never fight wrong with wrong. Satan cannot cast out Satan.

#### THE PROPER USE OF FORCE

This does not mean that all use of force is satanic. Coercion has its proper place in life, always indicating a pathological condition but capable of salutary use in the interests of the whole community, as, for example, against the insane or the criminal. Even in such realms, however, the Christian ethic has been so far influential that not retaliation but cure and reformation have become the test and aim of intelligent procedure.

Because one believes in municipal police one is not by any logic driven, as some seem to suppose, to believe in war. War is a highly

specialized form of force, in its preparations, procedures, and results distinguishable from any other of force's exhibitions. One may believe in the police and think dueling wrong; one may grant the salutary nature of coercion communally applied for the good of all and still think gladiatorial shows are unmitigated and outmoded evil.

#### WAR IS SATANIC, AND ONLY SATAN GAINS

So one may pray and work for an ultimate international community, in which the collective security of all is the aim of all, and the policing of the world is the joint affair of all, and may still see clearly that at the present moment no war will mean that or anything aimed in that direction, but will be the old satanic, retaliatory process, motivated by imperialistic ambitions and waged with sadistic savagery to an end catastrophically evil. War is satanic, and only Satan has anything to gain from it.

However some may doubt the possibility of applying this principle to public affairs, how can one doubt its magisterial power in personal relationships? I would almost venture to say that any special fineness of spirit that anybody here possesses is his because sometime he has lived at the receiving end of this ethical principle.

For there are three kinds of goodness in the world. First, coerced goodness, where someone is good to us because we can require it. That is not impressive. Then there is deserved goodness, where we have been good to someone and now, quid pro quo, so much for so much, he is good to us. That is not deeply impressive. Then there is undeserved goodness, where we have been unworthy, ungenerous, unkind, unjust, and, lo! someone comes back at us with good will and friendliness.

From the days at home when our parents so treated us, through all our lives, no force has reached so deep, laid hold so hard, lifted so powerfully as that. Thank God not everybody has slapped back at us. Thank God some people did go the second mile with us. The salvation of the world depends on the multiplication of people who understand and practice that adventurous ethic.

#### WHAT SHALL AMERICA DO?

Do not represent me as having said that it is simple to apply this principle to the world's large affairs. It is desperately difficult. No one of us is wise enough to see around the next corner. Only as Americans this seems clear, that we are at the fork of the road and that either we are going to throw the vast influence of this Nation on the side of those constructive forces that make for international good will and conference instead of violence or else we are in for an era dominated by our aping of our enemies.

They make war! We make war! They build vast armaments! We build vast armaments! They use poison gas! We use poison gas! They say, All restrictions off on the most brutal instincts of mankind! We say the same, until once more, fighting evil with evil until we are the evil that we fight, far from conquering our enemies we let them make us after their own image.

So at long last, at the end of a ruinous era, we shall be facing again the question—which God grant us grace to face now before it is too late—"How can Satan cast out Satan?"

### Problems Facing Congress, 1940

#### EXTENSION OF REMARKS

OF

HON. FRED C. GARTNER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

RADIO ADDRESS BY HON. FRED C. GARTNER, OF PENNSYLVANIA, JANUARY 13, 1940

Mr. GARTNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following radio address delivered by me as guest speaker for the United Businessmen Association of Philadelphia over station WFIL on January 13, 1940:

My fellow citizens, it is my purpose in the few minutes allotted to me to give to my listeners an unbiased and concise picture of the problems facing Congress, and therefore facing the Nation, for I believe Congress is the pulse of the Nation, giving a true picture of the heartbeat—the people.

Under our beautiful and unequalled system of freedom of the press and radio, the American public is the best informed in the world. One of the greatest liberties that we enjoy in this country is the fact that no one tells us what we may or may not read, hear, or say. This condition makes for the supreme health of our democratic form of government. This permits me to come before this great unseen audience to speak from my heart of the American scene as I view it. The things I say to you today are my own expressions and ideas, neither dictated nor prescribed by any master other than my own conscience.

Having made a flying return from Washington to fill this most welcome engagement, I feel that I will have made a worth-while

trip if I can leave with you some idea of the magnitude and seriousness of the affairs of the Nation. As you know, in ordinary times the duties of a Congressman are many and manifold. In normal days a Congressman develops a huge business. For instance, during the second session of the present Seventy-sixth Congress my own office had to read, study, and answer some 6,000 letters on the neutrality measure alone. Besides the task of studying legislation and attending meetings of the House and of committees, innumerable constituents bring a wide variety of problems to their Congressmen. This exchange of problems, this trading of ideas, this constant contact with the people who enabled me to reach the office which I so proudly hold, have been invaluable in guiding my actions in Washington. Truly, Congressmen, above all other persons in public office, must never lose sight of the fact that they are servants of the people, answerable at all times to their constituents. A Congressman who attempts to shut himself off from the citizenry would be as senseless as the proverbial ostrich.

I modestly believe that this present term will develop into one of the most momentous in the history of our democratic form of government, and I believe that paramount to all the problems are those concerning affairs here at home.

As usual, the session began with a Budget message from the President, which, in itself, requires endless hours of study. It is not my intent to bore you with long lists of figures that have been so prominently displayed in the local press—figures which of themselves are staggering and far beyond the grasp of the average citizen. It is too early in the session to keep these figures alive, for they will be many times revised before any appropriations are made. Besides, figures in themselves do not always give a true picture, and even trained statisticians and economists differ widely in their interpretations. That we must have money to run the affairs of our Government is elemental—the amount a question mark. Admittedly, the President says, national defense must be strengthened and the tremendous cost of relief reduced. In studying this Budget message we must bear in mind the fact that the per capita debt for all branches of Government has grown from \$59.28 in 1913 to nearly \$500 per person last year. We must bear in mind that some day a start must be made toward payment of the public debt, which will be a very painful undertaking, for those who have subscribed to the belief that we have been getting something for nothing are due for a rude awakening, and the sooner it comes, to my mind, the better off we shall be.

Another primary essential of this and future terms of Congress is to keep Americans united for peace. Of course, it is inevitable, in times of war abroad, that we approach a consideration of our home problems by way of discussing foreign affairs, but we must not lose sight of home issues because of complications overseas. There can be no more illuminating picture of what happens to nations whose internal plight becomes desperate than what is going on across the Atlantic and Pacific.

We must admit that we cannot shut the door to the economic results of Europe's hostilities, but it is gratifying to report that the unanimous opinion in the Congress is unalterably for keeping America out of those hostilities. To this end there are many steady forces in the United States constantly bringing their ideas to the Members of the Congress. The United Business Men's Association, under whose auspices I speak today, has done an excellent job of rallying public opinion. One of the greatest forces for good in the Nation today are the veterans' organizations, among whose members I am proud to be numbered, and who are constantly on the job of educating the general public to think and act neutrally, to think and act in the best interests of God and country, to think and act for the preservation of American democracy as set forth in the Constitution of the United States and the Bill of Rights. There can be no doubt that the men who participated in America's wars are still serving with far more valuable ammunition than that which fires guns and destroys lives; it is the ammunition that builds peace and good will. There are hundreds of other truly American organizations—fraternal, civic, and religious—cooperating with and augmenting each other. I say "religious" because this Nation is founded upon the principles of religion and tolerance; so long as those principles survive, so long will peace in America survive.

Again a further problem arises in the President's request for taxes to meet the cost of the needed defense increase. We must bear in mind the already heavy burden of taxes paid by our people—employers and employees, wage earners and jobless, young and old. If we are cognizant of these burdens, you can readily see that no Member of Congress can rush blindly in to cast a yea or nay vote. We must first determine what would be the best defense policy—how much we are expected to defend. As you can readily see, this in itself could well take up the time of an entire session.

We all desire a Nation so well defended from within and without that no enemy would ever dare challenge our right to live in peace and harmony, a Navy second to none, an armed force beyond question the most efficient, loyal, and ready for any emergency. May I digress for a moment to discuss the enemy within our gates, for they form a major part of our home problems. It is gratifying to read in the report of that splendid investigating group known as the Dies committee that subversive thought and action is declining. But that does not say that we can sit back and claim victory. The patriotic fervor that has aroused our citizens to combat subversive elements must be maintained until every vestige, every iota of un-American thought has been washed from our shores. We must never cease in our campaign to awaken Americans to their civic duty. We must never lessen or fail to keep alight the fires of justice, freedom, and democracy. We must be jealous of the rights of citizenship and make it our bounden duty to see that none shall

transgress thereon. We must guard our youth and protect them from the poison of foreign ideologies. We must keep ever before the public the glories that are America's. Our youth must have an undeviating faith that the sufferings of Valley Forge, the trials and tribulations of '61 and '65, the exploits and valor of '98, the great deeds of '17 and '18 have given them acres of diamonds far richer than any vague promises of a utopia beyond our shores. How anyone who for a single day could walk the streets of our beloved city, seeing and greeting friends as man to man, seeing our free commerce, people going into churches of their choice, riding vehicles of their choice, coming and going as they will, pursuing happiness in their own way, and still look across the seas for guidance, is beyond me. Anyone who would refuse to defend with his very life the richness and fullness of these acres of diamonds certainly has no right to protection here.

I regret the time does not permit to go into the ramifications of reciprocal-trade treaties and tariffs, except to say that they require deep study by experts of varying economic theories and a wide exchange of views before anything concrete can be evolved.

Another home problem, and one which may develop into the most important of all, is that of the relations between labor and industry and unemployment. Admittedly, the Wagner Labor Relations Act is unsatisfactory to both the sincere labor union and to the employers of labor. Admittedly, by both sides, it must be made equitable to all; but so that further mistakes may be prevented and further botched laws written upon the statute books, thorough and complete study of all phases of the question must be made before action is taken. It is futile to talk of a nation united for peace so long as despotic laws which foment conditions of strife remain on the statute books, but it is equally futile to believe that this situation can be righted in any limited space.

From the foregoing you can readily see that our foreign policy should not be overstressed at the expense of home problems. Millions are unemployed, billions of hoarded dollars so necessary to create business and industry are still being withheld from investment through uncertainty. Only settlement of our domestic affairs can start the wheels of true recovery and lasting prosperity. I think I can speak for the vast majority of my fellow members of Congress when I say that we will attack these problems in the true American spirit of fair play by always bearing in mind that two-party politics is the very backbone of our American system of democracy; that honest difference of opinion with those in office is the birthright of every American citizen. We must not be swayed by brilliant oratory, by half truths, by innuendoes: we must bear in mind that no party or group has a copyright on the best road to peace and prosperity.

I assure you that I will attack these problems wholeheartedly and open-mindedly, and, believe me, my every vote will be cast solely on the principle that I think my actions are guided by what I believe is best for this Nation we love.

To you, Mr. Treister, and to the United Business Men's Association, my sincerest thanks for the privilege of being with you today.

### The Cost of Tinkering

#### EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

EDITORIAL FROM THE CHICAGO HERALD-EXAMINER OF  
JANUARY 8, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Herald-Examiner of January 8, 1940:

[From the Chicago Herald-Examiner of January 8, 1940]

#### THE COST OF TINKERING

George N. Peek, who administered the agricultural program of the New Deal in its early days and parted company with it when the original objectives were abandoned, recently analyzed the present farm problem for the Hearst newspapers.

Mr. Peek is a good agricultural authority, and reliable.

When he says the farm policies of the New Deal, particularly the policy of encouraging and promoting ruinous foreign competition with American agriculture, are responsible for current agricultural depression, it must be considered as a meritorious and unprejudiced opinion.

Mr. Peek says all of that and much more.

He says the present system of burdensome appropriations by Congress for the relief of agriculture will be necessary only as long as the Government continues to impose unsound and unwise foreign competitive conditions upon American agriculture.

"The present administration," he declares "has been tinkering with the problem for 7 years.

"While encouraging imports from foreign farmers, it has spent billions of dollars of the taxpayers' money to bolster the income of the American farmer, and designedly it has undertaken to buy his independence of action."

Mr. Peek calls this an intolerable situation, "created by increasing costs of production and decreasing production itself, and by expanding imports enormously not only depressing home markets, but displacing American jobs."

Asserting that foreign farm products come from countries where lower wage and living standards prevail, Mr. Peek says:

"If our farmers have to compete in such a market as that, how can they be compensated except by a hand-out?"

He says, and he should know, having been in the New Deal at the outset, that the trouble with the New Deal farm program is that it is based on "too many blueprints" and is shaped by "too many bright young architects."

"It is well demonstrated," says Mr. Peek, "that production cannot be controlled, nor can competing imports be allowed on the theory that they raise buying power."

"Let us not camouflage the fact that domestic prices must be a little higher, but how much better that is than pouring out money in subsidies for wasteful Government bureaus to police and distribute."

Intimating that the purported reciprocal-trade policies and agreements of the American State Department tie American farm prices to world markets, Mr. Peek significantly warned:

"So long as we keep agricultural prices tied to world price levels this question will be with us unless we submerge the farmer and industrial worker to the wage levels and living standards of foreign countries."

Mr. Peek's conclusion is inescapably sound and American.

"We should," he advises, "reorganize the Tariff Commission into a real foreign-trade board and make it responsible to Congress and the President for policies of foreign trade and financial transactions, confining the State Department to the diplomatic activities and policies which have been its traditional sphere."

In short, American agriculture should be protected against its acts and policies, and it should not be solicitous of foreign welfare and covetous of foreign applause, to the detriment and disparagement of American welfare and opinion.

### The President Should Speak for Himself

#### EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

Mr. MUNDT. Mr. Speaker, in view of the fact that this morning's Washington papers carry the news that the State Democratic chairman of Ohio, one Arthur L. Limbach, has announced that "Ohio's 52 delegates to the Democratic National Convention will go there ready to support the renomination of President Roosevelt for a third term," I think it is now a safe assumption to conclude that Franklin Roosevelt is an active aspirant for a third-term nomination if he can get it by use of all means at his command. Consequently, I feel that the editorial at the conclusion of these remarks will make fruitful reading for members of all parties, since it discusses something very vital to the perpetuation of the entire American ideal of self-government.

It is inconceivable that the action of Ohio Democrats was taken without the tacit consent, if not the direct promotion, of the President himself; the device of using Senator DONAHAY as a favorite-son "front" to provide a stalking horse for holding "third termites" in line is a thin disguise of the administration's ambitions. The evidence indicating the President's great desire to capture the third-term nomination is increasing every day. The timidity of all other Democratic Presidential aspirants—with the exception of courageous and capable Mr. JACK GARNER—in announcing themselves indicates the fear of the administrative "crack-down" which would follow such announcement. Such Rooseveltian hatchet men as Ickes and Jackson would speedily deliver hymns of hate against lesser men than Mr. GARNER who would dare to announce themselves in opposition to the President's personal ambitions. The pathetic spectacle of the rapidly fading McNutt, who is trying to sell himself as a leader of men and a man of Presidential capabilities, when by his own omis-

sion his courage and stamina is of such synthetic stuff that he prefaces his please-vote-for-me speeches with the vapid confession that he is a candidate "only if the President tells me I can run," is sufficiently unattractive to deter many other "if candidates" from seeking the Democratic nomination. Thus the President drives other possible aspirants to cover or forces them to campaign under such ridiculous circumstances that the public loses all confidence in their qualities of leadership and self-decision.

The attached editorial states the case fairly and fully against the fulfillment of the President's apparent ambitions to get the third nomination "even if he has to organize a self-inspired draft movement" to get it. In my opinion, one of the greatest indictments of the New Deal and of the entire Roosevelt regime is the fact that it has permitted no other leaders to develop or to reach the headlines except the Chief himself. As a Republican, I am glad our party has a steadily growing list of Presidential aspirants with courage enough to become bona fide candidates. I am happy to belong to a party not so devoid of leadership that it must rely upon the advice or ambitions of one man to determine its destiny. I am proud to belong to a party which reflects the true spirit of the American system.

In a country with more educational institutions than any other five countries in the world, it represents a terrific indictment of their output and methods to assume that we have presently only 1 man out of 130,000,000 who is wise or able enough to serve as President. Such a philosophy of "defeatism," it is true, is in harmony with the New Deal defeatist attitude that with one-third of our people under-housed and under-fed we must nevertheless reduce and curtail farm production in order to raise farm prices, with no admission of the hope that we might be able to improve methods of distribution to feed more people additional food produced at better prices. With 48 separate States training public leaders in their legislatures and in their official executive departments and with innumerable county and city governments providing training opportunities for potential national leaders, it is a sorry sort of pessimism which must pervade the Democratic Party when it prepares to confess it has no other leader capable of carrying the torch than the present occupant of the White House. If that is true in 1940, and if by some unfortunate miracle the President should be reelected for a third term, how much more true this same predicament would be in 1944. And by 1948 perhaps men of all parties would suffer from the same fears which now inhibit men like McNutt and Hull and Wallace and other "careful-hopefuls."

Americans should remember that the violation of our third-term tradition to permit Presidents to rule—I use "rule" advisedly, because with such protracted regimes they would no longer purport to "serve"—the people for 12 or 16 years would be to do in America the thing we are so loudly disapproving in the totalitarian countries of Asia and Europe. After all, 12 years is a longer period of one-man rule than is chalked up by most of the one-man governments of Europe. This country must not yield to the totalitarian influences from abroad to the extent of adopting their objectives, if not their methods, at home. With so many other issues confronting the country, it will be unfortunate if the question of abandoning government by the people for government by family dynasties should become the big issue in the 1940 campaign; but if the Democratic Party is really so devoid of leadership that it can produce no other candidate, we Republicans will welcome the opportunity to let America speak for itself, once and for all, on this epoch-making decision. The biggest contribution this country can make today to a world quaking from totalitarianism and one-man autocrats would be to demonstrate in 1940 that we can change Executives—not necessarily parties—in this country in an orderly fashion and that the common people of the country are still capable of governing themselves and of developing a steady succession of new leadership. It would have a fatal effect throughout the world if we at this time were to collectively confess our own allegiance to one-man government.

The following editorial is from South Dakota's leading daily newspaper, the Sioux Falls (S. Dak.) Argus Leader:

#### THE PRESIDENT SHOULD SPEAK

The impression grows that President Roosevelt will not be a candidate for a third term.

But as long as he fails to speak, uncertainty in respect to his intentions will exist.

Obviously, regardless of any decision he may have made in his inner mind, he is eager to maintain this uncertainty. He wants the people to continue to regard him as a prospective candidate.

In so doing, he violates at least the spirit of the third-term tradition. He indicates he is toying with the possibilities of an additional term.

In as vigorous an editorial as we have seen on the subject, the Baltimore Sun insists that the President should state that he is not a candidate for a third term.

The Sun gives voice to its attitude in the following forceful paragraphs:

"We have lodged in the Presidential office such power as Washington and Jefferson, in their prescient concern for the future, never imagined. We have given the President command of a veritable army of officeholders, and the potentialities of this army are known to every politician in the land. We have given the President control, direct or indirect, over payment of subsidies to citizens which run into billions of dollars annually. We have given the President, acting through obedient subordinates, authority to make regulations which have the force of law in governing the lives and the property of 130,000,000 human beings.

"This unprecedented power must not remain for long in any man's hands."

In conclusion it offers these suggestions for the consideration of President Roosevelt:

"Measuring all these considerations, general and particular, Mr. Roosevelt's candidacy for a third term would be a peril in the life of the American people. In the long view it would be a peril to our national economy and our political institutions. In the immediate future it would be a peril to orderly relations within the Government, whether the immediate future holds in store for this Nation peace or war.

"It is a peril which ought definitely to be removed. And the threat of that peril ought definitely to be removed. These are not times for the growth of such suspicion, in the Congress and in public places, as must inevitably follow from silence on Mr. Roosevelt's part while members of his Cabinet and his diplomatic corps, and others within his intimate group, openly attempt to promote a third term. These are times when, above all else, there is need for that mutual trust and that sense of solid foundations which follow from respect in high places for tested principles and tested precepts.

"Mr. Roosevelt should declare publicly his obedience to the unwritten rule against the third term."

The statement from the Sun carries weight because of its logic. It carries additional weight, however, because it is an old-time Democratic newspaper—a newspaper that through the years has cherished the institutions befriended by the party which President Roosevelt now represents in Washington.

A democracy cannot be a one-man nation. To say that there is no one who can succeed Roosevelt is to assert that we are incapable of governing ourselves.

### Let Us Think Sanely

#### EXTENSION OF REMARKS

OF

#### HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

ARTICLE BY DR. GEORGE W. PEAVY

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. George W. Peavy, president of Oregon State College:

#### LET US THINK SANELY

(By Dr. George W. Peavy, president, Oregon State College)

In this atmosphere of peace, with these thousands of young men and women, buoyant and free, planning and building for lives of service and usefulness, it seems like introducing a discordant note in a beautiful harmony to speak of wars, or sordid ambitions, of the slaughter of women and children, of pestilence and famine, of unspeakable brutalities inflicted upon innocent people. Yet I vividly recall, as do others in this room, days like these and scenes like these 22 years ago on the campus of our own Oregon State College.

Nature was as kind then as now. Students were as happy and care-free, as ambitious, and as hopeful as the members of this student body are today. With a wide ocean between our country and war-mad Europe we felt remote and secure. But in brief months insidious propaganda, malicious misrepresentations, and unfortunate incidents transformed a placid-minded, peace-loving nation into a hysterical, crusading, revenge-seeking people, bearing aloft the banner of human liberty and having for their great ideal and objective "making the world safe for democracy." Impelled by the tremendous force of public opinion, we declared war and we sent more than a million of our choicest sons to the slaughterhouse of Europe.

#### AMERICA MUST FACE THE FACTS

The record shows it happened once. It can happen again. It will happen again unless the American people firmly resolve to be ruled by reason and not by emotion, to sift the tiny kernel of truth out of vast masses of propaganda; coolly to face the facts of history to the end that they may know the truth, and knowing the truth, may be kept free of any entanglements with the unclean and sordid political mess of Europe.

With a vivid remembrance and knowledge of what happened to our country in the period of the Great World War, of the awful price we paid for the part we played in it, and having, because of this knowledge and remembrance, a keen sense of responsibility to you, students of Oregon State College, and to the thousands like you, upon whom would rest the burden of another conflict should it come, I am compelled to counsel with you, hoping that I may help you to think straight and hoping, too, that we may stand united on a program which will best safeguard the interests of the United States of America.

To my way of thinking, as the situation now stands, the war in Europe is strictly a matter of European concern. Fundamentally, this war does not differ from the hundred and one other wars which, since the dawn of recorded history, have been fought on European soil. There have been wars to satisfy the pride and ambition of princes, emperors, and kings. There have been wars of conquest—for the sake of conquest alone. There have been wars because virile peoples have expanded their populations beyond the capacity of the land to support them and they have gone into battle to win room in which to live. Nations have been wiped out to give the strong a better chance to become stronger. Wars have been fought and thousands slaughtered to advance the cause of the Prince of Peace.

In the United States now we have no king or prince or emperor whose vaulting ambition could lead us to the field of battle. We, the people, are yet the rulers of America. There is in the spirit of the people of America no desire for conquest of other lands. With the people at the north and at the south we are at peace. To the east and to the west the oceans touch the shores of no lands which we covet. Within the confines of our Republic we have ample space for the most powerful, the best-cared-for people the world has ever known.

#### NEITHER HONOR NOR SENTIMENT IN WAR

If we have no fundamental reason for war, have we obligations to Great Britain or France sufficiently great to justify plunging this Nation into a foreign war? When we are sentimentally inclined, we speak of England as the mother country. Just how considerate has England been of her offspring? We fought England 8 long years because she refused to grant us representation in return for the taxes we paid. When the struggling young Nation began to put ships upon the seas the mother country played the part of a big bully with our shipping until we were obliged to battle her for 2 years in order to win our right to sail the lanes of commerce on the high seas. When this Nation, for 4 years, was engaged in a great civil war, to establish the principle that a nation could not exist half slave and half free, England tried to bring aid and comfort to the South by breaking the blockade of the Southern ports. Only as long ago as the administration of President Cleveland, England, with her powerful Navy, tried to nullify our Monroe Doctrine by establishing a stronghold in South America. At the conclusion of the World War, we loaned England vast sums of money which in past years she has shown no inclination to pay. With this record of loving kindness, it does not seem to me that we should put a million American boys on the battle line in Europe, just to help preserve the territories of the British Empire.

Shall we enter this world war because America has a great obligation to France? As every high-school boy and girl knows, La Fayette came to America toward the end of the Revolutionary War, bringing with him a handful of French troops, and helped us win the war with England. But remember, France was at war with England. France had lost the great Canadian country to England and France was glad to help split off from England that vast extent of territory from Canada to Florida which became the Original Thirteen States. The participation of France in the American Revolution was merely one part of the French war against her long-time foe across the English Channel. You will remember, too, that when the United States was engaged in a bitter civil war the French, with the help of the English, set up a puppet empire in Mexico, hoping to gain a foothold on the North American Continent, at a time when we were powerless to enforce the doctrine proclaimed by President Monroe. The United States, after the signing of the Versailles Treaty, ending the World War, loaned

France sums which now amount to \$4,000,000,000. This debt of honor the Frenchman, with a characteristic shrug, repudiates with the naive remark, "This was your war and this \$4,000,000,000 will help pay for the 2 years when you didn't come in."

There is neither honor nor sentiment in war. England and France, bitter foes in many wars, now have a union of convenience because their security is threatened by a common foe.

Hitler, the hysterical, who was cast up on the crest of the wave by fickle chance, at a time when Germany was mad with despair, whose hands are red with the innocent blood of thousands of a persecuted race; Hitler joins forces with Stalin, who has slain his fellow citizens by the hundred thousand because he thinks thus more firmly to fix his despotic hold upon a so-called communistic state. Hitler, with his highly mechanized military force, without warning, crushes a defenseless nation of 30,000,000 people and throws a sop of half the conquered territory to the Russian bear. Stalin seizes diminutive Baltic states to open wider his window on the Baltic Sea. And all this while Mussolini sits back like a treacherous Roman wolf ready to dash in and grab his bloody portion when the battling nations are locked in a death struggle. I repeat, there is neither sentiment nor honor in modern European warfare.

Before we go far in considering the participation of America in another European war it would be well for us to look for a moment at the cost—the cost in men, the cost in money, the cost in social values. The nations participating in the World War lost eight and one-half million men. Twenty-one million were wounded. Starvation disposed of 4,000,000 civilians. The nations at war expended over one hundred and eighty-six billions in treasure—more than all the wealth of the entire Nation. During the Great War we transported more than a million men to France. More than 126,000 American boys were killed and about 200,000 were wounded, many permanently disabled. How many were permanently diseased, how many spiritually and morally wrecked the records cannot show. Neither can the records show the years of suffering of the diseased and wounded nor the billions which must be spent "to care for him who bore the brunt of the battle and for his widow and orphans."

I stated a moment ago that I have distinct remembrance of the scenes of this campus when America went into the war. I saw classrooms deserted as boys by the hundreds enlisted and left for the camps. I saw the operation of the selective draft as other hundreds were called to the colors. I saw the lines of anxiety deepen on the faces of fathers and mothers as their boys were swallowed up in that zone of mystery "Somewhere in France." These Oregon State College boys, with alumni and faculty, 2,000 strong, went with high purpose, and they made a splendid record. We saw them return, some shell-shocked, some maimed, many disillusioned. We saw them try desperately to pick up the shattered fragments of their civilian lives. Some didn't come back, but found their final resting places under little white crosses, "where poppies bloom, on Flanders' field."

On Oregon State College campus, we erected a shrine to commemorate the sacrifices of our boys who gave themselves so freely to serve their country. We are proud of our Memorial Union and proud of the service flags with their hundreds of stars, some in gold, all bearing mute witness to the loyalty of the sons of Oregon State.

#### THROUGH ADEQUATE DEFENSE PRESERVE DEMOCRACY IN AMERICA

I have expressed the belief that this war is not our war. In saying this I would not be misunderstood. I believe in democracy, in American democracy. With a great American I can say, "The greatest service which we can render democracy in the world is to preserve democracy in America. The way in which we can best preserve democracy in America is to stay at home and attend to our own business. We might win a war and lose our liberties." With all my heart and soul, I believe in the United States of America. I do homage to the great men who supplied the Nation's leadership through all its years of development. I believe in our free American institutions, established and preserved by blood and sacrifice. I believe in adequate national defense, on land, on the sea, in the air. I am glad that in America we may worship as conscience dictates. I rejoice that in our country the Government derives its just powers from the consent of the governed. Great as our Nation is, I know that it exists for the benefit of the people, that the people do not exist for the benefit of the state. In America we cannot be deprived of life or liberty without due process of law. How wonderful it is, in America, that brother cannot set against brother, children against parents, or neighbor against neighbor, that we can live in peace and trust, one with another.

Glorious country, this United States of ours. Worth preserving, worth cherishing, worth defending, by every sacrifice. In these times of trial, when the nations of the world are coming to grips, when the mighty destroy the weak, when lust for power obliterates all sense of justice, when the plighted word of a nation's ruler is held as lightly as a vagrant breeze, when men by the million, at the command of a despot, are being led like sheep to the slaughter, in these times let us calmly turn our thoughts to our great Republic and what it means to us. And let us, with a prayer in our hearts and with determination in our souls renew our pledge to the flag of the United States of America and to the great Republic for which it stands.

## Aid to Finland

## EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

EDITORIAL FROM THE CEDAR RAPIDS (IOWA) GAZETTE OF  
JANUARY 15, 1940

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cedar Rapids Gazette of January 15, 1940:

[From the Cedar Rapids (Iowa) Gazette of January 15, 1940]

LET'S BE WARY OF ENTERING THE WAR BY THE BACK DOOR

The Associated Press reports that Congress is showing considerable skittishness in approaching the proposals that this country do something more to help the Finns fight the Russians. Members of both parties are fearful that aid to Finland might violate American neutrality.

These fears are well grounded. In considering the question of aiding Finland certain pretty well-established facts should be borne in mind, to wit:

1. President Roosevelt and other dominant leaders in the administration want Great Britain and France to win their war against Hitler. They would like to aid the Allies in any way they can without raising a howl of popular protest here in the United States. Naturally they haven't said this in so many words, but they have made their attitude sufficiently plain to all who appraise their words and acts with reasonable care.

2. The desire of administration leaders to help the Allies is hobbled by the unmistakable desire of the American people to avoid anything that might draw this country into the war. This popular sentiment is far too strong to be shaken by the sympathy most people feel toward the British and French and the antagonism they feel against the Nazis.

3. There is a strong possibility that the Finnish cause and the Allied cause may be merged openly in the near future. Finland is fighting for the same principles the Allies profess to be championing. Those principles are threatened as much by Stalin as by Hitler. And Stalin is in cahoots with Hitler. A military situation might easily develop in which striking at Soviet Russia would be the most effective way of dealing a decisive blow to Nazi Germany.

By giving direct aid to Finland the United States might maneuver itself into a position in which it would stand shoulder-to-shoulder with England and France in the European struggle for power. It would be only a short step in logic then to the contention that one of the best ways to aid Finland would be to aid the Allies. In those circumstances it would be pointed out that it wouldn't be sporting of us to leave little Finland in the lurch after going out of our way to help her.

In short, capitalizing on the traditional American sympathy for an underdog and on American good will for the only European war debtor that has fulfilled its obligations to this country could be a very slick way of easing the United States into the European war on the side of the Allies. No one can be sure it would work out that way, but no one can deny that it could. From the most optimistic viewpoint the chances are no better than even. Congress is well justified in hesitating to take the gamble.

## Reciprocal-Trade Agreements Have Injured Our Business

## EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

Mr. SPRINGER. Mr. Speaker, many matters of great importance will come before this session of the Congress, but I firmly believe there will not be a question presented which will be more important or of greater influence than the question of extending the further power to the President to make reciprocal-trade agreements with foreign powers. We are

reminded that the President now has that power, which was given to him by Congress in the year 1937. The power which is now vested in the President will expire in June 1940.

The appalling fact is disclosed that these agreements which have been made, under the authority extended therefor, affect every class and group of our people, either directly or indirectly. Our farmers, businessmen, laboring men and women, and our industrialists have suffered, and are now suffering, because of the unfair trade agreements which have been made and which are now in full force and effect with foreign countries. We must think of our own country and our own people first. While under the existing law no ratification of any such trade agreements is required, but the sole power and authority rests in the hands of the President to make such agreements, with the sole and only limitation that schedules are not changed more than 50 percent. Therefore to that extent the President has the sole power to make and to put into effect all tariff schedules—a power which never should have been given to any President—which directly affect the prosperity and well-being of all our people. The President of the United States is chargeable, therefore, with the ill effects resulting from these various trade agreements which have been made.

Mr. Speaker, agriculture has suffered greatly by reason of the fact that the existing trade agreements have permitted vast amounts of imports to come upon American markets, which were cheaply produced and which can be cheaply sold, all in direct competition to those articles produced by our own farmers. Our wage scale is higher than that paid in those countries which bring their goods into our markets for sale, therefore they can sell their products cheaper than our farmers can sell their commodities and make a profit thereon. The lack of a proper duty which would equalize the cost of placing the foreign-produced commodity upon the market here compels our own farmers to sell at a price which is less than their own cost of production, or forces them to keep their products.

Why do I say these imports have injured our American farmers? The imports have been increasing each year since the trade agreements have been in force. Let us see how some of these imports compare between the years 1938 and 1939.

Import items	Unit	1938	1939
Cattle.....	Head.....	330, 653	664, 339
Meat products.....	Pounds.....	123, 732, 000	136, 552, 000
Canned beef.....	Pounds.....	65, 833, 000	78, 073, 000
Oats.....	Bushels.....	5, 258	2, 612, 000
Wheat.....	Bushels.....	2, 433, 000	9, 310, 000

You will note the increase in 1939 over those same imports in the year 1938. After giving careful study to the figures shown above, which are from the United States Department of Commerce, the farmers of our country may be their own judges as to whether the reciprocal-trade agreements have aided or injured them. The present administration has failed to protect the American market for the American farmers. If this plan of importing farm commodities into this country continues, without any protection to our own farmers, it will result in the ruination of our greatest business and industry—agriculture. And at the same time our exports have materially decreased, all of which is shown by the following scale:

Export items	Unit	1938	1939
Barley.....	Bushels.....	14, 755, 000	5, 087, 000
Corn.....	Bushels.....	137, 709, 000	25, 634, 000
Oats.....	Bushels.....	7, 144, 000	203, 000
Wheat.....	Bushels.....	77, 382, 000	61, 165, 000
Total grain.....	Bushels.....	236, 990, 000	92, 089, 000

The imports have been largely increased, under these trade agreements, and the exports have been decreased.

We think of the agricultural policy in our country. Secretary Wallace is urging that our farmers reduce in their production of crops. On the other hand, our Government is the sponsor of reclamation projects by which thousands and thousands of acres of land are put into production—all of which have never been in production before—all of which is very injurious to our farmers. Such policies are wholly inconsistent and by adding a large acreage to the production in this country will further impoverish our farmers. It means that the reclaimed land will produce as much, or more, than the "crop reduction" decreases will reduce our production, and our Government is paying, from the taxpayers' money, huge sums to farmers because they have abstained from producing crops to the extent of their ability to produce.

We have hungry people in our Nation, and I will oppose all kinds of crop and livestock curtailment so long as our hungry are unfed.

We must remember this injury is not limited alone to agriculture but it extends to business and industry. When injury descends upon business and industry, then our laboring men and women are made to suffer in the loss of their jobs, loss of time, and in the loss of their wages and salaries. This extends further to the education of their children and to the well-being of all of our people.

How many times have our people entered a store or shop and found crowding the shelves manufactured articles and products which have the label "made in Japan" or "made in Germany," or where we found such canned goods as "Argentine beef"? This is the direct result of the failure to protect our own markets for our own people. The continuance of the power in the President of the United States to make reciprocal-trade agreements will mean a continuance of the increase of imports into our country and a decrease of exports from our land to other nations, and a further injustice to our farmers, laboring men and women, and to our industries. We must protect our markets for our products. If our own Government will not protect our markets, let us adopt the policy "buy American" and adhere to that policy; we can thereby protect ourselves from this great and growing injustice if our own Government fails us.

I am unalterably opposed to any continuance of the sole power in the hands of the President to make trade treaties or agreements with foreign countries as now. The President has almost ruined agriculture and industry and has dealt a terrible blow to labor. All treaties should be ratified by the Congress, who are the representatives of the people. No one man should control the destinies of this great mass of our people.

It is time our people awaken to the exigencies confronting them and demand that their markets be restored to them.

## The World Scene on the Eve of 1940—Scandinavia

### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 16, 1940

ADDRESS BY PROF. BEN A. ARNESON

Mr. SHANLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech delivered by Prof. Ben A. Arneson, professor of political science at Ohio Wesleyan University, recognized authority on Scandinavia, before the American political-science group here in Washington last month. I was present at this meeting and heard this speech, which seems to me to be timely and helpful for an understanding of the Scandinavian nations.

The term "Scandinavia," as it is most commonly—and properly—used, applies to the racial and linguistic group which makes up

three separate countries. Two of these—Norway and Sweden—occupy the Scandinavian Peninsula. The third is Denmark, 70 percent of whose territory is made up of the small peninsula jutting northward between the North and Baltic Seas, with the remaining 30 percent occupying about 500 islands, most of them very small, lying between the peninsula and the Swedish coast.

Finland can scarcely be classified as a Scandinavian country. To be sure, Finland was, previous to its absorption by Russia in 1809, for a long period a part of the Swedish Kingdom, and its state church is Lutheran—the state church also of each of the three aforementioned nations. The Finnish language, however, is entirely dissimilar from the Scandinavian; and in spite of the fact that about 10 percent of Finland's population is of Swedish descent, its racial composition is distinctly foreign to the other three northern countries. Furthermore, its historical traditions, due in part to its century under Russian rule, differ at many points from those of its Scandinavian neighbors. Even though we should agree that Finland is not in a strict sense a part of Scandinavia, it must be recognized that her geographical contiguity to her northern democratic neighbors, together with the noteworthy contributions she has made, during her brief history as an independent nation, to the field of democratic government and politics, warrants some reference to the Finnish Republic in connection with this paper. This is especially true with a Russo-Finnish war in progress.

We might get into an argument as to whether Iceland should be included as a Scandinavian nation. Originally a Norwegian possession, Iceland remained with Denmark when the separation from Norway occurred in 1814. It is now a separate sovereign state, with its own Parliament—the Althing—the oldest legislative body in the world. The King of Denmark is also the King of Iceland. In view of the fact that the Danish Foreign Office in Copenhagen handles all Icelandic foreign affairs, we shall, however, omit any reference to Iceland, and when the term "Scandinavia" is used in this discussion, it will refer to Denmark, Norway, and Sweden.

I propose in this paper to comment briefly on Scandinavia under four heads: First, the significance of these countries as contributors to the democratic experiences of the world; second, inter-Scandinavian relations; third, other international diplomatic policies and practices of Scandinavia; and, fourth, the significance of Scandinavia in the present world crisis. Under each of these heads some reference will also be made to Finland.

During the last few years the students of government in the United States have become increasingly conscious of the great strides made by the Scandinavian countries, not only in the development of democratic processes but in the results of these processes in the form of social and economic legislation, with its accompanying effects upon the lives of the people. It is, of course, needless to stress before a group like this that in Scandinavia the monarchical form is merely a form, and that in substance each of the countries is a thoroughgoing parliamentary democracy, as is also the Republic of Finland.

The elections in Scandinavia, for example, are worthy of study. In each country an intelligent, literate electorate regularly goes to the polls, with a low percentage of nonvoters, to cast their ballots after an intense campaign in which every propaganda device known to democracy is freely used. With complete freedom of speech and of the press, and with a multiplicity of parties—which multiplicity we may not necessarily approve—the verdict of a Scandinavian election probably represents the actual views of the electorate as closely as a democratic election anywhere in the world. We may not agree that the list system of proportional representation used in all three countries is the best system, but no one can dismiss this system as unworkable until he has examined its workings in these three northern countries. A 4-year term for legislators is in use, and it is interesting to note that Norway, which since 1814 has had a 3-year term for the members of the Storting, has recently adopted a constitutional amendment providing for a 4-year term. This amendment was proposed and adopted because there seems to be wide agreement among the leaders of various parties that the threat of dictatorship makes it incumbent upon democracies to avoid too frequent elections. This attitude is based on the theory that hard-fought political campaigns which may even slightly affect the efficiency of government should be as infrequent as is compatible with popular control.

The joint legislative committees of Sweden which make the bicameral system approach the unicameral might well be imported into other democracies. The one-house legislature of Finland might well be studied. We may feel that we should move toward unicameralism in the United States, but we might as well be realistic and recognize that such a change is not in sight in the immediate future, and that our problem may rather be to improve bicameralism with some such device as is used in Sweden. In the administrative and judicial fields the Scandinavian countries also have developed machinery and procedures which make for efficiency, and democracy, but time will not permit even a mention of those developments.

When it comes to the results of the many democratic instrumentalities, time will permit only the suggestion that Scandinavian experiments in the field of employment and relief, social security, the settlement of industrial disputes, public health, the cooperative movement, and many others, bear testimony to the energy—and many would say the intelligence—with which modern problems are handled by democratic methods in these countries. I am not trying to suggest that we should in our country do exactly what the Scandinavians are doing, but I do believe it would be fair to say that we might well study these procedures and their results very carefully.

Turning briefly to the matter of inter-Scandinavian relations, we find such a marked community of interest and such a degree of interstate comity that it may seem strange to one not familiar with the intense nationalism which accompanies this international comity why these nations do not federate or even merge into one nation.

What in America is called the "full faith and credit clause" seems to be in full operation in Scandinavia and in Finland. Any judgments, including those involving bankruptcy, valid in any one of the four countries, are valid in each of the others. There is the closest of cooperation in the matter of trade-marks, acts of incorporation, ship inspection, and negotiable instruments. A citizen of any one of these countries residing in any of the others receives the same benefits in the form of relief, for example, as though he were not an alien. For more than 20 years the administrative officials of each country have cooperated closely through what is known as the Northern Administration Association, while the Northern Interparliamentary Union has been an effectual instrument not only in promoting uniform legislation but in developing closer bonds in general. It is about 125 years since any one of these countries has been at war with any of the others. In fact, all three have been at peace with the world since Napoleonic times, except for Denmark's encounter with Prussia in 1864, resulting in the loss of Schleswig-Holstein.

The last show of inter-Scandinavian military hostility in 1814—which involved the invasion of southern Norway by a Swedish army—was hardly a war, as both sides desired peace, and an agreement was soon signed. Since that time war has played no part in inter-Scandinavian relations—this, too, in spite of the fact that the relations between Sweden and Norway during the 90 years of the dual monarchy was often not harmonious. When, in August 1905, the Norwegian people in a plebiscite voted overwhelmingly for separation from Sweden, this action seemed revolutionary to the latter, but the Swedish King and the Parliament showed real statesmanship by agreeing promptly to a treaty for the dissolution of the union. Sweden might easily have overpowered Norway, but here set an example of restraint and international wisdom which is representative of Scandinavian attitudes. The Norwegians, in turn, have cooperated more closely and more happily with Sweden since the dissolution of the union than before. The Norwegian-Swedish treaty of dissolution in 1905 included, among other provisions, an arbitration agreement to submit disputes to the Hague Court.

For years the Scandinavian countries have been supporters of peaceful methods of settling international disputes, not only in theory but in practice as well. A good illustration is the violent dispute which arose about 10 years ago between Denmark and Norway over conflicting territorial claims on the eastern shores of Greenland. Intense national feeling was aroused on both sides, with enough names hurled back and forth in the press and enough tension in diplomatic circles to have set off a war in many cases. As the situation grew more serious, the Danish Prime Minister, Stauning, issued an ultimatum to Norway—a new kind of ultimatum—to the effect that if Norway did not leave Greenland he would—not use force, not bombard Oslo—but would take the case to the World Court. Norway, in like spirit, accepted the challenge. Each had agreed under the "optional clause" to submit completely to the jurisdiction of the Court. When many months later the decision was unequivocally in favor of Denmark, the Norwegian Government promptly recognized the decision and withdrew from the disputed territory. An earlier illustration of the Scandinavian attitude in these matters was the prompt acceptance on the part of Sweden of an adverse decision by the League of Nations of her claim to the Aland Islands as against Finland.

The close inter-Scandinavian cooperation during the World War is well known to all students of European history. This community of interest was again evidenced, especially between Norway and Sweden, last spring when Hitler addressed the Scandinavian countries, as he did many others, asking for a nonaggression pact with each one. No action was taken by the Scandinavian countries until after a conference. It was realized clearly that Denmark, due to her proximity with Germany, could not well refuse to enter into such a pact, but Norway and Sweden each refused to do so. The failure of Denmark to follow the other two can hardly be said to be a break in Scandinavian solidarity, but rather a sympathetic understanding on the part of the others that Denmark had a special problem on her hands.

Since 1926 each of these four northern countries—that is, the Scandinavian countries and Finland—has a treaty with each of the others providing for the peaceful settlement of every dispute between them which may arise.

Let us now look for a moment at the policies and practices of the Scandinavian countries as regards their relations to the rest of the world. The essentials of Scandinavian foreign policy can in general be epitomized in three words: Arbitration, neutrality, and disarmament. Since long before the World War, Denmark, Norway, and Sweden have remained consistently neutral and free from foreign entanglements. They were among the earliest advocates of the arbitration of all international disputes. Already at the First Hague Conference in 1899 Scandinavia accepted the convention there drafted and at the second conference 8 years later the Scandinavian delegates went so far as to declare for obligatory arbitration—a stand which in general they have maintained to the present day. At all times the Scandinavian countries have striven consistently for international agreements to disarm. In each of the countries there has been public sentiment for disarmament even without international agreement. For example, in Denmark the parliamentary election of 1929 was fought almost entirely on the disarmament issue with a

coalition favoring disarmament carrying the election. As the war clouds have again gathered over Europe, the sentiment for complete disarmament has naturally lessened materially, and the expenditures for national defense have been increased. The Scandinavian countries began to realize clearly, even before the attack on Finland, that the European scene was such that neutrality might be more likely if it were an armed neutrality. Thus Sweden, for example, undertook in 1936 a thorough reorganization of her defense system which involved, among other things, important reinforcements to her air forces. There has been recently established also the National Commission for the Economic Preparedness for War. The very day after Hitler invaded Austria the Swedish Parliament voted large defense appropriations. In Denmark, Prime Minister Stauning, who in 1929 led in the campaign for armament, said in June 1939 that the northern countries should renounce the use of force unless their neutrality is threatened. The past summer Halvdan Koht, the Minister of Foreign Affairs of Norway, stated that Norway must be armed to enforce neutrality. In spite of these statements there runs through the expressions of Scandinavian leaders the firm belief that disarmament is in the long run the real road to peace. When, however, present disarmament runs contrary to another fundamental idea, namely, neutrality, it seems in their minds that arming in the interests of neutrality is desirable at least in the present crisis. Norway's fearless stand as a neutral is well illustrated by her procedure in the matter of the *City of Flint*.

No discussion, not even such a hurried one as this, of the foreign policies and practices of the Scandinavian countries would be complete without some mention of the relation of that group to the League of Nations. From its very inception and throughout its brief history, the Scandinavians were actively and officially interested in the League, although minorities, especially in Norway and Sweden, for a while opposed entrance into it mainly on the grounds that it did not go far enough in matters of disarmament and the settlement of international disputes. At the very beginning the Scandinavians stood for conciliation, for ease of admission to the League, and for ease of amendment of the Covenant. They favored the equality of states and objected strenuously to the differentiation between the victors, the vanquished, and the neutrals, and believed that the Assembly rather than the Council of the League should be given increased powers. They had little faith in great-power diplomacy, and from the very beginning championed the admission of Germany into the League. Those and many other aspects of Scandinavian attitudes and activities regarding the League are discussed in a most scholarly fashion by Dr. S. Shepard Jones in his recent book entitled "The Scandinavian States and the League of Nations," and it is this source to which I am indebted for the data included in this paragraph.

What significant part will Scandinavia play in the developing world crisis? From the very beginning of the present World War there were indications that the Scandinavian countries proposed to repeat their policies of the first World War; namely, to remain neutral. This was in accord with clear-cut statements which had been issued by official representatives of each of the countries during the spring and summer of 1939. A typical statement was that issued by Foreign Minister Koht at Oslo in the late spring—some time after Germany's conquest of Czechoslovakia. He made it clear that all political parties in Norway agree that Norway should remain neutral but recognized the tremendous cost, economic and otherwise, which neutrality would entail, and pointed out that Norway would be more likely to be drawn into a general war by economic pressures than by military ones. Koht insists that the next world war, if it comes, will not be an ideological war but rather a struggle between two powerful groups for world trade and domination. In such a contest all small neutral countries must stay out, he says—even to the extent of avoiding nonaggression pacts with any great powers. Because of their respective dangerous locations, Finland had entered into a nonaggression pact with Russia, and Denmark with Germany. Norway and Sweden, however, have refused to make such pacts with any great powers.

The Russo-German pact came as a stunning surprise to the northern countries. Furthermore, it was fraught with great dangers and special dangers for all of them. Previously they had counted on Germany to prevent Russian aggression and vice versa. It is possible that the Scandinavians had been lulled into a false sense of security because of the success with which they avoided entrance into the first World War.

The outbreak of the war on September 1 found the Scandinavian countries sympathetic with the Allied cause. Sweden which had been mildly pro-German during the first World War exhibited marked anti-Hitler sentiments. The Swedish working classes have never been pro-German. The upper classes have always been anti-Russian and therefore leaned toward Germany during the first World War. Denmark ordered her tiny army mobilized while Norway and Sweden ordered partial mobilization. All of the northern countries proposed to withstand an economic blockade, with the shortage of gasoline, for example, presenting a grave problem.

The common desire of Scandinavia and Finland to remain neutral is obviously not a matter to be decided by them alone. This Finland discovered in October when the Russian demands were made and then were followed by actual military attack in November. As the seriousness of the Russian threat became manifest, the heads of the four governments with their respective foreign ministers met in Stockholm upon the invitation of the Swedish King, a meeting reminiscent of the World War except that now, in addition to the three Scandinavian monarchs, the same three kings who were reigning in 1914, there now appeared also the President of

the Republic of Finland with his foreign minister. Out of this meeting came clear signs of solidarity and common sympathy, and the announcement of a common policy of neutrality. No military alliance was found, however, and evidently Finland was given no formal assurances of military support. Will Scandinavia join forces with Finland? That is what Stalin is reputedly anxious to know. With a total population in the four countries more than twice that of Belgium, and with well organized, though comparatively small, fighting forces, and with people, who though peace loving, may become truculent vikings when attacked, it is possible that a united front against Russia might give Stalin pause. What will be Germany's attitude toward Scandinavia? Will Hitler perchance attempt to take over Sweden to stop Stalin, or would a Russian attack on Sweden bring Germany to Sweden's aid? Will Germany in an endeavor to correct the Dano-German boundary swallow all of Denmark?

In spite of the tenseness of the situation, Scandinavia has endeavored to be neutral. Norway's bold action in the *City of Flint* constituted a slap both at Russia and at Germany but followed what Norway sincerely believed to be the proper procedure for a neutral—a belief which is shared generally outside of Russia and Germany. Denmark has shown her courage by opening fire on German planes which in violation of international law flew over her territory.

The Scandinavian countries are far from neutral in spirit as far as the Russo-Finnish war is concerned. Popular feeling in Sweden is favorable to military intervention in support of Finland. Swedish investments in Finland also are a potent influence pulling Sweden toward war. The present belligerent attitude in Scandinavia is in striking contrast to the attitude in the twenties, when the army was very unpopular. In the twenties Swedish soldiers are reported to have indicated that in case of a war they would shoot their officers and go home. This has all been changed. Even the Social Democrats now favor an increase in defense appropriations. The same changed attitude is in evidence in Denmark and Norway also.

Cooler heads in Sweden, however, believe that Sweden can serve herself and Finland best by continuing her formal neutrality. Sweden has a veritable Maginot line near the old Swedish-Russian border—that is, the present Swedish-Finnish border. A more formidable defense could be made against Russia at this point than farther east on Finnish territory. Besides, there is a certain advantage to Finland in having Sweden neutral. Swedish munitions plants turned out supplies for Finland, but cannot be bombed. In fact, even though Sweden should become a belligerent, she could not be readily damaged from the air. Her industries are scattered all over the countryside. Her scattered munition plants are well hidden. There are no great industrial centers where bombing would paralyze the nation.

If the Swedes should enter the war, they might be glad to have Norway, facing the Atlantic, remain a friendly neutral so that her many fiords might be the means of approach for supplies from abroad.

Scandinavia is at best facing great dangers. If these countries are invaded and conquered, it will be the first time in recorded history that the Scandinavians have been subjected to non-Scandinavian rule. Their subjugation, too, would mean the destruction of some of the best democratic structures in the world.

## National Defense

### EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

RADIO ADDRESS BY HON. THOMAS E. MARTIN, OF IOWA

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me recently over the radio, as published in the Iowa City Press-Citizen, of December 27, 1939:

[From the Iowa City Press-Citizen of December 27, 1939]

OF NATIONAL DEFENSE—CONGRESSMAN MARTIN DISCUSSES RECENT TRIP MADE AS MEMBER OF CONGRESSIONAL GROUP

Congressman THOMAS E. MARTIN, of Iowa City, in an American Legion address over radio station WSUI during the holiday season, told of his recent trip of inspection of the United States defenses as a member of a joint congressional committee. His speech, entitled "National Defense," is as follows:

"The European war has gone far enough to give us some idea of our own position in regard to defense. We know by now that the mere expression of a wish on our part that European nations keep their warships far from our shores will not be fully observed by either side.

"We know also by now that all sales of goods and all shipments of goods to or from all American shores are being watched most carefully by both sides. Our every move or expression of opinion is carefully scrutinized to determine our position with reference to the warring nations.

"In this situation we must speak with extreme care in discussing our problem of national defense lest in our desire to bring out the various problems and their possible solution, we are not misunderstood as to our objective.

"No nation can rightly be condemned for planning adequate defense for its shores and its people. But overemphasis of some phase of so-called defenses may be taken to indicate a fear of some type of attack from some particular source or nation or even worse than that, it may even indicate preparation for possible offense to be launched immediately on the outbreak of hostilities. Unfortunately, the line between offensive and defensive weapons cannot be clearly drawn. In fact, the entire list of combat weapons can be used in either category if circumstances require. It is really impossible to determine whether the preparation is for offense or defense unless one knows the type and extent of the forces and armament against which our preparation for possible combat is made.

"So far as I know, very few are in position to speak with certainty or authority on those points at this time, and all who speak should speak with great care in order to avoid as much as possible presenting a warped or unfair picture of our national defense problem.

"No nation is in position to defend itself from a foreign foe unless it is in position to place an adequate number of trained soldiers in the field with adequate weapons to successfully repel a threatened invasion.

"The time element will depend upon the aggressiveness, size, and proximity of the foe together with his freedom for immediate attack.

"The United States is most fortunate so far as this time element is concerned, but we must not let that good fortune lull us into a state of apathetic indifference and unpreparedness.

"The United States has just this year shown a real concern in bringing our defense up to date. And now it is exceedingly 'defense minded.' This awakening has borne all the earmarks of our awakenings of the past, generating a feverish sort of hysteria and a feeling of complete dependence upon other nations whose armor may be thicker and whose armies and navies may have been mobilized and equipped with greater supplies of modern and efficient weapons. This very feeling of dependence upon those nations equipped to make a show of might may have influenced us in shaping our foreign policy. It undoubtedly has. But why can't it also influence us to build a friendly and cooperative relationship with all our near neighbor countries to the end that they realize our sincerity of purpose in guarding against establishment of any base of operations by any European or Asiatic power within effective range of us or our neighbor nations?

"Our long proof of our own freedom from aggressiveness should help us in that matter. The recent journey of the joint House and Senate committee throughout Central America, Panama, and Mexico has convinced me that the good will of those nations can and will respond to every manifestation of friendship and good will by us toward them.

"As you probably know, the 15,000-mile journey of the joint committee was made for the purpose of studying our national defense to the end that we may be better prepared in the next session of Congress to provide for an adequate defense without extravagance.

"I will not go into detail or technical discussion of the inspections we made on that long, thorough, but rapid tour through our various factories, arsenals, airports, Army forts, and other stations of importance in our national defense system. I cannot describe in any detail in the time available the tour and visit we made to each of the countries between us and the Panama Canal. I would like to call attention, however, that this part of our trip was of great significance.

"It is my own opinion that the good will of our neighbors which can be won by a heartfelt smile and handshake may fortify us against aggressor nations through denying them footholds near our lands more successfully than an extravagant outlay for armament. We may also supplement that manifestation of good will with the determination to accept without bitter resentment the many incidents that are probable during the progress of hostilities abroad.

"If we combine the above with a reasonable preparation calculated to eliminate some of the bottlenecks in the process of manufacture of our munitions, we can stand ready to defend ourselves against any probable attack before such attack would be fully launched. And this sort of preparation could be achieved at far more reasonable cost than the cost of a vast array of obsolete or obsolescent weapons manned by a large standing Army and Navy personnel.

"Friendship and good will between us and our near neighbors can greatly reduce the requirement for vast stores of munitions and a large and expensive standing Army and Navy, but it is not expected by any nation to take the place of a reasonable defense structure.

"We are not prepared for a war of any kind to an extent that would guarantee our soldiers access to adequate supplies of modern weapons. And many of us have vivid recollections from the World War of the needless loss of our friends on the field of battle due to lack of adequate arms.

"It is my belief that our standing Army should be augmented principally in those branches of the service that require long

training in the handling of highly specialized weapons, such as aircraft and antiaircraft, and that we should not increase the great expense of maintaining a permanent or standing Army of large numbers in other branches.

"My recent trip of inspection leads me to believe the American Army has no peer in brain power, efficiency, and inventive genius. My observation in the World War leads me to believe the American soldier and sailor have no peer in personal loyalty and bravery, and that they have the ability to absorb discipline and training very rapidly. These qualities in the American soldier and sailor make it possible for us to build up adequate defense through a far less expensive system than if we found it necessary to maintain large standing armies and navies.

"It is true we need very badly a moderate augmentation of our specially trained troops and a reasonable increase in our rate of production of the most modern and efficient weapons our experts have designed, which, by the way, lead the world, and we need to expand our Reserve Officers' Training Corps, Officers' Reserve Corps, and National Guard to the end that we can mobilize and train our defense force within the time it may be needed with a minimum of expense during the long years of peace we hope lie ahead."

### Fortification of Guam

#### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

#### LETTER FROM THE SINO-KOREAN PEOPLES' LEAGUE

Mr. HARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from the Sino-Korean Peoples' League, of Washington, D. C.:

SINO-KOREAN PEOPLES' LEAGUE,  
Washington, D. C., January 12, 1940.

Honorable Members, House of Representatives, Committee on Naval Affairs, Seventy-sixth Congress, Washington, D. C.

HONORABLE GENTLEMEN: The reverberation of last year's congressional objections to fortifying the island of Guam can be heard once more. The objection is said to be based on the noble intent to avoid displeasure of Japan's Shinto Samurais.

No thinking American can truly believe that the refusal to fortify Guam will make the Samurais restore and respect America's rights in the Far East. The Tokyo Nichi Nichi, the powerful daily in Japan, in its editorial, recently pointed out the fundamental issue between America and Japan:

"So long the United States continues its friendly attitude toward China, readjustment of American-Japanese relations is impossible. \* \* \* Too much self-confidence in America's superiority in geographical position and strong economic resources is cause for Washington's policy of interference in the Far East."

Last month the "shun-so" forcefully urged the Japanese people to "once again seriously consider the meaning of the China incident, particularly why it is a holy war to Japan, and resolve to accomplish an illustrious achievement in the history of humanity by fully utilizing the rare opportunity of settling the China incident without being distracted by the complex and mysterious international situation."

In the face of the present international situation in the Far East, the refusal to fortify Guam, the connecting link of naval defense, will not only be construed by the Shinto Samurais as America's weakness but it has caused the military and naval bases in the Philippines and Hawaii to be highly vulnerable.

Never before in the history of America have the two defensive forces in the Pacific been faced with such a precarious and apprehensive situation.

The problem of defense in these areas, including the Panama Canal, has doubly increased, largely due to the intensive Japanization activities of the Japanese residents and their Government agents against the security of America.

Let us frankly and patriotically view the Japanization activities in the Philippines, Hawaii, North, Central, and South American countries. Constantly the Shinto agents are, in the name of cultural and other means, preparing for the so-called national emergency. Remember there are more than 600,000 Japanese in these countries. They are the vanguards of Japan's samurai. Two-thirds of the so-called American citizens are still clinging to Japanese citizenship.

Last September Dr. Junjiro Takakusu came to Hawaii from Japan to lecture on the superiority of the Japanese people over the westerners. Shinto, Buddhist, and other Japanese organizations are most active in Japanizing Hawaii. So much so that one of their own leaders, Rev. Takie Okumura, said:

LXXXVI—App—16

"Today the pendulum has swung in the opposite direction and the Japanese community seems to be Japanized more and more."

Few months ago (August) Lt. Gen. Kiyokatsu Sato, in his book, *War Between Japan and America Imminent*, lengthily described in detail how the United States may be conquered by the invincible Shinto forces. He said:

"Japan must first seize Hawaii and undertake the destruction of Panama Canal," etc.

#### JAPANIZATION IN THE WEST COAST ACTIVE

During my tour of the West coast last September I found that the Japanese naval officers have been most active, giving lectures to confidential groups and passing out un-American literature, etc.

Attached herewith is a photostat copy of a book entitled "U. S.-Japan War," and a naval map. Please note the Japanese naval operation against America. The Japanese naval officers are said to have told their hearers that—

"Once we control the Aleutian Islands, Hawaii, Guam, and the Philippine Islands, America will bow to the will of Japan."

"In 1904 and 1905 Japan won the Russo-Japanese War with America's money and moral support; we will now win the United States-Japan war with the financial, material, and moral help from Soviet Russia."

"By 1945 Japan will have China under full control and the puppet governments will be at our command. The exhausted world conditions will aid Japan; Japan will be in a top position to dictate world politics."

On January 7 the Washington Merry-Go-Round had an interesting item of Japanese fishing activities in the Mexican waters:

"State Department and authorities are doing some quiet checking on a new fleet of Japanese fishing vessels which has suddenly bobbed up in the Pacific off the highly strategic coast of Mexico."

"Intelligence agents have learned that the boats are former British coast patrol vessels bought as obsolete early last year and reconditioned in Japan."

"The original small-caliber gun mounts were enlarged for 3-inch guns. Machine-gun nests were left untouched. Also, each boat carried powerful, latest-type radio equipment—all very strange 'fishing' tackle."

"There are about 60 of these boats, 90 to 120 feet long, all steel, \* \* \* with a cruising range of 6,000 miles. Naval experts say they can be converted overnight into raiders of commerce. But what is really worrying them is that the vessels are made to order as mine layers. \* \* \* The Japanese Government's connection with the boats is direct and unquestionable."

Reliable sources informed the league that last October 21 the Japanese Navy approved the subsidy of building 50 large fishing boats of 650 tons each. These boats are to be engaged in fishery in the west coast of Mexico.

#### AMERICA AIDING JAPAN'S SAMURAIS

Last July the Donald Douglas airplane manufacturer of Southern California sold to Japan one of the largest planes of its kind (Douglas D-C-4), with a capacity of 100 passengers, for \$726,000. According to reports, it is alleged the American plane is now being converted into bombers, and the Japanese will start the building of similar planes.

Ever since the China incident began, each year America has sold about 57 percent of Japan's war essentials to her.

American businessmen well knew that without American gasoline, arms, munitions, and war essentials Japan cannot effectively carry on a successful war in China. In spite of this knowledge they have been and are continuing the sale of these destructive war essentials to Japan. Why?

Can any American be so foolish and unpatriotic enough to justify the profit end of such a trade with a gangster? How much more so should America play a just and humanitarian part for the sake of a true peace in the Pacific?

Every dollar made by these American businessmen by such trade with Japan, the American people must spend five to six times the amount to fortify the strategic islands in the Pacific in fear of Japan's aggression.

#### ANTI-AMERICAN ACT INTENSIFIED

In 1910 America helped Japan to annex Korea. Did America profit by such an unjust act making the American-Korean Treaty of May 22, 1882, a scrap of paper?

Did Japan respect American rights any more since the refusal of the last Congress to fortify Guam?

The truth is that Japan has deliberately intensified anti-American activities.

Few weeks ago we received news from the Orient that the Japanese Government closed nearly all the Presbyterian Bible seminaries, boys and girls' Bible clubs, etc. An American missionary wrote:

"Because of these conditions I went to see Mr. Grew, the American Ambassador. \* \* \* He is interested and anxious to help. He realizes that missionaries are being squeezed out just as American businessmen are being squeezed out."

The Presbyterian foreign mission board recently appealed to the Department of State:

"You will regret to learn that most recent advices indicate that a still more serious situation is developing. Attendance at the shrine is being required not only of educational institutions but pastors of churches and religious bodies are compelled to take part in the ceremonies. Severe punishment and long imprisonment are being inflicted upon any persons who on conscientious grounds

refuse to conform to this requirement. Our entire work in Chosen (Korea) is being imperilled."

We the victims of Japan's aggressions are very apprehensive of America's security in the Pacific. Therefore we sincerely pray that the Seventy-sixth Congress take proper defensive steps to fortify Guam soon.

Respectfully submitted,

KILGOO K. HAAN,

Washington Representative, Sino-Korean Peoples' League.

## The House Committee for the Investigation of Un-American Activities Should Be Continued

### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

Mr. RANDOLPH. Mr. Speaker, this body will soon be called on to consider the extension of the so-called Dies committee and the providing of funds that the work may go on into a further investigation of un-American activities.

It has been my course, Mr. Speaker, to support this program from its inception. I have, on previous tests, on even earlier proposals, been in that group of Members, sometimes small, who felt the Congress had a real responsibility in relation to this problem.

In the current issue of Collier's I have noted with approval an editorial, To Ward Off Ruin, and I commend it to this membership for a careful reading. I think the entire comment could well be placed in the Record. But for the time being I only quote from it, to wit:

A country where the "reds" are allowed to scream warts on their vocal cords needs some agency that can scream back at them, nail their more outrageous lies and exaggerations, and dig into any criminal business they may be trying at any given time. These services have been ably performed by the Dies committee for the last couple of years, and we believe it would be only sensible for the American people to tell their Congress to tell the Dies committee to carry on, with ample funds.

I agree that it is sensible to continue the committee. I have recently talked with individual members of the group and they assure we there is work still to be done. They feel they can continue to disclose the devious devilry of persons and agencies who are attempting to cause unrest in America and tear apart our democratic system of government.

Let us, regardless of party, join together to the end that Congress stand strong against the subversive and un-American activities now being practiced in the Republic.

### Work To Do in America

### EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ADDRESS BY WHEELER McMILLEN

Mr. WOODRUFF of Michigan. Mr. Speaker, under unanimous consent given me by the House, I herewith offer for the RECORD an address entitled "Work To Do in America," by Wheeler McMullen, editor in chief of Farm Journal and Farmer's Wife, and also president of the National Farm Chemurgic Council. This speech was delivered to the National Grange at its annual convention held at Peoria, Ill., on November 17, 1939.

Mr. Speaker, Mr. McMullen is a recognized authority on agricultural matters and is thoroughly familiar with its early

and recent developments. As president of the Farm Chemurgic Council he has kept in step with the development of the use of farm products in industry, and he is greatly interested in the orderly development of this new market for the products of the farm.

I offer the following speech in the belief it will be of great interest to every Member of this House and that it will contribute much to the knowledge of those of us who are really concerned about the present deplorable condition of those engaged in the greatest American industry, farming:

An enormous amount of work is waiting to be done in the United States.

Jobs have got to be found for 10,000,000 workers for whom opportunities to work have not been provided.

The 20,000,000 people who are on public relief must be restored to more satisfactory and generous living.

About forty-five billions of Federal debt, and the interest thereon, will have to be paid, besides the \$18,000,000,000 debts of local governments and private debt.

There are homes to be built and homes to modernize before all our people are well sheltered. Hundreds of thousands of American homes are yet without electricity, without water systems, without paint, without suitable floor coverings, and in need of new furniture and equipment.

There are farms to buy and farms to pay for—and hundreds of thousands of farms in need of fences, of better power and machinery, of better livestock, of lime and fertilizer, of paint and shrubbery.

A vast mileage of market roads awaits improvements. There are schoolhouses yet to build and equip, hospitals needed, library services to establish, and recreation facilities to develop. There is untold work to do in conserving the Nation's heritage of soil and water, of forests and wildlife.

#### KNOWLEDGE

Most important of all, ahead of America is a vast area of undiscovered knowledge yet to be unfolded for the benefit and advancement of mankind. Inventions are yet to be made and developed for the further increase of our wealth. Science is confronted by thousands of unanswered questions. New knowledge will extend the power of man to understand, to increase health and wealth, and will enlarge man's enjoyment and capacity to serve.

All this is but a way of saying that the tragedy of modern America is the far too great prevalence of needless poverty. Rich though we are as a Nation relative to the rest of the world, entirely too many millions of Americans are poor by the standards that the middle of the twentieth century ought to exemplify.

Tremendous as is the work waiting to be done in the United States, we have among us husbands and fathers who have never had a regular job. In the cities nearly half of the youth is without opportunity to make a living, or to establish homes unless upon relief standards.

For a few years it has been possible to moderate the severity of these conditions by borrowing from our children and grandchildren. If that procedure is followed for long enough, not only will the situation itself become chronic but the palliative will cease to be available.

Here is a challenge that must be met face to face. We have got to think out a program that will ameliorate poverty by some other means than by denying to our posterity even the opportunity of prosperity.

There are those who believe the increase of poverty is inevitable because they say the long task of creating the United States is finished, and that hereafter we must be content with a shrinking economy. I cannot participate in that school of thought. The United States still has both great needs and great resources.

In a few centuries we have built in North America a truly great Nation. Our fathers erected this structure not simply by borrowing from the future, not merely by passing laws nor by any kind of legerdemain. They built the United States mainly by a plain old-fashioned practice called hard work. I for one believe that a still greater and richer Nation can and will be built here but that it will only be done when enough Americans adopt the same practice.

#### EARNING POWER

You who are here today represent leadership in agriculture. You believe in work. From your deliberations may well come a program that can meet the challenge of turning the steps of our fellow Americans out from the alleys of poverty into the paths of prosperity. I say this deliberately, not to offer you a compliment but to suggest a responsibility.

What is the character of this problem of poverty in the presence of work that needs to be done? Essentially poverty is a lack of buying power. A lack of buying power comes from a deficiency in earning power. Earning power, of course, is simply an ability to produce something in the way of goods or services which others want enough to exchange for it their own buying power. The reduction of poverty, plainly enough, has to start with the increase and diffusion of earning power.

The great majority of all earning power has its sources in agriculture. It is because so large a proportion of the general earning power does have its roots in the soil that I attribute to you, as leaders in agriculture, a primary responsibility in meeting the challenge of poverty.

Indeed, the earning power of agriculture probably determines, more than any other single factor, the earning power of the people as a whole. For a long time it has been remarked that farm income and factory pay rolls rise and fall in almost exact unison. Also notable is the fact that the national income rises and falls in almost exact proportion to the gross agricultural income, the national income being regularly a little more than seven times the farm income.

#### A SURE WAY

The reasons for this are fairly clear. In the first place, farmers, themselves, with nearly 25 percent, constitute the largest single group of population. The incomes of another 25 percent are solely dependent upon the first crack at the farmer's dollar. Thus half the Nation must be prosperous or depressed directly as farmers are. When that half of the Nation prospers, orders for goods flow to the factories, men are hired, and in turn start buying; transport is busy, finance is busy, and the entire economic machine moves into a higher gear.

I frankly doubt whether there is any other way to restore prosperity than to build up earning power in agriculture first. You can balance the Federal Budget, you can modify Federal taxes, improve the labor laws, and give friendly aids to business with no assurance that any one or all of them will restore what is called confidence. But raise farm income and orders will flow to business in exact proportion to the raise. There is nothing like orders to tell business that confidence has arrived.

Whenever the earning power of agriculture again reaches \$12,000,000,000, the national income will again exceed eighty billions, and the problem of unemployment will cease to be serious. When agriculture can earn \$15,000,000,000, there will be more jobs in the United States than there are men.

Agriculture's present earning power is low simply because farmers do not produce enough of the goods that are now in demand, and because there is not as yet demand for all that farmers can produce.

Consequently the furious competition among farmers causes a steady and terrific pressure upon prices of farm products. More farmers go into dairying and into poultry because already the competition is too severe among farmers growing wheat and cotton and corn.

The answer has to lie in broader outlets for farm products. Merely to reduce production, even with a temporary reward for doing so, does not suffice. The result, if acreage control works, is that the individual farmer has less to sell, and if control does not work, that he produces higher yields on fewer acres and nullifies the expected price gain. That the artificial controls cannot be accepted as a permanent policy is increasingly clear.

#### POLICY

It becomes an imperative need of the Nation that a long-time, income-building farm policy be accepted. An effective farm policy is imperative in order that farmers be properly rewarded for their labors upon the land. Such a policy is doubly imperative when it is realized that the end of relief, the employment of labor, and the eventual solvency of the Nation all await its application. Until agriculture is well paid instead of half paid, there will be joblessness, relief, debt, and all the attendant ills.

A realistic view of inescapable facts leads directly to conclusions which must be factors in determining a constructive agricultural policy. One is that there is futility in continuing to produce year after year quantities of any crop in excess of the amounts the markets can profitably absorb. Another is that neither the agricultural nor the national economy can derive permanent advantage from placing limits upon production.

Fortunately between the two horns of this dilemma may be perceived a clear-cut road to the answer.

The national policy must enable farmers to supply every need of the American market which agricultural resources and skill, supplemented by scientific and industrial technique, are capable of producing or learning to produce. When the United States adopts that concept our country will again be on the road to prosperity.

This policy means that our own American farms must be permitted to grow every item we know how or can learn how to produce that is now purchased by American consumers. It means that knowledge must be developed to extend our production for the nonfood requirements of the people and the raw materials of industry. It means that at some points the subsidy of production of things we need may be substituted for the subsidy of restriction of things which we need less.

#### PROGRAM

Definitely it calls for an about-face toward a wholehearted and aggressive program of utilizing to the utmost the opportunities nature has provided here in our own 48 States.

Reduced to simple statements, a constructive national farm policy may be expressed in the following program:

1. Give every advantage of the American market to American farmers.
2. Encourage and expand by every possible means the utilization in industry of products American farmers can grow.
3. Extend and hasten experimentation to establish new crops on American farms.
4. Establish incentive payments to farmers for producing materials the United States does not grow in sufficient quantity or does not yet grow efficiently.
5. Encourage throughout both rural and urban society the habits of self-help in preference to Government help.

The extent to which the products of foreign farmers are admitted to the markets of America can hardly be appreciated without examining the records. Nor is the effect of these imports, whether directly competitive or not, easy to measure. Great pains have been taken to show that the quantities of many imports are so small that their effect upon the American price is imperceptible. To that contention it may be sufficient to point out that in an open market the lowest offer sets the price. Not a very large puncture is required to cause a flat tire.

There is a well-worn argument to the effect that if we are to export we must also import. Those of us who insist that the American farmer's home market must be fully protected wish to declare, however, that exports gained at the expense of domestic opportunity are not worth much. The fact is that we do import. Our principal imports, except sugar, are rubber, coffee, tin, and silk, which enter without duty. We import gold and silver. Our people travel abroad. We employ foreign shipping and other services. With all these we do not have to impair our domestic farm markets to promote exports.

#### THE GREAT MARKET

Farmers of the United States, if enabled to obtain the earning power, will buy far more goods from our manufacturers, and from each other, than the farmers of any other part of the world. Therefore to build up the income of our own agriculture would seem to be the simplest of plain common sense.

Sugar, incidentally, contributes an illustration in this question. Despite the thousands of acres that might profitably be growing cane and beets, our continental farmers are restricted to growing less than 30 percent of the sugar Americans consume. There is a theory that Cuba, for instance, must be allowed to sell us sugar so that she may buy our products. The proponents of that theory do not bring out the fact that one good American beet-growing county spends 10 times as much for automobiles per ton of sugar produced, and owns more than 30 times as many motor cars per thousand population, as is the case in Cuba.

Moreover, those who pay for foreign trade propaganda because they are interested in exporting, in shipping, or international banking, appear to overlook the fundamental fact that foreign trade flourishes best in periods of domestic prosperity. Then is when we import the largest quantities of necessities, such as manganese and rubber, and spend most freely for the foreign luxuries. The most intelligent way for these interests to stimulate foreign business would be for them first to join with the forces that want to create a sound domestic prosperity. None of us objects to a sound foreign trade; indeed, we look forward to its development. But foreign trade cannot and should not be built at the sacrifice of opportunity for America's farmers.

#### MORE OUTPUT

Here in the United States nature has given farmers nearly every possible combination of soil conditions and climate, of humidity and altitude, of temperature and sunshine. Somewhere in the United States can be grown, perhaps, not every, but certainly nearly every agricultural product needed now or in the future by the American people.

Certainly we can and should grow the sugar this country uses.

Thanks to the recent sweetpotato research, we now know how to fill our entire needs for starches. The second sweetpotato starch plant, operated entirely by private capital, is now at work, and the scores of others necessary to meet our needs will follow, especially when some protection is afforded to American producers.

There is no reason why American farmers should not supply the entire American market for fibers. We know how to grow cotton and wool, flax, hemp, and others. Yet practically every square foot of carpets, rugs, and linoleums manufactured for floor coverings in the United States is made from foreign fibers and other materials. It is time for a serious effort to grow our own carpet wools and other coarse wools. The head of a large textile mill, located in the very edge of the Cotton Belt, told me the other day that he had not bought a pound of American cotton in 20 years. He used Indian cotton because of some peculiar quality—and apparently no one had ever tried to find out whether Indian seed would reproduce such cotton here, whether some American strain could not be bred to meet his needs, or domestic fiber be treated to acquire the necessary characteristics.

On the same day I visited a great factory headed by a man who formerly manufactured cigarette paper in France from European materials. He had determined to Americanize his business, manufacture his product where his customers were. One result of his effort I saw in a warehouse filled with a half million dollars worth of flax fibers purchased from American farmers. In the mill were 700 American workers enjoying new earning power that had not existed a few weeks before. I refuse to believe the theory that these 700 workers and the farmer flax growers will not buy more American goods than did the Europeans whose places they take, and thereby make more jobs for other American workers.

#### COMPETITION

Our imports of fibers last year added up to more than \$67,000,000, while we brought in enough flaxseed to have required two or three million acres to grow—acres which instead produced too much wheat.

The importation of about 3,000 tons per day of oils and fats is a matter of concern to nearly every farmer. This flood of coconut oil, palm and palm-kernel oil, babassu oil, whale oil, to say little of the linseed, flaxseed, and castor beans, bears an overwhelming weight upon the prices of cottonseed, peanut, and soybean oil,

is a substantial factor in the low price of lard and therefore of hogs and corn, and even reaches to some extent toward the price of butter and therefore of dairy products. Taken together, these oils and fats, pouring in mainly from the Tropics and jungles, where a few cents a day is the reward of labor, are probably our largest import.

I might pile up the facts about the foreign competition which flings its challenge at American farmers. Rather than to add tables of statistics, let us rather examine the application to the whole problem of the remedies I have suggested.

Obviously there are several points at which tariff protection can properly be applied. The changes in duties since 1930, especially under the Reciprocal Trade Agreements Acts, have been steadily downward. A 171-page list of such changes includes nearly 100 pages of reductions in duties on agricultural products. There is no single instance of an increase. The first forward step should be the amendment of the Trade Agreements Act to require confirmation by the Senate of the agreements. The next step should be the repeal of the act itself, and then the termination of the agreements. Following that, some upward revision of duties on farm products probably would be needed.

#### INCENTIVE PAYMENTS

However, the tariff is not an adequate instrument for enabling farmers to expand their acreage in many of the new fields of opportunity. A tariff duty may have the effect of raising the price to millions of consumers in order to benefit a few thousands of producers.

For that reason I have proposed an equally effective but more economical device—the establishment of incentive payments. There is now a 65-cent tariff on flaxseed. To increase it further would be to add to the cost of paint, linoleums, and all of the multitude of items in which the oil is used. Instead of increasing the tariff, domestic production could be made profitable at no additional cost to consumers except as they are taxpayers if Congress were to authorize a payment from the National Treasury for the flaxseed actually produced. A better example might be presented in the fast-drying oils, of which we produce hardly 3 percent of our needs. A tariff on these would immediately benefit very few, but an incentive payment on tung oil, perilla, chia, or castor oil to be dehydrated, would compensate all producers engaged without taking the commodity out of its natural price range.

This device, applicable to a multitude of items which farmers might well be learning to produce, would cost the Treasury far less than the present program. It would add millions of dollars to farm income, and millions of tons of materials to the national economy. Instead of depriving workers of jobs because of reduced production it would make jobs. It would seem to make better sense to pay farmers to produce things we need in the United States than to pay them not to produce.

Also necessary to effectuate the five-point program I have outlined is vigorous research to extend, not only the markets for farm products, but the ability of farmers to produce for the markets which now exist. Now in construction at Peoria and at three other cities are splendid Federal laboratories to study new uses of the crops which now are surpluses. These laboratories are a gratifying fruit of the Farm Chemurgic Council's program which thousands of farmers have supported. Their attack upon the surplus program is necessarily slow, for research, especially Government research, cannot be hurried. They are a sound step for the future. But their work is limited now to the study of surplus crops.

#### NEW CROPS

The output of surpluses can be more readily diminished by introducing new crops to occupy the acres now growing the excessive quantities. That new crops can readily be fitted into the farm economy is clearly demonstrated by soybeans, of which 80,000,000 bushels will be harvested this year. Most of us can remember when soybeans were not yet a commercial crop. The development of sorghums to the west of the Missouri River affords another example.

I would therefore urge that as soon as public demand can be built up effort be made to obtain a fund of around \$25,000 for every State experiment station to devote to study of new crops. We spend great sums these days to learn how to grow still higher yields of wheat and corn and cotton. Would it not seem at least equally sensible to spend something to find substitute crops that the country needs? A \$25,000 fund would permit an experiment station to employ a competent research scientist, along with the necessary aid and equipment to test, for the conditions of that particular State, all sorts of possible newcomers to the crop list. Certainly somewhere in the United States American farmers can grow the vegetable oils, the fibers, the insecticides, the furs, and, in fact, most of the farm products we now calmly import, because we haven't tried seriously to find out what we could do.

You will readily see how, once experimental evidence indicates the suitability of a new crop for a given area, the incentive payment plan could be applied to hasten the commercial production. The incentive payment plan also will give assurance to manufacturers that they can depend upon domestic supplies if they adapt their facilities to use the American product.

No one can guess the results that might come from vigorous and thorough study of new crop possibilities. Most of our major crops were once new to North American soil. Exceedingly little intensive and scientific research has been devoted to new crops. Certainly no one knows even that we can't produce rubber and coffee, for no determined scientific effort to find out has ever been completed.

Agriculture, no more than industry, can afford to become static. One of the largest American corporations recently revealed that

40 percent of its sales for the year had been of items which 10 years before the company not only did not manufacture, but of items which, for the most part, did not even exist 10 years before. The other 60 percent of sales were from the backlog of standard products; they were the company's wheat and corn and cotton. In agriculture we have got too much backlog, not enough new products.

Naturally most of the new products must be for nonfood markets, for expansion of food demand can be expected only as prosperity becomes more diffused.

#### STARTING PLACE

Last month, after laying the cornerstones of the new-uses laboratories here and near San Francisco, the Secretary of Agriculture declared that the United States should help South American countries to develop noncompetitive agricultural crops for us to buy in order that we might sell them more goods. Last winter he asked Congress for \$250,000 from the United States Treasury to spend in South America for that purpose. If this is a good idea for South American farmers, I see no reason why it is not a better idea for farmers in our own country. The world's greatest undeveloped market for the goods of American manufacturers lies up and down the rural routes and in the farm villages of the United States.

The work that needs to be done in America can be done. The starting place is in agriculture. The first part of the job may be the hardest—but the way will be much harder in America if the start is not made soon and made soundly.

We in agriculture need to ask little in the way of aid from others, and that little we ask in order that agriculture may aid labor to employment, industry to activity, and the Nation to prosperity. What we ask is mainly that a few needless obstacles be removed from our path. Given full and free opportunities in the markets of this country, farmers will set the example of work. The output of their hands and of their lands, as it grows in volume, will make jobs for those who transport, who manufacture, who sell, and who serve. The money farmers earn will in turn multiply by seven to create new earning power for the rest of the Nation.

Agriculture provides most of the Nation's raw materials, supplies most of the wealth that builds our cities, and contributes the youth to replenish the city population. The earning power of farmers is the unit that determines the annual income of the Nation. Already carrying these responsibilities, the leadership of agriculture may as well assume the full role of guiding America toward getting its work done, toward creating the earning power that is the reward of useful work, and the driving power of prosperity.

### West Virginia Coal-Mine Disaster Calls Attention to Pending Legislation and Also to Work Which Has Been Done by United States Bureau of Mines in Bringing Safety and Health to This Great Industry

#### EXTENSION OF REMARKS

OF

#### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

Mr. RANDOLPH. Mr. Speaker, we are conscious of the terrible tragedy that recently occurred in the Bartley mine disaster in West Virginia, where 91 miners lost their lives.

It appears timely that attention of Congress and the country be directed to the work which has been done by the United States Bureau of Mines in safety and health programs. I include also suggestions for broadening and improving this necessary work, with a proposal for an additional safety station in West Virginia.

For several years I have participated in first-aid and safety meets in West Virginia, particularly in the section I represent, where there are 9 coal-producing counties out of the 15 included in the Second Congressional District.

Senator NEELY, of West Virginia, will shortly bring before the Senate his measure for Federal inspection of coal mines, and it has much to commend it. I believe its provisions are needed and will help, rather than hinder, the work of State mine agencies.

#### WEST VIRGINIA AIDED FROM PITTSBURGH

The work of the Health and Safety Branch of the United States Bureau of Mines in West Virginia has been handled chiefly from Pittsburgh, Pa., though one of the all-steel railroad mine-rescue cars has been maintained chiefly in West Virginia for the past several years. However, much work

has been done by the Health and Safety Branch—chiefly by the Safety Division—in West Virginia. I am informed that in the fiscal year 1937-38, of the 105,093 persons in the mineral industries given the Bureau's first-aid and mine-rescue courses, 26,305 were from West Virginia, or about one-fourth of those engaged in coal mining in West Virginia were given the training. In addition, out of 1,902 first-aid instructor's certificates given by the Bureau, authorizing the holder to give first-aid-training instruction, 497 were issued in West Virginia. The first-aid and mine-rescue training was given in 790 towns and mining communities of the United States, and of these 121 were in West Virginia. Out of 74 first-aid and mine-rescue contests in the United States attended by workers of the safety division, 18 were in West Virginia. In addition to the above, the Bureau's engineers aided in connection with several mine explosions and fires in West Virginia, made several health and safety inspections and reports on West Virginia mines, and conducted several important investigations as to possible improvement in health and safety procedure in the mines of the State.

#### WEST VIRGINIA SAFETY STATION IS NEEDED

It has long been felt that, while much of the Bureau's health and safety work for West Virginia, and especially in the northern part of the State, can be done from the Bureau's main safety station at Pittsburgh, Pa., on the other hand, the southern and central parts of the State are too far distant from Pittsburgh for effective or economical handling of the work. In recent years there has been a fairly definite movement, actuated largely by the mining interests of the central and southern parts of West Virginia, to have a Bureau of Mines safety station not very far from Charleston; and at various times Montgomery, Beckley, and Mount Hope have been mentioned as suitable places. Recently it has been felt that, inasmuch as a new Federal building is to be constructed at Mount Hope, a Bureau of Mines safety station might well be placed at Mount Hope; and it is also understood that this has the approval of the West Virginia Department of Mines and of most, if not all, of the mine operators. I understand Mount Hope is satisfactory to the Bureau as the location for a safety station, provided the various West Virginia interests approve.

If a station is established, additional funds should be obtained from Congress, as the Bureau has no funds for the purpose, its present funds for health and safety work being inadequate for the needs of its present organization and personnel. The additional funds, personnel, and equipment required would be about as follows:

1 senior mining engineer (to be a district engineer for West Virginia).....	\$4,800
1 assistant mining engineer.....	2,600
1 senior safety instructor.....	2,000
1 assistant safety instructor.....	1,620
1 junior stenographer.....	1,440
Total salaries (annually).....	12,460
Travel funds for 4 men (annually).....	3,000
Supplies, maintenance of automobiles, etc. (annually).....	3,000
Total recurring funds needed annually.....	18,460

In addition, the following materials would be needed initially but would not be needed annually after the station had been established, as repairs, replacements, and so forth, would be included in the \$3,000 above requested annually for supplies, and so forth.

Initial supplies and equipment needed for a safety station in West Virginia:

4 passenger automobiles, at \$750 each.....	\$3,000
1 automobile truck (mine-rescue purposes).....	1,000
10 sets of oxygen breathing apparatus.....	2,500
5 all-service gas masks.....	250
1 oxygen pump.....	250
10 oxygen cylinders.....	200
10 electric cap lamps and charging rack.....	250
5 gas-detecting devices.....	300
Miscellaneous safety devices and equipment.....	500
Supplies, cardoxide, repair parts for oxygen breathing apparatus, etc.....	1,000
Total for initial equipment, etc. (not needed annually).....	9,250

It will be noted that five additional persons are requested and the annual cost of running the station would be about \$12,460 for salaries, \$3,000 for travel, and \$3,000 for supplies, and so forth; a total annual operating expense of \$18,460, which should be given to the Safety Division of the Bureau of Mines under the allotment designation "Operating mine rescue cars and stations and investigation of mine accidents," in the bill which allots funds to the Bureau every year. The sum of \$9,250 would be needed to equip the station with automobiles, truck, mine-rescue equipment, and so forth, but this item would not, of course, be needed after the first year. Each of the four men in the station—engineers and safety instructors—should have a light automobile to run from mining town to mining town, otherwise he will be of relatively little utility in putting over any safety program.

The Health and Safety Branch of the United States Bureau of Mines consists of 2 divisions; the Safety Division, with some 80 or 85 employees, and the Health Division, with about 20 persons, or approximately 100 for the branch, out of a total of about 725 for the Bureau as a whole.

The Safety Division of the Bureau of Mines was recently composed of 82 persons—29 safety instructors engaged chiefly in giving first-aid and mine-rescue training to the nearly 2,000,000 persons employed in the mining and allied industries in the 48 States of the Union, upwards of 600,000 being engaged in coal mining; 28 engineers who do some first-aid and mine-rescue training but who should be engaged in strictly engineering work—making safety examinations and reports on mines and mining plants, giving accident-prevention courses to mine workers and officials engaged in mining, and numerous other similar types of work—18 clerks, and 7 others—cooks on mine-rescue cars, laborers, and so forth. The Safety Division work is directed from 14 safety stations—San Francisco, Calif.; Seattle, Wash.; Phoenix, Ariz.; Salt Lake City, Utah; Denver, Colo.; McAlester, Okla.; Duluth, Minn.; Vincennes, Ind.; Birmingham, Ala.; Jellico, Tenn.; Norton, Va.; Pittsburgh, Pa.; Wilkes-Barre, Pa.; and Juneau, Alaska—all of these places being provided with suitable complement of mine-rescue equipment, and so forth. In addition, there are 3 field offices established relatively recently to handle petroleum safety work: Dallas, Tex.; Bartlesville, Okla.; and Houston, Tex.

The 82 employees had the following funds allotted in 1938-39: Salaries \$213,560, travel \$45,120, supplies \$18,500, contracts \$14,464, miscellaneous \$4,120; total \$295,764. This sum was available in the fiscal year for the Bureau of Mines field safety work for the approximately 2,000,000 persons engaged in the mineral industries—bituminous coal, anthracite coal, metal mining, nonmetallic mineral mining, quarries, cement plants, petroleum plants of all kinds, metallurgical plants, and so forth—in the 48 States of the Union. It is interesting to know that the State of Pennsylvania allots upward of \$250,000 for its inspection force for approximately 200,000 persons employed in coal mining. The total working allotment for the Bureau of Mines was about \$2,400,000.

The Health Division's force of 17 persons—2 in Washington and 15 in Pittsburgh, Pa.—devotes its activities chiefly to laboratory investigations into harmful gases and dusts, testing dust respirators, gas masks, and so forth, and to the dissemination of information of various kinds looking to the prevention of ill health and accidents in the mineral industries. Workers of the Health Division also do considerable investigative work in mines and tunnels every year. The funds available to the Health Division in the fiscal year 1938-39 amounted to \$43,869, of which \$37,380 went to salaries, \$2,000 to travel, \$2,489 to supplies, and \$2,000 to fixed charges and miscellaneous activities.

The total available funds for the operation of the Health and Safety Branch of the Bureau of Mines for the fiscal year 1938-39 was \$339,633.

The Bureau pursues two general lines of investigation—field and laboratory studies designed to bring about safer and more healthful conditions among workers in the mining and allied industries, and the study of new and improved methods for mining, treatment, and utilization of the numerous mineral materials essential to present-day human welfare.

The mining, quarrying, metallurgical, and petroleum industries of this country give more or less direct employment to well over 2,000,000 persons; hence, with their dependents, the welfare of probably 10,000,000 persons is fairly definitely affected by the Bureau's work of various kinds.

The Bureau has no legal authority to enter mines or other establishments or to enforce its recommendations as to health, safety, or efficiency; the regulation of mining and other mineral industries being vested in the individual 48 States rather than in the Federal Government. The Bureau, therefore, relies upon the cooperation of the mining industry and of the various State mining and other departments—chiefly through educational work, such as the issuance of published papers and pamphlets, the giving of first aid and other safety-training courses, and so forth—to make its findings and recommendations effective in trying to improve or better conditions not only as to health and safety but also as to efficiency and conservation. The Health and Safety Branch of the Bureau of Mines is essentially a service organization, though considerable research work is done also, not only on the health side but in safety also.

#### NO AUTHORITY TO ENTER MINES

With no authority to enter mines or other plants to obtain information or to enforce its suggestions or recommendations, the main function of the Health and Safety Branch is educational, and in this activity utmost effort is expended to secure and maintain close cooperation with workers, employers, State inspection and enforcement organizations, and numerous other agencies engaged in promoting health and safety.

In its various educational activities the engineers and safety instructors of the Safety Division annually come into fairly close personal contact with approximately 300,000 persons in the mineral industries; in the past fiscal year it is estimated that the approximately 60 engineers and safety instructors had fairly close contact with at least 500,000 persons in these industries. The first-aid-training work constitutes the most intimate and in some ways the most effective method of putting before the mining industry—both employer and employee—up-to-date health and safety data.

In other words, the first-aid-training course as now given is excellent accident-prevention propaganda, and probably its most valuable feature is that it reaches workers in large numbers, about 100,000 now taking the course annually. Over 1,000,000 mining people have taken this course, and it is estimated that through it at least 200 lives are saved annually and probably at least 10,000 nonfatal accidents are prevented from occurring in the mining and allied industries because of the safety consciousness given to those who take the course of instruction as taught by present-day Bureau of Mines methods and instructors. During the past year the first-aid training was given in some 750 to 800 mining communities in 38 States, more than 100,000 persons receiving certificates for having completed the course.

Those who have been engaged for any considerable period in the field activities of the Bureau of Mines in health and safety have long been of the opinion that nearly all matters pertaining to health, safety, and efficiency in the mineral industries are so interlocked inherently that any attempt to try to engage in any one without paying due attention to the other is almost certain to result in ineffectiveness, if not in absolute disaster. Hence, the Bureau of Mines employees in the Health and Safety Branch are prone to associate all three of these phases of mining together whenever any one is brought up for discussion or action. Most of the hundreds of pamphlets issued by the health and safety workers of the Bureau of Mines since its inception in 1910 have recognized this interdependence in some manner.

#### SAFETY OF MINERS IS PARAMOUNT

Unquestionably, no major industry has any greater need to safeguard the health and safety of workers than has mining, and it is generally admitted that mining is an ultrahazardous occupation unless utmost precautions are in effect at all times. On the health side the mine worker is subject to essentially all of the ills and ailments that affect persons who spend their time on the surface, and in addition he is confronted

with definitely unusual health problems almost wholly related to his atmospheric environment.

Health is the greatest asset of the miner, as it is of every human being. To the miner, however, it is probably relatively more valuable than to most people, as his occupation almost invariably demands the possession of far more than ordinary physical abilities, particularly physical endurance. In other words, the miner must be a "he man." When his health fails he is usually relegated to the scrap heap. For this reason many ex-miners at a relatively early age in some cases become watchmen, truck farmers, chicken raisers, or owners of drink emporiums or pool halls, or are engaged in some similar occupation. I have observed this fact in the State and district from which I am a Representative.

The miner has some advantages, as well as numerous very definite disadvantages, as regards health in comparison with persons engaged in other types of industrial endeavor. Practically all miners are forced to take considerable amounts of exercise, and our medical authorities tell us that only through exercise can good circulation of the blood and the efficiency of all vital organs be maintained.

Any person who loads 6 to 10 or possibly 20 tons of coal or rock per day, or who "wrestles" all day with a several-hundred-pound drill or a several-thousand-pound mining machine, or who follows a mule in the hauling of scores of cars of coal or rock, or who walks or partly runs through several miles of muddy, low, or hot underground workings, or climbs several hundred or possibly several thousand feet of ladders per day certainly expends plenty of physical effort. In this he undoubtedly derives numerous advantages—as well as some disadvantages—over those whose work is sedentary.

It is difficult to evaluate the results and accomplishments of the Bureau of Mines in its health and safety efforts for the benefit of those engaged in the mineral industries, though the bibliography of published matter issued by the Bureau in connection with investigations and their results with application to combined health and safety in the mineral industries is at least partly indicative of what has been done or at least what has been attempted.

#### SAFETY RECORD IS IMPROVING

On the safety side some definite figures are available and are offered. During the 5-year period 1906-10, inclusive, or just previous to the creation of the Bureau of Mines, 13,288 persons were killed in the coal mines of the United States, an average of 2,658 per year, and the fatality rate for this 5-year period was 5.89 persons killed per million tons of coal produced. The number killed in our coal mines in 1932 was 1,207, and the fatality rate per million tons of coal produced was 3.36; in 1933 there were 1,064 killed, a rate of 2.78; in 1934 there were 1,222 deaths, a rate of 2.93; and in 1935 there were 1,242 deaths, a rate of 2.93. Tentative figures for 1936 indicate that 1,330 fatalities occurred, a fatality rate of 2.72, the lowest coal-mining fatality rate on record. Figures for 1937 show that there were 1,467 fatalities, a rate of 2.98 (tentative).

If the 5.89 fatality rate for the 5-year period 1906-10 had continued to the 1st of January 1940, the number of fatalities in the coal mines of the United States would have been approximately 30,000 greater than they actually were. During the 30 years' life of the Bureau of Mines the coal-mine fatality rate has been reduced sufficiently to indicate an average annual saving of life of more than 1,000 persons. Similar figures as to prevention of nonfatal accidents are not available, but it is estimated that about 50 nonfatal accidents occur to 1 fatality. It is probable that about 50,000 nonfatal accidents have also been prevented annually.

If the cost to the operator of a life is put into cold-blooded dollars and cents and a relatively low amount, such as \$5,000, is taken as the value of a life, it will readily be seen that, irrespective of ethical or humanitarian considerations—and not considering nonfatal accidents—the annual saving of somewhat more than 1,000 lives may be considered as worth more than \$5,000,000, or almost three times the total amount being expended by the Bureau of Mines during the last year and nearly double the entire expenditure of the Bureau for any year of its existence. If, in addition, it is conceded that as many as 50,000 nonfatal accidents per year have been pre-

vented—and the assumption is by no means unreasonable—and the cost to the operator in compensation, hospitalization, and so forth, of a nonfatal accident is placed at \$100—some authorities estimate it at \$300—it will be seen that at least an additional \$5,000,000 annually has been saved to the coal industry through the safer operation of the past 28 years.

The benefits to the workers in and around coal mines due to this increased safety of operation are much more impressive than are those to the mine operator. The prevention of the death of 28,000 coal-mine workers in the past 27 years has obviously avoided a vast amount of suffering, pain, and misery of various kinds to the families who would have been bereft of their loved ones. And the prevention of 50,000 or more nonfatal accidents annually for 27 years certainly has saved the miners, their families, their friends, and the community a large amount of pain, inconvenience, misery, and other losses.

#### AVERAGE DEATH AGE IS 35

The financial losses that the workers have avoided through this increased safety of coal-mine operation are in themselves colossal. The average age of the coal-mine worker who is killed is about 35 years, and, in general, he should under normal conditions have a future active working period of at least 20 years. In normal times he should earn at least \$1,000 annually; therefore, in his 20 years active life expectancy he would receive approximately \$20,000 for his services. Hence, the saving of the life of about 30,000 coal-mine workers in the past 28 years through decreased death rate in coal mining has prevented a financial loss to them of at least \$565,000,000, and this does not take into consideration the financial losses saved to the worker through the elimination of large numbers of nonfatal accidents. For the past 28 years an annual saving of approximately \$21,000,000 has been made to coal-mine workers in the prevention of fatalities; \$21,000,000 is far more than the total expenditures on safety work made by the Bureau of Mines since its establishment in 1910; therefore the coal-mine worker unquestionably is reaping annual dividends of several hundred—probably several thousand—percent on the expenditures of the Federal Government in the promotion of safety in coal mining.

The foregoing detailed facts about coal mining are more or less similar to safety conditions that obtain in the other phases of the mining and allied industries, including metal mines, nonmetallic mineral mines, the petroleum industry, and so forth, all of which still have a relatively high rate of accident occurrence, though much progress has been made in the past 5 or 6 years.

#### SUFFICIENT FUNDS NEEDED

The Health and Safety Branch, like practically all other parts of the Bureau of Mines, was hit hard by the various cuts made in allotments in the depression years, and in the upbuilding of the past few years has not been given anything like the consideration the results of its activities deserve. The safety work of the Bureau is generally credited with a large share in the very definite progress which has been made and is being made in safety in the mining and allied industries of the United States. It is confidently believed that if the safety education work of the Bureau could be widened, accident occurrence in the mining and allied industries could be decreased at least 50 percent, and perhaps to even a greater extent. Although definite progress has been made in safety in mining in the United States, especially in recent years, late statistics give mining the worst accident rate of the major industries; yet we know from records of individual mines and mining companies that mining can be done with accident occurrence little, if at all, higher than most of the so-called hazardous industries.

In addition to the present work—all of which are essential and should be continued—the following programs are needed:

#### SAFETY DIVISION

##### 1. First-aid and mine-rescue training

This work is now in far greater demand than at any other time in the history of the Bureau of Mines, because of its demonstrated value as one of the most effective methods of accident prevention; it is now fairly well proven that as the result of the first-aid training of the Bureau of Mines at

least 200 lives are saved annually in the mineral industries and the number of accidents prevented by the safety consciousness instilled by the giving of the training is unquestionably of the order of many thousands annually. For years the Safety Division has been literally swamped with requests, almost demands, of the mining and allied industries, and especially the petroleum industry, for services of first-aid instructors far in excess of ability to comply with the limited personnel and funds now available. At present but 29 safety instructors are available to handle the first-aid and mine-rescue work among the approximately 2,000,000 workers in the mineral industries, strung through every one of the 48 States, and manifestly they cannot begin to handle the work at all adequately. Much of the time of the 28 engineers of the Safety Division is now occupied with first-aid training because of the shortage of safety instructors in proportion to the demand for the first-aid training; this keeps the engineers from doing real engineering work, with resultant decrease in the efficiency of the engineers' results. These men are kept practically continuously in the field going from mine to mine, hence must be provided with travel funds, including automotive equipment—cars and trucks. At least 10 additional safety instructors, with travel and supply funds, should be provided.

##### 2. Accident-prevention education

It is now almost universally conceded that safety in industry can best be achieved through education, not only of the workers but also of the officials who are in charge of operations. Some of this type of work is now being done, but the demands for this service are far beyond the ability of the available personnel to handle, and 10 additional engineers should be employed to engage in this very much worth while activity—four for coal mining, two for bituminous and two for anthracite; four for noncoal mining, two for metal mines and two for quarrying; and two for the petroleum industry. These men would spend most of their time in the field, going from mining community to mining community, organizing community safety chapters, holding accident-prevention classes, giving safety lectures, and so forth.

##### 3. Talking motion pictures on safety

The mine worker is the person most definitely concerned in mine safety, yet he is often the most difficult to convince when trying to alter an existing, long-used, unsafe practice for one now known to be safer. Generally the miner reads but little with reference to mine safety; frequently the mine-safety man or the mine officials are viewed with distrust; the first-aid-training course, while of much value, fails to handle numerous important phases of mine safety. Suitable talking moving pictures on safety in mining undoubtedly offer maximum opportunity to put over safety to the mine worker, and while several scenarios have been prepared and a few pictures have been made, the lack of funds for this work has heretofore so restricted this activity that production has been far below what it should be to achieve worth-while results. There is good reason to believe that much benefit could be derived through carrying this program into effect. The money expended would be far more than repaid in both tangible and intangible safety benefits to the mine worker, the mining companies, and the general public.

##### 4. Travel and supplies

The work of the Safety Division is almost entirely confined to activities at and around mines and mining localities, and this is necessary if it is to be even reasonably effective, as manifestly the mine worker must be contacted personally if the Bureau's safety knowledge is to be transmitted to him. To obtain this personal contact the engineers and safety instructors of the Safety Division must be in travel status most of the time, thus requiring travel funds and automobiles or autotrucks for travel.

The travel and supply funds available for the use of the Safety Division were much depleted to take care of the cuts made in 1933 and since that time have been somewhat further depleted in taking care of such matters as promotions, and so forth. The result of this is that practically 60 field workers of the Safety Division have had their activities much

curtailed in recent years due to lack of funds for travel and supplies.

#### 5. Printing funds

The present printing allotment of the Safety Division amounts to about \$10,000, which is far too low to take care of one essential printing requirement of the division, namely, the first-aid manuals. A manual is given to every man who takes the first-aid training course but this cannot be done now as our men train from 75,000 to 110,000 persons per year—105,000 in the fiscal year 1937-38—and the manuals cost nearly 10 cents apiece. For the past 10 years the Safety Division has been in the unhappy position of being forced to divert practically its entire printing allotment—and in some years this was insufficient—to first-aid manuals and as a consequence very little printed material has emanated from the Safety Division for 10 or more years.

The following suggestions are confined chiefly to standard work of the Safety Division and do not include numerous special problems, the solution of which should be undertaken when funds are more plentiful.

#### HEALTH DIVISION

##### 1. Field investigations on air dustiness

In view of the seriousness now existing in connection with the dust-health problem in mining, as evidenced by the fact that numerous requests for dust-health studies in California, Arizona, Tennessee, Kentucky, Wisconsin, Michigan, Minnesota, North Carolina, Pennsylvania, West Virginia, and other States, have been received and have not been handled chiefly because of lack of personnel and funds, it seems advisable to have additional funds to make field studies in several States in coal, metal, and nonmetallic mineral mines and plants for use as a field laboratory to try to ascertain what can be done to protect the mine worker from the menace of occupational diseases—chiefly dust disease—to help the employer to protect himself from the heavy expenses of various kinds from the disease and to save the general public from the numerous costs in human misery, charity, and relief work and other distressing phases of the dust-health situation in the mining and allied industries. Practically all of this work would be done in mining regions and ample provision should be made for travel and supplies.

##### 2. Air conditioning in mining

Hot humid air frequently dust laden is the cause of much ill health, accident occurrence, and inefficiency in mining and particularly in relatively deep metal mines. This subject has been approached only to a very slight extent by a very few mining organizations in this country and essentially no attention has been given to it by the various State governments or by the Federal Government. It is desirable that at least two engineers give full time to this subject in metal mining and two others in coal mining. While this subject is somewhat allied to dust disease, it has features not associated with dust disease and preferably should be attacked as a separate study. Practically all of this work would be done in mining regions and ample provision should be made for travel and supplies.

##### 3. Health and sanitary conditions in mining communities

With occupational disease and workmen's compensation now taking a heavy toll not only on the operating cost of mining properties but also on the health of the workman and to some extent on members of his family, the Bureau can do its part at least to some extent by making studies of health and sanitary conditions in and around mining communities with probably the making of health studies of mine workers and possibly of their families. These studies should be by all means be made by engineers and others familiar with mines and mining conditions or they are likely to cause unnecessary grief rather than be of aid to anyone. But little has been done on this in recent years, and a vast field is open for investigation with the probability of doing an immense amount of good not only to the workers in and around mines but also to the surrounding communities. One such investigation much needed is the condition of the vision of mine workers; while numerous other studies should be made, that on vision is decidedly important and could readily occupy the full-time work of several engineers and doctors though at

present one engineer could do much good in starting this particular study. Vision defects in underground mines which are very difficult to light at all adequately, unquestionably cause hundreds of accidents—and some disasters—in our mines—especially coal mines—every year. It is suggested that the Bureau employ about three engineers for this work of investigating health and sanitary conditions in the mineral industries and that sufficient funds be supplied to take care of the travel, supply, and other expenditures of doctors who may be detailed by the United States Public Health Service to participate in these studies, the doctors to be detailed for specific jobs, and on completion of those jobs return to their usual duties in the Public Health Service.

##### 4. Health laboratory research

The mining industry, including employer and employee, is beset with almost innumerable uncertainties as to the effect of air conditions not only in mines but also in surface plants, such as breathing of various dusts and gases, as well as of attendant temperatures, humidities, velocities, and so forth. Many of these problems must be solved in the laboratory, and since underground conditions vary much from those encountered on the surface, solutions worked out in general industrial work and which are applicable to the usual types of industrial plants, are very likely to be wholly unsuited to mine conditions, the solution of many of these problems as applied to the mining industry must be done by an agency such as the Bureau of Mines which is thoroughly familiar with mining conditions. This is exemplified in the fact that the present apparatus in general industrial use in the United States in the sampling and determining of air dustiness is the impinger; this apparatus and method are utterly unsuited to mine conditions, and if the mining industry is to protect itself in connection with the numerous problems arising from air dustiness, suitable equipment and methods for air dust determinations must be devised, and the Bureau of Mines seems to be the agency capable of undertaking this type of work. This matter of the unsuitableness of the ordinary device and method for mine air-dust determinations has recently been solved by laboratory workers in the Bureau of Mines, and it is but one of many problems in connection with mine air which must be solved by some agency such as the Bureau of Mines which is sympathetic with the needs of the industry and has intimate knowledge of mine conditions; and while much can be done by field investigations many of these solutions must be reached in the laboratory. Some of the work must be done in connection with other agencies, such as the United States Public Health Service. The Bureau is now swamped with requests for services of a laboratory nature in connection with dust, gas, and other subjects affecting health of workers in the mineral industries, and its meager forces and funds available for this work allow of doing but little other than the testing of respiratory equipment—dust respirators, gas masks, and so forth—and analyzing of mine gases in connection with mine fire and explosion disasters, leaving but little attention to be given to other urgently needed research. It, therefore, is very desirable that the gas and dust laboratory work, now very inadequately manned and financed, be given materially additional allotments.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

EDITORIAL FROM THE DALLAS MORNING NEWS OF JANUARY 13, 1940

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks, I submit herewith an editorial from the

Dallas Morning News of January 13, 1940, commending Secretary of State Cordell Hull's stand on reciprocal-trade agreements, in opposing the new plan whereby such agreements negotiated by the Department of State would require ratification by the Senate, and also commending generally the effect of the treaties heretofore entered into.

[From the Dallas Morning News of January 13, 1940]

#### CORDELL HULL'S STAND

Commendation should go to Cordell Hull for the unyielding stand on the reciprocal-trade treaties which he took in testifying before the House Ways and Means Committee Thursday. The Secretary of State is on firm ground in opposing any concession that would give the Senate power to ratify or kill the agreements negotiated by the Department of State. Such a provision would open the door to a vicious type of logrolling that might easily kill the whole program.

Opposition of Republican Congressmen to the Hull program is understandable, if not justifiable. But those Democrats who are now trying to knife the continuation of this policy of reciprocal-tariff reduction are turning their backs on one of the basic principles of their own party. And, since the Democrats control the present Congress, theirs will be the main responsibility if the power to negotiate trade treaties is allowed to expire next June.

If the Roosevelt administration is open to any criticism on its tariff policy, this criticism is that action toward lower tariffs has not been direct or vigorous enough. But in trying to put traditional Democratic tariff principles into practice, the administration has been handicapped by the high tariffs that have been erected in other countries and by the fact that many Democratic Congressmen give only lip service to their party's tariff plank.

The Hull program of reciprocal-tariff treaties has helped to reopen foreign markets for both farm products and manufactured goods from the United States and has boosted our foreign trade. It has been a major factor in adding to the income of American farmers, which had suffered severely as a result of the Smoot-Hawley tariff rates adopted under Hoover. The interests of both farmers and consumers call for extension of this trade program.

### Putting Christ Into Uniform

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

ARTICLE BY HARRY EMERSON FOSDICK

Mr. ANGELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Harry Emerson Fosdick, which was published in the Christian Century of December 13, 1939:

[From the Christian Century of December 13, 1939]

#### PUTTING CHRIST INTO UNIFORM

(By Harry Emerson Fosdick)

This new European war calls up many memories of the last war, with some of which the pulpit has no particular concern. One memory, however, we may well face: we put Christ himself into uniform. Willingly would we let that be forgotten, that the younger generation might not know what we said and did in 1917, but with another war rampant we had better confess frankly what we did, what war always tempts Christians to do—we put Christ into uniform. Jesus was our Lord; we could not go to war and leave Him behind. We wanted Him for the comrade of our sacrifice, and the sponsor of our task, and we took Him along.

First, we made Him our recruiting sergeant. As one of the foremost ministers in America in 1918 said, "Jesus Christ calls His followers to the colors and . . . their response to the call constitutes a triumph for Christianity such as the world has never before known." But that was not enough. These men from Christian homes and churches were going out to kill; in all the ingenious ways that science gives us skill with, they were going to slaughter men—yes; women and children—in the mass murder of a modern war, and we put Christ into uniform and sent Him with them.

Said one of our leading intellectual lights in the pulpit in 1917: "As Christians, of course, we say Christ approves of the war. But would He fight and kill? . . . There is not an opportunity to deal death to the enemy that He would shirk from or delay in seizing. He would take bayonet and grenade and bomb and rifle and do the work of deadliness." Indeed, one of the loveliest Christians I knew, an intellectual, a devout spirit, whose very devoutness made it impossible for him to do anything that he thought Christ would disapprove, said this: "I would not enter this work till I could see

Jesus himself sighting down a gun barrel and running a bayonet through an enemy's body." So we put Christ into uniform.

There have been statements aplenty about what war does to everybody else but not so many about what it does to Christ Himself. It conscripts Him, too. It sends Him to the front, too. One scene in the New Testament provides our inevitable text. In Pilate's court, after Pilate had condemned Him, the soldiers led Jesus into the praetorium and mocked Him before they took Him out to crucify Him. Some items in that scene we vividly recall—the crown of thorns, the spitting in the face, the beating with the rod—but one item often is lost sight of. They "put on Him," we read, "a scarlet robe." What was that scarlet robe? Undoubtedly, part of the uniform of a Roman officer. Somewhere in the praetorium they found the cloak of a military chieftain and, putting that on Jesus, mocked Him. See Him there, the Prince of Peace, forcibly clad in the garb of military authority, while the soldiers, mocking, salute Him. Would not any Christian in his senses cry, "Take that scarlet robe off Him. Of all the disguises that misrepresent Him, that is the worst."

That was bad enough when in the praetorium long ago His enemies did it, but how often His friends have done that too. They have conscripted Christ. The burden of our message is—whatever you and I personally may think or do about war—in the name of historical accuracy, intellectual clarity, and common decency, take that robe off Jesus.

#### II

Consider, to begin with, that the Christian's motives for conscripting Jesus are easily understandable. War is a costly and terrible affair—so terrible that no one can sustain it until he sees it as a sacred duty. No nation can maintain war without idealizing it as a holy cause. Now, for Christians the simplest way to idealize any enterprise is to get Jesus into it. That does the business. If He can go to war, we can, too. We say that a Christian is one who adores Christ. Beware of saying that too easily. A man who adores Christ wants, above all else, to agree with Christ. But when a man deeply desires to agree with Christ, nothing is easier than to make Christ agree with him. The psychologists call that rationalization. Adoring Christ, we face what seems a social necessity—some enterprise such as war that seems to us wrong and yet seems necessary. How can we make it seem right? Of course, we use Jesus. We elect Him chairman of the board of sponsors for the war. What can He do? He cannot talk back. He died on Calvary long ago.

That crucifixion did not hurt Christ. He handled that magnificently. But what we, His friends, have done to Him—using Him as sponsor of every sort of evil social custom, employing Him as a rubber stamp to guarantee the rectitude of the most damnable things on earth, from czarism and feudal systems to slavery and war—that is the greatest tragedy that ever has befallen Him. And this tragedy springs—strange anomaly—from our adoration of Christ, from men and women who want so much to agree with Him that they make Him agree with them.

So, in the 1850's, an American minister defended slavery thus: "American slavery is not only not a sin, but especially commanded by God through Moses, and approved by Christ through His apostles." That sort of rationalization concerning war we were guilty of in 1917. We hated war. It was against our principles. We had had 3 years to watch it in Europe. We knew what it was like. We even had before us the words with which drillmasters in the camps taught boys the uses of the bayonet. Here is a verbatim report of one drillmaster: "You've got to get down and hook them out with a bayonet; you will enjoy that. . . . Get sympathy out of your head. We go out to kill. We don't care how, so long as they are killed. . . . And I say to you, if you see a wounded German, shove him out and have no nonsense about it. . . . Kill them, every mother's son of them. Remember that your job is to kill them—that is the only way—exterminate the vile creatures."

We knew that war meant that and a thousand things like that. Yet it seemed necessary; we thought we had to go in; we could not go in without idealizing it; so we conscripted Jesus to make it a holy cause. Especially, we ministers did that. We could not go to war and leave Him behind. One of the leading ministers in this country said, "We must keep the flag and the cross together, for they are both working for the same ends." My soul! In hooking them out with a bayonet, the flag and the cross both working for the same end!

If you say, "We would not do that now," I reply that you may be sure some of us would not. Never again! And I agree that in these last weeks the American clergy on the whole have been much more conscientiously and courageously Christian than some dared expect. Still, ever and again from some of my ministerial brethren I hear echoes of the old abomination. If the heat were put on, they would do it again. Unable conscientiously to go to war without Christ, they would put a scarlet robe on him and take him along. That is why a British general in the last war said of the clergy, "The clergy are the best fomenters of blood lust that we have." Yes, indeed, for they have Christ to use.

#### III

Consider, now, the arguments we Christians commonly have employed to justify that scarlet robe on Jesus. For, of course, we have sought in the Gospel records for historical backing to support our picture of Jesus doing the deadly business of a modern war. Some American Christians are doing that today, falling back on the same two passages that were used in the last war and arguing from them that Jesus would sanction bloody violence and even participate in it.

The first passage is the one where He says, "I came not to send peace, but a sword." One of the best selling books on the market now has for its title *Not Peace, But a Sword*, and multitudes of Christians fall back on that phrase of the Master when they wish to justify the scarlet robe. But read the passage in the Gospel. Jesus is telling his disciples that when they break free from orthodox Judaism they will have divisions in their families. Loyalty to Him, He says, will break up households, and they must have courage to endure that. So, concerning that, He says to them: "I came not to send peace, but a sword. For I came to set a man at variance against his father, and the daughter against her mother, and the daughter-in-law against her mother-in-law: and a man's foes shall be they of his own household." That is what the passage is about. It has nothing to do with war. The word "sword" is a metaphor for difference of opinion within families about religion; and in Luke's parallel passage, as though that evangelist feared someone might crazily take the word "sword" literally, he drops the metaphor and uses the word "division" instead. Says Jesus, according to Luke, "Think ye that I am come to give peace in the earth? I tell you, nay; but rather division."

Yet if tomorrow America should be dragged into this war, you would find Christians falling back upon that phrase, "Not peace, but a sword," ripped from its context and twisted to meanings that were not in Jesus' mind, whereas the historic fact is that when Jesus used the word "sword" literally, he said, "All they that take the sword shall perish with the sword."

The second passage in which justification is found for the scarlet robe on Jesus concerns the cleansing of the temple. Did not Jesus use violence, some say, when he cast the money changers out? Did he not even use a whip of small cords? Therefore, would he not use bomb and bayonet? Quite apart from the general ridiculousness of the analogy, look at the story in detail. Mark's Gospel is the earliest record. There is no whip of small cords there. Matthew and Luke are next. There is no whip of small cords there. The whip of small cords is not even mentioned until John's Gospel, about 100 A. D., and in John's Gospel the cords are evidently used not on the money changers but on the sheep and oxen. Well, what would you use to drive out sheep and oxen that were defiling the sacred courts better than a whip of small cords? And what has that to do with visualizing Jesus sighting down a gun barrel, or driving a bayonet into an opponent's breast?

Moreover, take the phrase "cast out." He "cast out" the money changers, so the record runs. The Greek word is "ekballo" and is used again and again in the Gospel records. It ought to be possible to find out what it signifies. When Jesus was sent out by the Spirit into the wilderness to be tempted, ekballo. When Jesus put the noisy mourners out of Jairus' house, that he might be alone with the sick girl, ekballo. When a man tried to cast the mote out of his brother's eye, ekballo. When a householder brought forth out of his treasure things both old and new, ekballo. When the Lord was asked in prayer to send forth laborers into his harvest, ekballo. When the Master cast out demons, ekballo. And when Jesus, backed as he was by popular indignation against the racket of the money changers in the temple, cast them forth, ekballo. What has that to do with war?

How helpless a man is when he is dead. No sooner has he gone than, as it were, men fall upon him, the very men who were his friends. They use his name for things he never would have used it for; they twist his words to meanings that he never held; they claim his sponsorship for enterprises that he hated. And what can he do? He is gone, and his name and memory are at the mercy of those that are alive. And nowhere is this tragedy of Christ more terrible than when, on the basis of things He never said and never did, men put on Him a scarlet robe and lead Him off to war.

## IV

Indeed, Christians, in their insistent endeavor to put Christ into khaki, have used still another device. Jesus, they say, did stand for benevolence and brotherliness. He did protest against the use of violence. He pleaded for good will and even for love of enemies. We are not denying, they say, that this is the distinctive emphasis of Jesus' ethic, but all this applies to individuals only in their personal relationships and not to the policies of nations. I had a long letter the other day presenting that good, bad, and indifferent; we thought we had to do and wanted backing for. And so we have obscured his distinctive message and have made him stand for everything from slavery to war, until, in consequence, he has stood for nothing clear, characteristic, and distinctive that he did stand for. That is the most tragic thing that has happened to Christ. Far better for one of us with intellectual clarity to recognize what Jesus did distinctively stand for, even if one says one cannot follow Jesus, than to go on with this perennial rationalizing, this endless use of Christ in sponsorship of things that he was everlastingly against.

As for me, I have no intelligent and conscientious choice except this: I must take that scarlet robe off Jesus and, as the Gospel record says, even the Roman soldiers in the praetorium had the decency to do, put on him his own clothes. And as I must take the scarlet robe off Christ, I must take it off myself.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

## LETTER FROM THE IOWA LEAGUE OF WOMEN VOTERS

Mr. HARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from the Iowa League of Women Voters in regard to the reciprocal trade pact program:

IOWA LEAGUE OF WOMEN VOTERS,  
January 8, 1940.

Congressman VINCENT F. HARRINGTON,  
House of Representatives, Washington, D. C.

DEAR MR. HARRINGTON: The State Board of the Iowa League of Women Voters gathered at Des Moines for its winter board meeting wishes to express to you its views on the reciprocal-trade program.

The League of Women Voters' study and consideration of the whole problem of tariffs began in 1924. In 1936 the League began its support of downward revision of tariffs by reciprocal-trade agreements and to this end has promoted ever since the reciprocal-trade program.

The league's support of this program is not partisan but is based upon the interest of the general public welfare. The league supports this program for three reasons:

1. Because it helps the consumer by reducing the cost of living.
2. Because it is a step toward the removal of economic friction between nations at a time when the world needs peace efforts as it never has before.
3. Because the treaties provide a scientific method for the adjustment of tariff schedules by eliminating logrolling, leaving the decisions to unbiased experts and stimulating trade.

We are fully aware the wars have temporarily limited the effectiveness of the trade treaties but that is only partial and is no reason for abolishing them.

Domestically, we feel that the reciprocal-trade pacts are not a partisan issue for they are being supported by many Republicans and supported by some Democrats.

We earnestly urge you to support the retention of the reciprocal trade pact program.

Sincerely,

Mrs. R. J. De La Hunt, Ames; Mrs. John A. Vieg, Ames; Caroline Burtis, Grinnell; Margaret S. Trestree, Grinnell; Mrs. W. F. Mengert, Iowa City; Mrs. C. R. Smith, Onslow; Mrs. L. V. Phelps, Loretta Vrooman, Mrs. E. L. Nelson, Newton; Mrs. J. P. Mills, Cedar Rapids; Mrs. Charles E. Payne, Grinnell.

## Soil Conservation Service

## EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

## LETTER BY HON. LYLE H. BOREN, OF OKLAHOMA

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I have written to all Members of Congress on the subject of soil conservation:

DEAR COLLEAGUE: I am deeply interested in seeing the cost of government reduced, and am sure you and I both know many places in which enormous savings can be made in governmental expenditures. I am seriously concerned, however, with the proposal to reduce the Soil Conservation and the C. C. C. programs. The Soil Conservation appropriation is not a direct and final expenditure,

like so many Government appropriations, but it is an investment which will pay dividends.

Already in the United States 50,000,000 acres of farm land have been completely ruined for practical and profitable cultivation. This means 320,000 farms of 156-acre average have been permanently abandoned and those farm families formerly occupying them added to unemployment. Another 150,000,000 acres have been depleted to the borderline of abandonment. Three hundred thousand acres of land are abandoned in the United States annually because of soil erosion. This means that 28 farm families every day are forced to abandon farms. The eventual outcome is that that many more people are unemployed.

Despite improved farming methods, improved seed, improved methods of fertilization, the per acre yield per family is seriously reduced annually. Soil erosion from wind and water displaces 3,000,000,000 tons of soil each year, causes 750,000,000 tons of soil to be dumped in the Gulf of Mexico annually. And yet it takes Nature, under a protective cover of vegetation, some 300 to 1,000 years to build 1 inch of top soil.

At the present time we have organized operative districts for soil conservation pretty generally throughout the United States, with a very small appropriation given this gigantic task. Only skeletonized technical staffs are available in a small percentage of the districts. Soil-conservation work necessarily requires long-range planning. Under the present set-up a 30-year program should be the least we could expect for over-all results for the Nation.

I urge you to make a thorough and careful study of the situation which we face relative to our greatest natural resource—the land. I plead for your assistance in maintaining and expanding soil-conservation work. Let's curtail expenditures in the proper places. A few less battleships than are asked for, a few less guns than are requested, a hundred thousand less Government employees, abolition of a few useless bureaus, a lot less money down the drain pipes and rat holes will give us plenty of room for curtailment and still leave an abundance for sound investment in soil conservation.

Sincerely yours,

LYLE H. BOREN.

### Appropriation for Flood Control in Verdigris Valley, Kans.

#### EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

Mr. MANSFIELD. Mr. Speaker, my attention has been called to a speech in the Appendix of the CONGRESSIONAL RECORD, page 95, by Senator REED, of Kansas, with reference to an item said to have been embraced in the river and harbor bill of last year. This speech appears in the RECORD as an extension of remarks, embracing the speech made by the Senator before the National Industrial Traffic League at Chicago on November 21 last. A preliminary statement contains the following language:

The river and harbor bill this year contained a "pork barrel" item of \$31,000,000 for flood control in the Verdigris Valley in Kansas.

The statement shows that the item referred to is purely a flood-control provision with no reference whatever to navigation. The language used, that the river and harbor bill contained this item creates an erroneous impression.

The river and harbor bill passed the House May 18, 1939, and went to the Senate. The so-called "pork barrel" item pertaining to flood control in the Verdigris Valley was not in the bill.

An effort is now being made to have the Verdigris flood control item adopted in the Senate as an amendment to the river and harbor bill, but action upon it has not yet been taken by the Senate. If the Senators from Kansas object to the item, it will, of course, be stricken from the bill. The course is simple and easy and no appeal to the railway executives at Chicago is necessary. The Senator from Kansas holds the key.

### Amendment of the National Labor Relations Act

#### EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

#### RESOLUTION BY THE WAYNE AND HOLMES COUNTY AUTOMOBILE DEALERS ASSOCIATION OF OHIO

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the Wayne and Holmes County Automobile Dealers Association of Ohio:

Whereas as a result of disputes between automobile manufacturers and their employees and consequent curtailment or stoppage of production, automobile dealers suffer severe hardship, endangering their business and the welfare of their employees through inability to secure motor vehicles for sale; and

Whereas by reason of the fact that most automobile dealers operate under a franchise arrangement with the automobile manufacturer which requires them to handle and sell that manufacturer's product exclusively; and

Whereas automobile dealers are required to invest their own capital in dealerships and their source of livelihood is dependent upon being able to secure motor vehicles from manufacturer whose franchise they hold, and their aggregate investment in the industry is as great or greater than that of the manufacturer; and

Whereas the recent unfortunate and disastrous 8-week dispute involving Chrysler Corporation and its employees caused great loss of business to the 11,000 Chrysler dealers and their thousands of employees, rendering them helpless without recourse or protection: Therefore be it

*Resolved*, That it is the sense of a unanimous vote of the Wayne and Holmes County Dealers Association of Ohio, that in the event of industrial disputes, the rights of third parties whose interests are as great as those of disputing parties, should be adequately protected; and be it further

*Resolved*, That the Wayne and Holmes County Automobile Dealers Association recommends that the Wagner Act and National Labor Relations Act, be amended at the forthcoming session of Congress; and be it further

*Resolved*, That a copy of this resolution be transmitted to the Member of Congress from this district, also to our Senators, requesting them to provide the necessary relief and protection.

### Trend of Labor Disputes Under National Labor Relations Act

#### EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 16, 1940

#### LETTER BY HON. ROBERT F. WAGNER, OF NEW YORK, AND TWO ARTICLES FROM LIBERTY MAGAZINE

Mr. WAGNER. Mr. President, on November 2, 1939, the Chamber of Commerce of the State of New York adopted a report of its special committee on industrial problems and relations concerning the trend of labor strife since the enactment of the National Labor Relations Act. The accompanying resolution indicated that copies of the report are to be transmitted to Members of Congress and other Government officials.

I subsequently addressed to the editor of the New York Herald Tribune an exhaustive reply to the charges of the New York chamber. The letter was printed in the issue of

Sunday, November 19, 1939. The chamber was kind enough to make the text of this letter available to its members through its monthly bulletin for November 1939.

At this time I ask unanimous consent to have the full text of this letter printed in the Appendix of the RECORD so that my reply may be available to Senators having occasion to examine the original report.

I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial in Liberty magazine concerning the National Labor Relations Act and my reply thereto.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

TEXT OF LETTER TO THE EDITOR OF NEW YORK HERALD TRIBUNE, BY SENATOR ROBERT F. WAGNER, OF NEW YORK, PRINTED IN ISSUE OF SUNDAY, NOVEMBER 19, 1939, REPLYING TO CHARGES OF NEW YORK CHAMBER OF COMMERCE THAT WAGNER ACT HAS INCREASED INDUSTRIAL STRIFE

TO THE EDITOR OF THE NEW YORK HERALD TRIBUNE:

Widespread publicity has been given to a report adopted on November 2, by the Chamber of Commerce of the State of New York, which purports to furnish "convincing evidence that the Wagner Act not only has failed in its avowed objective of diminishing the causes of labor disputes, but has been a strong incentive in increasing labor controversies." Since I have frequently cited official statistics to the contrary in the press and before congressional committees, I hastened to examine the chamber's report and check it against all the available data. I am grateful for this opportunity to present my views on this important national issue.

It is essential first to restate clearly the broad objectives of the act, against which its success or failure must necessarily be measured. The act was never intended or designed to eliminate all strikes or lock-outs, or to displace the numerous Federal, State, and local laws directed against restraints of trade, improper picketing, or violence by either party in the course of labor disputes. Instead of dealing with the effect after labor strife has run its wasteful course, the act seeks to diminish certain underlying causes of that strife. Instead of imposing upon employers and employees wages, hours, rates of production, and grievance procedure established by Government fiat, it looks to the freely chosen representatives of employers and employees to thrash out their own difficulties and make their own bargain at the council table. Instead of adopting the policy of suppression of management and labor characterizing the totalitarian states, it builds upon the framework of the American system.

As the Supreme Court of the United States has held, freedom of choice in the selection of representatives must be safeguarded if such a voluntary plan is to accomplish its purpose. Since it cannot seriously be maintained that employees have impaired the Nation-wide organization of employers in corporations, trade associations, or chambers of commerce, no legislation was necessary to protect that right of employers. But the record unfortunately shows that bitter industrial strife frequently arose because no election machinery was available to enable workers to select their representatives in case of dispute, and because employers interfered with the industrial liberties of employees. In the words of a recent publication of the Brookings Institution:

"Prior to the 1930's employers wishing to prevent unions of workers from gaining sufficient strength to establish collective bargaining were able to resort to methods which sometimes rendered empty or meaningless this general and long-conceded right. . . . The employer could refuse to meet in conference with representatives of the workers or to discuss the issues at stake; he could discharge, demote, or discipline workers in his employ who were active in promoting the cause of a union; he could persuade, advise, or threaten employees with various possible consequences in order to induce them either not to join a union or to give up already held membership therein; he could establish as one of the conditions for obtaining or retaining employment the signing or acceptance of 'yellow-dog' contracts; he could carry on espionage work concerning the activities and plans of his employees and of union members or agents; and he could establish, finance, and aid in other ways organizations confined to his own employees as an alternative to the much less congenial 'outside' union.

"In an effort to give meaning to the declared right of labor to organize, the National Labor Relations Act defines violations of that right in terms of a series of 'unfair labor practices' and creates legal machinery to prevent the commission of these defined violations." (Government and Economic Life, 1939.)

The procedure of the Labor Act had been established in our governmental system since the pioneer Interstate Commerce Act of 1887. Its underlying policy had been successfully applied by the Federal Government to minimize industrial conflicts during the World War, and is at the basis of the highly effective Railway Labor Act. So carefully had the Labor Act been framed to protect the fundamental rights of employers and employees that in 18 successive decisions by the Supreme Court not a line of the act has been held unconstitutional.

The burden of the chamber's report is that a policy so well established in our law and our practices, and so deeply rooted in our democratic traditions has proved a failure in actual operation. This

conclusion is unfounded. Authoritative and indisputable data show the contrary ever since the act has been given a fair chance to exert its pacific influence.

## II

The chamber's "factual survey" may conveniently be considered under four heads: First, the incidence of all industrial strife; second, the incidence of strife which the act was directly designed to minimize; third, the volume of cases filed with the Labor Board; and fourth, the extension of the practice of collective bargaining.

1. The chamber's report finds that in the 3-year period following the passage of the act (1936-38), the incidence of all industrial strife was greater than in the 3-year period preceding its passage (1932-34). The arithmetic is correct, but the intended inference that the act has been ineffective is entirely without foundation.

Logic and common sense tell us that because two facts concur, there is not necessarily a causal connection between them. It might just as well be said that the Labor Act is responsible for the booming profits of 1937, when 185 industrial companies listed on the New York Stock Exchange earned more than in 1929, or for the current business upturn, with industrial production exceeding the 1929 average. It is obviously necessary to go beneath any statistical assertion to appreciate what the figures mean and how they were derived.

In this case it must be recognized that the tempo of business activity, as shown by national income produced, was 50 percent higher in the period 1936-38 than in 1932-34. Since the incidence of labor strife normally follows the business cycle, as the chamber's report concedes, it is not surprising that more industrial strife occurred in the former than in the latter period. What is more surprising is the comparatively minor increase in aggregate working time lost—less than 10 percent. But even if other factors intervened to disturb this normal tendency, the chamber's analysis will be rejected by a fair-minded public because of its studied failure to distinguish between the date of the act's passage and the date when it began effective operation.

It is a notorious fact that the Labor Act, though placed upon the statute books on July 5, 1935, was virtually a dead letter until its constitutionality was upheld by the Supreme Court in April 1937. Its effectiveness during this entire 18-month period was undermined by pseudo-legal opinions that it was unconstitutional, widely circulated by the Liberty League, the National Association of Manufacturers, the National Metal Trades Association, and similar groups; by a barrage of injunction suits in the district courts; and by the widespread practice of industrial espionage. Because the law of the land was ineffective precisely where its intervention was most needed, labor had no recourse but to vindicate on the picket line the fundamental rights which the law guaranteed. Labor strife, of course, multiplied. The first Supreme Court decisions, upholding the act against every constitutional attack, were handed down in April 1937, at the peak of this unprecedented strike wave. After an inevitable but remarkably brief period of adjustment the strike wave subsided. In the late months of 1937, according to the Bureau of Labor Statistics, fewer workers were idle and less time was lost through strikes than in the same months of the preceding year. In 1938, the first full year of the act's operation under the Supreme Court's mandate, there were only about half as many strikes, one-third as many workers involved, and one-third as much working time lost through strikes, as in the preceding year.

This record for 1938 is remarkable not merely in relation to 1937, an exceptional year, but in relation to the entire strike trend of recent times. The proportion of workers involved in strikes to the total gainfully employed was lower than in any year since 1932, and substantially below the average for the last 60 years. Fewer workers were on strike than in any year since 1932. The average working time lost per striker was lower than in any year since 1927—an indication of the short duration of the strikes that did occur. Less aggregate working time was lost through strikes than in any year since 1931. Sit-down strikes fell off sharply after April 1937 and have now virtually disappeared from the American scene.

This peaceful trend has continued to date. The number of strikes in the first 6 months of this year was about 20 percent lower than in the same period of 1938, and 60 percent lower than in 1937. The time lost in strikes was relatively high, however, due to the unusually severe bituminous coal-industry stoppage.

In brief, since the law actually became effective there has been a very substantial decline in the incidence of industrial strife. This decline is all the more significant because it has occurred in a period of unprecedented organizational activity, and has run counter to the upswing of the business cycle which began in the middle of 1938. The tempo of business activity in the year 1938, as a whole, was higher, except for 1937, than in any year since 1929, and is currently estimated at about the 1937 level.

2. Let us turn now to the statistics on labor disputes which the Labor Act was directly designed to minimize.

The act is limited, of course, to labor problems directly affecting interstate commerce. As the chamber's report properly notes, only 67 percent of the strikes in 1937 and 60 percent of those in 1938 occurred in industries fully subject to the jurisdiction of the act. But the chamber's report fails to record the even more significant fact that the decline in the incidence of labor strife in those industries during 1938 was substantially greater than in industries partially or wholly outside the act's jurisdiction.

Another limitation, emphasized at the outset, is that the act is directly concerned only with issues of representation, union recog-

nition, discrimination, and the like. The supposed increase in strife over these issues, alleged in the chamber's report, is vitiated by the same objections as its conclusion concerning strikes as a whole. Here again the official statistics show a very substantial decline once the act went into effective operation. During 1938 fewer workers were involved in "organization" strikes, as classified by the Bureau of Labor Statistics, and less working time was lost in such strikes than in any year since 1932.

The peaceful trend is clearly shown by a careful break-down of the figures for the first 6 months of 1939, furnished by the Bureau of Labor Statistics. Of the aggregate working time lost, 17 percent resulted from strikes over wages and hours, and 57 percent from strikes for the closed shop (an unusually high figure attributable to the bituminous coal stoppage). Neither of these issues is within the purview of the act. Less than 15 percent of the total working time lost is properly attributable to strikes over issues which could have been resolved by resort to the peaceful procedure provided by the law.

3. The volume of cases filed with the Board furnishes the clearest indication that the strike weapon is giving way to the orderly processes of law. From January 1936 through March 1937, there were more strikes called each month than cases filed with the Labor Board. But since the first Supreme Court decisions in April 1937 the number of new cases filed each month has averaged three times the number of strikes. The increasing tendency of workers to take their cases to the Labor Board instead of going on strike is clearly evident. In 1936 the average monthly ratio of workers involved in Board cases to workers involved in "organization" strikes (as classified by the Bureau of Labor Statistics), was 5:4. In 1937, the ratio increased to 2:1. In 1938 and the first half of 1939 the ratio rose to 6:1. That is to say, six workers are currently involved in cases voluntarily submitted to peaceful adjudication for every one who is involved in an "organization" strike.

To date, almost 24,000 cases have been handled under the act, involving over 5,500,000 workers. Most of these cases were filed after April 1937. Four out of every five cases filed have been closed. About 95 percent of the cases disposed of have been closed by dismissal, withdrawal, or by agreement of the parties, all without even holding a hearing.

The chamber's report impliedly criticizes the act because of the large number of cases filed under it and the proportion of cases dismissed as unfounded. I am unable to understand how these facts can be made a basis for criticism. They seem rather to demonstrate that, more and more, labor is substituting legal process for the picket line, and that the Labor Board in administering the act has taken pains to eliminate unfounded charges with a minimum of inconvenience and expense. Such charges would be just as likely to flare into industrial strife as grievances that are well-founded.

The trend of cases handled under the act reflects the broad trend toward greater industrial peace. In the first place, the number of cases filed in the year ending June 30, 1939, was one-third lower than in the preceding year, notwithstanding a continued increase in union membership. This would indicate a diminution in the Labor Board's activities with the increasing recognition of the principles of the law throughout the country. In the second place, since April 1937 the great majority of the Board's decisions have been concerned with elections or certifications of representatives, rather than with charges of unfair labor practices. To date, almost 8,000 representation petitions have been received, involving over 2,500,000 workers, including 25 petitions filed by employers, as provided by the new regulations in force since June of this year. Twice as many workers were involved in representation cases filed with the Board in the last 6 months than in cases of unfair labor practices. Almost 1,000,000 workers have voted in elections conducted under the law. The fact that 90 percent of eligible workers have actually registered their choice in these elections is an interesting commentary on the degree of industrial democracy which is being achieved.

4. The chamber's report makes no mention of the phenomenal development of peaceful collective bargaining in recent years under the influence of the Labor Act. According to a very recent study of labor agreements by the National Industrial Conference Board:

"Five years ago only a small proportion of companies in the United States operated under formal agreements with labor organizations. A growth of membership in labor unions from around 3,500,000 5 years ago to an estimated 8,000,000 has brought about a marked increase in the extent of collective bargaining."

Since 1937 thousands of new labor agreements have been negotiated, especially in the steel, metal-fabricating, rubber, electrical equipment, automobile, petroleum, and communications industries.

The principles of the National Labor Relations Act are an indispensable foundation for this vital phase of economic democracy in America. But successful operation under these agreements depends on patience, mutual confidence, and a responsible appraisal of mutual problems by the parties themselves. These qualities cannot be legislated into existence—they must develop with experience and the exercise of responsibility. The marked tendency toward more stable relations between parties new to the ways of collective bargaining is evidenced by another statement in the above-mentioned report of the National Industrial Conference Board:

"A noteworthy difference observed in the 1939 group of contracts, as compared to earlier ones, is in the matter of duration of agreements. A majority of those included in the 1937 survey ran

for a definite period, usually a year, perhaps reflecting the management's expectation that collective bargaining would be temporary and its unwillingness to commit itself too far into the future. The prevailing practice in present contracts is to make the duration indefinite. \* \* \*

"In general, recent union agreements seem to indicate a more serious acceptance of collective bargaining than former ones. The character and working of the various provisions give the impression of an attempt to construct practical and workable agreements to cover situations that arise in day-to-day plant operation rather than of contracts entered into under duress and couched in such vague terms as to make misunderstanding inevitable and amicable administration difficult."

Our own industrial history over the past 50 years demonstrates, and the splendid report of the President's Commission on Industrial Relations in Great Britain confirms, that the key to industrial peace lies in such collective bargaining relationships between freely chosen representatives. Their fullest development presents a continuing challenge to the industrial statesmanship of labor and management.

The clear indication from these facts is that the Labor Act is functioning well as an instrument for industrial peace. We should not permit our judgment of the over-all picture to be obscured by discussion or criticism of isolated cases or issues under the act, or by the conduct of employers or employees in some particular labor dispute. Indeed, it becomes increasingly clear that many labor disputes being laid at the door of the Labor Act arise out of the substantive terms of employment and are not within its purview at all. Those strikes can be controlled or prevented by Government only through compulsory arbitration. Most Americans will agree that such measures, placing the collar of involuntary servitude on both labor and management, are too high a price to pay for industrial peace. Consistently with democratic principles, the public authority can, however, help the parties themselves to minimize and adjust such strikes through the development of voluntary mediation machinery. I have already stated my belief that the time is ripe for a further elaboration of Federal action in that direction and my intention to offer a suitable plan.

### III

Finally, no appraisal of the merit of the National Labor Relations Act is complete without mention of those values which cannot be measured in statistical terms. To increasing millions of wage earners the act is bringing increasing enjoyment in their daily working lives of freedom of expression, of the press, of assembly, and of ballot. To increasing millions of wage earners it is guaranteeing a voice and a place in our industrial system which has been too long neglected or denied. The significance of these values must be apparent in the present trend of world events.

In closing, may I say that I have always supposed that the Labor Act would be perfected from time to time if the need were shown. But the wisdom of changes in the Labor Act can only be determined upon a clear understanding of its purposes and the actual record of its operation. That is the only sure path of progress. This letter is submitted in an effort to light the way.

Sincerely yours,

ROBERT F. WAGNER.

NEW YORK, N. Y., November 15, 1939.

[From Liberty magazine for November 25, 1939]

WAGNER REGIMENTATION AND HITLERISM

[Editorial]

Labor leaders have been warned on this page on various occasions that the time would come when they would heap curses on the Wagner Act.

President Green has criticized this act a number of times, and now President Lewis, former enthusiastic supporter of this legislation, is caustic in his comments.

Labor wanted certain privileges, and if they were not secured, legal compulsion was demanded. The workers wanted laws to force the employers to carry out their desires, but you cannot keep your cake and eat it too. You cannot compel employers to respect principles of control that cannot be applied to employees. If laws can be made to control one group of people, identically the same laws can be applied to control other groups.

Now the Wagner Act is fascism pure and simple. It represents a control of business and labor closely allied to that which is now in vogue in Italy and Germany. It is just another name for Hitlerism. Under the restrictions of the present law the employers' rights are ignored, and the employees are given many privileges that are surely unconstitutional.

Favoritism is a dangerous two-edged weapon. It is all right as long as your group is receiving the favors, but when the situation changes, it is irritating beyond description.

And laws should be made not for the use of one particular group of officials representing one party, but they should demand justice for the citizens regardless of which party is in power.

The present administration has favored labor beyond the wildest dreams of the most fanatical labor leader. But how about the officials of the next administration? Are they likely to be just as liberal toward the workers? Every intelligent worker knows the situation may be reversed. The favoritism pendulum of the political clock may swing one way, allowing unusual privileges, and then it is likely to swing in the opposite direction.

If we give capital too much power it takes selfish advantage of labor. When we give labor too much power similar mistakes are made.

The commission which has been enforcing the restrictions of the Wagner Act has in some cases been prosecutor, judge, and jury, and many of their decisions have been biased to a scandalous degree.

It is the desire of some of our Government officials to place all workers in one union. They want to control business and industrial activities of all kinds, and naturally they want the C. I. O. and the A. F. of L. to join forces. With one big union, the Government's problem would be easy when the time came for them to control labor. All that would be required when ready for such a change would be to depose the leaders and place others of their own choice in their jobs.

As we have stated previously on this page, the workers who are advocating the Wagner Act are walking into a trap. They are playing with a political buzz saw. They are being led into certain regimentation. They are making it especially easy for this administration, when the time comes, to place a yoke around the neck of American workmen.

Through the American system, our workers have earned wages and maintained a standard of living unequalled in any other country in the world, and the Wagner Act is entirely foreign to our system, and it will closely ally us, both employer and employee, to the "goose step" of Europe. There is nothing American about the Wagner plan.

The workers who are being fooled into supporting this legislation will some day lose the liberties which they have valued so highly, if the principles which it represents are permanently maintained in this country.

BERNARR MACFADDEN.

[From Liberty magazine for January 13, 1940]

SENATOR WAGNER DEFENDS HIS ACT—LIBERTY GIVES BOTH SIDES—MR. WAGNER ASKED THAT HE BE ALLOWED TO ANSWER THE EDITORIAL BY BERNARR MACFADDEN WHICH IS SHOWN AT THE RIGHT—HERE IS HIS REPLY

American democracy means, first of all, the machinery of representative government—Congress, the President, the courts, the ballot box on election day. But this machinery would be empty ritual if it were not used to foster life, liberty, and the pursuit of happiness by the average citizen in his daily affairs. It would be small consolation for the American worker to know that freedom of speech, press, and assembly are included in the Bill of Rights if the exercise of those rights resulted in his being discharged as a "labor agitator." His traditional American right of collective bargaining would be a mockery if he were represented by a dummy union dominated by his employer. His right of privacy would be nullified if his every move were watched by professional labor spies. His right to "equality before the law" would disappear if the right of organization enjoyed by his employer were denied him by control of his means of livelihood.

The National Labor Relations Act makes certain that these inequities, which existed all too often in the years prior to its passage, will be permanently eliminated from our national life. By guaranteeing industrial freedom in our factories, it establishes American democracy on a 100-percent basis.

There is nothing new or untried about the Labor Act. In procedure it follows closely the Federal Trade Commission Act passed in 1914. In principle it follows the Railway Labor Act and the decisions of the War Labor Board. If the Labor Act is unconstitutional in any respect, then the courts have ceased to be the guardians of our fundamental law. In 20 successive decisions by the Supreme Court, not a line of the act has been held to infringe the constitutional rights of employers or employees.

The act has provided a peaceful forum for 25,000 disputes over employee organization and choice of representatives involving over 5,000,000 employees. Thousands of new collective agreements have been entered into, bringing to both management and labor a better understanding of mutual problems and a peaceful basis for cooperative solution.

As the fair principles of the law have become widely recognized, it is being used more and more to conduct free elections among employees instead of proceedings on charges against employers. The right to petition for an employee election, once vigorously opposed when invoked by employees, came to be demanded by employers, and that right they now enjoy under appropriate safeguards.

About a million workers—90 percent of those eligible to vote—have cast ballots in thousands of separate elections held in every part of the country. This record represents democracy at its best.

The law which brought more industrial freedom has also brought more industrial peace. In 1933, the first full year of its operation after being upheld by the Supreme Court, less working time was lost in strikes than in any year since 1931. Contrary to the normal trend, the business upswing in the year 1939 was accompanied by a decline in the number of strikes.

An increasing proportion of workers is now seeking redress through peaceful legal process rather than fight out their organizational grievances, real or imagined, on the picket line.

The Labor Act eliminates the causes of certain labor disputes, but it was never designed to settle all labor troubles. In some particular labor controversy, employers or employees may engage in violence or trespass; but against that type of offense, existing reme-

edies afford ample protection. In other controversies the legal use of the strike or lockout weapon may give cause for criticism; but we must always remember that the freedom which democracy guarantees includes the freedom to make mistakes. If we wiped out all free labor unions and employers' associations, and settled all employer-employee disputes by government fiat, there would be no "labor troubles." But when that day comes our democracy will be dead and we will have adopted the dogmas of the Communist and Fascist states.

Under the practices early established by the Nazi regime, for example, the leader of the establishment—the employer—lays down the working conditions for his followers—the employees—within the framework of certain state decrees. The free-trade union is prohibited. Men who agitate for better working conditions are jailed for an offense against social honor. Grievances in each factory are presented through a council of trusted men hand-picked by the employer and the Nazi Party and rubber stamped by the workers. Unsettled problems are submitted to the final decision of labor trustees and courts. The state-controlled Labor Front embraces both employer and employee interests. Among employees it promotes strength through joy, while stamping out materialism; that is, concern over wages, hours, and conditions of work. More recently forced labor has become the order of the day.

This systematic suppression of all human and property rights is too high a price to pay for peace in industry. The American people prefer to seek greater industrial peace within the framework of the American system. To that end the broad objectives of the Labor Act are supported by every political party and by patriotic citizens in every walk of life.

The Labor Act will doubtless be amended from time to time in the regular democratic way, in the light of experience. But whenever I find its principles obscured by disagreement over details or criticism of administrative personnel, I recall a comment made by an American statesman many years ago: "Concessions on the part of the friends of the plan, that it has not a claim to absolute perfection," he wrote "have afforded no small triumph to its enemies. Why, say they, should we adopt an imperfect thing? Why not amend it and make it perfect before it is irrevocably established?" His answer was: "I never expect to see a perfect work from imperfect man."

The statesman was Alexander Hamilton, and the imperfect plan of which he wrote was the Constitution of the United States.

## Aid to Small Business

### EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1940

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by the distinguished Senator from New York [Mr. MEAD] at Washington on January 17, 1940, on the subject Small Business Needs a Helping Hand.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We cannot afford to neglect the problems of small business. Its welfare is too vital to the healthy heartbeat of American enterprise; too essential to our national economic stability to be victimized by inattention.

Since the economic collapse of a decade ago, industrial, financial, and political leaderships have paid lip-service to the needs of small business but, in terms of practical assistance and encouragement, only the most superficial remedies have been applied. The reasons for this unfortunate circumstance are, of course, easily understandable. Small business, in a collective sense, has been relatively inarticulate, individualistic, and unorganized. Small business, as a whole, has been unselfish, undemanding, and long-suffering. In the face of an acute and long-enduring credit dilemma, it has been reduced, in many instances, to a hand-to-mouth existence. Laboring under a constant strain of credit strangulation, it has almost miraculously succeeded in surviving a difficult decade of the sternest competition with larger and more fortunately situated business concerns.

Today the situation confronting small business is nothing less than downright desperate. Here is a cause that demands prompt championship by Federal legislation if ever one did. With national industrial prosperity predicted for 1940 by every economic expert, you may well ask why. Any small-business man can answer your question. The answer is that, after 10 years of credit famine, low earnings, and intensifying competition, he is not in a posi-

tion to participate in the current upward industrial swing. His inventories are low; his surplus funds are negligible; his machinery is antiquated; he needs long-term capital and credit in order to purchase supplies, to meet pay rolls, to buy new equipment, to modernize and to improve his plant production, to solicit new orders and to meet his big business competitor in the price field. It is right at this point that he finds he has met his Waterloo. Long-term, low-interest-rate credit, without which he cannot hope much longer to survive, is difficult if not impossible to find. Stymied by a short-sighted, insidious credit barrier, he is frequently condemned to a painful, lingering, but inevitable failure.

As, one by one, the lives of small concerns are blotted out, community problems multiply. Unemployment spreads and local relief burdens mount. Reemployment in a single small community becomes an impossibility perhaps to hundreds. Despair and bankruptcy shake civic morale to its foundations. It invites municipal bankruptcy; it contributes to wholesale distress; it creates continuing economic and social problems for that unfortunate community.

It would be improper and misleading for me to ascribe this entire chaotic condition to a lack of adequate credit facilities. Certainly there were many other major contributing factors to industrial failure during the early 1930's, but I do insist that the absence of adequate private and public credit agencies spurred on the debacle and intensified the already complicated problems of the average small-business man.

Let me make it plain that I do not lay the entire blame on the doorstep of the local commercial banker. Today I feel that he is the most potent force combating this repressive influence that stifles the very life of small business. Lately there has been a steady trend toward more sympathetic consideration by the commercial banker for the "little fellow."

Let it be said at this point that I have thought for a long time that our banks have been hampered in their efforts to meet current business-loan demands by what might be termed a triplication of bank examinations. Although this view is not shared by many in authority, the question continues to arise as to the justification for overlapping bank examinations by the F. D. I. C., the State banking departments, and the Federal Reserve System. It would seem practical, economical, and efficient to provide a more simplified system which would accomplish the supervisory purposes of the Government and at the same time relieve a great portion of the detail and red tape, of which the banks now complain.

A twofold program which would include legislation to supplement the present efforts of commercial banks to extend term loans to industry and which would simplify and diminish the existing repetitious regulations upon our banks appeals to me to be a sensible proposition. It must be pointed out that the banks are little more than scratching the surface of the business-credit problem. This fact takes on dramatic reality when we note that excess bank reserves or idle funds are now at a record peak, while business loans have shrunk to 50 percent of their volume of 10 years ago. Of the loans that are advanced, the vast bulk are in the form of short-term credits, which temporarily relieves but fails to solve the problem of small business. Compared with 10 years ago, total earning assets of the banks of the country are down 15 percent. Interest rates have sharply declined. The banks are tremendously eager to put their excess reserves to work. But, of course, it is absolutely necessary that only sound, legitimate loans be made. A bank's obligations to its depositors demand that a high degree of liquidity be preserved at all times. The degree of risk involved in the extension of a long-term loan to a small enterprise often makes such a loan unattractive to the prudent banker, and, in many instances, rightly so.

Particularly has this circumstance obtained during the past decade. As a result, the banks have largely frowned on long-term loans which would have served to bail out hundreds of small businesses and have, instead, concentrated on discreet although relatively unprofitable investments. This is shown by the fact that, over the last 10-year period, while bank loans have shrunk 50 percent, bank investments have jumped 70 percent.

In an effort to supply the long-term loans unavailable at banks, the Federal Government, in 1934, through the facilities of the R. F. C., sought to meet all unsatisfied legitimate credit needs of business. Businessmen who needed funds for any legitimate reason, which could not be obtained from local banks, provided they could offer adequate security and a reasonable chance for repayment of the loan, were invited to apply at the R. F. C. As a result, R. F. C. agencies throughout the Nation swarmed with applicants overnight. They are still applying in great numbers, which indicates the unsatisfied demands that continue to exist.

However, to the average business applicant, the R. F. C. proved to be no better than a private lending agency. Thousands of loans were extended but, in the bulk of cases, the terms demanded were too stringent for the applicant to meet. Most applicants discovered that they were dealing with an agency the demands of which equalled and often exceeded those of their local banker who was, in comparison, ill-equipped to extend the loan. In other words, the R. F. C. has failed in its appointed function to meet all unsatisfied, legitimate, long-term credit requirements of business. It has accomplished much good in many fields and I am an enthusiastic advocate of its purposes, but I am convinced that, insofar as small business is concerned, it has only fractionally met the vast demands for long-term credit on reasonable terms.

The Federal Reserve banks, in 1934, were given closely restricted authority to grant term loans to business for working capital purposes only. They have made good in this small field but, of course,

have lacked authority to widely assist in relieving the credit suffocation of small business.

We see, therefore, that small business has been struggling in a credit twilight zone where commercial and Federal Reserve banks have been unable to assist it and where the R. F. C. has, in spite of ample power, failed to materially assist it.

Such a condition, in my considered opinion, must no longer be tolerated. The credit frustration of small business must be remedied. It must be remedied promptly.

With the application of a proper credit remedy at this time, the future will be bright for small business in America. Several recent surveys have shown the rich untapped fields into which small business may successfully venture, provided it has the credit and capital to do so.

Experience has taught us that direct Federal business loans have been of only minor assistance in filling this need. A program of direct Federal loans to industry has proved to involve too much cost in time, patience, and money to the average applicant. If a practical, effective, decentralized, and convenient method for the provision of legitimate long-term, low-interest-rate loans by local commercial banks can be adopted, it will mean, in my judgment, the salvation of small business in this country. I am proposing such a method and I am urging its approval at this session of Congress.

Very briefly, my plan proposes a broadening of the present industrial lending powers of the Federal Reserve System. I would establish an industrial loan corporation as an integral part of the Federal Reserve System. This corporation could extend financial assistance to commercial or industrial businesses by acquiring their notes, debentures, bonds, or similar obligations, by purchasing preferred stock in such businesses, or by making commitments to acquire such obligations. These advances could have a maturity up to 10 years and would be principally aimed at assisting concerns needing term loans of 5 years or more.

The plan calls for the setting aside of an amount not exceeding twenty-five million as an insurance fund for insuring banks whose deposits are insured by the F. D. I. C. against losses which such banks might sustain on future loans to businesses.

This plan will require no additional appropriation, nor further indebtedness, on the part of the Government. The capital and surplus of the proposed corporation would be supplied from funds already set aside for the purpose of assisting Federal Reserve banks in making industrial loans.

I consider this a logical, sensible plan because it will utilize the existing facilities of the Federal Reserve banks and their branches. Loans will be made and passed upon locally where local community conditions are understood and appreciated. Loans will be made quickly and without the consumption of time and "red tape." Long-term loans will be encouraged and provided. The real concrete needs of small business will be recognized and promptly met.

In arriving at this legislative solution to the small-business man's problem, I have steadfastly insisted that no new bureau of government be created, that the Government must not stand to lose a cent in the application of the law, and that the initial control of credit must remain in the hands of the local banks where it properly belongs.

I wish to emphasize these points lest it be charged that I seek to project the Government further into business, or that I seek to establish a new, expensive division of government, or that I seek to open the way for an added financial burden on the Government, and, therefore, on the taxpayer. I seek to do none of these things.

What I am seeking to do is to provide a simplified, decentralized method of tapping the huge reservoirs of latent credit for the benefit of banks and businessmen alike. It seems incredible to me that we must resign ourselves to a circumstance that crushes the hope of small business and, at the same time, baffles the entire banking profession.

I submit that my plan is a modest, conservative, and yet effective answer to the present-day credit problem. We know we have got to solve that problem. The future of small-business enterprise in the United States depends upon its solution. I want the small-business men who may be listening to this discussion to let me know what they think of the proposal which I have outlined. I shall welcome comment from you and I pledge you my best efforts. Now is the time to accomplish something constructive for small business.

## Jackson Day Address

### EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESSANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

ADDRESS BY HON. HERBERT R. O'CONOR, GOVERNOR OF MARYLAND

Mr. D'ALESSANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

delivered by Gov. Herbert R. O'Connor, of Maryland, at the Jackson Day dinner held in Indianapolis, Ind., on January 8, 1940:

One may count himself as fortunate to be within the confines of the great State of Indiana and to assemble with the citizens of this great Commonwealth. It is no exaggeration to say that the sons and daughters of Indiana have ever been an inspiration in patriotism, leading citizenship, and in National and State pride. Just as Indiana is a State of extensive resources of agriculture and industry, so Indianapolis is to its visitors a city of exceptional beauty and striking vitality. When I observe, as I have, the excellence of your railroad service, centering in a commodious and well-arranged union depot; when one sees your attractive road bus terminal, the largest in the country I am told; when I think of your World War Memorial Plaza, conceived and executed on such a magnificent scale, it is not difficult to realize the vision, the resourcefulness, and the perseverance which have gone into the development of this great city and of the State of which it is the capital.

Your State capitol is, indeed, a worthy one for any State, or indeed, for any nation. It is interesting in its modern treatment to a visitor from Maryland as is our State capitol in Annapolis, the major part of which was constructed before the Revolutionary War, to visitors from your own section. All of which leads to the consoling thought that after all one of the things that makes our great Nation the leader in the family of nations today is its ability to assimilate the old and the new and to keep both in harness side by side, functioning smoothly for the mutual benefit of all concerned.

So, tonight I consider it a privilege to be among you and I am happy to bring you greetings from the people of a State whose origin may have been older by almost two centuries than those of the Middle and Far West, but whose feeling and whose loyalty for the Nation we jointly claim is as young and as vital as is yours here in this great Commonwealth.

Tonight, throughout the country, the Democratic Party celebrates its existence. Nothing is more heart-stirring than to refer to our parentage and to our date of birth. We may justly be proud to point to the fact that we were born with the election of Thomas Jefferson in 1800; that we came to full manhood with the Presidency of Andrew Jackson, 28 years later.

We gather tonight simultaneously with other assemblages of loyal men all over the Nation to pay our tribute to Andrew Jackson the cofounder of what is now the Democratic Party. More specifically, however, we grasp the opportunity to renew our allegiance to those principles of government he so ably and fully exemplified in his career and in his beliefs, which beliefs he put into practice in his life, examples which we can admire and can emulate with profit to the Nation whose course he helped to chart.

This seasoned old warrior, who could not be stopped nor swerved from his appointed course either by his opposition or by the bullets of his adversaries, had an abiding faith in his own kind—the common people of the country. He came up from among them. The son of a pair of Scotch-Irish immigrants—the father, a landless farmer, the mother a linen weaver—his boyhood was hard and his advantages few, indeed. What he knew he learned from life rather than from books. He knew warfare from his early years. He was under arms when he was 13, and ever afterward was ready for the call of his country, either to fight her enemies in the field or to serve in the guidance of her destinies. And yet, from his humble beginnings, he became judge, Member of the House of Representatives, Senator, and President. Throughout this memorable career, his course was always straight and direct; guided by his belief in what he thought was right, pursuing it undeviatingly to the end.

He knew calumny and treachery from those he thought to be his friends, and the bitter opposition of those who fought his policies as President. But he did not swerve a hand's breadth from his way, which intuitively he knew to be in the interest of the kind from which he had sprung, even if those policies conflicted with the tenets of the aristocracy of his day represented by the Clays, the Calhouns, and the Websters.

He was what in these days would be called "a rugged individualist," and he was an individualist to the core. He believed in his country and its Constitution and in the guarantees of that Constitution to the masses of its people and to the minorities. He did not propose to see those guarantees impaired by persons he regarded as nullificationists. He fought them at every turn and they fought him. In one of the greatest crises facing the youthful Nation in his day, he took hold of the situation and showed his teeth and proved his mettle. That was the instance when a mighty financial and monetary institution, the Bank of the United States, dared to assert its superiority over the agencies of the Government itself. I might be pardoned for referring specifically to this momentous event because it was with the backing and counsel of Roger Brooke Taney, of Maryland, his Cabinet officer and later to become Chief Justice of the Supreme Court of the United States, that Jackson struck down and crushed this engine of special privilege, convinced that it discriminated against the people in favor of particular classes and interests. It was but another expression and application of Jacksonian democracy exercised to relieve the masses of people from exploitation and plunder by favored classes.

He believed in the freedom of the individual to work out his own destiny. All he asked was a fair field and no favor and with

that, under the Constitution he loved, he felt that any man with the right stuff in him could make his own way. And was he himself not proof of this? Hard work, a willingness to fight for what he thought to be right, and an inflexible purpose to succeed, had taken him, a poor, unlettered boy from the hills of Tennessee, to the White House. He asked neither the Government nor anyone else to do for him what he could do for himself. But in doing for himself, he proved what America offers by way of opportunity, and he demonstrated that democracy as a philosophy of government is the soundest and surest charter of individual liberties and of human rights.

Doubtless, we are better situated to evaluate the worth of various leaders in this Nation's history than those who lived even during the stirring and eventful periods through which our country has passed. As we gaze back over the rise and fall of men and issues, it is possible to agree on what really counted. To the glory and pride of our race, men have risen who by nature and intellect sincerely believed in, and took a whole-hearted stand for, the broad application of the meaning of democracy to men and women. Unfortunately, that character of leader does not appear often. We have had probably not more than ten or a dozen in our history. Jefferson, of course, comes to mind; Lincoln made a distinct contribution; Grover Cleveland and Woodrow Wilson were bright lights in the firmament of the country; our present period is not without illustration—all humanitarians in the broad sense of the word. But no matter what names may be mentioned, the name of Andrew Jackson must be included in the list.

It is because his name and memory constitute a symbol of democracy that hundreds of similar celebrations are being held tonight throughout the Nation. Historians have said that it was only with the advent of Jackson that political democracy was begun to be realized in the United States. Prior to his selection as Chief Executive our Presidents had been chosen by a relatively small number of the dominant leaders of our social and economic life. The selection of "Old Hickory" was the result of a virtual revolution in our political system and was brought about by the upsurge of the great mass of people of that day.

One foundation stone underlying the very existence of our party has remained steadfast since the days of Thomas Jefferson and Andrew Jackson. The guiding star and great light of our party has been humanitarianism. Its supreme objective has been the comfort, the happiness, the living of people—not the people as an organized entity, but as individuals—the men, women, and children who make up the community or the State. With this broad, practical, and applied humanitarianism as their vital principle, the policies of the Democratic Party have, from period to period, taken form and substance as the contemporary requirements of the people have demanded, for their protection, relief and welfare.

The demands of true democratic humanitarianism in its application to the aid and benefit of the people in large masses are necessarily as varied and multiform as the different needs of the people from time to time. True democracy, therefore, is and must be progressive and flexible. It must be made to fit the conditions and demands of the people as those conditions and demands change and develop from age to age or from emergency to emergency. Plainly, the bedrock principle of Thomas Jefferson's political creed was a broad, benign humanitarianism. True, the condition of the American people in the limited territory of his day, along the Atlantic seaboard, did not call for the extreme applications of government aid for the relief and succor of the people. But the principle was there in its full potentiality.

And when the next great Democratic leader, Andrew Jackson, was swept into power it was as a champion of the rights and needs of the rank and file of the people in their humbler existence in the newly acquired wildernesses of the Louisiana Territory, together with the less-settled portions of the old Northwest. To bring relief, support, and assistance to the great majority of the people there, to recognize in a humane way, by humane policies, their rights to protection, aid, and relief, to extend to them the broad and beneficent humanitarianism of the cult of democracy was the great work of Jackson, and by following the same line of reasoning we can bring to our own day the application of humanitarianism through democratic administration. In recent years we have witnessed the greatest humane social benevolence ever practiced by any national administration to the benefit of suffering people.

In its administration of social security, of old-age assistance, of aid to the unemployed, to the crippled, and to the dependent children, the present Democratic Party has achieved the real purpose for which it came into existence; and in giving credit where credit is due, let it be definitely understood that the fulfillment in our day of the aims and social security to the lasting benefit of the present and future generations has been due to the leadership, the initiative, but, above all, to the humanitarianism of another great Democrat, who tonight occupies the White House, in the person of Franklin D. Roosevelt.

Running through all of those outstanding administrations is the same basic and foundational principle. It is a recognition of the worth and dignity of human beings. This prevailing attitude has spelled success for the Democratic Party and will continue to be its main bulwark.

It was Jefferson who wrote:

"The freedom and happiness of man are the sole objects of all legitimate government."

Fourteen words, but a volume of thought and philosophy and purpose embodied in one sentence; and Jefferson's doctrine, thus

expressed, was echoed by Andrew Jackson and has been enunciated in action, as well as by word, by President Roosevelt.

In addition to the actual accomplishment of a social-security program, concerning which previous administrations had merely talked, many other accomplishments can be cited to the present-day credit of the party founded by Jefferson and Jackson. No incoming administration throughout the entire period of American history ever faced a greater crisis than existed in 1933 when the closing days of the Hoover administration resounded with the clang of the closing doors of every banking institution in the United States. Many financial institutions were in collapse, and chaos threatened the country. Under the magnificent leadership of our President, this problem was not only solved but provisions were made to prevent any recurrence. The insurance of bank deposits was perfected. The gambling with other people's money by unscrupulous bankers and stockbrokers was effectively stopped.

Furthermore, a farm program has been written which for the first time has given agriculture its deserved place with finance and industry. This administration has recognized that upon the farmer's success depends, in no small measure, the success of the country.

The pump-priming activities of government undoubtedly have started the wheels of industry moving forward. Through W. P. A. and P. W. A. projects, through Federal Housing and Home Owners' Loan undertakings, the Federal Government has tided over much needed activities in various sections of the country. The inauguration and pursuance of C. C. C. camp activities have not only resulted in material assistance to countless rural and urban sections but, what is even more important, they have had an intangible value not to be reckoned by dollars and cents, through the employment and advancement of the young people of today, who as a result will be worth-while citizens of tomorrow.

We are justified in feeling that the party to which we owe allegiance has been the instrumentality of good government, and that it has been versatile and capable of meeting any situation with which the country has been faced. Discussion is frequently heard that some recent undertakings of government were never intended to be projected when a central union was conceived. We will hear more of this opposition as 1940 progresses—more talk of returning to the "catch as catch can" methods of big business; more argument to the effect that government has no responsibility toward such minorities as the sick and needy, the luckless inhabitants of the Dust Bowl, the slum dwellers, and the sweatshop children. But we contend that democracy, as represented by the party bearing that name, believes that it has a duty beyond mere governmental routine. As democracy has become more Americanized it has also become humanized. Let us again turn back a page of history.

It was Jefferson who brought the idea of equality into politics. That was a great shock to the conservatives of his day who had inherited our ideas from abroad, and the very thought of allowing the workingman to have a vote sounded like anarchy. He was a dangerous radical, some thought, and he was even called a much harsher name, "a Democrat," which, in those days was equivalent to an insult. Nevertheless, the Jeffersonian doctrine was endorsed by the voters and, strangely enough, the country survived. Not only did it survive, but it actually prospered.

What happened during the early 1800's was that democracy had taken out another set of naturalization papers. During the 28 years when the party of Jefferson remained in power, voting restrictions dropped away and the country witnessed the first great wave of popular government, culminating in the election of Andrew Jackson. But by the time "Old Hickory" came into office the radical ideas of yesterday had gathered conservative moss. A few die-hards still believed suffrage would eventually ruin the country, but they were willing to let someone else worry about that so long as government kept hands off business. And as Jefferson felt that government belonged to the people, so Andrew Jackson contended that it owed protection to the people.

His fight to subdue the monopolistic banking corporation, enthroned in the Government, revealed a new conception of social responsibility in a political party. We can tonight trace the spirit of Andrew Jackson down through the pioneering administration of other great Democratic Presidents—of Grover Cleveland, who electrified the country with his ringing slogan, "A public office is a public trust"; of Woodrow Wilson, with Thomas R. Marshall, of Indiana, at his side, whose philosophy of the new freedom opened new frontiers of humanized government; and finally down to the far-reaching, progressive, and socially minded achievements of Franklin D. Roosevelt.

No more opportune time than the present for members of our party to repeat the announced principles of Jackson and of Jefferson, and more especially to rededicate themselves to those first principles which their careers and campaigns did so much to exemplify. This is particularly true at this very hour, both because of extraordinary conditions at home and the revolutionary conditions abroad. In domestic matters, we must be alert to preserve the results of the progressive action of the Democratic administration during the past 7 years. The people of this country do not want to return to the day when social security was merely a subject of discussion, to the day when labor was denied its fundamental rights, when stock exchange manipulations and financial legerdemain were the order of the day, when the helpless unemployed were given the freedom of starving under local supervision without any act of Federal

intervention. The Republican office seekers may desire the return of that day, but 27,000,000 voted the other way about 3 years ago, and 27,000,000 Americans can't be wrong.

In referring to the situation abroad, it is unnecessary for anyone to remind you that the ideal of democracy is on trial for its life today on the battlefields of Europe. It is unnecessary for anyone to point out to you, as well-informed people, that the ground we walk on every day is the only place on earth where the great-grandsons of free men are still free and still at peace.

We have no right to be smug about it; no right to take these things for granted. Too often we are apt to suppose that democracy was a native product of the North American Continent, and that we merely fell heir to it as we did to all the other vast resources which have made us the most fortunate nation in the world. What we are tempted to forget is that our governmental systems and political philosophies and very habits of thought as to civil liberty and personal freedom became American by processes of evolution and that we must guard them jealously in order to keep them from being twisted out of shape. We will have no one to blame but ourselves if the Democratic Party is not kept continuously refreshed and revitalized to meet conditions in this changing world as they occur—and the world doesn't stand still.

Again referring to history, we have definite evidence of the differing objectives in various periods striven for by Democratic leaders from the day of Jackson until the present time. On January 8, 124 years ago, Jackson won his great victory at New Orleans. Against great odds he triumphed over the veterans of Wellington and the conquerors of Napoleon. Records of that engagement show that in the preliminary assault Jackson was supported by only 1,500 men and bested an enemy encampment of 7,000. The great climax came on January 8, which marked the end of foreign invasion of our soil. But more than that, Jackson, through military efforts, had secured permanently the absolute independence and security of this country on land and seas. This great Democrat, as a warrior, had brought success in the second war for our independence. All of this was accomplished through extraordinary military efforts.

Today the Democratic administration of Franklin D. Roosevelt is giving unmistakable evidence of its desire to use every means and method known to it to insure the peace of the country. Our people today are essentially peace-loving. They are as one in the conviction that difficulties and differences underlying wars abroad are not of our doing and are none of our business. Not being responsible for the squabbles of European countries, we are not going to "pull anybody's chestnuts out of the fire."

Every parent in America will agree that the life of one red-blooded American boy is worth more than all the raw materials, booty, and prized lands which form the basis of conflicts between our neighbors across the seas. The present Democratic administration, with President Roosevelt as its spokesman, is striving valiantly to maintain peace for the country. It is a fortunate thing that in such a crisis as the present, an experienced and courageous person is in the White House and that he is aided by such an able Secretary of State as Cordell Hull. By showing its attentiveness to the public interest, by adhering to the wishes of the great body of American people, by choosing to continue along the path of peace, the Democratic national administration gives evidence that the principles and purposes underlying its existence can be adapted to the entirely changed situation than that which confronted the country in Andrew Jackson's day.

No safer rule can be followed than to base a prediction of future conduct on that which has been done in the past. Such a rule is applicable to a group of men composing a political party just as certainly as it is applicable to an individual. Applying that yardstick, Americans can feel the safest by entrusting their destinies to a party such as yours, which has measured up to every emergency in the past. We are fortunate and thankful that the Democratic Party was, and is today, the melting pot of the North and of the South, of capital and of labor. In a day when Republicans still waved the "bloody shirt," the Democrats elected a New Yorker, Grover Cleveland, with southern votes. Then they sent a Virginia Democrat, Woodrow Wilson, to become Governor of New Jersey before he went to the White House. It was a Democratic administration that first gave labor a seat in the President's Cabinet. It was a Democratic President who first put an outspoken liberal on the Supreme Court of the United States.

But after reviewing the many developments we might ask whether the Americanization of Democracy has come to an end. Well, we might just as well ask if the human body—if any living organism—can cease to assimilate food and still continue to live. New ideas, necessary to meet new and ever-changing problems, are the very sustenance of this ageless dream.

What was radical to the Pilgrim Fathers was middle-of-the-road doctrine to their grandchildren. The French theories of Thomas Jefferson were American homespun to Andrew Jackson, and so it goes. The moment we close our minds to progressive thought, that moment we cease to be alive. This is the challenge of the Democratic Party from this anniversary of Andrew Jackson's triumph on. The year 1940 will be epochal in the Nation's history as well as in the party's annals.

Let us not draw back in alarm at the reactionaries who will always be among us to raise their voices in great alarm because something new is being suggested. In 1895 the spectre of an income tax caused Joseph H. Choate to call that form of legislation

"a communistic march." As late as 1912 President Taft was declaring that popular referendum "is socialism." We smile at those preposterous fears today, but they were the bugaboos of yesteryear. Let us go forward with confidence in the ability of our party—so many times proven—to Americanize any idea before it is digested.

Reference to the undoubtedly great part played by Jackson in shaping this country's future would not be complete without the recital of the estimate of this man by John Fiske, admittedly the outstanding contemporary authority on the Government and institutions of the United States. He said:

"The theory of government set forth in books is that the most clear-headed and powerful thinker now living in the world, is a man who, moreover, is thinking thoughts of tomorrow as well as of today. In spirit it is most profoundly American, but not in the sense in which that word was understood by Clay and the Whigs. It was Jackson whose sounder instincts prompted him to a course of action quite in harmony with the highest political philosophy."

Death came to this begrizzled warrior at his home, the Hermitage, in 1845. It can truly be said that his people, the plain people, could not find words adequately to express their grief, but they mourned him only as England mourned him in Tennyson's lament:

"Oh, good gray head, that all men knew;  
Oh, iron nerve, to true occasion true;  
Oh, fallen at length, that tower of strength,  
That stood four-square to every wind that blew."

Before he "crossed the bar," a most interesting occurrence took place with Gen. Sam Houston as one of the leading figures. Though facing death "Old Hickory" was resolved that Texas would ratify the resolution of annexation passed by the Congress, and he waited anxiously for word from the messengers he sent to the Lone Star president. Finally, on May 26, he was elated to receive Houston's favorable decision. Furthermore, he was informed that "Old Sam" was on the way to act in person to his former military chief. At dusk on June 8, some hours after Andrew Jackson had finally entered into the great beyond, a coach rolled madly into the Hermitage grounds and the towering figure of Sam Houston emerged, accompanied by a very small boy. When led into the presence of the earthly remains of his one-time chief, Houston broke down and sobbed and calling his son to his side he said: "My son, try to remember always that you have looked on the face of Andrew Jackson."

But in the light of all this, what lesson does it bring to us? What significance has it in the light of present-day problems or of future emergencies? The meaning of it and the causes for which Jackson and his cofounder Jefferson lived and fought and died would be wasted if it did not command us to carry on—now. Their party, your party, the Democratic Party, is the political organization which has lasted throughout the history of the country. It has survived a civil war, which temporarily disfranchised a majority of its members. It has lived through the lean years of defeat and, what is more remarkable, through long stretches of practically unopposed success. Doubtless therein lies the real reason for its long life. Primarily, it is because the party was built upon a rock—the never-shifting principle that government belongs to the people. And of no less importance, the party has continued to exist because of its response to progressive and liberal ideas.

Let us, on this day, rededicate ourselves to the ideals of democracy as symbolized by Jackson, by Jefferson, and by Roosevelt. In recurring instances, fraught with difficult conditions, the Democratic Party has striven to bring about betterment for the great mass of people and to chart a course in keeping with the time and conditions for our national life and activities. Also the underlying philosophy has been the same, although the means necessarily was different. But by adhering in the future to this same philosophy, by manifesting the courage of Jackson in fighting to retain the gains already won, we will so strengthen our life that the dangers which come from further difficulties will be mastered. The dangers which come from the importation of various "isms" will be dissipated through the application of this doctrine of a system of government based upon the individual's inalienable rights. The dangers which may come from wars and revolutions abroad will disappear in the face of a free, contented, prosperous, and happy people.

This, then, is the charter of our rights. The principles of Jackson are our traditions. We owe it to ourselves; we owe it to the memory of those great names which stand as the founders of the party—Jefferson and Jackson—we owe it, above all, to the country to see that the democracy which has been Americanized does not falter or fail in the days ahead.

In taking my departure I can think of no more ringing appeal than that which was inspired by the glorious achievements of Andrew Jackson and was voiced by a devoted descendant as the rallying cry to the democracy of his day, which was, and is:

"Freeman, cheer the hickory tree;  
Its boughs in storms have sheltered thee;  
O'er freeman's land its banners wave;  
'Twas planted on the lion's grave;  
Firm, united, let us be,  
Rallying around the hickory tree!"

## New Orleans—A Battle and a Boon

### EXTENSION OF REMARKS

OF

## HON. OVERTON BROOKS

OF LOUISIANA

### IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Louis Johnson, the Assistant Secretary of War, on the occasion of the celebration of the one hundred and twenty-fifth anniversary of the Battle of New Orleans, New Orleans, La., January 7, 1940:

Citizens and friends of New Orleans: To bask in the warm sunshine of the traditional hospitality of New Orleans, is the dream of every American who appreciates the good things in life. You have them all here—delicious food to satisfy the most epicurean gourmet, cultural advantage to stimulate the most artistic temperament, scientific experiment to excite the most searching mind, economic opportunity to attract the most practical head and human sympathy to understand the most sensitive soul. New Orleans is a brilliant jewel in the diadem of American civilization and a united Nation wholeheartedly rejoices with you in your celebration of the epochal victory of 125 years ago.

On the outcome of the Battle of New Orleans, on January 8, 1815, hung the destiny of an entire Nation. Few people then recognized its full import. Not all Americans, even now, have caught its full significance. Yet it is fair to say, that had Andrew Jackson failed, this fair Crescent City might have remained an international football to be tossed around between Great Britain, France, Spain and perhaps other countries. Had there been no battle of New Orleans the Mississippi might have become a Rhine, a Danube, or a Vistula, along whose banks peoples live in fear and hate, and into whose waters human blood perennially flows. Had Lord Packenham and his hosts carried the day, the war that now sweeps over Europe and engulfs the Canadian shores, would have dragged this peaceful valley into its deadly maelstrom. If it was Yorktown that made us free, then it is New Orleans that has kept us so.

As for the battle itself, it was a victory of a David over a Goliath. It was a triumph of a hastily mobilized, inexperienced force of determined frontiersmen over a well-organized, thoroughly trained army of professional soldiers. As for bravery, there was little to choose between the gaily clad, clean shaved, neatly groomed British veterans, and the ragged, unshorn, and untidy American recruits.

America won, because it was fortunate in its leadership. Who but Andrew Jackson could have welded into a cohesive fighting team on such short notice, the wide variety of men and organizations that responded to his call? There were Beale's famous rifles, the pick of New Orleans' families and Lafitte's notorious Baratarians, the outcasts of Louisiana society. There were white émigrés from France, colored refugees from Santo Domingo, Indians from the Choctaw Tribe, and African slaves from the nearby plantations. Mississippi dragoons, Tennessee riflemen, Kentucky musketeers, Coffey's "Dirty Shirts," Planche's Creoles, and American Regulars vied with each other, faithfully to serve their gallant commander.

In 25 minutes of actual fighting this motley array of self-reliant, courageous "minute men" under the personal command of Old Hickory destroyed the flower of the British Army, fresh from its successful campaigns in the Spanish Peninsula, where it proved more than a match for the great Napoleon and his doughty marshals.

Second only to Jackson's leadership, the decisive factor in the victory of New Orleans was the deadly accuracy of the American riflemen. In 1815 we were a Nation of sharpshooters. We still had our frontier where hostile Indians and beasts of prey lurked in the forests and swamps, and only those survived who could shoot and shoot straight. We still had an abundance of bird and game, and gentlemen learned to shoot for sport. We still held faithfully to our traditional conception of the militia which looked upon every able-bodied man as a potential rifleman. The musket then was a household necessity and hung conspicuously over every hearth.

That American pride in individual marksmanship today, alas, no longer exists. Young men have turned to other forms of sports, just as manly, perhaps, but in an emergency, less useful. If war should ever come to us or to our children, it will be our ability to fire a rifle rapidly and accurately that will spell victory on the battlefields of tomorrow, just as it did 125 years ago along the mud walls of the Rodriguez Canal. Airplanes, tanks, and combat cars have their place, but in the last analysis it is the man with the gun who takes, holds, and defends the ground.

The War Department recognizes that fact and stresses training in rifle marksmanship in the Regular Army, the National Guard, and the civilian components. At best, however, this instruction reaches but a fraction of our young men. To increase interest in rifle shooting throughout the United States, the National Board for the Promotion of Rifle Practice which functions under my office, and the National Rifle Association of America, working together, have fostered the establishment of civilian rifle clubs throughout the country. They are not military organizations in any sense of the term. They engage in rifle shooting as a sport and merely enjoy the advantage of military arms and ammunition. Today there are approximately 2,300 such senior clubs, with a membership of about 130,000, and 1,250 such junior organizations, with an enrollment of about 50,000.

The rules for establishing such clubs are quite simple. Ten or more able-bodied men above the age of 18, residing in any locality, may organize a civilian rifle club. My office in Washington will furnish further details upon request.

I am stressing the value of these clubs to you in Louisiana today because you have taken less advantage of this opportunity than any other State in the Union. You have but one rifle club in the whole State. It is the Crescent City Rifle and Pistol Club. You may well be proud of that organization; but one club of 12 members is hardly enough for a State such as Louisiana. Montana, for instance, has 46 clubs and Utah has 33. Wyoming has a ratio of 1 club member for every 184 of its population. New York's ratio is 1 to 1,296; Texas, is 1 to 3,903; but Louisiana is last among the 48 with 1 to 177,666.

In loyalty to the traditions of Old Hickory and to the famous Beale Rifles, I trust that a more universal interest in marksmanship will be revived among you.

Today we behold throughout the country a revival of interest in all things military. At last America is awakening to the importance of adequate national defense. Congress is opening the purse strings and is covering the starved Army skeleton with flesh and muscle. Within the Army itself there is a renaissance of study of the art and science of war. Throughout the South especially the progress of the Army is stimulating discussion, for you in this part of our country are witnessing today the most significant steps taken in the peacetime history of our country toward the perfection of our military organization. I refer to the Army's new training program, which calls for concentrations and maneuvers at various points in the Fourth Corps area.

The idea of military maneuvers is not novel. We have had them before, but never in the past have they proved of great value. What in the last 5 years one let pass under the guise of military maneuvers were in fact nothing more than troop assemblies of Regulars, few in number, and of National Guardsmen, limited in experience. We called them our "minute men," but if rushed into campaign conditions upon little notice to crush a stalwart foe, they might not have lasted very much longer. Imagine a National Guard physically hardened for arduous campaign on no more than 12 to 13 training days a year under field conditions. Think of a Regular Army ready for action without corps troops and with improvised command and staff. Yet it was under such conditions that our maneuvers of yesterday had to be conducted.

When we lacked troops, we merely substituted map symbols for live men and living organizations. When we found no corps organization, we simply skipped it in our demonstrations. When we saw that we could not marshal the necessary trucks, we improvised with horses and mules. When we had difficulty in renting the ground we needed, we had to permit limitations upon our maneuvers imposed by landowners, unwilling to convert their farm lands into battle fields even when war conditions were but simulated.

All that we rapidly are changing. We have reorganized five divisions and now are putting them into the field. We are organizing and training corps troops for concentrations early in the spring. We are providing opportunities for the development of leadership and technique for command and staff duty. Morale is high. Officers and enlisted men are enthusiastic. The climate is proving ideal for training.

The Army appreciates the opportunities that this new program affords. The cobwebs that have been spun over the military art and science since Armistice Day, 1918, are being brushed aside. At last, a solid basis for the understanding and practical application of the principles of war to modern battle conditions has been afforded our Army. The results should have tremendous effect upon our military policies.

These concentrations of men and machines are bringing to light many shortcomings. They show, for instance, the difficulties of supply. We always have maintained that it takes twice as long to provide equipment for a recruit as it does to train him. Many of our divisional organizations may already be in the field but it will be May 15 before they have the minimum of motor transportation that we have prescribed for them. It is taking us more than 6 months from date of contract to date of delivery to get the trucks, the reconnaissance cars and the ambulances that we need. I say this in no criticism of the automotive industry that is furnishing the vehicles nor of the Army that has drawn up the specifications. If we could get delivery in about 6 months on every Government contract our industrial mobilization program would give us but few worries. But if it takes 6 months for a well-established, experienced, mobilized, and efficient organization such as the automotive indus-

try to deliver, think what may await us when we order guns, ammunition, searchlights, and gas masks which are not in ordinary production at all.

Thanks to the \$110,000,000 that Congress provided for equipment during the last session, we are making considerable progress in getting our Regular Army and National Guard ready but we still have many needs to be filled.

These maneuvers show us, however, not only our weaknesses, but also our strength. More and more we realize, for instance, what a valuable asset to national defense the National Guard has become. It has proven itself one of the principal boons toward the success of our present training program. Without its cooperation we would have been stymied. It loaned camps. It took on additional training in the field. Civilian employers cooperated and extended leave to National Guardsmen to enable them to attend these extra camps.

All of us, however, Regulars, National Guardsmen, and Reserves, who are intensifying our Army training and our military studies do so with the fervent prayer that we shall never have occasion to use the added experience in actual combat. We want no war anywhere against anyone, and we believe that in the increased efficiency of our Army, we present a sound investment in our national insurance against war.

If an emergency should arise, however, we shall be able, because of this increased training, better to serve our country. If go we ever must, we shall march forward in the spirit of your own famous Washington artillery. Try Us is their motto.

"You shall not find them wanting," the Nation may well respond.

## Journalism of the Bygone Days in Indiana

### EXTENSION OF REMARKS

OF

### HON. LOUIS LUDLOW

OF INDIANA

### IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

Mr. LUDLOW. Mr. Speaker, the city of Indianapolis has one of the best press clubs in the United States, conveniently housed in commodious quarters facing Monument Circle, in the heart of our city. The club was organized in March 1934, with Maurice Early, one of the most outstanding political news writers of the country, as its first president. In its present location it occupies the former editorial rooms of the old Indianapolis Journal, and James Whitcomb Riley, the Hoosier poet, whose genius was first developed through the columns of the Journal, had his desk in what is now the club's front room. The club has dedicated that room to Riley's memory, and his picture is prominently displayed. The present officers of the club are: Corbin Patrick, the Indianapolis Star, president; Harry Daniels, the Indianapolis News, vice president; E. G. Bowman, the Indianapolis Star, secretary-treasurer; Walter Morse, the Indianapolis Star; Robert Hoover, the Indianapolis News; Jack Forcum, the Indianapolis Star; Bennett Wolfe, the Associated Press; Audley Dunham and James Carr, members of the board of governors. The club is composed entirely of working newspapermen and supported by them.

Since I was raised in the arms of the press and was actively identified with Indianapolis and Indiana journalism of the bygone years, the club extended to me the distinguished honor of being its guest and speaker at a wonderful reception on the night of Wednesday, December 27, last. I was introduced by Mr. Corbin Patrick, president of the club. By unanimous consent of the House, I submit for printing in the Appendix of the RECORD the following press report of my remarks on that occasion:

#### REPORT OF PRESS CLUB RECEPTION TO CONGRESSMAN LUDLOW

The Indianapolis Press Club was host last night to Representative LOUIS LUDLOW, who related many reminiscences of his early struggles as a newspaper reporter in Indianapolis and his experiences during his career of 28 years as a Washington correspondent, capping his recital with stories about the great and the near great with whom he has come in contact. There was a note of deep sentiment in his talk when he said:

"Indianapolis was good to me when I was a verdant, friendless, penniless boy, a stranger in a strange land, and part of my mission tonight is to tell her how much I love her."

The Congressman began his talk by saying that it was regrettable that the pronoun "I" would have to appear so often in his recital, but that he had not mastered the technique of relating reminiscences without using the personal pronoun. He led his hearers back to "a bright June day in 1892" when he first came to Indianapolis from the country, a lad of 18, obsessed with a desire to get a job as a writer on a newspaper.

"It may be that greener boys have come out of the deep bush, but I doubt it," he said. "I had been raised in a section of Indiana where the wilderness was still more a fact than a memory."

He first offered his services to the Indianapolis Sun, a little afternoon paper published on Ohio Street between Pennsylvania and Delaware.

"It was the smallest and least pretentious paper here, and for that reason I thought it would be the most amenable to reason," he said.

When, after a 2 weeks' try-out, the editor gave him a fatherly lecture and told him he was a member of the permanent reportorial staff at \$10 a week, he almost "burned up" with gratitude.

"The salary was his suggestion," said the Congressman. "I would have been glad to work for \$4 or \$5 a week. Ten dollars to me was a princely sum. To be known as a representative of the press was to me the summum bonum of earthly ambition. Salary was wholly secondary. I believe I would have died for the Sun, so strong was my sense of loyalty to the newspaper that had given me a job. In fact, on several occasions I did almost court death for it, for while I was utterly devoid of malice and my intentions were the best in the world, my technique was bad. When the city editor gave me an assignment, I considered it to mean that I was to execute the assignment or die in the attempt. My first regular assignment after my try-out period was to get a statement from an outstanding professional man who had been having domestic difficulties. He was at his office when I called.

"I am a representative of the Indianapolis Sun," I said. "Can you tell us, for publication, whether you and your wife have made up your differences?"

"He made a dive for me, and I made a dive for the door and beat him to it. I believed then, and I still believe, that he was displeased with that question.

"My zeal brought me into conflict with the attorney general of the State, a big man with powerful muscles, and we had a fight. I call it a fight, and so it was, in a way. Two blows were struck. He hit me and I hit the floor. When he found how well-meaning I was he apologized, and I never had a better friend than he was from that time on.

"Again I fumbled the ball when I was assigned to the death-watch over a beloved old priest who was an outstanding character in the diocese of Vincennes, now the diocese of Indianapolis, Father Augustine Bessonies. Everybody knew him and loved him, and there was much concern over his condition. The Irish girl who came to the door repeatedly put me off, and I was beginning to suspect that she did not appreciate my dignity as a representative of the press, so one day I said to her, with iron in my voice:

"I want you to send Mrs. Bessonies out to see me. I want to talk over this matter with her."

"That act of mine became noised about, and it has brought more fame to me than any other act I ever committed. It has been written up in newspapers and magazines, times without number, and even now hardly a week passes but some one says to me: 'You are the man who interviewed the priest's wife, aren't you?' Being a man of truth, without guile, I have to say, with becoming modesty, 'I am.'"

Mr. LUDLOW exhibited a key chain which he said he has worn every day for 47 years. It was given to him by the editor of the Sun, with a key to the office, so he might begin his work earlier than the regular working hour.

"The regular hour to report was 7:30," said the Congressman, "but I gathered stories around the hotels at night, and by coming to the office at 4 and 5 o'clock I would have my stories written and ready to place on the city editor's desk at opening time. I requested a key to the office, and the editor threw in the chain. Having worn it for 47 years, it has become quite a part of me. On the rare occasions when I don a dress suit I transfer the chain to it. See me and you see my chain."

The boy reporter made friends rapidly but two men in particular were always gracious and helpful—John H. Baker, judge of the Federal court, and John C. McNutt, State law librarian, father of Paul V. McNutt.

"I have been in court when Judge Baker would lecture great lawyers like Benjamin Harrison, W. H. H. Miller, and Ferdinand Winter, until he almost made their teeth rattle, but when court adjourned and I entered his chambers he was gentle as a woman. He seemed to think there was something in me worth developing, and my father could not have been kinder to me. His attitude toward me has always seemed to me the shining example of noblesse oblige. He had been a Member of Congress, and he expatiated on Washington and governmental affairs a great deal. I was entranced by the things he told me, and if it had not been for those talks I probably never would have gone to the city of Washington. I also spent much time with Mr. McNutt, where the reception was equally gracious and cordial."

Long ago in Indianapolis there was another press club which was described by Mr. Ludlow as follows:

"In the nineties we had a press club in Indianapolis. As far as I am aware Mr. Hilton U. Brown, of the Indianapolis News, and I are the only survivors of that club. It was a very anemic and inconsequential institution compared with the splendid press club you

now have. It was domiciled in a basement on South Pennsylvania Street in what is now a part of the Indiana National Bank Building. Our press club of the nineties had its ups and downs—principally its downs. When we went into the red, which was frequently, James Whitcomb Riley was our savior.

"Riley had a lecture on the peanut, which was the funniest thing I ever heard. In it he impersonated a bumptious country school master lecturing to his class and using a peanut as an illustration. His sole property equipment was a peanut, which he carried around with him at all times. Whenever our club got heavily in debt Riley would give his peanut lecture and bail us out. Riley's peanut was like a mine of gold to the press club of that time."

Describing the early type of partisan journalism, Mr. LUDLOW said:

"In these days, when newspapers try to tell the truth in their news columns, no one could imagine the extremes of partisan journalism which I witnessed in the nineties in Indianapolis, when the Sentinel, the Democratic organ, and the Journal, the Republican organ, were at each other's throats. For example, if there was a Republican political meeting with 500 actually present the Sentinel in its account would say that the meeting was attended by a couple of dozen women, a broken down old man, and a stray cat while the Journal would say that 4,256 were present by actual count. The height of partisan venom was reached when the Sentinel, displeased with a decision of the Indiana Supreme Court, poured out the vials of its wrath in an editorial captioned 'Damn Their Cowardly Souls.'"

In 1894, more in love with newspaper work than ever, LUDLOW decided to expand and went to New York City to seek a newspaper job. There he nearly starved to death.

"The memory of those times is painful to me yet," he said. "My funds soon gave out and I moved to a little dingy hall room in the slums. At the present time I am chairman of a subcommittee of four which is engaged in preparing a bill directing the expenditure of a thousand million dollars of the taxpayers' money in the fiscal year 1941. Thinking in terms of millions and billions, as I am now obliged to do, when my mind reverts to those awful days when I was hard pressed to raise the price of a plate of beans I almost have to pinch myself to realize that I am the same fellow."

In his extremity he appealed to Robert G. Ingersoll, the famous agnostic, calling on him at his law office in New York and laying his entire plight before that sympathetic man. Ingersoll took pity on him and gave him an interview.

"That was on a Friday. He told me that he lived at Dobbs Ferry and that he would take my questions home with him and write out the answers over Sunday and that I was to return Tuesday and get the interview. I did and he handed me a roll of manuscript. He had copied my questions and written the answers. It was the most precious manuscript I ever saw. Ingersoll was one of the noblest men I ever knew. He could swear in a very worldly way, but he could, and did, perform the deeds of a saint."

Mr. LUDLOW brought the manuscript with him and exhibited it to members of the Press Club. It is still perfectly legible, though stained with age. He sold the interview to the New York Sunday Herald and had the satisfaction of seeing it advertised all over New York as a coming feature. Largely on the strength of it he secured a position on the City Press Association, but by that time the ties of home were pressing and straining against his heart and he returned to the Indianapolis Sun, where he was received with open arms.

Next year the tempting bait of a salary increase took him over to the staff of the Indianapolis Sentinel. But that wasn't the only bait. He had long admired at a distance the society editor of that paper, who also was the secretary of Samuel E. Morss, its publisher.

"She was a perfectly lovely girl," he said, "and since she is not here where she can control my tongue I don't mind saying that she is just as lovely today as she was then. She was a privileged character and a general favorite at the Sentinel office and she edited her own copy and the lid blew off when she sent down to the composing room a notice in her own handwriting of our engagement. I thought the staff would ride me on a rail. They had never even suspected me."

The reporter's rough edges had worn rather smooth by that time and Mayor Joe Bell was moved to remark:

"When LUDLOW first came to Indianapolis anybody could have sold him a gold brick. Now he's selling them to the other fellow."

Mr. LUDLOW hastened to add that this compliment might be given a sinister construction, but that all Mr. Bell meant was that he had become city broke.

"I suppose the campaign of 1896 was the most unique campaign ever waged in America," said Mr. LUDLOW. "The absorbing issue was the money question. It was an abstruse, complicated issue, dealing with ratios and monetary factors and theories. While in my reportorial experience I have known many hectic and strenuous campaigns, there has been nothing comparable with the fervor with which the money issue was debated here in Indianapolis in 1896. The self-constituted professors of economics were numberless. A ground-floor room was opened on the north side of Washington Street between Pennsylvania and Delaware Streets, called the Forum and its doors, like the temple of Janus, were never closed. There the professors of economics in their florid and individualistic styles expounded the money question day and night, Sundays and weekdays, to open-mouthed and excited audiences."

"The outstanding political sage in Indianapolis in those times was Tom Taggart. He was the ablest and most sagacious politician I ever have known and a finer man never lived. In the midst of the campaign and the saturnalia of oratory I went to Mr. Taggart

and asked him for an interview on the money question. He looked me straight in the eye and said:

"Now, what do you suppose I know about the money question?" "It seemed to me that if a wise man and excellent business executive, like Mr. Taggart, knew nothing at all about the money question, what the self-constituted professors of economics knew about it represented several degrees less than zero."

When the War with Spain broke out Mr. Morss, the publisher and owner, gave Ludlow a day assignment to cull the biggest items from a pony day-press report and put them on the streets in extra editions. As editor of the war extra he found his time much occupied.

"I will venture to say that journalism has no record of as many extra editions coming hot off the press in as short a space of time," he said. "When Dewey captured Manila I got out a screamer."

When the boys returned from the war Ludlow tore the lid off of the embalmed-beef scandal in an interview with Rev. G. A. Carstensen, rector of St. Paul's Episcopal Church, who had been at the front as chaplain of an Indiana regiment. The minister was brimming over with indignation and the Ludlow interview was the spark that created the explosion. President McKinley took note of it and ordered a searching investigation. Rev. Mr. Carstensen was called upon the carpet, but he stood his ground and did not retract a word.

In 1899 Gavin Payne, city editor of the new Indianapolis Press, tolled Ludlow over to that newspaper as its political writer. In June 1900 they reported the Kansas City Democratic National Convention together. An important caucus of the Indiana delegation was held at the Coates House. Extreme precautions were taken to insure secrecy. Payne concealed himself on a ledge outside the caucus room where he could hear every word and wrote notes on a scratchpad, tearing them off sheet by sheet and dropping them to Ludlow, who caught them on the pavement below and rushed them to the telegraph office.

"By the time that secret caucus was adjourned every detail of its important proceedings was in the Press office at Indianapolis," said Ludlow. Kent Cooper, now the general manager of the Associated Press, and Ludlow were fellow reporters on the Press, and Roy Howard, another friend of Ludlow, was soon to make his appearance on the stage of Indiana journalism.

Ludlow's career as a Washington correspondent began in 1901, when the Press suspended publication and Mr. Morss, his former employer, who had been consul at Paris under President Cleveland, decided to open a Washington bureau and invited Ludlow to take charge of it. Two years later the Sentinel suspended and thereafter for 10 years Ludlow was Washington correspondent for the Star League of Indiana. In 1928 he was elected Representative in Congress for the Indianapolis district, and he has been reelected five times. He was the first correspondent to go from the Press Gallery to a seat in Congress.

"In my newspaper work I have often been interested in observing the power of suggestion. 'Plant a thought in peoples' minds and they will do the rest' is a saying that has a good deal of truth in it," continued the Congressman. "Through the columns of Ohio newspapers I once suggested the appointment of a distinguished Cincinnati attorney as a United States judge. He was not a candidate, and, in fact, did not want the office. Senator Pomerene recommended him and President Wilson appointed him. The position was distasteful to him and in a short time he resigned."

"On a hot and languorous day in the summer of 1907 I met Albert W. Wishard, an outstanding Republican, on a street of Indianapolis and he lent a sympathetic ear to my complaint that I could not find anything to write about. With corrugated brow he thought long and hard and said:

"Why don't you start a boom for Tom Marshall for the Democratic nomination for Governor. Tom and I were schoolmates together over at Wabash College, and he would make a fine candidate and a good Governor. If he should be nominated, I would vote for him, but, of course, you understand I am not saying that out loud."

"No one on earth, least of all Tom Marshall, had ever heard Tom Marshall mentioned for that place or had ever had the remotest suspicion that he would ever seek political office. His field was the law, and in that profession he was the outstanding leader in northeastern Indiana. He was on a vacation in the pine forests of northern Michigan when I printed the story. He returned to find his 'boom' well under way. He was nominated and elected, and he went from the Governor's chair at Indianapolis to the Vice President's chair at Washington, and at one time, when President Wilson was in extreme ill health, it looked as if he was headed right for the White House. That summer phantasy of mine certainly had a lot of propelling force, but, of course, it would not have gone so far if Mr. Marshall had not been a man of sterling character and great ability."

For nearly an hour Ludlow entertained his audience by relating his personal recollections of Presidents of the United States.

"During my long career as a newspaper writer, covering more than 40 years in Indianapolis and Washington, it has been my privilege to have known, rather intimately, I think, all of the Presidents of the United States from Harrison to Franklin D. Roosevelt," he said, and then he added, laughingly:

"Of course you understand I mean Benjamin Harrison and not William Henry Harrison."

He continued:

"In all of that galaxy of great men I assume the one that will live the longest and stand out the most in the solemn history of the world is Woodrow Wilson, because he was the President during the crucial period of world strife and he gave origin to the idealistic conception of the League of Nations, but I believe that if our own

Indiana President, Benjamin Harrison, had been put to the crucible as was Woodrow Wilson he would have given an equally good accounting of himself, because I think I never knew a man who had more sheer strength of character than had Benjamin Harrison."

After telling a great many stories, most of them highly amusing, about Presidents of the United States, which he had picked up in his personal contacts with the Presidents during his newspaper career, Representative Ludlow closed his remarks in a serious vein as follows:

"During my long career as a newspaper man I have met oceans of people—God's run of the mine—and occasionally I have been able to discern genius on its starry track. I have rubbed against all strata of society from the seamy bottom to the gilded top and have come into contact with the public service in all of its angles and ramifications. Among all of the superlatively great people I have known there has run one common trait and that is their sincerity. Truth and simplicity are well-springs of being among the truly great. Nor is genuine public service charted by any abstruse and recondite code of action. It all simmers down in the last analysis to one simple rule of conduct—a rule of conduct that is age-old but which time and experience have shown to be good and true—the rule of conduct which says: 'Whatsoever ye would that men should do unto you, do ye even so unto them.'"

"It was this passion for service that made Jefferson and Lincoln great beyond all comparison. I remember hearing my father tell about an old farmer in our rural neighborhood in Fayette County who went to Cincinnati to hear Lincoln speak. He was a good deal of a cynic, this old farmer, and his entire outlook upon life was acidulous. When he returned, my father, curious to know his reaction, said: 'Well, what did you think of Lincoln?' The old farmer stood for a minute as if in a daze and then blurted out, explosively:

"My God, what a man!"

"There was nothing intentionally irreverent about that remark. It was an involuntary tribute to character. The motivation and the inspiration of all genuine public service, as exemplified in the superlative by Jefferson and Lincoln and in lesser degree and minor reflection by every friend of humanity, is love. If I love you I will serve you, unselfishly, devotedly, nor ever count the cost."

"And in defense of politicians as a class, especially those who serve in the House and Senate of our country, I want to say as one who has been among them almost a lifetime, that they are not, as so many people seem to think, devoid of worth and genuineness. On the contrary, I think that as a rule they seek earnestly and faithfully to discharge their obligations to the last full measure of devotion. The fact that a shockingly large number of them have dropped dead in their tracks recently is evidence of the burden of work and worry that is upon them and their faithfulness to it. The number of those I have known who have been buried by contributions raised by their friends is a tribute to their honesty. There is a more or less prevalent idea that a politician is a dubious character, with a low mentality and even lower morals, but the highest act of nobility I ever witnessed was the act of a politician, John F. Shafroth, of Colorado. Many years ago, when I was correspondent for a long string of newspapers, including the Denver Post, I was in the press gallery when Mr. Shafroth secured recognition of the Speaker. What he rose to say was that he had been investigating the election returns and he had come to the conclusion that he had not been elected, although he had been seated as a duly elected and accredited Member. He asked that his seat be vacated and that his Republican opponent be sworn in to succeed him. I had never seen anything like that happen before, and I said to myself:

"God must be pleased with this honest man."

"Though it has been my fortune to have been close to the moving drama of the world for more than four decades, I confess that I do not even begin to understand the mysteries of life and death, but this one thing I do know, and that is that Emerson was right when he said that 'love is our highest word and it is the synonym for God,' and another thing I do know is that next to love, the highest word in the English language is the word 'friend.'"

"I think it is an experience common to all of us that there have been times when we have gone to our mothers to tell them how much we loved them and how much we appreciated the hardships they had undergone and the sacrifices they had endured for us. Indianapolis mothered me when I was a verdant, friendless, penniless boy, a stranger in a strange land, and in the years of my maturity she has honored me six times with a commission to represent her in the Congress of the United States. A part of my mission here tonight is to tell Indianapolis how much I love her. I want her to know how much I appreciate all she has done for me. There is no finer city in the world than Indianapolis. There is no more typically American city on the map. There is no city less susceptible to subversive strains and influences. It is American to the core, a city of good neighbors, of honest men and women, who have faith in God and in the destiny of the Republic. And I want you to know that while I have spoken tonight with gaiety tripping fantastically on my lips, there has been all the while, deep down in my heart, a sad refrain as the strands of memory have led me out to Crown Hill, Holy Cross, and the Jewish Cemetery, and the other silent cities of the dead, where hundreds upon hundreds—yes; thousands upon thousands—of those who knew and loved me and whom I knew and loved in the yesteryear are sleeping the eternal sleep. To them my heart goes out tonight in deepest affection. I cannot tell you how happy it has made me to be with you tonight, not only because I have been among friends but because I have been with my own flesh and blood, the newspaper fraternity, in the city that is to me the dearest place on earth, because it is my home and the city of so many hallowed memories."

## Electric Rates in New England

## EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

RADIO ADDRESS BY LEONARD FARMER, JANUARY 7, 1940

Mr. RANKIN. Mr. Speaker, some time ago Mr. Samuel Ferguson, president of the Hartford Electric Light Co., of Hartford, Conn., in a radio broadcast made an attack upon me for exposing the overcharges for electric lights and power throughout the Nation, and especially in New England.

That is the usual answer of these utility magnates when you publish the "deadly parallel" showing their exorbitant overcharges and their ruthless mistreatment of the electric light and power consumers throughout the Nation. They answer with vilification and abuse without attempting to give the people the information to which they are entitled.

I could not go to New England to answer this broadcast, so I supplied the information, giving the facts from the record, sustaining every charge I had made about overcharges for electric lights and power throughout the New England States, placed it in the CONGRESSIONAL RECORD, and sent a copy of it to Mr. Leonard Farmer, who represents the Connecticut Conference on Social and Labor Legislation.

On January 7, 1940, Mr. Farmer delivered a radio address over station WTIC, Hartford, Conn., giving the facts relative to the electric light and power rates in New England, and showing the enormous overcharges the people of that section of the country have to pay.

Under permission granted me to extend my remarks in the RECORD, I insert Mr. Farmer's speech, which I trust that every Member of Congress from the New England States will take the time to read.

The matter referred to follows:

Good afternoon, ladies and gentlemen, this afternoon through the courtesy of the management of this station I am going to speak to you on electric light and power rates in New England, and especially in Connecticut. Sometime ago Mr. Samuel Ferguson, president of the Hartford Electric Light Co., of Hartford, Conn., spoke to the people of New England over this station on the subject of Federal control of electric utilities. In that address he attacked public ownership of power facilities, especially the Tennessee Valley Authority and its yardstick rates, and finally wound up by referring to what he called "Congressman RANKIN's absurd statements" concerning overcharges in electric light and power rates in New England. Congressman RANKIN, who was the coauthor of the T. V. A. Act and chief sponsor of rural-electrification legislation, is unable to answer Mr. Ferguson personally. The Congressman, however, has directed me to be his spokesman in this matter at this time.

Electricity is now one of the necessities of our modern life, and it must necessarily be handled by a monopoly since it would be too expensive for two, three, or more different agencies to attempt to supply electricity to the same community. Therefore, since it is a monopoly of a necessity of life, it is necessarily a public business and one in which the Federal Government or the municipality has the right to engage, and especially when handling public power generated by the waters of a navigable stream.

Why should a great private monopoly with its inflated valuations and watered stocks stand between the people of New England or of any other section of the country and their own water power and exact tributes of millions of dollars annually to provide exorbitant profits for the favored few or to pay dividends on watered stocks?

According to the T. V. A. rates we people of the six New England States are overcharged for electric light and power about \$83,000,000 annually, and according to the Ontario rates we are overcharged \$93,000,000 a year.

The enemies of public power would have us believe that these overcharges are absorbed by the taxes paid by the private power interests, when as a matter of fact the T. V. A. pays 5 percent of its gross revenues in lieu of taxes, and practically every municipality that distributes T. V. A. power pays into the city treasury in lieu of taxes an amount equal to, if not exceeding, that paid by any private power company in any municipality of the same size.

But even if the T. V. A. and its distributing agencies paid no taxes at all, the argument of the private utilities would fall flat, for the reason that in the New England States, in 1936—according to

the 1935-37 report of the Federal Power Commission on rates, taxes, and consumer savings—they paid in taxes of all kinds, including State, Federal, and municipal, and even income taxes, together with all cash contributions and free services, only \$26,000,000. Now, if you take this amount from last year's overcharges of \$83,000,000 paid by the power consumers in New England last year—according to T. V. A. rates—you get a clean \$57,000,000 overcharge for which we power consumers in New England received absolutely nothing in return.

In this State of Connecticut alone the overcharges last year, according to the T. V. A. rates, amounted to \$18,000,000, and the taxes paid by the private power interests in 1936, including State, Federal, county, and municipal taxes, together with all cash contributions and free services, amounted, all told, to only \$5,000,000. Even if we give T. V. A. and its distributing agencies credit for no taxes at all, this would still leave an unquestioned net annual overcharge of \$13,000,000, for which the people of Connecticut received absolutely nothing in return.

Let Mr. Ferguson, the president of Hartford Electric Light Co., explain that overcharge away.

Furthermore, private power interests in Connecticut paid in taxes, cash contributions, and free services only 12 percent of their gross revenues in 1936, while public power systems in Connecticut paid 29 percent, or more than twice as much, of their gross revenues in taxes, etc., although their bills to consumers are substantially lower. The average monthly bill to the residential consumer in New London for 25 kilowatt-hours from the privately owned Connecticut Power Co. is \$2.19, while a few miles north in Norwich the residential consumer pays only \$1.50 for the same consumption furnished by the municipal plant there.

I would like for Mr. Ferguson to explain these differences.

Power generated by the Tennessee Valley Authority is sold at wholesale to the municipalities and cooperative associations within the distribution radius, and they in turn sell it to the ultimate consumers at yardstick rates or rates based upon the costs of generation, transmission, and distribution.

T. V. A.'s policy of cheap power has been a tremendous success in spite of the efforts of the private utility interests to smear the project. Already the T. V. A. is paying its way, and, far from having an unsalable surplus of electricity, it may be unable to meet the greatly enlarged demand which has arisen from the rate reduction it has brought about. The power system has a net income of \$1,500,000 for the year ending June 1939. The amount of power sold in its region has grown twice as rapidly as in the whole United States. The reason for this is clear when we realize that residential consumers of T. V. A. power paid an average price of 2 cents per kilowatt-hour, as compared with a national average of 4 cents. Also, during the year they used an average of 1,179 kilowatt-hours, as against 850 for the Nation.

If the people of New England had a New England power authority similar to the T. V. A. or the Ontario power system, generating and distributing the power in her navigable streams and their tributaries and delivering it to the consumers at the Ontario rates, we would have saved ourselves \$93,000,000 last year on our light and power bills. Take from that \$26,000,000, the amount paid by private power interests in New England in taxes, cash contributions, and free services, and you will still have a net overcharge of \$67,000,000, according to the Ontario rates.

Last year the people of Connecticut used 1,284,000,000 kilowatt-hours of electricity, for which they paid \$38,986,000. Under the Ontario rates the cost would have been \$18,725,000, or a savings to the people of Connecticut alone of \$20,260,000. Take from that the \$5,000,000 paid in taxes, cash contributions, and free services, and it will leave an overcharge paid by the people of Connecticut last year, according to the Ontario rates, of more than \$15,000,000, for which they got nothing in return.

I should like to hear Mr. FERGUSON explain away that overcharge.

Last year the people of Maine were overcharged more than \$5,000,000, according to the Ontario rates, after deducting all taxes, cash contributions, and free services paid by the private power companies; the people of Massachusetts were overcharged \$34,000,000 in the same fashion. The net overcharges in New Hampshire amounted to \$3,000,000; in Rhode Island, \$5,000,000; and in Vermont, about \$1,800,000.

How can the people of New England continue to stagger under this stupendous burden of overcharges, amounting to more than \$67,000,000 a year, after all taxes, free services, and cash contributions are deducted?

Probably Mr. FERGUSON has an answer for that question.

These overcharges are simply a tax levied upon the consumers—industrial, commercial, rural, and domestic—by this great utilities supergovernment which has been described as the utility fascist, that now seems to control the economic life, if not the political destinies of New England. It is this group which wrote into the New England flood compacts the power joker which would deprive the electricity consumers of New England of the benefits of public power's cheaper rates. It is this group, with its Washington lobby, which killed the Enfield dam project for Connecticut before the bill had a chance to see the light of day even, and all in the name of Connecticut consumers, too. It is this group in Connecticut, with its perpetual franchises, which deprived the farmer of the benefits of rural electrification projects, sums for which had been specifically allocated for Connecticut's use.

Let us ask ourselves the question whether the private power companies of New England possess a political force all out of keeping with their true economic position. The Ontario Power System has an investment of about \$400,000,000. It generates and distributes about one-twelfth the amount of electricity generated and dis-

tributed by private power companies in the United States. Therefore, it would be logical to assume that the private power interests in this country should have an investment of not more than 12 times that of the Ontario Power System, or about \$4,800,000,000.

Yet they claim an investment of \$13,000,000,000, or \$8,000,000,000 more than is necessary. What does that \$8,000,000,000 represent except watered stocks and inflated valuations?

Let Mr. Ferguson answer that question.

What we need is a New England power authority to develop our own water power, our last great natural resource in this barren region, and distribute it at the yardstick rates to municipal plants, in order to lift this enormous burden from the shoulders of the power consumers of our New England States.

Neither myself nor the Connecticut Conference on Social and Labor Legislation has a personal interest in this controversy. However, our position as consumers and citizens interested in the economic well-being of our Republic demands that we save the water power of this Nation for the American people to provide electricity for every home, farm, and business establishment throughout the country at reasonable rates. The war in Europe provides a particular reason for the perpetuation of economic well-being and democracy at home. A speedy solution of our economic problems through preserving our social reforms, including the Tennessee Valley Authority and rural electrification, is the common-sense goal of peace-loving Americans.

We must marshal behind this cause the moral support of the 25,000,000 electric consumers throughout the Nation, who are now paying an overcharge for electricity of more than \$1,000,000,000 a year.

This will continue to be one of the leading issues from now on until we power consumers of America receive justice in the rates we have to pay.

This will mean more to the people of New England than anything else that could be accomplished during your day or mine. New England has no coal, no gas, no oil, and her timber supply is vanishing. Her only chance to secure electricity generated with her own resources is the development of her water power; and the only chance we have to get this power at reasonable rates or at rates based upon the cost of production and distribution is through some form of public operation, such as the Tennessee Valley Authority or the Ontario power system.

The only way for private power interests to head off this movement, even in conservative New England, is to squeeze the water out of their stocks, eliminate the inflated valuations from their books, and reduce their rates at least to the rates now charged in the Tennessee Valley Authority area, and then gradually adjust them downward as time goes on. It is time for the people of New England to make their own voices heard on this vital problem.

In closing I want to call on each and every listener this afternoon to write your legislative representatives in Washington—Senators and Congressmen—demanding that the Federal Government continue its steps to make cheap public power available to the people of New England.

ANNOUNCER. You have just heard a talk on Electric Rates in New England, by Mr. Leonard Farmer, under the auspices of the Connecticut Conference on Social and Labor Legislation. Copies of this talk can be obtained by writing to the conference office at 87 Orange Street, New Haven, Conn.

### Tribute to Senator Burke

#### EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1940

EDITORIAL FROM THE OMAHA WORLD-HERALD OF JANUARY 10, 1940

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able editorial quoting a tribute by the Senator from Texas [Mr. CONNALLY] to the Senator from Nebraska [Mr. BURKE]. The editorial was published in the Omaha World-Herald of January 10, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Omaha World-Herald of January 10, 1940]

#### TOM CONNALLY'S TRIBUTE

"He has distinguished himself for ability, fidelity, and vigor as a public servant. He is truly entitled to high place in the councils of the Nation and of the party."

That high tribute was paid to a Senator of the United States at the Jackson Day dinner in Omaha. The Senator is EDWARD R. BURKE, of Nebraska.

And the speaker, one of the foremost fighting Democrats in public life, was TOM CONNALLY, of Texas, also a Senator, whose championship of President Roosevelt and New Deal objectives won grateful applause from his Nebraska audience.

Senator CONNALLY has not always agreed with Senator BURKE on public issues. Senator BURKE has not always agreed with the President. No more has Senator CONNALLY invariably agreed with the President. Like his Nebraska colleague, he is a man of courage and independent judgment. But like all strong men, he has great respect for ability, fidelity, and vigor in the public service. And he finds these qualities so outstanding in Senator BURKE that he believes they entitle him to high place not alone in party councils but in the councils of the Nation.

Many Nebraskans share that belief. They have confidence in their junior Senator and admire him. They are proud because his devotion to principle, his political fearlessness, have won him Nation-wide respect. And his fellow Democrats know that his loyalty to fundamental democracy that stems back to Jackson and Jefferson, has never been questioned.

But politics is politics. Personal rivalries and ambitions give rise to strange situations. And so ED BURKE is obliged to defend his challenged candidacy to a well-earned second term. That he will do so with the characteristic forthrightness that has distinguished his public career is assured.

The outcome should not be in doubt. For not only Nebraska and the Democratic Party but the Nation needs men with the experience, ability, and independence of BURKE in the Senate of the Republic.

### National Aeronautic Association Convention

#### EXTENSION OF REMARKS

OF

HON. WILLIAM H. KING

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1940

ADDRESS BY HON. PAT MCCARRAN, OF NEVADA, AND EXCERPTS FROM PRESS NOTICES

Mr. KING. Mr. President, on January 12, 1940, the distinguished Senator from Nevada [Mr. McCarran], before the National Aeronautic Association in national convention at New Orleans, delivered a very interesting and informative address which I ask to have printed in the RECORD, together with certain excerpts.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every science has its place in the affairs of men. But that science which you here represent and that is of necessity uppermost in your thoughts, is one that has functioned to make the earth smaller by supplying speed to miles. It has brought the peoples of the earth closer to each other. It has made mountain ranges look flat; it has scoffed at the terrors of the deep. It has enabled man to view the stars from an elevation never before thought of, and it has brought under man's control agencies regarded in the years past as mythical things indeterminable.

The science of aviation has combined nearly every other science known to man, and, from the whole so combined, it today gives promise of new fields and new conquests limited only by man's ability to imagine, and his courage to dare.

Some years ago, I expressed the thought, in the presence of my colleagues in the Senate, that the day was not far distant when the sportive-minded Members of that body might board a plane in Washington Friday afternoon, hunt big game in South Africa Sunday morning, and answer the roll call in the Senate on Monday morning. I was undoubtedly challenging the extreme of imagination. But perhaps I learned to challenge that extreme when, as a boy, I read that fascinating book from the hands of the master of imagination, Jules Verne, when he gave to the world his Twenty Thousand Leagues Under the Sea.

I am reminded of the story about little Willie who was thirsty for knowledge, and interesting facts shone like jewels in his brain. "Read today," he said, "of the wonderful progress made in aviation. Men can now do anything, absolutely anything, a bird can do."

But his friend was tired of wonders—he was more matter of fact. "Is that so?" he answered. "Well, when you see an airman fast asleep, hanging onto a branch of a tree with one foot, I'll come and have a look."

Now we have learned not to bow to the word "impossible." Who is there in this day and hour conversant with the subject of aviation who will dare to question any imaginative statement as to the limits within which the science must confine itself?

Courage, imagination, and vision are human prerequisites to make the science of aviation a handmaid with all the potential power of aerial travel to serve the needs and ventures of man.

No science yet evolved has brought forth so much of human courage, and none has developed courage more. No science and no art yet developed by man has called for more of man's imagination, and certainly none has exacted from him more in the way of vision.

With propriety I may say that aviation is a science that primarily belongs to youth. Indeed it has been the toy that lately most attracted youth, and from which youth has derived the greatest measure of amusement. More significantly, it has been the instrumentality that, in the last 3 decades, has given to the youth of the world the greatest field for venture.

While youth has played with this science, so to speak, the science in turn has made great demands on strength, courage, and, in many instances, a reckless disregard of personal safety. We must glory in this, as I think it may be apt to say that when, in the individual, the love of ease overcomes the desire for adventure, that individual is grounded.

It is indeed to the credit of the youth of the world that such strides have been made in the science of aviation in the past three decades. Again it is to the credit of those who had wealth at their control that they were willing to hazard their fortunes in the development of that great promise which the science of aviation gave to mankind. To some it might seem that a long period of time has elapsed since that dramatic venture was made at Kitty Hawk. To others it is but a moment. But in that moment what accomplishments have been effected!

It is within the memory of everyone who listens to me tonight when we gladly paid \$2.50 to gain admission to some county fairgrounds where some venturesome fellow was going to "try to go up." If he got off the ground we thought we had received our money's worth; and if, by any chance, he made the circuit of the race course, we were doubly recompensed. Today, we scarcely pause to see the *China Clipper*, majestic monarch of the air, come through the Golden Gate to settle birdlike with its precious cargo on Treasure Island. Things of aviation have become somewhat commonplace with us, so much so, I am sorry to say, that the public, and indeed, many in public life, are oblivious to that thrill which comes of knowing what is going on in aviation.

Our National Congress has, through the persistence of some of us, given a most valuable aid to this great science and great industry by a comprehensive law, the Civil Aeronautics Authority Act of 1938, which some have honored by calling the Magna Carta of aviation. Let us who are assembled here tonight, and who have for years given and are now giving their best thought and personal fortune to this great work, here resolve that the spirit of this so-called Magna Carta shall continue without hindrance to be administered by an independent agency capable of keeping stride with the advancements and possibilities of aerial transportation.

If I might express my most sincere wish and hope, it is that this national association, now composed of some 17,000 interested Americans, shall continue to enlist in its membership hundreds of thousands more, that the principles of your association may thereby become more widely known and more securely enshrined in the minds of men and women who seek to promote their country's welfare and who believe that its millions should be invested in national civil accomplishments rather than expended in the activities of useless war.

That we may view the future of this science and industry, it will not be out of place to marshal the events of the past. Let it not be lost sight of that we are now in the eleventh year since the initiation of commercial air transport. In that short period of time the industry has received set-backs of no mean magnitude, one of which was the chaotic condition that prevailed following the cancellation of the air-mail contracts. It is indeed to the credit of those who had the courage to invest and to fly new lines that, notwithstanding the discouraging effect of these cancellations, the industry still continued to expand.

It will be recalled that in 1933 commerce by air in the United States, or air transport, as we choose to term it, was absolutely dominated and controlled by four separate and distinct governmental agencies—the Department of Commerce, the Post Office Department, the Interstate Commerce Commission, and the Department of Agriculture as the seat of the Weather Bureau. May I apologize when I say that an experience given me as a member of a committee investigating ocean-mail and air-mail subsidies brought very vividly to my view the unhappy situation that surrounded the industry of civil aviation under that system which gave its control to four Federal departments, each jealous of the other's prerogatives.

It was this disturbing view that gave rise to the impelling thought that if this great industry was to succeed as a commercial agency in this country, if commerce by air in America was to keep pace with the other countries, nothing short of an independent agency, untrammelled by bureaucratic ties of any kind, should come into existence with Federal sanction, so that the industry and science of aviation would grow and prosper under a regulation by which that industry and that science would be fostered, promoted, and encouraged.

In other words, it appeared to me then, as it does now, that legitimate, sane regulation would be wholesome for this infant industry, and the industry itself would become strengthened by fostering regulation; while, on the other hand, a regulation that progressed with the industry would become less irksome and binding as time went on.

Civil aviation in America and under American customs and laws may, with propriety, forget the unhappy experiences of the past

and prepare itself for a glorious future. In looking into this future and its possibilities, let us turn the eye to threatened dangers.

I would dismiss some of these dangers with mere expression of reminder.

It is imperative that the Civil Aeronautics Authority should remain independent—free from the control of any other governmental agency.

It is my conviction that civil aviation deserves a place of recognition in the National Congress through the establishment of a permanent committee in each House, on which committee will sit men whose interest, vision, and desire for progress guide them to see greater things for aviation than even the splendid accomplishments of today.

Civil aviation, especially under the American system and certainly in keeping with our democracy, calls for national encouragement and the faith and support of our citizens. This call is heard from two distinct theaters of action—national commerce and national defense.

On the commercial stage it is inevitably destined to play a great role in national development and take a leading part in civic welfare. It transports passengers, express, and mail from the Golden Gate to the Statue of Liberty in 16½ hours. In the year last passed it transported 16,000,000,000 mail pound-miles in the United States and 5,000,000,000 express pound-miles. In the year last passed it carried 1,900,000 passengers. It accomplished that feat of carrying 1,900,000 souls through the air with but 2 fatal accidents and with but 9 passenger fatalities. These are results with which to conjure. These are accomplishments unexcelled in any country in the world. The achievements of air commerce in 1939 prophesy greater results as greater venture takes its place, as greater propelling power is developed, as more encouragement is given to those who are willing to invest in this line of human activity.

In passing, may I draw the attention of the country to the fact that in every year prior to 1939, the industry as a whole, in America has operated at a financial loss. In the year last passed, for the first time, the industry as a whole is looking to a profit of something in excess of \$3,000,000.

We did much for the industry when we eliminated competitive bidding in the matter of carrying the mails, and we placed that traffic on a fair and sensible basis whereby the rate of pay may be changed from time to time, always having in mind the service rendered.

On the stage of the second theater of action, that of national defense, civil aviation will assume a role of first magnitude in the hour of need. Every air transport line is a militant challenge to an aggressor from without. Every pilot at the controls of an air transport, fortified by his training and aerial travel, his knowledge of air currents and emergency landing places, together with his seasoned experience, becomes a potential warrior should war occur.

Thus far, our present legislation, enacted and put into effect in 1938, has gone a long way in a brief time toward bringing the industry out of the rut of discouragement into which it had fallen due to many things, of which no small part was a lack of cooperation between the various agencies of Government that were formerly in control. In passing, I would like to pay my respects to the Department of Commerce, the Post Office Department, the Interstate Commerce Commission, and the Department of Agriculture, for their individual efforts and accomplishments as their respective functions would permit. It was not the lack of effort on the part of any one of these governmental agencies that made an unhappy situation before the enactment of our present law. It was rather the fact that no department had absolute control, and that each department worked without harmony with the others.

Today we have a centralized constituted Authority created by our act of 1938, and this Authority has accomplished more in one year than was brought about in all other years prior to 1938. No Federal regulatory statute has ever been enacted so broad in scope of authority as our Civil Aeronautics Act of 1938. We must realize this when we pause to consider that not only does our Civil Aeronautics Act regulate from an interstate standpoint, but its regulation extends over the seas as well as internationally. Moreover, it looks with solicitude to safety, and effects harmony between air transport and private air activities, in addition to the control of private flying and promotion of a mechanical training agency.

The scope of the powers prescribed in our present civil aeronautics law was not written into the statute by a mere haphazard venture. It was the result of years of study and volumes of counsel from those who had practical experience, and who were unselfishly interested in the industry. The cordial way in which the law has been accepted is to the credit of those whose lives and fortunes are wrapped up in aviation. In this respect, let it be remembered that, notwithstanding the scope and jurisdiction conferred on the Civil Aeronautics Authority, its acts and its regulations have to date remained unchallenged in any court. I make mention of this by way of commendation to those engaged in every phase of aerial activity. And I make mention of this for another reason—to pay my respects to the Civil Aeronautics Authority as presently constituted and to the broad vision of those who administer the law. Regulation is always best when it is liberally applied with a view to promoting and fostering the welfare of the element to be regulated; and this has been the view of the Civil Aeronautics Authority up to the present moment.

In drafting the law it was essential to take into consideration many conditions and some obstacles never before contemplated in a regulatory statute. The ancient principle of freedom of the seas cannot

apply to the air. Hence international relations and the laws of foreign countries had to be considered. Here, again, I pay my respects to the Civil Aeronautics Authority for the efficient way in which they have brought about harmony and cooperation between this country and foreign powers.

One of the most difficult features of the law to draft was that which had to do with safety. The amazing results in the protection of human life and preservation of property justifies and compensates the effort. I deal with records when I say that for the 3-year period ending September 1, 1938, there was 1 passenger fatality for every 12,000,000 passenger-miles flown. For the year ending September 1, 1939, under the new Civil Aeronautics Act, there was 1 passenger fatality for every 55,000,000 passenger-miles flown.

I was most gratified at the public statement made by the President on the 3d of November last, wherein at a press conference he said, "Last night the 17 scheduled air lines operating within the United States reached a really extraordinary record. They have now carried passengers for a total of 500,000,000 miles since they last had an accident involving the death or serious injury of any person."

At this point it is but proper to say that the conferring of duties and powers upon the Civil Aeronautics Authority, with the creation of the safety board and its specific functions within the Authority, resulting in the splendid record of reduced fatalities, was brought about by the advice, experience, and persistent zeal of the main-line pilots of America, and the cooperation of licensed pilots in general, that splendid group of the young men at the controls in the air-transport industry which insisted on provisions in our law insuring the greatest measure of safety in civil aviation.

Perhaps we have American womanhood to thank for this, as those fine young wives of these pilots have no doubt impressed upon their husbands the attitude of the young aviator's wife who was discovered in tears by one of her dear friends, who asked anxiously, "Whatever is the matter, my dear?" "I'm worrying about Harold," said the young wife. "He's been trying for a week to kill our cat, and as a last resort he took her up in his plane. He said he would take her up 2,000 feet and drop her over the side." "Well, what is there to worry about?" "Plenty," exclaimed the frantic woman. "Harold isn't home yet and the cat is."

On the occasion when the Senate was considering the reorganization bill during the first session of the Seventy-sixth Congress, unfortunate criticism was made that the Civil Aeronautics Authority now had a pay roll in excess of that of the Interstate Commerce Commission, which regulates all the railroads. This criticism was not and is not well taken when we consider that under the control of the Civil Aeronautics Authority are 44 designated civil airways in the United States and its Territorial possessions, with a total of approximately 26,000 miles. On civil airways are 12 airway traffic-control stations, 298 intermediate landing fields, 190 radio-range beacons and communication systems, 2,130 airway beacons, 57 non-directional radio-marker beacons, 35 ultra-high frequency radio fan-type markers, 30,000 miles of teletype-communication circuits serving 358 different stations. For all of these facilities there are engaged only some 2,700 employees. But however we may find justification for the pay roll, we must nevertheless look forward to the unguarded criticism which may be resorted to as a means to induce unfavorable congressional action as an impediment to the growth of the industry.

Inevitably the future of civil aviation demands consideration of those things which may not at first meet with public or governmental favor. Hence I am glad for the opportunity to bring some of these all-important matters of the future to the attention of the National Aeronautic Association in its annual convention, because it is one of the functions of this organization, and indeed one of its duties so to enlist the attention of the public as will bring the necessity for future development clearly to the forefront.

The average man looks with admiration on a great passenger airplane as it passes through the clouds thousands of feet above his head. However, the average man does not pause to think that that great instrumentality passing so majestically through the air had to leave the ground somewhere and must return to the ground somewhere. Thus people must be made conscious of the fact that a landing field with all of its facilities for safe embarkation and debarkation is as much a part of the industry and as much a part of the science as the airplane itself.

It is not going to be an easy matter to have Congress at this or the next session make adequate appropriation for airports and landing fields. We might be successful in getting an appropriation of a half billion or more for the improvement of rivers and harbors; but as yet neither the public nor Congress has become sufficiently conversant with the problems of aviation nor with its importance in national life to realize that the landing field is the harbor of the airplane, and that any community seeking to keep abreast of the times in the next half century must have an adequate, up-to-date field in which, for aerial commerce, planes may land and take off.

I would draw this to the attention of your association in the hope that we may have a concerted action and the wholehearted support of all possible agencies for an appropriation adequate to commence and carry forward a system of federally aided airports in this country.

It was with a view to arousing public interest in matters of this kind that, at the request of the industry and this organization I introduced in Congress a Senate joint resolution providing for the designation of September 11 to 24, 1939, as a period to be set aside for the celebration of air progress. The resolution did not pass, but

its introduction played at least a small part in bringing aviation to the attention of the American public. Its failure of passage must be noted by way of emphasizing what I have just said—that the American people and the Congress have not fully awakened to what is being done and what is essential to be done in civil aeronautics. Regardless of the passage of the resolution, the manner in which the industry, the Civil Aeronautics Authority, and your group took hold and made the designated week an outstanding one, is deserving of the highest commendation.

The mastery of world ocean commerce has in the past four centuries been conceded to Great Britain. A slogan emanating from the British Empire, "Britannia rules the waves," has not been denied in recent centuries. I belong to a school of thought that would give commercial mastery of the air to my country. I can see no reason why a nation of 135,000,000 people, with unlimited national resources and with courageous youth in millions stepping from the portals of thousands of educational institutions, cannot so build for the future as to be able to say with undeniable emphasis, "Columbia rules the air."

American-flag ships plying the air have today reached Asia and Australasia, as well as Europe. American-flag ships are today going southward along the eastern coast of South America, crossing the Andes, and coming northward on the western coast. No country in the world has ventured more in this science of private wealth and private energy than has America.

With this great program in mind, perhaps too far-reaching and too colossal to be freely understood at this moment, it seems to me both fitting and proper that the Federal Government, looking to this great visionary future, should open the avenues of vocation and employment in civil aeronautics to the youth of the land. Thus we introduced and had passed the bill authorizing the training of college students and of noncollege students for pilot service.

We "grandstand pilots" are in sympathy with, but do not want to encourage that kind of flying typified by the young student pilot in the British Air Force who was making a survey flight over the Sahara Desert as copilot and was busily manipulating his sextant and the various other instruments in order to determine their exact position. Suddenly he tapped the pilot on the shoulder and said:

"Hey, take off your hat."

The pilot immediately wanted to know why.

"Well," said the young student, "according to my calculations we are now flying through St. John's Cathedral."

The President advocated the training of 20,000 pilots per year, so our bill contemplated that progress. The Civil Aeronautics Authority set up a most comprehensive plan by way of experiment. So successfully did this plan work out that today 9,350 students have enrolled from 437 colleges in all of the 48 States of the Union, Alaska, Hawaii, and Puerto Rico. These enrollees, together with some 700 noncollege students, make a total of something in excess of 10,000 who will graduate this year.

The appropriation of \$4,000,000, which the conference committee finally approved, made it impossible for the Authority to accommodate even a fair percentage of the 125,000 applicants for college aeronautical training.

Here, again, I would enlist the attention of your great organization for moral assistance, because in order to carry out this program which now gives so much promise, we should have an appropriation of \$7,000,000 from this present Congress.

Up to the present moment, the greatest attention has been given to air lines of greatest magnitude. Those that were transcontinental in nature inevitably held the attention of the country. This is true today; but the future calls for encouragement of commercial air lines of less magnitude, extending from interior parts of the country to places of junction with the trunk lines. Sometimes we call this "feeder-line service"; but by whatever name it may be known, the welfare of the small line, acting as a support to the greater line, must be a thing of paramount thought and consideration.

It is by the feeder-line system that small communities, remote from the greater lines of service, will receive the benefits flowing and to flow from aerial commerce. The feeder-line system will serve its great practical purpose by bringing small communities and isolated rural districts into speedy touch with the world of commercial activity.

While aviation has definitely progressed in America, we regret to say that its progress has been hampered by the lack of adequate research facilities. The laboratory at Langley Field is a most praiseworthy activity. However, a science so far-reaching, in a country of such magnitude, is demanding and will demand and should receive the benefits of research laboratories so located as to give to the several sections of this country the best that men of scientific study in this field can bring forth. Perhaps it is true what they say about scientists—that they are men who prolong life so we can have time to pay for all the gadgets they invent, but our scientists in aviation have produced gadgets for which we are proud and grateful.

The appropriation for the laboratory at Sunnyvale, Calif., traveled a rough road in its way through the National Congress. It was finally accomplished, and the splendid work of Langley Field will be aided and augmented by laboratory facilities at Sunnyvale.

Obviously even two research facilities will not fill the needs of aviation for the future. Development almost revolutionary in nature in the art of construction has come forth from Langley Field under the National Advisory Committee for Aeronautics. But this Authority and the laboratory at Langley Field have their limitations.

Much of the development in engine construction that we find in our country today has been brought about in the private laboratories of those engaged in this line of work. The future demands governmental study and development of engine construction so that this country will not depend upon any other, nor upon the genius of any other, for its motive power in the air.

I was grateful for the opportunity afforded me by the invitation of your president to address your organization in national convention because, enlisted as I am in the campaign for the development of civil aviation in America, it is my ambition to say something to this organization, to leave with you some thought that may arouse you to greater action for the development of the science and industry in which we are so vitally concerned.

I would wish to see your membership increased tenfold.

I would wish to see the public mind trained aviation-wise by the continuous and emphatic preaching of every member of the National Aeronautic Association. We must by your efforts educate the American people to understand what can be accomplished by the air transport.

Every effort that we put forth looking to this end is an effort for the upbuilding of our country, the contentment of its people, the security of our institutions, and the strengthening of democracy as a form of government to hold the attention and admiration of the civilized world.

Thus, in accepting the honor conferred upon me by your invitation to address you, I feel that the privilege affords me an opportunity to arouse in the minds of my listeners a zeal dedicated to a greater future for civil aviation, and at the same time to perform a patriotic duty for my country.

#### EXCERPTS FROM PRESS NOTICES ON NATIONAL AERONAUTICS CONVENTION

Faith in the future of American aviation was expressed by Senator McCARRAN when he made this prediction in an address before the members of the National Aeronautic Association at the organization's convention in New Orleans, Friday, January 12.

Glowing tribute was paid the Senator by Thomas H. Beck, editorial director of Collier's magazine, who referred to McCARRAN as "the man who is superseded only by the Wright brothers in his contribution to American aviation." The Senator was introduced by George Logan, former vice president of the National Aeronautics Association, who honored the Senator as "dean of aviation" and reviewed McCARRAN's congressional career as sponsor of key measures in the Senate for a civil-aviation program. Logan emphasized the McCARRAN civil pilot training bill, passed last session, which he considered the most outstanding piece of aviation legislation since the Civil Aeronautics Act.

### Grand Street Boys' Association of New York

#### EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the RECORD the remarks made by the distinguished Senator from New York [Mr. MEAD] at the celebration of the twentieth anniversary of the Grand Street Boys' Association at the Commodore Hotel in New York City, on January 13, 1940.

There being no objection, the address was ordered to be printed in the Record, as follows:

I am glad to join with the Grand Street Boys' Association, which began so hopefully a score of years ago, to celebrate its twentieth anniversary: 20 years that are studded with accomplishment and victorious venture. No one can enter the club's magnificent edifice nor stand within its walls without sensing the rich atmosphere of noble achievement, the precious combination of elements which go to make up Americanism.

The Grand Street Boys' Association finds its vitality through unselfish, patriotic, devoted leadership. This great organization already has its traditions, traditions founded on a unique and happy background.

There ought to be a Grand Street Boys' Association in every city and hamlet in the Nation, an association with the spirit, the color, and the potentiality of this one. I presume none of us who have

become acquainted with this group in more recent years can ever appreciate the real satisfaction that must beat in the hearts of those who conceived this glorious accomplishment.

The men who established this club built a greater monument than perhaps they had even imagined. They were men who loved Grand Street and who cherished the associations of their youth. Some of the early pioneers of this association had gone far afield of their youthful environment. They had established themselves in the world of business, of culture, and of human relations. But they never forgot the heartbeat of Grand Street. They never really moved "uptown." Whatever they were and to whatever heights they may have attained in financial or public success, the memory of Grand Street clung to them with an affectionate fascination. Many men carry reminiscences in their hearts for the scenes of their youth, but some lack the vital spark of initiative that these men surely had.

Here, after 20 years, is the magnificent realization of their dreams. Here is a boys' association dedicated to the brotherhood of young men without regard to race, color, or creed. In keeping with the conception of its founders, here is an organization that disregards financial standing and social prestige. It asks only that we like one another and that we maintain a wholesome respect and defense of the happy system under which we live and under which a society such as the Grand Street Boys' Association is based. In a word, the hand of good fellowship, of friendly association, and of clean living and honest thinking stretches forth to all who enter these portals. Here is democracy in action. Here in Grand Street is captured and perpetuated the spirit that has made East Side products the Nation's leaders.

Embryonic leadership is here tonight; leadership that will carry the torch far higher and far wiser than some of us who are entrusted with such responsibilities today. Leaders will spring from this noble atmosphere because the rules of fair play, of decency and respectability, kindness and tolerance are the rules which have guided the destinies of the Grand Street Boys' Association for 20 years. These are the rules that have made this club the remarkable institution that it is today. These are the rules that predestine even greater achievements in the future. These are the rules upon which democracy must be founded and without which neither domestic, industrial, or political morality can survive.

Democracy, if it is to endure in this country, must appeal to us as an opportunity for service, as an opportunity for cultivating the finer things of life. To continue to function, it must assume its rightful responsibility.

We do not propose that economic, political, or religious oppression shall ever be permitted to take root in this country. We must, however, be constantly on the alert to guard against encroachments upon our system of government. We have learned that there is no short cut to human happiness, no substitute for individual freedom. Our Government stands today for the enthronement of law and equity, the preservation of democracy, the right to individual freedom, the redemption of the oppressed, the education of the poor and unfortunate, the establishment of free institutions, and the protection of life and property. We must keep faith with that system, for it stands for justice for all. We must pledge anew our determination to make democracy work. That is fundamental Americanism.

Americanism is the trade-mark of the Grand Street Boys' Association. It has emblazoned the symbol of tolerance and good will upon the skyline of New York. It has rooted its fundamental Americanism deeply into the mud sills of a friendly neighborhood. After 20 years it has erected a superstructure that is far greater than the steel and stone, beautiful as it is, that greets the eye. That superstructure has been built by piling good deed upon good deed, by pyramiding an incalculable volume of neighborliness, and by amassing a wealth that we measure in terms of liberty, justice, and tolerance.

I always look forward to a visit here, because, to my mind, there springs from this association a blend of romance, of adventure, of something both sentimental and practical. There is inspiration in this atmosphere. There is an air of progress, of opportunity, of democracy itself, in the activities carried on here. There is blended here the mellowness of memories, the freshness of youth, and the promise of fruitful endeavor.

With another storm sweeping the earth, with the forces of greed and intolerance ravishing other nations, and with the survival of representative government at stake, we need a rebirth throughout the world of the spirit that glows here—a democratic spirit that glows like a cloud by day and a ball of fire by night. In other lands, under less fortunate governments, innocent human beings are cast into a vortex of hatred, misery, and bloodshed. Bigotry and intolerance motivates ruthless leadership there. Despotism is pitted against democracy. The specter of serfdom, enslavement, and oppression threatens again to stem the upward tide of civilization. In these calamitous circumstances the value of organizations of this type is self-evident. I congratulate you on your twentieth anniversary. I join in the most deserved tribute to Judge Goldstein, whose energy, devotion, and vision have brought you on the road to this glorious occasion. I say again, give us a Grand Street in every town; give us a Grand Street Boys' Association in every community. That is what America needs. That is what helps to preserve the democratic way in the greatest land under the sun.

## Preservation of American Liberties

## EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

RADIO ADDRESS BY HON. JOHN W. McCORMACK, OF MASSACHUSETTS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on December 29, 1939:

Out of a confused and disturbed condition of a world nature has come a message of hope in the recent action of His Holiness, Pope Pius XII, and of President Roosevelt, action of a courageous nature, having as its objective the establishment of an honorable peace, when the proper time arrives to further prosecute their peace plans. It is the molding of decent world public opinion, of all creeds, all races, all neutral countries against the indecent and destructive forces of the world. All persons who hope and pray for an early honorable peace should support the efforts of these distinguished men, outstanding leaders in different fields of human activity, but both having the same objective—an early peace.

In a speech I made in the Congress during the special session, I stated, in substance, "Communist Russia and Nazi Germany are attacking and attempting to destroy religion and the ennobling influences that come therefrom and which lift up men and women."

I then pointed to gallant Poland, a religious and liberty-loving people, with the murdering of priests, ministers, and rabbis by the Communist oppressors. Since then we have witnessed Lithuania, Latvia, and Estonia, compelled to submit to terms that reduced them from the status of independent nations to a protectorate of Soviet Russia. We read in the press that when the Soviet military forces marched into these countries, with them went the printing presses, the purpose of which was to indoctrinate the people of these countries with communism. You and I know that if the Communist propaganda is unsuccessful, the next step will be for Soviet Russia to establish a so-called people's government, forcing a Communist state upon these fine people.

The next step was little Finland, the valor of whose people is known to all. After that, probably Norway, then Sweden, or an attack upon the people of the Balkan states; ruthless force operating with a complete disregard of the rights of small nations, not only for conquest but also to deny to those conquered the right of a free religious conscience.

We are witnessing the world forces of destruction in operation—cold, cruel, ruthless. We see little Finland, with its 4,000,000 population, whose people know what communism means, fighting for its independence against a nation with a population of 165,000,000. This nation and its brave people are fighting one of the two subversive regimes of the world. Communism and its illegitimate offspring, nazi-ism, from a world angle, are menaces. They both have the same common objective—conquest and revolution. They are both the enemies of religion, one open and direct, in the case of Soviet Russia, the other hidden and indirect, but just as determined, as in the case of Nazi Germany. The broader implications involved should be understood and appreciated by all persons who stand for decency in world affairs.

The recent action of President Roosevelt in the appointment of a special Ambassador to the Vatican, and his message to Pope Pius XII, and recognized leaders of the Protestant and Jewish faiths, and their favorable responses, coupled with the independent efforts of Pope Pius, and recognized leaders of other faiths, clearly show an appreciation of the dangers of these forces of world destruction. Such action will produce favorable results at a later date. Such leadership has as its objective the molding of the world forces of decency, spiritual and material, for peace, and not for war; for order and stability, not for destruction. To me, it is the most enlightening leadership and action since the present war started. It is a definite challenge, in an orderly and peaceful manner, to communism and nazi-ism in their attack upon religion, and in the attempt to impose their will upon the people of small and defenseless nations.

In our own country those same forces of destruction are operating. Their moves are hidden and subtle. There is no question but what they are financed from abroad. Only a few months ago, the open and avowed enemies of each other, here and abroad, today, communism and nazi-ism have clasped hands, and are working in concert with each other. They are both the enemy of our Government.

I know what their tactics are. Five years ago I was chairman of the special congressional committee that investigated communism, nazi-ism, fascism, and other un-American activities, such as the cheap, contemptible, bigoted movements which existed at that time. Every method, legal or illegal, or a combination of both, are used by them. Deception and hypocrisy are their acknowledged policies. One of their favorite tactics is to try and create hatred among Americans because of differences of race, color, or creed. They know if they can create suspicion it will lead to misunderstanding and hatred, and then to a movement of bigotry directed against some American citizens, because of either race, color, or creed. Such movements are not only contemptible, but are un-American. At the present time, according to credible testimony of the Dies committee, a determined effort is being made by the Communist and Nazi forces, in conjunction with others, to start another wave of bigotry in the United States. All Americans should oppose such a movement. Hate is a disruptive influence upon mankind. It is the main origin of evil.

As a result of the investigation by the special committee of which I was chairman, a bill which I drafted became law 2 years ago—a bill compelling foreign propagandists in the United States to register with the Secretary of State. While that bill is far-reaching in its operation, it is particularly aimed at communism, nazi-ism, and fascism. There is strong evidence that the Department of Justice is enforcing this bill. Recently, in the District of Columbia, three Communists were indicted for conspiracy to evade the provisions of this law, and pleaded guilty. This law should be vigorously enforced by the Federal authorities.

The special committee also recommended a bill making it a crime for any person to "willfully or knowingly advocate the overthrow of our Government by force and violence." That bill should become a law. What American can object to such legislation? Last year I offered it as an amendment to another bill which was pending in the House of Representatives, and the amendment was adopted by the House. It is now pending in the Senate. It is proper and necessary legislation which the Senate should pass. To those who believe in personal liberty, freedom of religious conscience, freedom of speech and of the press, the sanctity of the home, and of the family life, and of all other individual and human rights for which our institutions of government stand—communism, nazi-ism, fascism, and bigotry in any form should be vigorously fought.

When we witness the oppressive conditions in other countries—Communist Russia and Nazi Germany—with their attacks upon religion and the destruction of individual rights—we realize more profoundly what it means to be an American citizen. Here, religious freedom and other human rights are guaranteed to all and are protected by the Constitution. Here, under our form of government, freedom and liberty within the law exist as a right and not upon the will of a dictator. And yet there are those within our country who play the game of atheistic communism and pagan nazi-ism—both anti-God, both antidemocracy, and both determined, if they can, to destroy every ideal for which you and I stand.

You and I have the responsibility to protect our institutions, not only from attack from within, but to see that national policies are formulated that will not aid those forces of destruction which are now active in other parts of the world. It is the duty of all American citizens to see that necessary legislation to combat these vicious forces of destruction is enacted into law. It is our duty, in these trying days when the only law of some nations is the law of might, to see that our country is adequately protected and defended. It is our duty to see that we have a national defense that will not only command the respect of lawless nations, but will instill into their minds fear of entering into any conflict with our Government.

I am glad to state that our Navy at the present time is in admirable shape. Six years ago it was practically defenseless. During the last 6 years 106 new naval vessels have been constructed and commissioned and many others are now in the process of construction. The next Congress will be faced with the problem of whether or not our Navy should be further increased—not for the purpose of attacking other nations, but for the purpose of defending our own shores in case of attack. It is my frank opinion that our Navy should be further increased. The price that we pay is the premium for protection.

Our air forces must be materially increased. Six years ago we had practically no air force. Today we are in a different position. The last regular session of Congress appropriated money for the building of 5,500 airplanes for the Army during the next 2 years. The present conflict in Europe has shown the effectiveness of a strong air force. It has also shown the necessity of a strong air force. An adequate national defense, under existing world conditions, requires a substantial increase in our present air forces.

The first duty of a nation is to assure its own protection and continuance as a government. That is why a country must provide for its national defense. The extent to which a country such as ours, which seeks nothing that other countries possess, must go, is dependent upon the actions of other countries and upon world conditions as they exist from time to time. As I view the situation, looking over world conditions, it is imperative that there be

a further increase in our national defense on sea, on land, and in the air. This is a practical question which must be viewed from a realistic angle.

With all its human weaknesses and human imperfections, our Government is the best government in the world. Its existence is dependent upon you and me as individual American citizens.

Past generations of Americans in their day met the problems which confronted them and passed on to you and me, of this generation, a great country—the great country of which we are citizens. It is our absolute duty to persevere in our day and to pass on this heritage to the generations of Americans yet unborn. To do that we must meet our problems and determine them in the American way. One of our serious problems is the menace of world communism and nazi-ism, with their vicious and ruthless disregard of moral obligations. It is our duty to be prepared to preserve ourselves from attack—from without and from within—by these forces of destruction. An adequate national defense protects us from without. An enlightened public opinion, together with the passage of necessary legislation to combat these forces, will protect us from within.

### The Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

EDITORIAL FROM THE OMAHA WORLD-HERALD

Mr. SCHAFER of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Omaha World-Herald:

[From the Omaha World-Herald]

MR. HULL'S CASE

Secretary Hull says the people who oppose his reciprocal-trade program have been guilty of "flagrant and unscrupulous suppression and misuse of material facts."

Maybe he has something there. Any tampering with the tariff stirs strong prejudices and arouses powerful interests, and they do not always keep their punches up.

But the Secretary of State himself should be above reproach. His figures should stand like rocks imbedded in eternal truth. He should not be swayed by the selfishness and partisanship which commonly influence lobbyists and sometimes, we regret to confess, Congressmen.

Yet some of Mr. Hull's statements before the House Ways and Means Committee arouse the wonder if he, too, wasn't guilty of misusing material facts.

He began with a round of abuse for the Smoot-Hawley tariff of 1930, which is the conventional opening for any tariff discussion. Then he pointed out a sequence of events intended to blast forever the pretensions of the Smoot-Hawley advocates and to squelch the arguments of the enemies of the Hull reciprocal trade program.

Chronologically, his argument went something like this:

1929—American farmers' cash income, \$11,200,000,000; income of the cattle industry, \$1,495,000,000.

1930—Smoot-Hawley bill passed.

1932—American farmers' cash income, \$4,700,000,000; income of the cattle industry, \$621,000,000.

1935-39—Many reciprocal-trade agreements put into effect.

1938—American farmers' cash income, \$7,600,000,000; income of the cattle industry, \$1,144,000,000.

In other words, everything was lovely in this country until the Smoot-Hawley bill was passed. Then things went to hell in a basket, and no good news happened until the reciprocal-trade agreements were negotiated. Then the farm business started picking up, and now, thanks to the program, we are well started on the road back.

But the chronology does not take into account the long depression, which whacked values not only in the United States but everywhere in the world, nor does it give any credit to the worldwide recovery which got under way in about 1935. Now the Secretary's zeal for his reciprocal agreements may be so great that he can convince himself that the Smoot-Hawley tariff caused the depression and his program ended it, but he can hardly expect the rest of the country to accept that conception.

As a matter of fact, industrial statistics for the past decade have been so badly tangled by many currents that they can be used to prove anything or nothing about the tariff.

But there is one fact about the whole situation which ought to be plain to everyone interested in the American economy. It is this:

Admission into America of foreign-grown farm products which compete directly with American farm products can serve no useful purpose at this time.

It can only have the effect of increasing our surpluses, reducing our prices, forcing more American land out of production, and driving more American farmers from the land. Any tariff revisions which will force drastic changes in any basic industry, such as agriculture, should be undertaken with the greatest of care—and not at all during a time when prices are already depressed.

### The Dies Committee

#### EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

NEWS LETTER BY HON. SAMUEL B. PETTENGILL

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news letter issued by Hon. Samuel B. Pettengill, former Member of Congress from Indiana:

THE DIES COMMITTEE

(By Samuel B. Pettengill)

One important, immediate matter for decision at the present session of Congress is whether the work of the Dies committee shall be continued. There is large public interest in this question. The other night we had a lively debate over the topic, in which I held the affirmative, over the Town Hall of the Air, in New York.

It was once said of a great American that "we love him for the enemies he has made." Who are the enemies of the Dies committee? Who wants it discontinued? Here are a few: Earl Browder, under indictment; Fritz Kuhn, now in prison; the Communist Party; the bund; the Daily Worker; the New Masses; the New Republic; the Nation; Labor's Nonpartisan League; the American Youth Congress; the American Student Union, which has just given its blessing to Russia's attack on Finland; the American League for Peace and Democracy; the Workers Alliance; Secretary Ickes; and Mme. Perkins. All of these were also behind the bill to pack the Supreme Court; they all favored the "dictatorship" reorganization bill; they all applauded the attempt to purge Democratic Senators in 1938. We judge the objections by the objectors. "By their fruits ye shall know them."

The American League for Peace and Democracy is the largest group fighting the Dies committee. The committee acquired its hatred by publishing the names of the Washington, D. C., members and mailing list of the league, 553 in number, nearly all of whom are employees of the Federal Government—your Government—several in key positions.

It is probable that many of these members were duped into joining an outfit which Earl Browder described as a "transmission belt" for the Communist Party, and of which he was formerly vice chairman.

But these people are not private citizens. Most of them are public officials. They hold office under the Constitution of the United States. Their salaries are paid by the loyal citizens and the hard-working taxpayers of this Nation. Now, I ask this question: What right has any public official to belong to any organization the publication of which would embarrass him in the slightest degree? Or putting it another way, has not the public the right to know the names, purposes, and financial support of every political organization to which any public servant belongs? If not, why? What right has anyone drawing his pay and groceries from the Government of our country to belong secretly to any organization whatever and to be protected in that secrecy?

Dr. Harry F. Ward, the head of this league, denies what Browder asserts—that the league is a "transmission belt" of the Communist Party and the Third International. But it is in evidence that two or three thousand dollars a year, or 15 percent of the league's budget, is contributed by the Communist Party. Dr. Ward himself has admitted that 2 out of 25 of its steering committee are Communists, and that its membership is probably 10 percent Communist.

If so, the Washington chapter is 10 percent Communist. That means that 10 percent at the very least, or 55 of 553 names, are Communists. Now I, for one, am old-fashioned enough to hold that no Communist has any business on the pay roll of our Government—not one. I submit, further, that no Government employee who is not a Communist has any business to knowingly belong to an outfit which is 10 percent or 5 percent or 1 percent Communist.

With reference to the 90 percent who are not Communists, according to Dr. Ward, I think the Dies committee should give them an opportunity to disavow any loyalty to any flag except the Stars

and Stripes, and to any political creed except the American Constitution. If satisfied of their good faith, the Dies committee should give these innocent people a clean bill of health. And for that reason, among others, I submit that the Dies committee should be continued.

No one is called upon to give a blanket endorsement to everything done by this committee. But on net balance it has done a great job against great difficulties. And now that we are spending billions to defend our land against foreign foes, we would be the prize boobs of the ages if we called off the Dies committee from continuing to expose the enemies within. Let us keep the spotlight on our navy yards, our merchant marine, our factories manufacturing military supplies, our newspapers and book reviews, our press services, relief agencies, and all public officers, our schools, and even our churches until we are sure and certain that no one longer works in secret at least to betray America to a foreign flag and a pagan god.

### The Passing of Dr. Kelly Miller

#### EXTENSION OF REMARKS

OF

HON. ARTHUR W. MITCHELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

Mr. MITCHELL. Mr. Speaker, it is my opinion that the Negro race, the educational field, and the army of loyal men and women interested in the building of a genuine democracy in America, lost one of its foremost champions in the passing of the late Dr. Kelly Miller who, though born a slave in the South, became one of the greatest scholars, philosophers, and champions of human rights in the country. For 50 years he served in various capacities as a member of the faculty at Howard University. His life was purely unselfish and he lived primarily for the good he could do mankind. His contribution in the building of substantial citizenship among Negroes and in lessening race prejudice was surpassed only by that of the late Booker T. Washington.

During my tenure of office as Congressman of the United States, it was my custom to call him in consultation about practically every important question involving the interest of the race. He was always enthusiastically anxious to do what he could to lessen race friction and to put the case of the Negro squarely before the country on its merit. In his passing I sustained a great personal loss, for it was upon his shoulders that I leaned more heavily than upon the shoulders of any other leader in the country. Because of the close relationship that existed between us, it was very fitting that the last conference he had with anyone outside of his immediate family and his physicians was with me. Although he was weak and seemed to realize that the end was near, his whole talk, lasting for more than a half hour, was about the future welfare of his people and his country. Being a great patriot, in his illness, as in his days of health, he thought of others and his country before he thought of himself.

I think it is fitting that I include here an interview which was among his last with the great commentator, Frederic William Wile. This interview with Mr. Wile was no passing fancy with Kelly Miller. His opinions on these matters are not to be regarded lightly.

"PERSUASIVE INDUCEMENTS OF NEW DEAL" BIND COLORED VOTE, DR. MILLER BELIEVED

(By Frederic William Wile)

By design, naturally, rather than by accident, that time-stained bogey of Congress, the antilynching bill, reintrudes itself on the threshold of the 1940 Presidential campaign. House debate preceding overwhelming passage of the bill on Wednesday evoked from the body's only colored Member, Representative MITCHELL, Democrat, of Illinois, the charge that the Republican party is "trying to buy back the Negro vote" with the Gavagan (Democrat, of New York) sponsored measure to prevent lynching. According to the former dean of Howard University, Dr. Kelly Miller, who passed away at the turn of the year, it is "the persuasive inducements of the New Deal" which have bound the Negro to its philosophy "with hoops of steel." Not long before Dr. Miller's death this observer asked him to forecast the direction the Negro vote would take this year. In what was probably that respected colored leader's political swan song, he declared unequivocally that "the great bulk of Negro voters having

supported Roosevelt in 1932 and 1936, all indications point in the same direction for 1940."

#### THE WANDERING BLACK SHEEP

Dr. Miller wrote: "Both parties will put forth as strenuous an effort to corral the Negro vote as any other element of strength. Already the Republicans have appointed Dr. Emmett J. Scott, a distinguished, persuasive politician, one-time editor of a Texas Negro newspaper, erstwhile secretary to Booker T. Washington, later secretary of Howard University—a man who knows the rules of the political game—to bring the wandering black sheep back into the fold. The Democrats will doubtless set up a competitive agency. But the New Deal stands on its record—a record warranting the assertion that the vast majority of the colored vote will adhere to the Democratic Party in 1940, as it did in 1932 and 1936. This is no mere wishful expression. It is based upon a dispassionate analysis of the facts and factors involved."

#### G. O. P. BROKE PROMISES TO NEGROES

"The strategy of Negro political leaders in the past five Presidential campaigns," Dean Miller continued, "was to impress both parties with the race's importance either as an ally or as an opponent. The influence of these leaders sprang from the fact that both parties believed their contention might be true. Yet the 1920, 1924, 1928, 1932, and 1936 elections were won by such landslide proportions that the Negro vote was completely wiped out. Harding, Coolidge, Hoover, and even Roosevelt, the latter both times, would have won triumphantly even if every Negro had voted against them. Neither side this year predicts victory by a landslide. This uncertainty gives the Negro vote strategic importance."

"A careful or even a casual analysis of its potentiality in the free-voting States of the North and West clearly indicates that its weight is sufficient to throw victory to one side or the other. In at least a dozen States the Negro vote exceeds the margin by which either party can reasonably hope to win. The only question now is which party will be the more seductive in suing for the Negro's favor. Up to Taft's time the Negro vote was bound to the Republican Party by ties of gratitude and tradition. But due to the retrograde policies of Taft, Harding, Coolidge, and Hoover, followed by the persuasive inducements of the New Deal, there has been a radical reversal of attitude. The G. O. P., being in the minority and without power, prestige, or patronage, no longer possesses any concretely convincing appeal for the Negro vote, especially in the big northern cities, where it is chiefly concentrated. The Republican Party has abandoned the vital issues of human rights, on which it rose to power, and has a long record of broken promises with which it beguiled its black ally. It has therefore lost its effective hold on the Negro's allegiance."

The large contribution made by this unselfish and untiring patriot is bound to live and express itself in the fruit borne out in the lives of those who are to live after him. His passing is a distinct loss to the Nation.

### Authorizing the Expenditure of \$20,000,000 for the Relief of the People of Finland

#### EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 17, 1940

Mr. FISH. Mr. Speaker, I have introduced on January 10, 1940, a joint resolution authorizing the expenditure of \$20,000,000 for the relief of the people of Finland, for the purchase in this country of foodstuffs, clothing, and other American products, including raw materials and manufactured goods, except arms, ammunition, and implements of war.

The people of Finland are facing a great national emergency, and their very existence is at stake. Finland is the one country that has paid its debts to the United States, and I believe the American people desire to assist it in every practical way in the crisis with which it is confronted.

Finland is in dire need, not only of foodstuffs, cotton, and clothing but also of copper, steel, gasoline, trucks, and other manufactured products of this country. In the past Congress has appropriated large sums of money for relief in Belgium, Poland, and Soviet Russia and there is every reason that legislation should be enacted immediately to afford substantial relief to the people of Finland at a time when it is most urgently needed and their own existence and that of their Government is threatened with disaster. Time is vital and

essential if we are to help Finland defend itself from the "red" avalanche of communism. We must act immediately.

#### House Joint Resolution 415

Joint resolution for the relief of the distressed people of Finland

*Resolved, etc.,* That the President is hereby authorized, through the American National Red Cross or such agency or agencies as he may designate, to purchase in the United States and transport and distribute grain, fats, milk, and other foodstuffs, clothing and raw materials or manufactured products (except arms, ammunition, and implements of war) for and adapted to the relief of the distressed people of Finland, and for their benefit in defense of their liberty and independence. That there is hereby authorized to be appropriated, out of money in the Treasury not otherwise appropriated, to be expended under the direction of the President, a sum not exceeding \$20,000,000, or so much thereof as may be necessary, for the purpose of carrying out the provisions of this joint resolution: *Provided*, That the President shall, on or before December 31, 1940, submit to the Congress an itemized and detailed report of the expenditures and activities made and conducted through the agencies selected by him under the authority of this joint resolution.

### America's Deliverer (a Satire)

#### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

ARTICLE BY R. WALLACE EUGOH

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a philosophical, satirical, and good-humored treatise on the subject of propaganda and civil liberties. It is written by a friend of mine who entertains profound and vigorous views on the subject of free speech, labor, and civil rights. I am sure its reading would be of benefit to all intelligent and alert citizens, whether they agree with the sentiments and philosophy of the article or not.

The article is as follows:

The freedom of 130,000,000 people is in grave jeopardy. The very foundations of the Republic are endangered. They have been endangered ever since that alien freethinker Thomas Jefferson proclaimed the subversive doctrine that error can be tolerated safely so long as truth is left free to combat it. Had I but lived in his day, my countrymen, I would have exposed this un-American radical as a fellow traveler of the godless gang that perpetrated the damnable French Revolution.

I would have called a hearing, myself presiding, before the public, the press, and the photographers. I would have summoned witnesses from the four corners of the earth, deserters, spies, felons, renegades, and stool pigeons. Out of the hidden byways and crowded highways I would have brought them forth to share with me the limelight. Thus would I have saved the young Republic from such traitors as Jefferson and his kind. And that all the people might be made cognizant of their eternal debt to me I would have published far and wide, day after day, photographs of my heroic countenance. I would have these pictures portray me standing bravely firm, with patriotic and protecting arm about the shoulder of an exiled antirevolutionist from France, doubly shielded by the shifting alias of his identity and by the steadfast star of my destiny—and my immunity. These things and more would I have done to save my imperiled country, and to enshrine my name forever in the hearts of all blue (mind you, blue, not red) blooded patriots.

But, my countrymen, there is yet time to save America. All that is needed is more and more money for my paid informers. My spies and snoopers tell me that the dangers of today far exceed those that faced the infant Republic in the days of Jefferson the infidel. They are more subtle, more invidious, more insidious, more infectious, more contagious, aye, more devious, more devastating, more deadly, and more damnable. Think on these words and shudder. Behold, my fellow patriots, some of these evils, as I recount them in all their menacing reality.

Collective bargaining and the right of laborers actually to quit work. Tenant farmers, sharecroppers, slum dwellers, yes, even field hands, discontented with their heritage in this land of plenty, aye, sometimes rebellious against that state of life in which it hath pleased God to place them. All of them potential victims of the subversive doctrines of foreign agitators.

Make no mistake, my countrymen, these agitators will stop at nothing. They do not know the meaning of fair play, as I under-

stand it. They even make themselves familiar with Woodrow Wilson's writings and quote his statement that "the way to overcome the agitator is to remove the causes of agitation." Could anything, I ask you, be more dangerous than this? Nor are they content to quote dead Presidents. They repeat those ominous words spoken in my day concerning one-third of the people of this Nation being "ill-fed, ill-clothed, ill-housed." (I shall not name the author of these words lest with shame my cheek turn red.) My countrymen we come now to the very fountainhead of all our dangers. The inspiration of all the spirit of discontent and unrest in our land emanates from one source—the White House and its brain-trust child, the New Deal. These are the chief foes of the God-fearing, property-owning, fortune-making, power-loving people of this country. These are the real enemies within our gates.

Behold the devastating evils of the present dictator administration. Under the false front of democracy our capitalists are hampered by taxes, our banks are rigidly regulated, our stock exchange is robbed of its ancient liberty, our employers are not allowed to forbid or circumvent collective bargaining, and our industries are forbidden to pay wages as low as they want. The time-honored conservatism of our Supreme Court is flouted by the appointment of young radicals disguised as liberals. The far-flung dominions of our public utilities have been ruthlessly detached from the holy empire of holding companies, and debt-burdened farmers have been seduced by the temptation of cheap, labor-saving electricity. Our National Government has been subjected to the degradation of an unbalanced Budget, partly to pander to an unprofitable minority—the poor, the idle, and the aged.

These, my fellowmen, are but a few of the body blows against the American system by Soviet satellites installed into key positions under the New Deal. Who is to expose and overthrow these agents of Moscow and their army of fellow travelers? Can they be overthrown by the home, the church, and the school? From the lips of my informers comes the answer. They cannot. Our homes? What mother by the hearthstone can be sure that husband or son is not a subversive radical masking as a mere liberal? Our churches? Which of them can be certain it is not the voice of revolution in the pulpit that repeats the prophet's plea for social justice or reads aloud the bold denunciation of the rich by Jesus Christ? Our schools and colleges? Can any board of trustees guarantee that no teacher belongs to a labor union and that no student knows about the Bill of Rights?

Fellow Americans, the fate of our institutions is trembling in the balance. The governments of our sovereign States are being steadily undermined by insidious propaganda against privilege, the sales tax, yes, even the poll tax. Again I ask, Who shall save America, its institutions, and its people? Not our War Department, which widespread sabotage stands ready to wreck at any moment. Not our Navy Department, penetrated throughout by foreign agents of disaffection. Not our Department of Justice—God save the mark—whose Attorney General was publicly indicted as a radical by a political rival summoned by my agents—a man who in this hour of peril glibly prates of civil liberty.

Long have I known that America could be saved in only one way. The New Deal must be discredited in the eyes of the people by charging that it is infested with agents of "red" Moscow. We do not have to prove the charge. All we need to do is to spread it broadcast. Publish a list of names, no matter where or how they are obtained. Make it a long list, even if you have to pad it. Attach each name to a New Deal agency, whether it belongs there or not. Proof is unnecessary, accuracy is irrelevant. People will remember what they read in the papers. Have I not proved this? Is not my name today on the lips of millions who would never have heard of me but for the front-page headlines I have made? Ah, that blessed, that beautiful, that immortal word—publicity. As the great prophet-priest, Coughlin, has proclaimed, by deed as well as word: "The end justifies the means."

Arise, my countrymen, arise and follow me. Let our password be "suspect, suspect"; our watchword, "accuse, accuse." And our unfailing battle cry, "We see red."

Onward and forward, fellow patriots to the rescue of America imperiled. Do not fear—I will lead you. Behold America, behold in me, your deliverer and your redeemer.

### Do Machines and Inventions Cause Unemployment?

#### EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

Mr. DONDERO. Mr. Speaker, in the President's message to Congress, delivered in this Chamber on January 3, 1940, the President stated "To face the task of finding jobs faster than invention can take them away" was one of the problems of the Nation. And he further stated:

We have not yet found a way to employ the surplus of our labor which the efficiency of our industrial process has created.

How much does machinery have to do with creating unemployment? What effect does invention have on the question of jobs? In answer to those questions and to the President's challenge, the figures prepared by the National Industrial Conference Board are interesting as well as an answer to the questions.

In an editorial published in the Daily Tribune in my home city, Royal Oak, Mich., this interesting question was discussed. I believe it to be pertinent information on the challenge presented by the President in his address.

Personally I have never seen anything to convince me that, in the long run, the invention of new machinery does anything but create more jobs. Where people often get confused, I think, is in the fact that introduction of a new machine frequently does cut down jobs on some particular operation for the time being. But in the majority of cases, in the long run, it creates more jobs. For it generally makes it possible to produce goods more cheaply. Then these are sold to more people, and more men than ever are required to make them. Look at the automobile industry as an outstanding example.

In this connection I am struck by an article in the Detroit. It takes issue with the statement of President Roosevelt to Congress when he referred to the Nation's problem "to face the task of finding jobs faster than invention can take them away."

The writer took the figures of the National Industrial Conference Board, which are standard in this field, to make the following comparison between 1929 and 1937:

	1929	1937	Increase or decrease
Average annual—			
Total employed.....	47,925,000	46,639,000	-1,286,000
Agriculture.....	10,539,000	11,244,000	+705,000
Forestry and fishing.....	267,000	227,000	-40,000
Mining.....	1,067,000	865,000	-202,000
Manufacturing.....	11,059,000	11,361,000	+302,000
Construction.....	3,340,000	1,924,000	-1,416,000
Transportation.....	2,465,000	2,016,000	-449,000
Public utilities.....	1,167,000	975,000	-192,000
Trade distribution and finance.....	8,007,000	7,549,000	-458,000
Service.....	9,003,000	9,518,000	+515,000
Miscellaneous.....	1,012,000	958,000	-54,000
Unemployed.....	429,000	6,372,000	+5,943,000
Total labor force.....	48,354,000	53,011,000	+4,657,000

One of the surprising facts disclosed is this. While the total number of jobs decreased 1,286,000 the number employed in manufacturing actually rose 302,000. The drop came in other fields.

#### BIGGEST DROP IN BUILDING

By far the largest drop in employment was in the construction field, where nearly 1,500,000 fewer men were at work in 1937 than in 1929. We are hearing a lot about that in the Government's inquiry these days. Between the agreements of construction firms to hold up prices, and the demands of strongly organized unions for exorbitant wage scales, it has been made pretty difficult for those who want to erect buildings to do so.

The next largest decrease, 449,000, came in transportation, along with 458,000 in trade, distribution, and finance. The two total nearly a million people.

Another large decline in jobs came in mining. The largest share of this field—coal—is dominated by John L. Lewis. Public utilities, which have been under fire by the Government and have been subjected to the competition of Government-financed corporations, have decreased their expansion rate of previous years.

It looks as though we would have to go much further than just blaming the invention of machinery if we want to put our finger on the cause of unemployment.

### "Causative Factor" Should Go

#### EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

EDITORIAL FROM THE NATIONAL TRIBUNE OF JANUARY 18, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include

the following editorial from the National Tribune of January 18, 1940:

[From the National Tribune of January 18, 1940]

#### CAUSATIVE FACTOR SHOULD GO

There is now pending on the Senate calendar a bill by Senator WALTER F. GEORGE, of Georgia, to restore retirement privileges to certain disabled officers of the World War who lost their retirement by the infamous and unjust Economy Act of 1933. This bill (S. 134), should be passed immediately and sent to the House, so that early action can be had on it or a companion bill sponsored by Representative ANDREW EDMISTON of West Virginia.

In 1933, when they were overpowered by the minions of big business, the veterans lost many benefits. As Congress learned about the injustices of the Economy Act, practically all original rights were restored. Of all the vicious results of that act, perhaps the most ruthless still remains, the so-called causative factor regulation.

Directed solely at disabled emergency Army officers, this regulation requires that in addition to proving direct service connection for disabilities, these men must also show a direct relation between a service incident and the disability, a thing absolutely impossible to do in most cases. In a disability from disease, for instance, it must be shown that a germ entered an officer's system at a specific time and that the arrival of the bug was caused solely by a special factor brought about directly through military orders.

This sounds extremely ridiculous to us. How could a patient suffering from disease or a mental ailment be expected to meet such a requirement? For that matter, how could a man who accidentally lost a leg or an arm always prove that it departed from him while he was acting under specific and direct orders?

It is true that comparatively few persons are directly affected, probably not more than 2,000. This isn't many when one considers that more than 200,000 officers served in the World War. The number of men affected should in itself dissolve some of the fog once raised that too many officers were being placed on the retired lists. Only 6,500 were ever retired; two-thirds of these were cruelly penalized by the "causative factor" regulation. All of them had directly service-connected disabilities and were justly entitled to the benefits they were receiving. If this vicious principle were applied to enlisted men, we dare say less than 100,000 men would remain on the compensation rolls. Realizing this, to say nothing of the principle involved, enlisted men have supported the officers. All major veteran organizations insist that the rights taken from disabled emergency officers 6 years ago be restored.

So much water has gone over the dam since 1933, a little history is in order. Just after the World War, eight classes of officers of the nine who served were retired as provided by law—all but the emergency Army officers. Of course, all Regulars were cared for; so were the provisionals.

Navy and Marine Corps emergency officers were also voted retirement, and at the time, Franklin D. Roosevelt, now President, was Assistant Secretary of the Navy, in charge of personnel.

Fearing that the retired list would be loaded down, the War Department dodged its responsibility. Not until 1928 was special legislation enacted. When Congress then created a special retired list for emergency officers it did so without discriminating between officers and enlisted men. It recognized that, by reason of their rank, officers were entitled to higher compensation, thus following an established policy of the Nation.

In 1933 the then solicitor of the Veterans' Administration, at the behest of the President's economy committee, headed by Bernard M. Baruch, Wall Street speculator, wrote the Economy Act. The solicitor could not get rid of all those then on retired lists because the principle of retirement was too well established. He, therefore, wrote into the Economy bill the right of retirement, but with it went his pet brain child, the "causative factor" provision.

Everybody remembers the conditions under which that outrageous bill became law. Few legislators knew what it was all about. Soon thereafter, 49 Senators who voted when the bill was considered, in answer to a query, wrote that they did not realize what this "causative factor" requirement would do; those who opposed and some others were not asked about their views. To relieve the intolerable situation, an amendatory measure was passed overwhelmingly by both Houses in 1937, but was vetoed so near the close of a session Congress could not then express its will.

Efforts have been made to have the courts declare the requirement invalid. Another section of the Economy Act, however, forestalled relief because it said that no court could review any administrative action under the law. The case has gone all the way to the Supreme Court, but it has never been considered on its merits because the law says that no review is permissible.

Legislation is therefore necessary. Only 1,500 of the original list retained their rights. About 300 of the men stricken from the roll have met the requirement. It took some of them 6 years to do it. A thousand of these officers have died. The balance who ask to be restored through the George and Edmiston bills all suffer from directly service-connected disabilities. They are drawing compensation along with enlisted men.

Practically all enlisted men who suffered from the Economy Act have had their rights restored. The disabled emergency officers should have the same consideration.

Last year the new Defense Act granted the retirement privileges to emergency Army officers who may be hereafter disabled, provided

they are on emergency duty for a period in excess of 30 days. Disabled emergency officers in the future, therefore, will receive retirement with pay. Disabled officers of the past have been retired with pay, and this handful of World War disabled who have had their rights snatched from them must be restored to the roll.

Criticisms of the first retirement law for these officers have been met in the legislation now pending. The National Tribune has reason to believe that if both Houses of Congress act promptly the President will this time favor the measure. He will have the true facts laid before him, so that he may fully understand the justice of the legislation.

The "causative factor" provision of the Economy Act is a blot on legislation which has been enacted for disabled veterans of our country's wars. It is time for Congress to remove the stain.

### LaGuardia Chuckles About Terror Plot

#### EXTENSION OF REMARKS

OF

HON. CHARLES I. FADDIS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

EDITORIAL FROM THE WASHINGTON (PA.) OBSERVER OF  
JANUARY 17, 1940

Mr. FADDIS. Mr. Speaker, the activities of the F. B. I. in uncovering the plot to overthrow the Government of the United States may be of little concern to those in the great metropolitan centers, but it is of the utmost concern to the inhabitants of the small towns throughout this Nation. I include in my remarks upon this subject the following editorial from the Washington Observer, Washington, Pa., of January 17, 1940, which I believe is typical of the opinion of the average American upon this subject:

[From the Washington (Pa.) Observer of January 17, 1940]

#### LAGUARDIA CHUCKLES ABOUT TERROR PLOT

Mayor LaGuardia is reported as chuckling about the arrest of 17 men in New York City for alleged participation in the planning of plots against the United States Government and stating that such a small group could really accomplish little.

It is leaders of the type of Mayor LaGuardia, who pose as liberals but are really opportunists, who are responsible to a great degree for the unrest and disturbed internal conditions which prevail in the United States.

Even though the group under arrest may be small in numbers, the members represent an element which has been stirred and agitated by the harangues of men of the type of Mayor LaGuardia. They have helped sow the seed of discontent.

The Christian Front members in New York are only one of too numerous contingents of like caliber spread over the land.

Harry Bridges, an alien, is permitted to assume labor leadership on the contest and agitate thousands upon thousands of workers. He has been quoted repeatedly as being opposed to the American way and favoring domination of all groups by the workers.

David Lasser, of the Workers' Alliance, stamped with the taint of communism, is permitted to go to Washington and organize marches and demonstrations. He has been a close friend of Aubrey Williams, one of the New Deal leaders in the W. P. A. and N. Y. A.

Addressing a Workers' Alliance meeting in New York City, Lasser this week said the organization was "no longer satisfied to struggle for miserable relief or W. P. A. jobs." He said the new program of the organization was to obtain a guaranteed minimum income of \$2,000 a year for every American family.

The American Student Union League, which has received the blessing of Mrs. Roosevelt, at a convention recently refused to stamp Russia as the aggressor in its war on Finland. Its leaders were charged before the Dies committee with being radical.

Communists hold posts of leadership in a large number of the C. I. O. unions and are permitted to foment strikes and create strife and foment discontent which is their sole aim.

Perhaps Mayor LaGuardia can chuckle. It would be easy for him to laugh at most anything.

But serious Americans and those who are interested in the maintenance of freedom of speech, religion, and initiative and enterprise, we do not believe are inclined to laugh about such a condition of affairs.

"Little drops of water and little grains of sand make the mighty ocean and the pleasant land."

A combination of all the radical and crackpot groups would really threaten the peace of our Nation and its stability.

### Hawaii—An Historical Review of Its Annexation to the United States and Organization As An Incorporated Territory

#### EXTENSION OF REMARKS

OF

HON. SAMUEL W. KING

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

ADDRESS BY HON. SAMUEL W. KING, DELEGATE FROM HAWAII

Mr. KING. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address made by me before the Columbia Historical Society of Washington, D. C., on Wednesday, January 17, 1940:

As the Delegate in Congress from the Territory of Hawaii I find it frequently necessary to explain just where the islands are, what they are, and how they came to be a part of the United States. I welcome this opportunity, therefore, to tell the story of Hawaii to so representative a group of fellow citizens. I am happy to know by your invitation to me, that your interest in historical matters includes the romantic, even if brief, history of Hawaii.

The popular picture of Hawaii, created by our tourist advertising over a number of years, is out of focus in its overemphasis on the glamor and beauty of the islands. It is also true that amazing misconceptions prevail about our people and our status under the American flag. Despite a very friendly interest toward Hawaii, it is not uncommon to find people who place us in the Orient, or even the Caribbean; who assume we were once a colony of Spain, or use foreign coinage or stamps; in fact, are not quite American. I am frequently addressed as the Hawaiian consul or even ambassador, and our position as an integral part of the United States, as an incorporated territory thereof, is frequently overlooked.

It is our misfortune that there are no longer any territories on the mainland—the last one, Arizona, having been admitted as a State in 1912. The position of a Territory has therefore become ill defined, now that the only remaining Territories are Alaska and Hawaii. It is easy to forget that 29 of the 48 sovereign States served their apprenticeship as Territories; that, in fact, the precedent of establishing a territorial form of government was inaugurated by the Northwest Ordinance even before the adoption of the constitution created a United States of America in its present form.

When America completed its expansion across the continent from the Atlantic to the Pacific and from Canada to Mexico, there was a lull of two or three decades. Then the Spanish-American War precipitated a new and different kind of expansion, an adventure in imperialism that carried the American flag thousands of miles from the North American continent. Of all the communities this "course of empire" added to the Nation during and since that war, Hawaii and American Samoa alone came in by their own volition. Like Texas, Hawaii was annexed by a joint resolution of Congress. Hawaii was not a prize of conquest, nor did it become an American property through purchase. Nor was Hawaii a vacant land acquired through discovery and settlement. As an independent nation it negotiated a treaty of annexation with the United States, and on terms mutually acceptable consummated the purposes of that treaty by a joint resolution of Congress.

Along among these recent acquisitions Hawaii followed the American tradition in the development of new areas and was promptly organized as an incorporated Territory, with a local government similar to that of the then existing three Territories of Oklahoma, New Mexico, and Arizona. At a later date Alaska was also organized as a Territory.

With the passage of the years, with the admission of the mainland Territories to the Union as States, leaving only Alaska and Hawaii in the former category, and because of the continental habit of mind of the average American, there has recently arisen some confusion as to the correct status of a Territory. There is a new tendency to consider "continental United States" as a preferred part of the United States, as compared to "offshore areas" or "noncontiguous Territories," in matters of national legislation, as though America were about to embark on a colonial policy toward its incorporated Territories because of their physical separation from the mainland.

Perhaps a review of Hawaiian and American history will help to clarify this confusion and establish the principle that, insofar as Hawaii, at least, is concerned, no such colonial treatment can be justified. The annexation of Hawaii and its incorporation as a Territory of the United States was the climax of nearly a hundred years of friendship between the two countries. With your kind indulgence, I shall review the high lights of this long and close association.

The birth of Hawaii as a nation from its previous feudal state followed closely after its discovery to the western world in 1778 by the

English navigator, Capt. James Cook. The consolidation of the different islands under one rule was accomplished by the great Hawaiian chief, Kamehameha. His dynasty and that of an allied chiefly family ruled over Hawaii as a kingdom for nearly a hundred years.

For nearly three-quarters of this period America took the leading part in upholding the Hawaiian government against the turbulence of foreign residents—Americans and others—and the intrigues of local representatives of foreign nations. While the Hawaiian kingdom was fighting to maintain itself against the cupidity of the European nations—sometimes of their agents rather than of the governments themselves—it was America that consistently held out a supporting hand; that took a stand against foreign interference with the affairs of the little nation; that advised its rulers how to meet the recurring emergencies of French demands, of British arrogance, and of Russian efforts at infiltration.

The arrival of the first group of Christian missionaries in 1820, followed by several later reinforcements, comprising devoted American men and women from practically every New England State and many of the Middle Atlantic States, set the pattern of Hawaiian life along American lines. Indeed, the cultural foundation of Hawaii today is New England culture superimposed on the old Polynesian concepts of the native Hawaiians.

The rapid acceptance of Christianity by the Hawaiian people, the high degree of confidence in which the Hawaiian rulers held the early missionaries, gave the latter great power during the formative years of Hawaii's monarchical period. This thoroughly American element in Hawaii not only offset the efforts of the smaller British colony and other foreign groups but also exercised a strong influence in the United States in favor of Hawaii.

Besides the missionaries themselves, there were other Americans settling in the islands, engaged in business and trade. My own New England ancestor came to Hawaii in 1793, nearly 30 years before the missionaries, and was one of the first king's foreign advisers. Although these traders did not always see eye to eye with the missionaries in all things, their jealousy of any other foreign influence added that much more weight to the Americanization of Hawaii, which had begun long before the United States had crossed the Mississippi River.

The American Navy was another powerful force in keeping the islands out of the hands of other nations until the inevitable workings of destiny brought Hawaii under the American flag. Hawaiian history has on its roll of honor the names of several famous naval commanders who came to Hawaii's rescue in the many crises that agitated its course as an independent nation. On one occasion, when a British naval officer had hauled down the Hawaiian flag and hoisted the British flag in its stead, and before his superior had arrived to repudiate his action and restore Hawaiian sovereignty, an American commodore—Kearney—protested vigorously and received members of the Hawaiian royal family with full honors as evidence of his refusal to recognize the British rule.

As early as 1826 United States naval commanders, then practically roving ambassadors of their country, were advising the native government, acting as referees in disputes involving foreigners and the government, and supporting law and order against those who would have liked to have left the Ten Commandments behind them when they entered the Pacific Ocean. Capt. Thomas ap Catesby Jones and Captain Finch; Commodores Downes, Kennedy, Read, and Kearney (already mentioned); and Commodore Wilkes, whose exploring expedition added so much to the knowledge of the whole Pacific area, are great names in Hawaiian history, as they are honorable names in American history.

In addition to these many bonds that drew Hawaii and America together, at first cultural and later economic as well, there were many political ties, treaties, and trade agreements, and abortive efforts at a complete union of the two countries. As early as 1842 Daniel Webster, as Secretary of State, paved the way for the recognition of Hawaiian independence by declaring it to be the sense of the Government of the United States that the Government of the Sandwich Islands (as the Hawaiian Islands were then called) ought to be respected; that no power ought to take possession of the islands, either as a conquest or for the purpose of colonization; and that no power ought to seek for any undue control over the existing government or any exclusive privileges or preferences in matters of commerce."

The same sentiments were expressed in President Tyler's message to Congress of December 30, 1842; and in the report of the Committee on Foreign Relations written by John Quincy Adams. This strong stand by the United States soon led Great Britain and France to declare jointly that they "taking into consideration the existence in the Sandwich Islands of a government capable of providing for the regularity of its relations with foreign nations, have thought it right to engage reciprocally to consider the Sandwich Islands as an independent nation, and never to take possession, either directly or under the title of a protectorate or under any other form, of any part of the territory of which they are composed."

The first formal steps toward annexation were made in 1854, when President Pierce instructed Secretary of State Marcy to commission Mr. D. L. Gregg to represent the United States in Hawaii to negotiate a treaty with Kamehameha III for that purpose. This treaty of annexation was to provide for the admission of Hawaii as a State "enjoying the same degree of sovereignty as other States and admitted as such . . . to all the rights, privileges, and

immunities of a State, on a perfect equality with other States of the Union."

The proposed treaty was not ratified, and the admission of Hawaii to the Union was not consummated at this time primarily because of the death of Kamehameha III and also because the representatives of Hawaii insisted upon being admitted as a State. The records show that efforts were made to persuade the Hawaiian officials to accept admission to the Union as a Territory, which these officials, and especially King Kamehameha III, refused to do.

The latter's successor, Kamehameha IV, terminated the negotiations, but during their course the Hawaiian authorities frankly stated that they looked forward to the time when their country might constitute an integral portion of the great North American Republic and were willing to cede to the United States "all of its (Hawaii's) territories, to be held by them (the United States) in full sovereignty, subject to the same constitutional provisions as other States of the American Union."

But they were unwilling to forego the "rights and privileges of the citizens of the United States on terms of perfect equality in all respects with other American citizens."

As an evidence of good faith on the part of the American Government, Secretary Marcy, in the first of a series of similar pledges by the United States, stated that "it will be the object of the United States, if clothed with the sovereignty of that country (Hawaii), to promote its growth and prosperity."

Although the matter of annexation lay dormant for the time being, the general attitude of all American Secretaries of State following Secretary Marcy was that the United States had a special interest in Hawaii and would not permit the kingdom to come under the control of any other power. In the meantime the economic relations of the two countries became ever closer, America's dominance of Hawaii's trade and commerce increasing steadily. As industries were developed in the islands the nearest and most logical market for their products was America. The converse was equally true that the natural source of supply for all the commodities Hawaii needed was also America.

This mutual dependence led to the signing of a treaty of reciprocity in 1875, effective the following year, which made Hawaii in effect a unit of the American economy. The treaty gave the people of Hawaii a sense of security in their trade with America previously lacking, and brought about a further development of their principal industry, the production of sugar from sugarcane, now assured of a place in America's protected market. The treaty greatly increased Hawaii's demand for American goods, now granted a preferred place in the Hawaiian market; and likewise ceded to the United States the exclusive right to use Pearl Harbor as a naval base.

It may be of interest to know that during the discussions which preceded the treaty, the King of Hawaii, Kalakaua, was the guest of Congress at a joint session of the Senate and the House of Representatives, and appeared on the floor of the House to exchange compliments with the Speaker. This incident is recorded in the CONGRESSIONAL RECORD for the Forty-third Congress, second session.

In 1893 a local revolution overthrew the Hawaiian monarchy, and set up a temporary government in its place. Its policies were stated in a proclamation announcing the abrogation of the monarchy and the establishment of a provisional government to exist until terms of union with the United States had been negotiated and agreed upon. Following out this program, the President, Sanford B. Dole, dispatched commissioners to Washington with instructions to negotiate a treaty "by the terms of which full and complete political union may be secured between the United States and the Hawaiian Islands."

President Harrison approved of the principle of annexation and designated Secretary of State John W. Foster to act on behalf of the United States. In the conferences with Secretary Foster the Hawaiian commissioners insisted that Hawaii be admitted to the Union as a State. Secretary Foster replied that "bringing Hawaii into the Union" was the main objective, and that while not adverse to statehood, a treaty providing therefor would occasion debate and delay. He said that Hawaii, by asking for annexation, had demonstrated its confidence in the United States and could rest assured that if annexed this confidence would be justified.

The Hawaiian commissioners were evidently convinced by Secretary Foster's arguments, and of his sincerity, for they modified their first request and submitted instead one for "full and complete political union" of Hawaii with the United States "as a Territory of the United States." Upon receipt of this formal request, Secretary Foster suggested that the latter phrase be omitted, on the ground that details involved therein would delay action by Congress and offered as an alternative that the treaty should contain a provision that Hawaii should "be incorporated into the United States as an integral part thereof."

To this change the Hawaiian commissioners were reluctant to agree, but after consulting the Century Dictionary, wherein "integral" was defined as "relating to a whole, composed of parts, spatially distinct (as a human body of head, trunk, and limbs) or of distinct units," with intrinsic—defined as "belonging as a part to the whole, and not a mere appendage to it"—given as a synonym, they accepted the proposed modification. The dictionary gave as an example of the correct use of "integral" the sentence: "All the Teutonic states in Britain became first dependencies of the West Saxon King, then integral parts of the kingdom." The clarification of

the definition of integral was considered extremely important by the Hawaiian commissioners, because though desirous of annexation, they did not wish Hawaii to be a mere appendage or possession of the United States in exchange for its existing sovereign status.

President Harrison was very much pleased with the treaty as finally drawn. In transmitting it to the Senate on February 15, 1893, he said:

"Only two courses are now open: One, the establishment of a protectorate by the United States and the other annexation full and complete. I think the latter course, which has been adopted in the treaty, will be highly promotive of the best interests of the Hawaiian people and is the only one that will adequately secure the interests of the United States."

No action was taken on the treaty by the Senate prior to the expiration of President Harrison's term on March 3, 1893. President Cleveland, his successor, withdrew the treaty from consideration by the Senate. Instead, he directed an investigation into the circumstances of the dethronement of Queen Liliuokalani, particularly with reference to charges that American diplomatic agents had taken an undue part in the revolution that abolished the monarchy and that the naval forces of the United States had assisted the rebels. On the basis of the report of Commissioner Blount, the President declined further to negotiate for annexation and demanded that the Queen be restored to her throne.

This the provisional Government of Hawaii refused to do, and proceeded to transform itself into a permanent government as the Republic of Hawaii. As of July 4, 1894, Hawaii adopted a constitution, one article of which provided for the making of "a treaty of political or commercial union between the Republic of Hawaii and the United States." It was undoubtedly in the minds of the Hawaiian leaders that, despite President Cleveland's opposition, the argument of events would sooner or later force the issue.

Almost immediately after the inauguration of President McKinley a new annexation commission was accredited to Washington by the Republic of Hawaii and reopened negotiations with Secretary of State John Sherman. The Hawaiian commissioners requested that annexation be expressed in terms of the Harrison treaty, namely, that Hawaii be annexed to the United States "as an integral part thereof." Secretary Sherman agreed, and a treaty was drafted incorporating that phraseology in its provisions.

President McKinley transmitted this treaty to the Senate with a letter dated December 8, 1897, in which he said that Hawaii was "realizing a purpose held by the Hawaiian people and proclaimed by successive Hawaiian Governments through some 70 years of their virtual dependence upon the benevolent protection of the United States. Under such circumstances, annexation is not a change; it is a consummation."

He further stated that "if the treaty is confirmed, as every consideration of dignity and honor requires, the wisdom of Congress will see to it that \* \* \* the most just provisions for self-rule in local matters, with the largest political liberties as an integral part of our Nation will be accorded the Hawaiians. No less is due to a people who \* \* \* come of their free will to merge their destinies in our body politic."

In the meantime war with Spain was brewing and became an actuality. Hawaii and its people threw themselves into the fray as though already a part of the United States, and were as wild with enthusiasm as any American community, greeting the transports and naval vessels en route to and from the Orient with every hospitality, official and private. The Hawaiian Government disregarded every tenet of international law in putting its services, especially the use of the port of Honolulu, at the disposal of the United States military forces, and laid itself open to any reprisal which Spain might wish to make.

The Hawaiian people accepted the possible consequences of their unneutrality with open eyes, for they felt themselves so much a part of America as to make the war as much their own as though they had by formal treaty allied themselves with the United States. Had annexation not been accomplished, no doubt punitive measures of some sort would have been evoked against the little Hawaiian community.

The treaty so strongly endorsed by President McKinley continued to languish in the Senate, until the march of events became too strong. The Battle of Manila Bay extended America across the Pacific and made Hawaii essential to America's new role in the world. Annexation was finally consummated in these war days by a joint resolution of Congress accepting, ratifying, and confirming the cession by the Hawaiian Government. The cession referred to was the resolution of the Hawaiian Senate containing the full text of the pending treaty, and for Hawaii accepting, ratifying, and confirming that document.

The treaty provided that "those islands shall be incorporated into the United States as an integral part thereof" and the ratification of that treaty by the Hawaiian Senate, as required by the Constitution of the Republic of Hawaii, is referred to in the joint resolution of annexation as the cession on the part of Hawaii upon which the joint resolution was based. The joint resolution, therefore, incorporated into itself the said basis of annexation as much as though the resolution itself had contained the above phrase.

The joint resolution was finally adopted by Congress on July 7, 1898. The formalities attending annexation were not effected, however, until August 12, 1898, when Harold M. Sewall, Minister of the United States to Hawaii, presented a certified copy of the resolution to President Dole, and the sovereignty and property of the Republic of Hawaii was transferred to the United States of America.

Mr. Sewall's instructions from Secretary of State W. P. Day, contained in the latter's letter of July 8, 1898, read, in part, as follows:

"Herewith a copy of a joint resolution of Congress for annexing the Hawaiian Islands to the United States.

"By the preamble to this resolution it is recited that the Government of the Republic of Hawaii has in due form signified its consent in the manner provided by its constitution 'to cede' \* \* \*

"These recitals, it will be observed, are made in the language of the treaty of annexation, concluded at Washington on the 16th day of June 1897. They, as well as the other terms of the treaty, were advisedly incorporated in the joint resolution because they embody the terms of cession which have not only been agreed upon by the two Governments but which have also been ratified by the Government of the Republic of Hawaii. The joint resolution, therefore, accepts, ratifies, and confirms on the part of the United States the cession formerly agreed to and approved by the Republic of Hawaii."

At the ceremony in Honolulu, when presenting the certified copy of the joint resolution of annexation to President Dole, Minister Sewall said: "This joint resolution ratifies and confirms the cession formally consented to and approved by the Republic of Hawaii."

President Dole, in reply, said:

"A treaty of political union having been made and the cession formally consented to by the Republic of Hawaii having been accepted by the United States of America, I now, in the interest of the Hawaiian body politic, and with full confidence in the honor, justice, and friendship of the American people, yield up to you as representative of the United States the sovereignty and public property of the Hawaiian Islands."

After the salute to the Hawaiian flag and its lowering, Mr. Sewall said:

"Mr. President, in the name of the United States, I accept the transfer of the sovereignty and property of the Hawaiian Government."

The American flag was then hoisted and saluted. The Minister then congratulated "his fellow countrymen" on the consummation of the national policies of the two countries.

Thus annexation was accomplished in accordance with the precedent established when the Republic of Texas was admitted to the Union as a State by a joint resolution of Congress. In annexing Hawaii in this manner, Congress did not have the authority to alter the terms agreed upon in the pending treaty. The joint resolution specifically "accepts, ratifies, and confirms on the part of the United States the cession formerly agreed to and approved by the Republic of Hawaii." The only cession to which Hawaii had agreed was that provided by the treaty. If the nature of the agreement had been changed by Congress, both parties would have had to signify their acceptance of the new conditions.

In the spirit of the treaty provisions, and of the assurances by the responsible spokesmen of the National Government, Congress, by the act of April 30, 1900, organized Hawaii as an incorporated Territory of the United States. American citizenship was extended to all the citizens of the former republic, all Federal laws became applicable to the islands, and a territorial government was set up in accordance with American practice for the preceding 113 years.

This is the story in brief of the background of Hawaii for the years preceding annexation, of the steps that led to its annexation by a joint resolution, and of its present status as an incorporated Territory of the United States and an integral part of the Nation. I was present in the palace grounds when the Hawaiian flag was hauled down, never again to be the banner of an independent nation, but continued in use as our "state" flag. I saw the American flag hoisted in its stead, and sensed, even though but a boy, the feeling of pride, and relief and security that that ceremony brought to the people of the islands.

Annexation brought no great changes and required no material readjustments, because Hawaii's past comprised no period of domination by any foreign nation. The ancient Polynesian culture of its native people, the contributions of immigrant groups, add color and variety to the local scene. But Hawaii's institutions and way of life, its customs and standards of behavior, were rooted in English and American patterns long before annexation took place. I myself illustrate that fact, born in Hawaii of Scotch, New England, and Hawaiian ancestry, descended in the fifth generation from that Yankee sailor who settled in the islands in 1793, when George Washington was still President of the United States, and this city of Washington had yet to become the Capital.

Under the Constitution of the United States and the Organic Act passed for its own government, Hawaii simply took its place as another Territory. Its statute law, based on the common law, remained in full force where not inconsistent with the Constitution and the Organic Act. The reorganization of the local government was easily carried out, because Hawaii already had most features of American governmental institutions, including free public schools, established in the islands soon after they had been inaugurated in Massachusetts. This year, 1940, marks the one-hundredth anniversary of free public education in Hawaii. The President of the former Republic of Hawaii, Sanford B. Dole, son of an American missionary to the islands, became the first Governor of the Territory; the public employees of the Republic continued in their positions as employees of the Territory; the people of the islands, already versed in the principles and forms of democratic government, promptly organized along national political lines, and both American political parties are well represented in Hawaii.

As a Territory, Hawaii follows the precedents of American history. Its people accept all the responsibilities of their American citizenship, both individually and collectively. They share with all Americans the full benefits of American economic and political institutions. As a Territory, Hawaii accepts no lesser place under the flag than even a State, except in those specific limitations appli-

cable to its territorial status. As a Territory, Hawaii has fulfilled every possible test that can be applied to it. And finally, as a Territory, Hawaii has the right, by the basic principles of our American democracy, to aspire to statehood, and to take for granted that when Congress decides it is ready for statehood it will be admitted into the sisterhood of States as the forty-ninth State.

### Statue of Freedom

#### EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

DESCRIPTION BY DAVID LYNN

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks, I submit, herewith, a description of the Statue of Freedom which our Architect, Mr. David Lynn, has very kindly given me in response to my request.

I am placing this in the CONGRESSIONAL RECORD at this time so that the Members of Congress may have a convenient and complete record of the Statue of Freedom available. I am doing this because I discovered recently a considerable confusion in the minds of Members regarding the statue on top of the Capitol dome.

The matter referred to is as follows:

The statue surmounting the dome of the United States Capitol, and facing to the east, is officially known as the Statue of Freedom. It is 19 feet, 6 inches high, weighs 14,985 pounds, and cost, exclusive of erecting in place, \$23,796.82.

The figure is that of a woman in flowing draperies with her right hand resting upon the hilt of a sheathed sword and her left holding a wreath and grasping a shield. At the waist, a brooch bearing the letters "U. S." holds the drapery in place. The head is covered by a helmet encircled with stars and surmounted by a crest composed of an eagle's head and a bold arrangement of feathers, suggested by the costume of our Indian tribes.

As a protection from lightning, 10 bronze points, tipped with platinum, are placed as follows: One on the head, six on the feathers in the headdress, one on each shoulder, and one on the shield.

The statue was designed by Thomas Crawford, the father of F. Marion Crawford, the novelist, and the plaster model for which he received \$3,000 was executed in the Crawford studios in Rome. Mr. Crawford died in 1857, before the model was shipped from his studio. Shipment was subsequently made on April 19, 1858, on the bark *Emily Taylor*. The bark, having sprung a leak, put into Gibraltar for repairs, after which the voyage was resumed. Encountering stormy weather, leaks again developed, and part of the cargo, such as bales of rags and cases of citron, was thrown overboard, but on the 27th of July, the leak having increased to such an extent, it was determined for safety to put into Bermuda. Upon surveys held, the vessel was condemned and sold. The cargo, which had been landed and stored, was finally forwarded to its destination as indicated in the records, which show that in December 1858 Tappan & Starbuck, of New York, acting as general agents for the United States in the receipt and forwarding of the statuaries, notified Captain Meigs, in charge of the work at the Capitol, that the bark, *G. W. Horton*, from Bermuda, had arrived with some of the statuaries on board. It was not possible to bring all of the statuaries, and as late as March 30, 1859, the last of the statuaries, or portions of the model, were shipped from New York to Washington by the schooner *Statesman*.

The contract for casting the statue in bronze was awarded to Clark Mills, whose foundry was located in the northeast section of the District of Columbia just off the Bladensburg Road and about 2 miles from Bladensburg, Md. On May 17, 1861, on account of the existing conditions due to the Civil War, Captain Meigs, superintendent of construction of the United States Capitol, issued orders to stop work on the statue.

The annual report of Thomas U. Walter, architect of the Capitol extension, dated November 1, 1862, states that "the statue of Freedom, which is intended as the crowning feature of the dome, is completed and removed to the grounds east of the Capitol, where it has been placed on a temporary pedestal in order that the public may have an opportunity to examine it before it is raised to its destined position."

The hour of 12 m. December 2, 1863, was selected for the completion of the erection of the statue in place on the dome. Four of the sections had been previously raised to their places and firmly secured to the structure, leaving the fifth section, embracing the head and shoulders, to constitute the crowning feature, the hoisting and adjusting of which was the occasion of a special order, No. 248, of the War Department, which provided that at the moment at which a flag was displayed from the statue, a national salute of 35

guns should be fired from a field battery on Capitol Hill, the last gun from this salute to be answered by a similar salute from the 12 forts which at that time constituted a line of fortifications surrounding the city of Washington.

Precisely at 12 m. on the aforesaid 2d day of December 1863, the crowning feature of the statue was started from the ground in front of the Capitol by means of the steam hoisting apparatus which had been successfully used for the construction of the entire dome, and in 20 minutes it reached the height of 300 feet, when it was moved to its place and firmly attached to the remaining portion of the figure. As soon as it was adjusted the American flag was unfurled over its head and the national salute was fired.

The original plaster model from which the bronze statue was cast is now on exhibition in the old building of the National Museum in Washington, D. C.

### The Price of Hogs

#### EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

ARTICLE FROM THE CEDAR RAPIDS GAZETTE OF JANUARY 14, 1940

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to call attention to a conversation I personally overheard while riding with Congressman MARTIN recently at Fort Bragg, N. C., which is very well set out in an article appearing in the Cedar Rapids Gazette of January 14, as follows:

WASHINGTON.—Representative TOM MARTIN, of Iowa City, learned about Iowa in North Carolina the other day. In a talk with a private soldier who chauffeured him to meet a train, MARTIN learned one of the reasons the price of Iowa hogs is so low.

MARTIN was at Fort Bragg, N. C., on an expedition of the Military Affairs Committee of the House of Representatives. On the way to catch his train back to Washington, he fell into conversation with the driver of his car, which he abridges as follows, quoting the soldier:

"My father is a farmer down in South Carolina. Our principal crop was cotton until this new farm program came along. Then we took a lot of our land out of cotton, getting paid for doing so, and put it into corn."

"Well, what do you do with your corn? You don't eat all of it yourselves, do you?"

"Oh, no, sir; we feed it to hogs. We used to raise 70 to 80 hogs a year and now we're getting up toward 300."

"What do you do with the hogs?"

"We sell them on the market, and the price we're getting for them is terrible. It's certainly not what it used to be."

Then MARTIN asked a question the soldier didn't try to answer. It was:

"Do you think the killing of little pigs and the reduction of corn acreage by Iowa farmers have had anything to do with the price you are getting for your hogs?"

"Now, that was just a casual conversation, but it shows what is happening down South Carolina way," says MARTIN. "It needs no comment by me."

### How Will the War Situation Affect Unemployment?

#### EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

ADDRESS BY JOHN M. CARMODY, ADMINISTRATOR, FEDERAL WORKS AGENCY, BEFORE THE TOWN HALL OF THE AIR, NOVEMBER 9, 1939

Mr. KRAMER. Mr. Speaker, recently Mr. John M. Carmody, Federal Works Administrator, discussed unemployment as it may be affected by the war situation over the

Town Hall of the Air, and I believe his remarks are of particular interest to the Members of the Congress at this time. With the permission of the House, I include his address in my remarks.

Through the business news these days runs a new note of buoyancy and optimism. Orders are coming in and industrial activity is close to the 1929 level. Furthermore, the repeal of the arms embargo is accompanied by stories that England and France are planning to spend a billion dollars in this country in the course of the next year on war implements and supplies. Finally, on top of it all, come reports of increased defense appropriations and a new and bigger naval building program. It is easy to lose perspective in the dizzy swirl of figures and reports and to imagine our major economic problems, including unemployment, are, or soon will be, solved. Calm appraisal of the situation is necessary. Let's drop the wishful and unrealistic thinking and get down to cases.

As I have said, our total production and our total employment are practically back to the boom year of 1929, when only two or three million men were out of work. Today there are about 9,000,000 out of work. Employment is almost back to 1929, but unemployment is not. Why is that?

The reason is that the population is still growing. There are about 600,000 more workers every year. To get back to 1929 is not good enough, because we have about 6,000,000 more people looking for jobs. In order to take up this extra 6,000,000 we have to expand all along the line.

What can we expect from the war boom?

When you add it all up the amount of new cash spending by foreign nations, so far as we can see now, will not give employment to more than half a million men.

I warmly endorse the statement of Eugene G. Grace, president of the Bethlehem Steel Corporation, when he says, "We don't want any war—we prefer peace—I'd like to see a situation where we'd never sell another gun, another battleship, or another projectile. I'd like to see the world stop destroying values and start creating values, and that would spell better business profits."

You and I know that much of our economic distress during the last 10 years is attributable to the dislocations arising from the last great war. If history repeats its usual story we shall find that today's war will actually add in the long run to the number of our unemployed and will increase the urgency of our unemployment problem.

We can't have any sustained prosperity without having increased purchasing power. The use of idle surplus savings for financing public works stimulates profitable industrial activity, puts wages in the pockets of our workers and money in the till of the corner grocer.

You may wonder why the relief cost and the W. P. A. don't grow smaller every time business grows better. Let me give you some figures.

There are 9,000,000 unemployed, more or less. Out of these 9,000,000:

There are 2,000,000 on W. P. A.

There are, perhaps, 1,000,000 idle workers in families that have one worker on W. P. A.

There are 1,000,000 employable workers on direct relief. That's 4,000,000.

That leaves 5,000,000 unemployed workers with no W. P. A. jobs, no W. P. A. relatives, and no direct relief. Not many still have savings left. How do they live? Most of them probably live on their relatives, or by not paying their grocers and landlords. When they come to the end of these resources, they have to go on relief. These 5,000,000 forgotten men are the reason that relief does not go down when business goes up.

Business will have to hire not 1,000,000 workers but several million before it crosses this gap of 5,000,000 and begins to eat into the number on W. P. A. or straight relief.

If anyone asks you "What are we going to do about unemployment?" You ask him if he thinks business will invest the \$20,000,000,000 annually which are required to solve our unemployment problem.

Business men had a shot of confidence this fall and invested in inventories, piling up goods on the shelves in the hope of better business to come. The industrial production index has gone up to 120, within 5 points of 1929. Yet most of the experts do not expect this little boom to go on much after January 1, because inventories have run ahead of consumer buying. Mr. Weil has called this a cream-puff boom. The same thing, in more drastic form, happened in 1937. It illustrates the fact that when production gets too far ahead of consumer buying, business has to fall off until buying catches up.

Before 1929 private investments amounted to about \$16,000,000,000 a year, but after 1929 we found that many of these investments were unsound. Today business men are more cautious. I am told that sentiment in financial circles is against building vast new muni-

tions plants. You can ask anyone in the cotton-textile business, or in sugar, lumber, canning, cement, or automobiles, how much new plant is needed in his line, and he will tell you it is needed in some other line.

Public works and public services have to be used to help fill the gap that cannot be filled by sound private investment. We have great opportunities for the employment of money and labor on useful public work.

There are still hundreds of towns that need waterworks and sewers, to improve health, increase property values, and reduce fire insurance costs. This country can go in on a large scale for soil conservation, for protection of forests, for control of disease, all at a profit. Reliable authorities say we are short more than 3,000,000 dwelling units. There are thousands of miles of road that can be improved to the great benefit of traffic and of the automobile business.

It is generally agreed that one of the best exhibits at the New York World's Fair was the Futurama of General Motors. This picture of the world of tomorrow spread before the eyes of millions magnificent new superhighways—an artist's conception of highways which could only be built as a part of future public-works programs; highways to be financed and maintained by your Government. Had the Federal Government produced the Futurama, the Futurama would have been attacked as outrageous propaganda for a continuing program of public works.

A recent round-table discussion here in New York City on unemployment, in which Wendell Willkie, Nelson Rockefeller, and other leaders in industry and finance took part, unanimously agreed that "social gains of the last few years must be kept," and "Government expenditure should make provision for the unemployed, even if this involves deficit financing." These conclusions by conservative businessmen and bankers mark a great advance in social thinking since 10 years ago, when the leaders of industry and finance were advocating apple selling as a cure for unemployment.

Senator WAGNER and Mayor LaGuardia are among the earliest advocates and staunchest supporters of the idea of providing needed employment by substantial programs of public works. Here in their home city, within a few miles of this hall, are three monuments to their vision and to their faith in public enterprise: Triborough Bridge, built with funds provided by the Public Works Administration; the finest airport in the world, at North Beach, built by the Work Projects Administration; and Queensbridge Houses, financed by the United States Housing Authority. Some of you may have witnessed the holing-through of the magnificent East River mid-town tunnel here in New York City yesterday.

In every part of the United States schools, hospitals, roads, and other public works built in the last 7 years with public funds have improved communities and provided needed employment to their citizens.

Some of the public works are a self-liquidating investment by the Government; others will pay the taxpayers direct. It costs money to have malaria; it costs money to get rid of it; but it costs less to put in the W. P. A. and kill the mosquitoes than to go on having the disease. It costs money to send thousands of C. C. C. boys to fight forest fires, but it costs less to stop the fires than to let them burn.

Finally, and this is the main point, it costs the taxpayers money to hire anybody. But it is more profitable to pay a man \$1,000 and get useful work done than to give him \$500 and get nothing. The one thing we can't afford is letting workers sit idle, losing their skill, their health, and their courage, while the years go by.

In the past 7 years we have added billions of dollars' worth of public works to our national wealth. This is a better record than we had in the twenties, when we lost several billions financing public works and private industrial plants in foreign countries, and the foreigners got the public works and the new plants. I have seen them in Germany with my own eyes.

We may get some further increase of employment from war business. Private investment on a sound basis might expand to take a million or two more workers. But there is no sign of any early expansion of private employment on a large enough scale to wipe out unemployment.

I believe that in order to be reasonably prosperous we also need to expand every kind of internal improvement that we know to be profitable. By hiring unemployed men to build up our own country we can create enough sound home-made prosperity so that we need not base our good times on the misfortunes of Europe.

In conclusion, I want to say that democracy here cannot be based on fine phrases; it must be based on the conviction that democracy is best because it works—it provides jobs, income, and security.

It is our business as a nation to see that it does work. We cannot afford to neglect the challenge. The means lie at hand—the stimulation of business, the expansion of useful public work, the creation of a wide base of purchasing power through programs of work and security. This is the new frontier we need to create in order to assure once more the traditional right to work, the right to a decent living, and the continuation of our democratic system.

**Farmer-Labor Association of Minnesota Expresses  
Its Opposition to United States Participation in  
War; Supports Domestic Social and Economic  
Improvement Program**

**EXTENSION OF REMARKS**

OF

**HON. R. T. BUCKLER**

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

STATEMENT BY THE STATE CENTRAL COMMITTEE OF THE  
MINNESOTA FARMER-LABOR ASSOCIATION

Mr. BUCKLER of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD I desire to insert a statement issued by the State central committee of the Minnesota Farmer-Labor Association following a meeting held on January 7 at the Labor Temple, in St. Paul, Minn. I want to make this declaration on the subject of Congress and the war available to the Members of this House and to the public at large since I believe it embodies a policy and a program for the best welfare of our people.

The release by the State committee of the Farmer-Labor Association is as follows:

This meeting of the State committee of the Farmer-Labor Association of Minnesota takes place at a significant moment, namely, the National Congress is starting another session, and during that session its actions are bound to be influenced by the fact that another war has broken out in Europe and this war is steadily threatening to spread into a second World War.

In view of these facts, the State committee of the Farmer-Labor Association issues the following statement to the public, and for the special consideration of Farmer-Labor clubs and affiliates throughout Minnesota:

We are opposed to international military aggression.

We do not believe it is either fair or honest to ask men and women to be indifferent to what is happening abroad. Such an attitude does not lead to neutrality; it can only lead to either ignorance or hypocrisy. People should seek information about what is happening, and how these events affect American life and economy. Furthermore, it is only natural and right that they should form conclusions and judgments on the basis of the best and most authentic information that can be secured.

At the same time it is all important to remember that going to war will not lessen our tax burdens nor balance the Budget; it will not solve unemployment, feed the hungry, or create more wealth; it will not provide pensions for our senior citizens, education for our children, and better houses and health services for people with low incomes.

Going to war will not give our farmers cost-of-production and parity prices; it will not increase the real buying power of labor's wages; it will not halt profiteering, but will increase it; and it will not save civil liberties in our own country, which should seek to be the world's last and indestructible stronghold of democratic freedom.

Therefore:

(1) We are opposed to again sending American boys and men to shed their blood on foreign soil in another international slaughter.

(2) While we are firm believers in the adequate defense of American territory and borders, we are opposed to using the needs of an expanded military and naval program as an excuse for cutting down relief and Government assistance to hard-pressed farmers and unemployed workers.

(3) Finally, we are opposed to using the existence of a war in Europe as an excuse for dropping social and economic reform at home.

We urge the people to notify their Representatives and Senators in Washington that they do not want this Congress to permit a black-out of progress in America at this crucial moment in our country's history. America's best defense at this moment lies in its preservation of civil liberties and progress toward increased economic welfare for all its citizens.

**Cotton, Land, and People: A Statement of the  
Problem**

**EXTENSION OF REMARKS**

OF

**HON. OVERTON BROOKS**

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

ADDRESS BY I. W. DUGGAN

Mr. BROOKS. Mr. Speaker, I have just read the speech of the Honorable I. W. Duggan, director of the southern division of the Agricultural Adjustment Administration on the subject of Cotton, Land, and People: A Statement of the Problem. This address was delivered before the American Farm Economic Association at Philadelphia, Pa., on December 28, 1939, and it constitutes in my opinion as careful an analysis in a limited space of the fundamental problems of the farming South as I have yet read. I commend the careful study of this speech by all who are genuinely interested in the solution of the great problem of the South, if not of the Nation. The address is as follows:

My efforts here today will be directed at calling attention to certain problems of the South. I am not going to suggest ways of solving these problems, or even review what has been done or is being done to remedy them. I am simply "jumping the rabbits." Others on the program will do the shooting, and I am sure they are adequately supplied with ammunition. They will tell you how these problems can be solved.

Cotton is the basic crop in the agricultural life of the South. In the 10 principal cotton States—North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Tennessee, Oklahoma, and Texas—the economic welfare of virtually every citizen, regardless of personal activities, rests in a large measure upon an agricultural foundation of which cotton is the keystone.

The 10 cotton States, which are the basis of this discussion, are famed for many crops, but the annual average cash income in these States from cotton alone is more than the annual cash income from all of the other crops and livestock enterprises combined. Cotton has maintained its dominant place in these 10 States in spite of low prices, boll weevils, overproduction, foreign competition, synthetic fibers, and other limiting factors.

Cotton is a "money crop" upon which the farmers of these States have long depended for cash to pay bills and operating expenses. Regardless of how low prices may be, there is always a market for cotton, even at the smallest crossroads hamlet, where a farmer can exchange his lint and seed for cash. Regardless of what a farm may produce for food and feed, the fact remains that it must also produce some crop or crops which can be sold for cash. Money must be had to pay taxes and labor and buy clothes, seed, fertilizer, machinery, and other things the farm itself cannot produce. To get this cash income, southern farmers have long depended upon King Cotton, despite the fact that this ruthless ruler has built a sprawling and densely populated kingdom where poverty and low income prevail.

Let's take a look at some of the statistics which show in striking fashion the dominant position of cotton in the States that produce the bulk of it.

During the 12 years 1924-35, the annual gross farm income from cotton and cottonseed in the 10 principal cotton States averaged \$1,019,000,000. This figure represented 41 percent of the average total gross farm income in these States from all crops and livestock enterprises combined; 59 percent of the gross income from crops alone; and was 39 percent larger than the gross income from livestock enterprises. From the standpoint of cash income, cotton occupies an even more important position than is indicated from the gross-income data. For the 10 States, the average cash income from cotton in the 12 years, 1924-35, amounted to 53 percent of the cash income from all crops and livestock enterprises combined; 67 percent of the cash income from crops alone, and was 158 percent more than the cash income from livestock enterprises. In individual States cotton looms even more important. In Mississippi, for example, where 66 percent of the people live on farms, the income from cotton during the 12 years has varied from 65 percent to 83 percent of the total cash farm income.

Another indication of the dominance of cotton in the South is the number of farms on which cotton is produced. In 1934 cotton was produced on 1,863,067 of the 2,713,597 farms in the 10 principal cotton States. According to the last decennial census, more than 80 percent of the farms producing cotton in these States received at least 40 percent of their total income from cotton. Total farm population of the United States is 31.8 million, and of this number approximately 10,000,000 live on cotton farms and derive the major portion, and in many cases their entire cash income, from the production of cotton.

Still another indication is the large proportion of the cultivated acreage which is devoted to cotton. In 1924, 43 percent of the cultivated acreage in the 10 States named was devoted to cotton; in 1929, 44 percent; and in 1934, 27.5 percent.

Cotton is not only important to the farm population of the South but to the region's entire population. In these 10 States many facilities have been developed to finance, transport, handle, and process the cotton crop. In some areas even the educational system is built around the cotton economy. The income from cotton determines to a large degree the funds available for education, and in many rural areas the school session is adjusted so as not to conflict with the peak of labor requirements in the production of cotton.

The first and most important problem of the South is that of low income. To state the problem simply, there just is not enough total agricultural income in the South to support the region's extremely dense farm population. In the 10 principal cotton States, 47 percent of all the people live on farms. The average per capita income of these rural people is unbelievably small. They are, as the President has so aptly stated, "ill-fed, ill-clothed, ill-housed." Many, if not all, of these ills can be traced directly to an inadequate income. There is no hope of correcting these ills through the redistribution of the available income, because that income is so small and so inadequate that even if it were redistributed there still would not be enough to go around. The first problem is to increase the total income going to the South so there will be more to divide among its dense farm population.

The gross per capita farm income for the 10 principal cotton States for the years 1924-35 averaged \$184. For the first 5 years of this period the average per capita gross income was \$238, and for the last 5 years it averaged \$127. The cash-income figures are even more significant. For the first 5 years this cash per capita farm income amounted to \$190, and for the last 5 years it amounted to only \$95. It is impossible to distribute such a small cash income so as to give a minimum purchasing power to the entire farm population. It is impossible to achieve or maintain even an un-American standard of living on a per capita income that low.

Out of this inadequate income it is necessary for producers to pay certain production costs, so that the income left for living is a much smaller figure. The cash out-of-pocket costs of growing cotton, the most important crop, is relatively large. The average cost for fertilizer alone for the years 1923-32, inclusive, for the 10 States amounted to \$2.07 an acre. Fertilizer costs ranged from an average of 25 cents an acre in Oklahoma to \$7.40 an acre in North Carolina. The cost of fertilizer per acre is usually highest in the areas of densest farm population.

The cropland per capita of farm population in the South is far too small. In 8 of the 10 principal cotton States there is less than 8 acres, and in 5 of these States there is less than 6 acres of cropland per capita of farm population. More than one-third of all the farms in the United States are located in the 10 principal cotton-producing States. Out of the national farm population of almost 32,000,000 people, more than 13,000,000 live on all types of farms in these 10 States. With this dense farm population and limited cropland, the farming units of the South are generally too small to permit efficient operation and to support the average family. Even with the most intensive cultivation, ignoring for the time being the limiting factor of markets, 5 acres of cropland per capita is not sufficient to maintain a standard of living equal to the average for all United States farmers. It is not probable that over a long period of time the dense farm population of the South can be supported on the limited cropland of the area.

Cotton has been the source of cash income in the South, because, in addition to being naturally adapted to the area, it has returned over a long period a higher income on both a per-acre and a per-hour basis than any other major crop except tobacco. According to an extensive study made by the Bureau of Agricultural Economics, the per-acre and per-man-hour returns from cotton are small, but they are still far in excess of any other crop universally adapted to the South and for which there is a ready cash market. The returns from crops other than cotton and tobacco might be somewhat higher if such crops were planted on the best land in the area, but they would still fall far short of equaling the income from cotton or tobacco.

In the report on the same study there is shown the estimated average acreage required to produce \$100 worth of products from certain livestock enterprises and from cotton in eight of the principal cotton States, on the basis of average yields and prices in the 10 years 1923-32. Texas and Oklahoma were omitted because the principal livestock areas in those States are not cotton-producing areas to a large extent.

As shown by this study, about  $1\frac{1}{2}$  to over 8 times as many acres were required to produce \$100 worth of products in the case of dairying, beef cattle, and hogs than in the case of cotton. Even poultry required a third more acreage than cotton to pro-

duce \$100 worth of products. The relatively low returns from livestock enterprises in these States are attributed to the low average yields of feed crops and the low carrying capacity of most pastures. The small acreage of cropland per capita is also one of the limiting factors in increasing livestock production. Other limiting factors are the large investment required in livestock enterprises, the lack of training and experience in livestock production, and the system of farm tenure. Losses from disease and insect pests still adversely affect the expansion of the livestock industry.

In the 10 principal cotton-producing States the 1935 census showed that of a total of 2,714,000 farms there were 758,000 without dairy cows; 973,000 without hogs; and 340,000 without even a chicken. These figures show the drastic need for expanded production of livestock to meet home needs. The livestock that is produced in the 10 States is not an accurate guide to the number used on farms because of the large-scale livestock industry in the noncotton areas of Texas and Oklahoma, and local areas in other States. The facts are that a considerable portion of the livestock and livestock products goes to market, and though originating in these States, does not furnish a part of the diet requirements of cotton farmers who are unable to afford these products.

In a recent preliminary study by the Bureau of Agricultural Economics it is estimated that an additional five and eight-tenths million acres of cropland and eight and seven-tenths million acres of pasture land would have been required in 1937 to furnish a minimum adequate diet for farm families in 8 of these 10 States. North Carolina and Tennessee are the two States excluded in this study. The same study showed that more than three-quarters of a million additional dairy cows were needed in 1937 to supply the dairy products and 15,000,000 more chickens were needed to supply the eggs alone for a minimum adequate diet.

Here again the problem of dense farm population and limited cropland is an important factor, because the profitable production of livestock requires adequate pastures and plenty of home-grown feed. Few farms in the Cotton Belt can further take away from their "cash" crops the land needed for pastures and feed. Furthermore, the South, except for certain well-defined areas, is not well adapted to grazing. There are no universally adapted perennial or biennial legumes in the South which provide grazing and forage.

Some observers have been keenly interested in the possible expansion of the livestock industry in the South under the Agricultural Adjustment Administration's program of diverting cotton acreage. The program not only permits but encourages the production of food and feed needed for home use, but there are definite restrictions on the use of diverted acres for commercial production. In addition, not all of the land diverted from cotton is available for food and feed, as it is necessary to devote considerable acreage to soil-conserving and soil-building uses if the productivity of the soil is to be restored and maintained.

It is estimated that 282,000,000 acres in the United States have been badly damaged by erosion. Of this amount, approximately 30 percent is in the 10 Cotton States. An additional large portion of the cropland of the South is damaged by moderate erosion. The system of tenure, the cropping system, the low income, the topography, and the climate have, for a long period, contributed to the depletion of the soil.

Sharecroppers and tenants who stay on a farm for only 1, 2, or 3 years have not been interested in expending the labor and money necessary to conserve and build the soil. Moreover, they have not known how to do this, and the management has not encouraged them along this line. The farm income has been so low that every dollar was needed for bare subsistence. Money could not be spared to buy the seed and fertilizer needed in soil-conserving practices.

Because of the dense farm population and the low income, too much of the land of the South has been devoted to soil-depleting, intertilled, cash crops which leave the soil bare during the open winters, the season of heaviest rainfall in most of the region. Much of the cropland, especially in the Piedmont areas, should not be planted to row crops because it is too steep for cultivation. Nevertheless, it is continually cropped year after year in cotton and corn because of the need for land. To keep a cover on the soil throughout the year in much of the South it is necessary to plant both a winter and a summer cover crop. In most cases the seed for winter cover crops has to be imported from without the region and requires an out-of-pocket cash outlay. To get satisfactory results from cover crops in the South it is necessary on much of the land to apply phosphate or lime, or both, which also requires a cash outlay.

The opportunities for supplementary farm income from forest enterprises are not being used to benefit the farmer to the fullest extent in the South. The lack of stability in the farm population, the length of time before income can be realized, and the size of farm units all hinder development of forest enterprises.

The story of forestry in the South in most instances is a story of exploitation. From my rather limited observations the present operations of the pulp mills are the last stages in the exploitation of the forests of the South. Many farmers have told me of the low prices they have received for wood sold to the pulp mills. That is distressing news today but what concerns me most is that it forebodes further depletion in the years ahead of the South's once magnificent forests. Improved forestry methods are needed and improved wood management would be an asset to cotton farmers.

Probably one of the most-discussed problems of the South is the high rate of farm tenancy. It seems to me, however, that the South's system of tenure, the cropping system, and the credit system

have grown up together and are so closely intertwined that it is difficult to deal with any one separately.

Sharecropping dates back to the War between the States and is an outgrowth of the conditions following the emancipation of the slaves. The planter had possession of the land and, in many cases, the tools and equipment, but no money with which to employ labor. The laborer had no money with which to acquire land, tools, or equipment, or to finance his operations, and was unskilled in any other occupation except agriculture. Out of this situation grew the sharecropper-tenant system as we have it today. The need for credit to finance crops made it essential that crops be grown for which there was a ready cash market. Cotton was the natural answer to the cash crop problem.

The high rate of tenancy in the South is too well known to this group for me to go into any detail as to its prevalence and distribution. I believe it will be sufficient to remind you that 60 percent of all the farmers in the 10 States are tenants or sharecroppers. The percentage ranges from 47 percent in North Carolina to 70 percent in Mississippi. Despite the heavy Negro farm population, there are 40 percent more white than Negro tenants in the South. Tenancy has shown a steady increase, even during the relatively prosperous period of the twenties. In the State of Oklahoma, for example, which started out 50 years ago as free land to all who would homestead it, we find today 61 percent of the farmers are tenants. On the average, about 40 percent of the tenants in the South move every year, and over half move every 2 years.

The credit system of the South with high interest rates has contributed to the tenancy problem. However, providing low interest credit alone will not solve this problem. If the income from the farm is not sufficient to pay back the principal, a low interest rate in itself would not bring about farm ownership. Here again the press of population for land tends to lead to the overcapitalization of land values and retards operator ownership.

There are other matters growing out of the sharecropper-tenant system that I would also like to call to your attention. The question of a fair division of crop and livestock products between sharecroppers and landlords and between tenants and landlords, has long been a controversial issue. In recent years, it has come up repeatedly in connection with division of Government payments. As yet, this question has not been satisfactorily answered either for the landlord or the tenant. However, here again the division of an inadequate income cannot be satisfactory to either the tenant or the landlord. The first problem is to increase the total income.

Under the farming and tenure system, tenants find it difficult or impossible to obtain productive employment when not engaged in the production and harvesting of the cotton crop. On the average only about 120 days of productive labor are required to make the cotton crop.

The tenant, however, does have opportunity for additional employment if he produces his own food and feed and takes care of his livestock, farm buildings, and equipment. While this would tend to lower the cash expense and improve the standard of living, it would not materially add to the cash income and purchasing power. Yet, even here we meet resistance because the skill required to properly do these things has not been developed. These people lack experience and educational opportunities.

Educational opportunities are lacking despite the fact that the 10 principal cotton States spent 3.2 percent of their total 1935 income for educational purposes. This figure compares favorably with other regions and the United States as a whole. We must keep in mind, however, that the South has an added burden of supporting a dual school system which, while necessary, tends to increase the financial burden.

The opportunities for part-time employment of the South's rural people in industry are also limited. There are large deposits of certain minerals in the South, but even here the opportunities for employment of seasonal farm labor are limited. It might be mentioned in passing that the area does not receive maximum benefits from its natural resources because, as a rule, they are controlled by absentees. The annual production of oil in Texas, for example, has a valuation of several hundreds of millions of dollars, yet only a small amount of this remains in Texas in the form of royalties, labor, and transportation costs. The same is true of many of the manufacturing and other industrial concerns located in the South, as most of these have been developed with outside capital and the profits, if any, have gone out of the region. The large insurance companies are not located in the South and for a long period of years the South has sent money which was sorely needed for local development to other regions to buy insurance.

Many of the advantages the South has had to offer industry have been nullified. Freight rates have played no small part in offsetting the natural advantages of the South. In a recent study made by the Tennessee Valley Authority it was found that the per ton-mile cost of hauling freight is actually lower in the South than it is in the official area, yet the charges for freight are considerably higher in the South than they are in the official area. This disparity is even greater between the official and the western areas.

The per capita use of consumption goods in the South is low because its people do not have the purchasing power with which to buy. If more manufacturing and industrial plants were located in the South, there would be a larger outlet for expanded production of a more diversified agriculture. We have a large group of people who are not able to buy the consumption goods they need. These people need employment and could be used in producing these

goods. Could not these two factors be reconciled without detriment to other regions?

It is possible that all or almost all of these handicaps could have been overcome if it had not been for the long-time national tariff policy. That, of course, is one man's personal opinion on a deep-rooted economic question that has rocked this country since the days of Alexander Hamilton—split it once—and apparently is just as far from being settled today as it ever was. The reciprocal trade agreements program of the present administration is one approach to this problem, but even this more or less mild effort to recognize that we can't sell if we don't buy is being singled out for attack in some quarters. I merely mention the tariff as one of the South's major problems.

Cotton and tobacco, the principal crops of the South, are both export products and we normally sell half or more of these crops abroad. Historically, the whole economy of the South has been built around cotton. Cotton has been the most important export commodity of the United States since shortly after Whitney invented the cotton gin.

The average annual value of cotton exports from 1875 to 1910 amounted to about \$260,000,000. During these same years the average favorable balance of merchandise exports from this country amounted to about \$250,000,000. This was a period when it was generally considered the United States was prosperous; a period when the interest and principal of our foreign debts were being paid off. In other words, cotton exports played no small part in paying for the industrialization of this country in the nineteenth century.

If 90 percent or more of the cotton crop were domestically consumed, it might not be difficult to attain parity income from cotton production. But, whether we like it or not, that is not the case. American cotton depends on foreign buyers for a large part of its consumption. Suppose, for example, that our cotton producers during the last few years had received a parity price for that portion of the crop domestically consumed. World prices for the remainder of the crop, even with normal production, would leave the farmers' income from cotton much below parity, possibly 25 to 30 percent.

Prior to the World War we were a debtor nation, but we came out of the war a creditor nation, which made it difficult to sell abroad. For a while, through large loans during the twenties, the full effect of the change to a creditor nation was not felt on exports. Trade agreements, such as the one in which Japan agreed to take up to 1,000,000 bales of Indian cotton a year and India agreed to take up to 400,000,000 yards of Japanese cloth a year, have further handicapped the exports of American cotton.

Another important factor is that foreign acreage in cotton production has been on an upward trend during the last half century. According to a study by the Bureau of Agricultural Economics in 1934, foreign cotton production for the preceding 45 years increased at the rate of 150,000 bales a year, while the average annual increase for the United States was a little more than 100,000 bales a year. Since 1920 foreign acreage has almost doubled. About 17,000,000 acres of this increase took place between 1932 and 1938. However, most of this increased acreage in foreign countries is accounted for by the four countries of Russia, China, Uganda, and Brazil. The increase in three of these countries, China, Russia, and Uganda, can be attributed to internal conditions and probably would have taken place regardless of policies in other countries. This is also true of a considerable amount of the increase in Brazil.

It should be borne in mind that this increase in foreign acreage in cotton production has taken place while the world price of cotton was on a very low level. About 10 years ago foreign countries produced around 10,000,000 bales of cotton for the equivalent of approximately \$900,000,000 in American money. In recent years foreign countries have produced around 16,000,000 bales of cotton for an equivalent of around \$600,000,000 in American money. These foreign countries are now growing 60 percent more cotton for about 30 percent less money than they did 10 years ago.

Cotton farmers of the South cannot produce cotton for the world market and live at world prices. On the other hand, they cannot afford to give up the foreign market for cotton without rearranging the whole economy of the South. Such a rearrangement would affect the entire Nation.

One other development which is making it more difficult to sell cotton abroad is the increased production of continuous filament rayon and rayon staple fiber. World production of these fibers increased from about 33,000,000 pounds, or the equivalent of 78,000 bales of cotton in 1920, to 1,948,000,000 pounds, or the equivalent of 4,583,000 bales of cotton in 1938. Most of these fibers are produced in Japan, Germany, the United States, Italy, Great Britain, and France in the order named. I do not mean that this much cotton has been replaced but the increased use of synthetic fibers has to be reckoned with both at home and abroad in dealing with the cotton problem. Possibly equally as significant as the increase in the production of filament rayon is the decline in the price. In 1920 the price of filament rayon was \$4.66 per pound of yarn. By 1938 the price had declined to 52 cents per pound of yarn.

The problems I have raised appear to me to be the basic economic ills of the South. There are others, of course, that I have not expanded upon, such as the prevalence of diseases—particularly nutritional diseases growing out of inadequate diets, and the absence of adequate medical care and hospital facilities. Then, too, we have the sorry spectacle of women and children working long hours in cotton fields—women who bear more than their share of

the Nation's children. In sharp contrast to the hours of back-breaking hand labor, we have the more recent mechanization of cotton production with tractors for cultivation, airplanes for dusting, and the mechanical picker lumbering through the experimental stage.

But I am not going to elaborate upon these problems for it seems to me that they are contributory to, or have resulted from, a major problem which is the fountainhead of the South's economic ills. I believe that the major problem can be summarized in one statement. That is: It is the press of a dense farm population against the limited natural resources, together with artificial, man-made handicaps and legal barriers, such as the tariff, which have resulted in an inadequate income both in the aggregate and on a per capita basis. That, briefly, is the basic ill of the South.

### H. R. 793

#### EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

#### EXCERPTS FROM HOUSE REPORTS AND COURT DECISIONS

Mr. BURDICK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following quotation from House reports and decisions of the courts in regard to Indian jurisdictional claims:

#### THE CLAIM OF SISSETON AND WAHPETON BANDS OF SIOUX INDIANS FOR AN APPROPRIATION TO PAY A LONG-STANDING JUST DEBT OF THE UNITED STATES

This act is for an appropriation of \$1,472,000 and interest at 5 percent per annum from July 1, 1901, for the benefit of the Sisseton and Wahpeton Bands of Sioux Indians having agencies at Fort Totten, N. Dak., on the Devils Lake Reservation, and at Sisseton, S. Dak., on the Sisseton or Lake Travers Reservation.

It is based upon the treaty of July 23, 1851 (10 Stat. 949), between these Indian tribes and the United States, sometimes known as the "Traverse des Sioux Treaty," or the "Broken Leg Treaty," the latter because Governor Ramsey, who helped negotiate the treaty, was known among the Indians as "Broken Leg."

Article 2 of the said treaty provided that the Indians ceded to the United States "all their lands in the State of Iowa; and also all their lands in the Territory of Minnesota, lying east of the following line, to wit: (line then described)."

Article 3 provided for a reservation for these Indians "on either side of the Minnesota River," etc.

Article 4 provided for \$1,665,000 to be paid to the Indians as follows:

(a) To the chiefs of the said bands for certain specified purposes \$275,000;

(b) For manual labor, schools, etc., \$30,000.

The balance of \$1,360,000 "to remain in trust with the United States, and 5-percent interest to be paid annually, to said Indians for the period of 50 years, commencing the first day of July 1852, which shall be in full payment of said balance, principal and interest."

"Believe it or not," though the land ceded was priced at 10 cents per acre in the deal to arrive at the principal amount specified and the Indians naturally believed that the principal sum of \$1,360,000 was held "in trust" for them bearing interest at 5 percent per annum, payable annually, for 50 years, and that at the end of the 50-year period they would receive their principal, the Department and the courts have held to the amazing theory that the payment of interest alone obliterated the principal. This principal sum of \$1,360,000 has never been paid. (See 277 U. S. 424, 72 L. 939; 58 C. Cls. 302.)

On August 30, 1852, Congress amended this treaty by striking out article 3 and providing that these tribes be paid \$112,000 for the 1,120,000-acre reservation that they were to have had, but didn't get, and that this should be added to the foregoing trust fund and interest at 5 percent per annum on this amount be added to the interest payments (10 Stat. 51-52). This principal sum has never been paid either.

These two items, \$1,360,000 and \$112,000, make the total principal sum of \$1,472,000 provided for in the bill. The 50-year period expired on July 1, 1901, and the fund has remained "in trust with the United States" ever since. Hence the item of interest at 5 percent per annum from July 1, 1901.

Regular annual interest payments were made by the United States on the full sum of \$1,472,000 up until 1863. Because of the trouble between the whites and the Indians which at that time was blamed upon the Indians but which impartial historians now

say was the wrongful doing of the whites, Congress, by act of February 16, 1863 (12 Stat. 652), abrogated and annulled all treaties between the United States and these Indians. For a time therefore the interest payments ceased.

By later acts of Congress, however, the annual payments to the Indians were reinstated and all of the 50 interest payments were made. On June 21, 1906 (34 Stat. L. 372), Congress passed a jurisdictional act providing that the annuities were reinstated "as if the act of forfeiture of the annuities of said bands, approved February 16, 1863, had not been passed."

And on May 16, 1873 (18 Stat. L. 47), Congress passed an act to pay certain traders who were creditors or alleged creditors of the Indians \$25,472.30, and this amount was deducted from these funds. This indicates that Congress, at that time, intended that the principal sum claimed was recognized as a fund belonging to these Indians.

On April 11, 1916 (ch. 63, 39 Stat. L. 47), Congress passed a jurisdictional act giving these Indians the right to sue in the Court of Claims upon this and other claims against the United States. Notwithstanding said act provided that "if any such question is submitted to said court, it shall settle the rights both legal and equitable of said bands of Indians and the United States, notwithstanding lapse of time or statute of limitations" the United States Court of Claims and the Supreme Court held that the courts would not consider the equities of the Indians; that the "act only gave authority to the Court of Claims to hear and determine claims for the amount due or claimed to be due said bands from the United States under any treaties or laws of Congress." (*Sisseton and Wahpeton Bands of Sioux Indians v. United States*, 277 U. S. 424, 72 L. Ed. 939; 58 Court Claims 302.)

Thus, the equities of the Indians were given no consideration by the courts. The Supreme Court indicated that the power to give the relief prayed for by the Indians was "political not judicial." Therefore, the Indians come to the political body—Congress.

Although evidence of tradition among the Indians was submitted in the trial, both courts refused to consider it. Of course the Indians whose signatures were appended—by mark—to the original treaty of 1851 were all dead in 1920 when the evidence was taken. It was, therefore, necessary to rely on tradition handed down, Indian fashion, from father to son. Sons and grandsons of the original signers testified of the tradition in the tribe; what their fathers and grandfathers who participated in the making of the treaty had told them. All said the understanding of the Indian signers, as told to the witnesses by the signers, and as carried in the tradition of the tribe was that at the end of 50 years the principal sum of \$1,472,000 was to be paid to the tribe. In any event how could Congress by its own act and not by treaty take from the Indians their \$112,000 of principal derived from the sale of their reservation?

Strangely, too, both courts gave very perfunctory consideration to the interpretation of the clause in the treaty regarding the principal trust fund and without ado assume that the payment of interest works a discharge of the principal. It's a strange doctrine. And when it is considered that our Government was dealing with unlettered, unlearned Indians who knew not the English language it seems that the interpretation placed upon the provision for the trust fund convicts our Government of unfair, if not deliberately dishonest, dealing. We refuse to believe that our Government or its commissioners intended such interpretation at the time the treaty was signed.

Congress, having "political not judicial power," can remedy this great wrong by the passage of this act.

Congress has already adjusted part of the injustice suffered by these Indians, though the courts said the judicial power could grant no relief. In the case referred to in the Court of Claims and the Supreme Court these Indians claimed to be entitled to compensation for a 3,000,000-acre error in the treaty of September 20, 1872. Both courts said, in case cited, that the Indians could recover nothing through the courts. Congress (Public. No. 407, 71st Cong., S. 1372) righted the wrong by an appropriation.

It is respectfully submitted that passage of H. R. 793 (S. 2085) by this Congress will be an act of simple justice.

Respectfully submitted.

TRAYNOR & TRAYNOR,

Attorneys for Sisseton and Wahpeton Bands of Sioux Indians, Devils Lake, N. Dak.

#### STATEMENT OF HON. LOUIS L. BURDICK IN REPORT ON THIS BILL

This Congress should stop for a moment and consider the facts and circumstances surrounding the execution of this treaty in 1851. From time immemorial the Sioux had occupied the land involved in this treaty. It was their home—their ancestors were buried there. These people were ignorant of the white man's ways and uneducated. They could neither read nor write, as is evidenced by the way in which the signatures of the chiefs were affixed to the treaty. Not only that, but these Indians were not free agents—they were virtually prisoners of war. During the early administration of Indian affairs the War Department, and not the Interior Department, administered their affairs and controlled their lives. In the year 1849 the management of Indian affairs was turned over to the Department of the Interior, where the power to control the destinies of ward Indians now remains.

On the day this treaty was signed these Indians were wards of the Government—the Government was their guardian. Being ignorant of our ways and uneducated, it would be natural for them to rely

upon the honesty of the Government. They did not understand legal English language or any written English language. These were the facts surrounding the signing of that treaty.

What was the wording of this treaty in respect to the amount of land purchased, the price, and method of payment? Here it is: "The balance of said sum of \$1,665,000, to wit, \$1,360,000, to remain in trust with the United States, and 5 percent interest thereon to be paid, annually, to said Indians for the period of 50 years, commencing the 1st day of July 1852, which shall be in full payment of said balance, principal and interest, the said payment to be applied under the direction of the President, as follows, to wit."

No matter what the wording of the treaty was, it cannot be presumed that the Indians understood it, no matter what the finding of the court may be upon the subject, for these Indians could not be presumed to know a thing which none of them could read. There is no record anywhere of the proceedings that took place when the chiefs affixed their signatures—at least, no record has been produced. In order to be on solid ground the court should have known what these conversations were. No affidavits of surviving chiefs or testimony of surviving chiefs were before the court. The presumption indulged in by the court could only be arrived at from the fact that the chiefs did sign the treaty.

Had the Indians been on equal ground with the Government—had they been free citizens and not wards of the Government—what about the wording of the treaty then? Was it usual for free people to enter into contract to purchase land and make payments of interest for a given period, and if all interest were paid, then the debt would be extinguished? This Congress can take judicial notice that during that day it was not the custom of the country, nor is it today.

Was it the custom of the Indian Office to not pay interest on trust funds? No; the custom was directly to the contrary—that all trust funds of Indian tribes drew interest. That is the testimony of the present Indian Department, and it is true.

If that would be the situation with respect to free contracting parties, would there not be an additional obligation on the Government because of its fiduciary capacity, being guardians of these very Indians, to at least treat them according to the custom of the country and the custom of the Indian Bureau? Can a guardian take advantage of his ward in any court of justice? No; the courts have always held that in such a capacity there is a strict accountability required of such guardian. What they may do to others they cannot do to their ward, because the theory of the law is that the Government, in such a case, is contracting for the ward; the Government would be bound to see to it that the interest of the ward was protected.

Under this treaty, a tract of land consisting of 16,650,000 acres was purchased for a consideration of \$1,665,000. The Indians agreed to this price. In other words, the Indians sold this valuable land for the price of 10 cents per acre. This money was placed in trust for this tribe. What money was so placed? The purchase-price money—the consideration for the purchase of the land, less some small down payments. No trust could be created unless there was a consideration.

During the 50 years interest was paid; and it may be said that the Indians received, in all, at the end of 50 years, \$3,400,000, or actually 20 cents per acre. But remember that during that period this land increased in value until the time of the last payment of interest this land could not be purchased for less than \$50 per acre—none of it.

No railroad lands were sold by the Northern Pacific Railroad during any of this period for less than \$2.50 per acre, even in the Bad Lands of Dakota, and none of it in the Minnesota area for less than \$10 per acre. Can it, therefore, be claimed that the Indians received just compensation, when the interest they did receive was a mere pittance compared with the actual value of the land which they did surrender? Can anyone in this Congress justify the conclusion that the Indians, under all the circumstances, agreed to take merely the interest on the purchase price and abandon the purchase price itself? If such a conclusion can be arrived at by this Congress, then I say justice to the American Indian is dead in this land. Is Congress willing to treat their ignorant wards in that way, when the Government solemnly promised to protect their red children?

In regard to Indian jurisdictional bills before Congress, the usual stock objection to the passage of a jurisdictional act is that the matter is in *res adjudicata*. Let us see what that term means in law. In plain English *res adjudicata* is a Latin expression meaning that the particular issue has been already decided.

As this term is commonly used in relation to cases before the Court of Claims it has no application whatever and those who make use of the term are quite ignorant of the proceedings in the Court of Claims. I have never heard of a case, or heard of anyone who ever heard a case in the Court of Claims where the term "*res adjudicata*" could possibly be applied. The reason is that in every case before the Court of Claims, the court has only such jurisdiction of the matters involved as is expressly given to the court by the jurisdictional act itself. The court can only see through one glass; and if, perchance, some new matters affecting the outcome of the controversy is offered in the proceedings, the court excludes them on the ground that the "court has no jurisdiction except such as the act itself creates."

Whenever such a situation arises, the claimants usually come back to Congress and ask for a new jurisdictional bill conferring the special authority which the court decided it did not have. A

new act is passed, or proposed for passage, and at this juncture, the lawyers of the House rise up like cornstalks and shout "*Res adjudicata*." They do not know that the term "*res adjudicata*" cannot be applied to a matter unless the former decision covers the same latitude of facts and circumstances as are presented in the pending matter. Evidently the former jurisdictional act did not cover the situation contemplated in the new act, for if it did no new bill would be pending. A decision of the Court of Claims, therefore, is a decision based upon only such matters as the court had before it at the time of trial. It could not possibly embrace matters concerning which the court excluded on the ground it had no jurisdiction. The conclusion is inevitable, therefore, that *res adjudicata* cannot be applied to a matter decided in the Court of Claims under a particular jurisdictional act.

The decision of the Court of Claims in the case of the *Sisseton and Wahpeton Bands of Sioux Indians v. the United States* (58 Court of Claims 302, 277 U. S. 424, 72 L. Ed. 939) cannot be *res adjudicata* because the jurisdictional act (39 Stat. 47, approved Apr. 11, 1916) was held by the courts to limit the jurisdiction of the Court of Claims to an accounting of the "amount due or claimed to be due said bands from the United States under any treaties or laws of Congress," and that, therefore, the court was bound to hold the Indians to the strict letter of the "laws of Congress," and could give no consideration to the equities of the Indian claims no matter how worthy were such equities.

In other words, the jurisdictional act, as construed by the court, gave the court no power as a court of equity. Congress was, therefore, remiss in its duty to these Indians in failing to pass a jurisdictional act broad enough to give the court equitable jurisdiction. Thus the court was hamstrung in its power to give relief and the equitable issue involved was never adjudicated.

The Court of Claims in its opinion, referring to the treaty of July 23, 1851, in this proposed legislation and one other treaty, said "afterwards, when both of said treaties came before the Senate for ratification, the Senate, instead of ratifying them as negotiated, substituted a provision for the purchase," etc. So the treaty or law passed by Congress was not the treaty the Indians made. The Indians claim they never ratified the changed treaty or law passed by Congress. But the court held it was bound by the law as passed by Congress.

The Court said:

"There is nothing in the jurisdictional act \* \* \* inconsistent with the treaty \* \* \* and nothing to indicate that Congress attempted by that act to authorize the courts to proceed in disregard thereof \* \* \* and the presumption is wholly inadmissible that Congress sought in this instance to submit the good faith of its action or the action of the Government to judicial decisions."

"That this act does not give this Court jurisdiction to inquire into the equity or impropriety of any of these treaties between these Indians and the United States is so obvious as to hardly need citation of authorities."

"The jurisdictional act here involved is not different in any essential respect from those construed in the citations (*United States v. Old Settlers*, 148 U. S. 468; *Atoe and Missouri Indians v. U. S. C. Cls.* 424, 429) mentioned and is not so worded as to make it an exception to the well-established rule \* \* \*. When Indian rights of property are fixed by the terms of treaties we are bound to accept them as so fixed."

It is clear from the foregoing that the courts never passed upon the equitable issue involved, to wit: Did the Indians understand that they were never to get the principal of the purchase price of their lands? Were the terms of the treaty (contract) fair and equitable under the circumstances, considering the unequal ability of the unlettered, ignorant Indians to deal in English, a language not understood by them, with the learned commissioners and Congress?

Clearly, therefore, there is not the slightest substance in the contention that the matter or issue involved in this legislation is *res adjudicata*.

Besides the Supreme Court of the United States in May 1938, in the case of the *United States v. Shoshone Tribe of Indians* (advance sheets for May 9, 1938, 82 L. Ed. U. S. Repts., p. 763) sets forth the principle of law that:

"Treaties between the United States and Indian tribes are not to be interpreted narrowly, as sometimes may be writings expressed in words of art by covenancers, but are to be construed in the sense in which naturally the Indians would understand them."

The sense in which these Sisseton and Wahpeton Sioux Indians naturally understood their treaty was to the effect that at the end of 50 years they would get their principal of \$1,472,000. The following narrative statements from the testimony of the Indians is undeniable proof thereof:

STATEMENTS TAKEN FROM TESTIMONY GIVEN IN THE ACTION OF THE SISSETON AND WAHPETON BANDS OF SIOUX INDIANS AGAINST THE UNITED STATES, NO. 33731, IN THE COURT OF CLAIMS OF THE UNITED STATES

Page 116: Joseph Sherman, or Tawacinhehomni, testifying on August 5, 1920, relative to the treaty of July 23, 1851, testified that he was then 70 years of age, born in 1850, and was a member of the Sisseton and Wahpeton Sioux Indians of the Devils Lake Reservation. He stated that Sleepyeye, who signed the treaty of 1851, being the fourth man who signed the treaty in behalf of the Indians, was his grandfather's cousin. That he, Sherman, had talked (always) (frequently) with Sleepyeye about said treaty. He had also talked

with his grandfather about the treaty of 1851 and was told that the interest would be paid to the tribe—5-percent interest—and at the end of 50 years the principal would be paid to the tribe.

Pages 119-122: Eyapahamani, member of the tribe on the Devils Lake Reservation, age about 70 years, born about 1850 at Lake Traverse, testified relative to the treaty of July 23, 1851, that he had talked with some of the men, who signed the treaty, about what the treaty contained. These Indian signers told him what they understood at the time they signed said treaty contained. They told him they were going to get the interest and at the end of 50 years the principal was to be paid to the tribe. His uncle told him that and that is the tradition that is handed down by the Indian fathers and those who took part in the signing of the treaty. His father and his brothers—two brothers—also told him the same thing. They told him to remember that as long as he lived and to hand it down like they handed it down to him. He was about 30 years of age at the time they told him this.

Pages 123-124: Tawasuwaste, a member of the tribe on the Devils Lake Reservation, testified that he was about 67 years old, born about 1853. That one of his grandparents signed that treaty. The grandfather's name was Wicanhpi-iteton, meaning in English "star has face." The witness was shown Senate Document No. 68, at page 32, and stated that the name of the second signer to the treaty was his grandfather. That said grandfather had told him all about that treaty after he had signed the treaty and that at the end of 50 years drawing interest the principal would be paid to the tribe. That the grandfather had told him that when he grew up he could depend upon that money. The grandfather also told him that it was his place to hand down these facts about the treaty to his children so that they would know about it. That is known as Indian tradition among the Indian people, that is being handed down from their forefathers. That is the method the Indian people have of keeping track of the record of what happened previously.

Pages 129-131: John Strait, a member of the Devils Lake Reservation, testified that he was 56 years of age, having been born about 1864. That he had been told by his father, whose name was Akicitana, which means "soldier," that he, the father, had signed the treaty of July 23, 1851. The witness' attention was called to page 33 of Senate Document 68, and stated that the last Indian name thereon was intended to be the name of his father. That the father was then, in 1920, dead long ago. The father had explained to the witness and to the witness' sisters and brothers what had been explained to him, the father, at the time he signed the treaty as to what the treaty contained. That what his father had told them with reference thereto as to his understanding of the treaty as explained to him was that there was to be paid to the tribe for 50 years interest in gold, and at the end of 50 years the principal was to be paid to the tribe. That also is the tradition that has been handed down by those who signed the treaty for the Indians.

Pages 134-136: Matohi, member of the Devils Lake Reservation, who was born at Lake Traverse, stated that he was then, in 1920, 70 years old, having been born about 1850. That his father, whose name was Hooksheedanwashtay, signed the treaty of July 23, 1851. That his father was then dead at the time witness' testimony was given. The witness' attention was called to page 32 of Senate Document 68, and stated that the name appearing there as having been signed to the treaty and spelled H-o-o-k-s-h-e-e-d-a-n-w-a-s-h-t-a-y, translated as "Good Boy" was the name of the witness' father. That the father had talked to the witness about the treaty and had told the witness what the people representing the Government at the time the treaty was signed had told the signers what was in the treaty. That the father told it to him this way: "Fifty years to be paid to the tribe the interest money, and at the end of 50 years the principal would be all paid in their full hands and then let them go." The father had further said that at the end of 50 years the principal would be paid to the little children. That is the same story or tradition as has been handed down generally by the older Indians to the younger Indians of these bands. The witness stated further that Governor Ramsey, one of the representatives when the treaty was signed, was called Broken Leg.

Page 174-179: Solomon Fox, whose Indian name is Sunginaduta, a member of the Devils Lake Reservation, testified on the 7th day of August, 1920, that he was then 58 years of age, having been born about 1862. Fox testified that his grandfather, Itewakinyan, was one of the signers of the treaty made by the man with the broken leg with the Indians. (Treaty of July 23, 1851.) The grandfather's English name was Thunder Face. The witness was shown page 32, of Senate Document No. 68, and asked if he knew whether or not the third name signed or purported to have been signed on the treaty as appeared by that document was the grandfather's name. He stated that "that is the one." Witness stated further that his father's brother, named Wakinyanahota, English name Gray Thunder, had also signed the treaty. Witness' attention was called to page 33 of Senate Document 68, and stated that the fifteenth name on the page was the name of his father's brother as a signer of the treaty. Witness further stated that his father and his father's brother—as to how the payments of money under the treaty with the Indians was to be made—told that it was 50 years to be paid to the tribe the interest in gold, and at the end of 50 years the principal would be paid to the tribe in full, and that the children would get the benefit of what the Indians called the "old money." That this was also the tradition in the tribe.

In answer to a cross-interrogatory (p. 178) that he had heard it from Itewakinyan, one of the signers, "Then he told it to his

nephew; then he told that to Sunkamaza; and then he told that to Matowakan; they are all brothers. Then the last mentioned, he told me all about it, that that is the tradition. I have got a son, and I am going to tell that to him just exactly what he told me. As long as I don't get anything I am going to tell that to my son."

Page 179-181: Mazakahomni, a member of the Devils Lake Reservation, testified that he was, in 1920, 70 years of age. That he had heard by tradition about the treaty of July 23, 1851, to the effect that the Indians were to be paid a certain sum over a period of 50 years as interest, and at the end of that time were to be given the "old money" or principal for the land.

Pages 183-185: Hnuyaninyanke, a member of the Devils Lake Reservation, born at Lake Traverse and in 1920 was 80 years old, testified that he had heard some tradition that under the treaty of 1851 that it was to be 50 years paid in gold—that is, the interest on that money—and at the end of 50 years the principal would be paid in full to the time.

Pages 188-189: Otakoyake, member of the Devils Lake Reservation, testified that he was then, in 1920, 63 years old. That he had heard about the agreement of July 23, 1851, known as the Broken Leg treaty, made at Traverse des Sioux. That he had heard it from Tiyouwaste, who was for many years the head chief of the Indians on the Devils Lake Indian Reservation. Had been chief about 50 years before he died. Tiyouwaste had told the witness that the tribe would get money from the Government for 50 years—that is, the interest on the money—and then, at the end of 50 years, the principal would be paid in full.

Pages 193-195: Canhdeskamaza, a member of the Devils Lake Reservation, born at Lake Traverse and at the time of his testimony in 1920 was 84 years of age, testified that he had heard about the treaty of July 23, 1851, known as the Broken Leg treaty. That none of his relatives had signed the treaty, so far as he knew, but from tradition he had learned that the payment was to be made 50 years paid in money; that is, the interest; and then, at the end of 50 years, the principal would be paid. He had heard many of the older people talking about this treaty and about the payment of the money.

Pages 197-201: Ignatius Court, a member of the Devils Lake Indian Reservation, born on what is now known as White Earth, in South Dakota, testified that he was at the time of the testimony in 1920, 53 years old. He had had some education and having heard the older Indians talking about their claims against the Government had become interested therein and had made investigations and had discussed the claims of the Indians with the chiefs and head men of the tribe and the older people, and particularly with reference to the tradition in regard to how the payments were to be made by the Government to the Indians under the act of July 23, 1851. He stated further: "According to tradition—tradition is our record; and according to tradition, relating to that treaty of July 23, 1851—and the way how I come to take part and interest in this matter was that my grandfather had signed the original agreement, and according to tradition \* \* \* the money was to be placed in trust for the Indians, and the interest to be paid for 50 years, and at the end of 50 years the principal will be paid to their children. That is the agreement."

He further testified that these Indians to whom he talked about the treaty of 1851 told him about the various matters regarding the payments and the land ceded. That the Indians—including those who signed the treaty—couldn't read nor write and had no records of anything and that the only way they had of recording such things was when things happened they hand it down to the next generation, etc.; that that is the record of the Indians in regard to matters of this kind.

#### NOTATION

At the time of the taking of the testimony in 1920, none of the original signers on the treaty was available because all of them were dead. The Court of Claims refused to in any manner consider the testimony of the Indians with reference to the traditions of the tribe, notwithstanding the fact that it is well known that such tradition is worthy of great credence inasmuch as it was the only manner in which the Indians had to hand on to future generations vital facts pertaining to the rights of said tribe.

### The Rape of Muscle Shoals

#### EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 18, 1940

ARTICLE FROM THE MUSCLE SHOALS AUTHORITY

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "The Rape of

Muscle Shoals," appearing in a publication entitled "Muscle Shoals Authority."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Muscle Shoals Authority]

#### THE RAPE OF MUSSEL SHOALS

(Note: The many muskells found in the river at the Shoals gave the name—Mussel Shoals. Even the name has been raped)

The people of the Mussel Shoals district hailed with delight the result of the 1932 election. They thought, now the long retarded development of the Tennessee River with its potential water power at Muscle Shoals was to be ended. That the district, the South would be given the opportunity to develop its natural advantages and resources—to come into its own—at long last.

Nature had given north Alabama the Tennessee River and Mussel Shoals; well-wooded, fertile lands, minerals, and other resources; all combined with a climate unsurpassed. The economic war, 1861-65, its aftermath and political obstructionists prevented the development of this section—for the better part of a century. Naturally any country, section, and individual endowed with unusual gifts expects, and with justification, to reap direct benefits from such gifts.

Neither the Nation nor South foresaw a bureaucratic, one-man government, which unstopped leads but to a totalitarian state and dictatorship. It just "could not happen here," but it has, or has been "planned" that way, as the mislabeled party in power these past 7 years repeatedly state. An unwanted depression was seized by this party to experiment and traffic with human necessities and constitutional liberties. Past individual and governmental mistakes and abuses needed correcting—by constitutional laws—but the party in power have and are trying to change the basic laws of God and nature.

Unfortunately, Congress gave this man, temporarily, more power than dictators have (saving the power over life and death), which, for 7 years, the President and his chosen affiliates have refused to relinquish. They are now "planning" to perpetuate it. Is not that the meaning of the third-first term, or the New Deal policies must continue? Power or money once held are rarely relinquished voluntarily, new dealers being no exception to the rule.

To even partially grasp the meaning of the New Deal party's appropriation and confiscation of the property and wealth of others (acquired by ability, thrift, and labor), and using it to establish a huge bureaucratic government—look at just one of these bureaus, T. V. A., the President's "pet" project. Only a few of the basic, far-reaching acts of T. V. A. in the Mussel Shoals district can be given in this article, and those perforce, briefly. But those given herein are recorded and verifiable. Were the whole history of the Authority's acts, at Mussel Shoals alone, given, more volumes would be required than those filled by the T. V. A. Investigating Committee to give T. V. A. a clean (?) bill of health.

The Tennessee Valley Act, passed by Congress, 1933, gave the President the power to appoint a board of three men. Whom did the President appoint? Two from the Middle and Far West, the third from the valley, but not a native. No representation from the valley or South, the section and people whose interests were most affected. This Board selected, at first, even to its laborers, men from Maine to California—to the exclusion of the people of the valley. Before even beginning work, Dr. A. E. Morgan broadcast to the Nation statements like the following: "Not an acre of land in the entire Tennessee River Valley was worth \$25." He even made more disparaging statements about the valley people. In fact, he warned the Nation, urged them to "stay away from the Muscle Shoals district," the people being "swindlers."

The Tennessee Valley Act, created by Congress, 1933, reads thus: "For national defense, navigation, industrial and agricultural development, and flood control of the Tennessee and Mississippi River Basins." Then the act states the regulations governing the Board: Section 2 (e): "The members of the Board shall receive a salary of \$10,000 a year." In "addition to his salary, each member of the Board shall be permitted to occupy as his residence one of the dwelling houses owned by the Government in the vicinity of Muscle Shoals, Ala., the same to be designated by the President of the United States." Continuing, section 8 (a): "The Corporation shall maintain its principal office in the immediate vicinity of Muscle Shoals, Ala." The Corporation shall be held to be an inhabitant and resident of the northern judicial district of Alabama."

Known to the entire Nation—the Board established both the "principal office" and their "residence" at Knoxville, Tenn. Whose duty was it to see where the Board was to establish the principal office and the residence? This is the first direct violation of the 1933 act and a slap at the Mussel Shoals district. After 2 years of continued protests from Alabama Senators, Representatives, district organizations, and individuals against this unjust violation and discrimination against the district, causing great injury and loss to the people and section—the President permitted the Board to place a wooden sign over the door of Nitrate Plant, No. 2, which reads: "Main offices of the Tennessee Valley Authority."

Both the President and his Authority claim this sign "satisfies" the "law." We shall show, partly, what this violation of the Tennessee Valley Act has cost the Mussel Shoals district, and the Nation's taxpayers. The late chairman of the T. V. A. gave the "T. V. A. investigating committee" some interesting "bunk," their excuse for establishing the main office in Tennessee. Dr. A. E. Morgan said, in part: "Mr. Lillenthal had informed the Board that

the language of the act which directed the placing of the headquarters at Muscle Shoals 'was only a legal phrase,' which was of 'no binding effect.'" Dr. Morgan continued: "Establishing the headquarters at Muscle Shoals would have meant the 'sacrifice' of 'many values.'" Truly said, Dr. A. E. Morgan. Not establishing the "principal office in the immediate vicinity of Muscle Shoals" has lost to Alabama and district millions of dollars, lost untold jobs to unemployed labor, and cost the Nation's taxpayers many unnecessary thousands of dollars.

Dr. Morgan goes on: "The Authority would have been denied the facilities of the University of Tennessee, including its 'law library.'" Why the special need for the law library? As a further excuse, "A large housing project would have been necessary to house the T. V. A. staff." Also, "The school facilities at Muscle Shoals were not of the best."

These facts, answer the doctor's "bunk." First, is there any ambiguity in the language of the act as to where the "main office" was to be established, or where the Board was to reside? Not just "Muscle Shoals" was designated—but "Muscle Shoals, Alabama," was stated in both cases.

Can Mr. Lillenthal's statement, merely a "legal phrase" of "no binding effect," be either legal or moral, judged by ethical standards?

A large housing project necessary—if offices were established in Alabama. The answer to that is: Quite apart from the many houses already at Mussel Shoals, the Government owned about 3,000 acres of land with streets, sewers, water, electric lights, etc., at the Shoals.

A mere fraction of the \$3,500,000 T. V. A. spent at Norris, Tenn., to build 350 houses of three and four rooms for the temporary use of workmen would have built a permanent city at Mussel Shoals. Not all of these \$10,000 three- and four-room workmen's houses were fully electrified. Dr. Morgan's own figures and statements. Just one example of the waste of the Nation's taxpayers' money. Why was this "housing" money not spent at Muscle Shoals? Had not the doctor stated, even before starting work in Alabama, he "wanted no Muscle Shoals City"? The little cities of Florence, Sheffield, and Tusculumbia "must be decentralized."

Dr. Morgan had stated his plan was to make "French-Czecho peasants" of the Valley people. This evidently was the beginning of the "rural electrification" of the Valley.

More expenses—because T. V. A. saw fit to locate the "principal office" in Tennessee: The McCarl investigating committee, 1935, brought forth the following facts: The Authority rented offices in Knoxville at the rate of \$36,000 a year. T. V. A. also leased telephone lines, hired cars, bought airplanes to keep in touch with Muscle Shoals. And although T. V. A. owned 223 automobiles and light trucks, its bill for hired cars averaged \$8,000 a month. In one period 53 T. V. A.-owned cars drove less than 1,000 miles, while the hired cars drove 114,000 miles, at 7 cents a mile rental. Also, cash registers of T. V. A. commissaries and cafeterias, etc., recorded receipts that differed from the actual cash receipts, from a few cents to several hundred dollars a day, the difference being explained by such entries as "cash stolen," "children playing with cash registers."

T. V. A. bought a \$10,000 herd of dairy cattle; prices ranged from \$250 to \$950 apiece. Then the rich milk from the expensive herd was traded for a low grade of milk. This unexplained by T. V. A. These facts and many more show the way the Nation's taxpayers' money was spent—by T. V. A.

Now, "School facilities at Muscle Shoals not of the best." Look at the facts: Florence has always been an educational center. Its State teachers college, high- and public-school systems rank with the best of their type. Undoubtedly with the influx of population, the necessity for enlarging school facilities would have been met.

Just what the real motive behind T. V. A.'s actions at Mussel Shoals? The utilities' interests were bound up with the district. The fiat had gone forth from Washington, the utilities must be annihilated—not errors corrected. Beginning with Muscle Shoals, henceforth all water power must be under Government control.

The reading public knows of the long, hard-fought battle between the utilities and T. V. A., and of the final settlement. But do the people generally realize that Government monopoly was submitted for utility monopoly, with this difference—the Government controls everything and everyone, while the utilities only controlled power? But, again, why was the Shoals district singled out especially for the drastic purge? The section that made possible the very existence of a T. V. A.?

But for Mussel Shoals, Ala., there never would have been a reason for any T. V. A. or Authority. Apparently, New Deal young collegiates must have decided the district fell under the class of "economic royalist" (district) by virtue of Nature's mistake in placing Mussel Shoals in north Alabama.

After T. V. A.'s first successful violation of the act (mislocating the main office) the road was cleared for further purges. So Florence was given two more crushing blows—below the belt. Scrapping the "contract" and "30-year franchise" given because she was right at the Wilson Dam; then 2 years later, after Florence had bought her own power plant, refusing to grant her cheap C-1 rates for factories, that (rate) given in Tennessee, and to remote districts. Thus two large factories were lost to the district by the refusal of the C-1 rate. T. V. A. completely controls all power given Florence, even to the amount of her lighting of the city. Refusing to let factories come to the district has lost millions in dollars and unnumbered jobs to labor. Factories established in the district would have given employment to the needy now on the dole or the W. P. A.

## T. V. A.'S CROWNING ACHIEVEMENT

To the people at large the wonderful dams are shown and written up, glorifying the Tennessee Valley Authority. Look facts in the face. Are high dams necessary for the purposes for which the Tennessee Valley Act was created? Or have they not been built primarily for power? Does the 1933 act mention anything about power but "surplus" power? Read section 10 of act, and on. Had Congress wanted a "rural electricity" bill, would it have passed the bill it did? Is not "rural electrification" but a New Deal excuse for social experimentation in the Tennessee Valley? Is not the following quotation an excellent analysis of Tennessee Valley Authority's objectives?

"It is evident Tennessee Valley Authority's plans are formless, except insofar as they relate to the power program." "Tennessee Valley Authority is relying upon its entry into the electricity field to establish its prestige." "If restricted to its constitutional functions, it will disappear from the scene, leaving navigation under the Corps of Engineers, where it should be, and national defense under the War Department, from which it is treasonable to remove it to any such chaotic organization as the Tennessee Valley Authority Board." Unfortunately Tennessee Valley Authority was not restricted to its "constitutional functions." "Relying upon their entry into the electricity field to establish their prestige." They have since the above analysis made, in 1935, developed a streamlined organization with the aid of the taxpayers' money and the sanction of the President.

But high dams have done something else to the valley. They have, or will have, when completed, put 1,500,000 acres of the most fertile lands in the valley out of agriculture forever. All know some land necessarily must be submerged when dams are built. Generally the lowlands thus submerged are often useless because of normal floods. But high dams, for power, do not take into consideration the agricultural loss they are creating. That is not all about the loss of these farms; Tennessee Valley Authority takes twice or more of the land (of all good farms) from the owner, and all his river frontage, than is necessary for submerging. Why this Government appropriation of good farms? The following dispatch from Athens, Ala., of March 5, 1939, partly explains "appropriations":

"THREE THOUSAND NINE HUNDRED AND FIFTY T. V. A. ACRES ARE RENTED"

"One hundred and fifty farmers of this county (Limestone) have leased 3,950 acres of land belonging to T. V. A. in the county for a total of \$10,324 for the current year, a checking up of bids reveals. The land will be cultivated under the A. A. A. program."

Government farming on untaxed land in competition with poor farmers paying high taxes. T. V. A. has acquired good farms in the counties surrounding the Shoals also, and has gone into the farming business. Is the Government reserving the river frontage for future factory sites—while denying factories to the district now? Is this preparing for the future totalitarian state?

In like manner T. V. A. is honeycombing the district with power lines. Transmission lines are like dams—when built for legitimate purposes—necessary. But these lines are not just for rural electrification, but are high-power lines, to drain all power from the Wilson Dam. Had it been a physical possibility, the Shoals and the Wilson Dam, etc., would have been removed bodily from north Alabama. That being impossible, the next best thing, remove the power generated there and give it to remote sections. This certainly kills the Muscle Shoals district, T. V. A.'s main objective. High dams and transmission lines alone are entitled to a book, to do the subject justice. But one word more about transmission lines must be given here. T. V. A. goes through any land desired, cutting a swath 150 feet wide. Whether wooded, under cultivation, or worthless—the sum paid is 3 cents a running foot, paid to all alike—so state T. V. A. agents. T. V. A. is given the use of this land for its wires—for all time—the owner still has the privilege of paying the Government taxes on it. What would the new dealers say about such actions, if done by corporations or private individuals?

The first reason for the creation of the Tennessee Valley Act was for national defense. In the present emergency is the President going to allow the Muscle Shoals any part or lot in his national-defense program?

Or is he (the President) going to ignore the very existence of Muscle Shoals, and continue to permit his T. V. A. to drain the power generated at the Wilson Dam, and give it to other and distant sections?

## WHAT MUST ALABAMIANS DO?

First. All elected Representatives, the people of the Mussel Shoals district, all Alabamians should stand united and demand their rights—the restoration of the purposes for which the 1933 Tennessee Valley Act was created by Congress. Rights first given the district by nature, then by the act. Begin by establishing the "principal office" in the "immediate vicinity" of Muscle Shoals, Ala., where it should have been these past 7 years. Then follow up the other violated sections of the act, correcting them.

Second. Remove the entire T. V. A. Board—for their many violations of the act. For changing the bill, by substituting their own socialistic "rural electrification bill." For not keeping their "contracts," nor allowing cheap rates to factories—this done to prevent any growth and development in the district. Also the injury done to agricultural development, and unnecessary "appropriations" of lands in the district, and the many other high-handed acts perpetrated on the helpless people of the valley by the T. V. A. Board.

Third. That Congress, not a President, hold any Board responsible for their failure to carry out the purposes of the Tennessee Valley Act which they [Congress] created.

Fifth. That the taxpayers of the United States join Alabamians in demanding that all the waste, and useless extravagance of the T. V. A. be stopped, and only the legitimate purposes of the bill be carried out by the new Board.

Remember—but for Muscle Shoals there would have been no act or Authority.

MARY CHALMERS HOOD.

## Pipe Lines, Railroads, and the Oil Business

## EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

LETTER BY EUGENE L. ORVIS

Mr. COFFEE of Washington. Mr. Speaker, in view of legislation now pending for the relief of our railroads I wish to bring to the attention of the House some significant facts in relation to the conduct of our railroads which should receive thoughtful consideration.

I present a letter addressed to all railroad executives by Mr. Eugene L. Orvis, the traffic attorney who appeared before the Temporary National Economic Committee, and exposed relations between the railroads of the Southeast and 13 major oil companies which undeniably fall into the category of conspiracy in restraint of trade; it also appears to disclose that major oil companies combine in intimidating and coercing the railroads and further tends to show that certain common-carrier pipe lines openly and flagrantly violate the commerce laws.

The documents supporting the allegations made by Mr. Orvis were duly authenticated by the Monopoly Committee, certain common carrier pipe lines openly and flagrantly talking about.

It seems to me that before this Congress enacts any railroad legislation that railroad management should itself first take adequate measures to relieve itself of the burdens placed on the railroads by such unfair and illegal practices as are disclosed in this letter.

The letter is as follows:

To all railroad executives:

Gentlemen: In behalf of fair transportation practices I wish to bring to your attention the high lights of my testimony before the Temporary National Economic Committee, in Washington, on the 5th and 13th of October last.

Included in this testimony was irrefutable evidence of how the major oil companies, by combined shipper-volume, "pressure" freight rates to suit themselves and how certain of them enter into unlawful conspiracies and designedly publish pipe-line tariffs violative of the law, all to the extreme detriment of the railroads and of independent oil shippers who use the railroads exclusively.

You probably have read that on October 5, I presented to the T. N. E. C. a copy of the following letter addressed by the president of the Association of American Railroads to 13 major oil companies operating in southeastern territory:

ASSOCIATION OF AMERICAN RAILROADS,

Washington, D. C., January 17, 1935.

Re: Memorandum of discussion regarding transportation of petroleum products in the Southeast.

DEAR SIR: Based upon discussion with Mr. Cleveland, it is my understanding that in view of certain conditions to be later referred to herein you have stated that in the Southeast you will discontinue trucking from your water terminals or refineries to the interior for distances in excess of 40 to 50 miles (which is the approximate limit of the customary filling-station distribution), whether service by truck for greater distance is being performed by outside agencies or by trucks of your company, and that you will simultaneously discontinue delivering these products to dealers' or buyers' trucks at your water terminals or refineries.

Railroads in southeastern territory, in order to make this arrangement an effective one and to stabilize the distribution of these products, will use their best efforts to bring about a readjustment of interterritorial rates on these products into southeastern territory on the same rate level as fixed by the Interstate

Commerce Commission within that territory, it being recognized that in order to make this change in freight rates it will be necessary to obtain relief from outstanding orders of the Interstate Commerce Commission. Railroads in southeastern territory will re-form as rapidly as seems advisable existing leases covering railroad property used for filling-station purposes; they will discourage future leases of this character and will in no case make such leases on terms more favorable to lessees than under the re-formation plan.

It is suggested that above arrangements become effective May 1, 1935, unless some other date as early as possible will better suit your necessities. It is understood that the above arrangements will continue in effect until your company or the railroads involved decide that they are not working satisfactorily, in which event 60 days' advance notice of the termination of these arrangements will be given, and upon receipt of such notice from any company I will promptly notify the other interests involved.

Very truly yours,

J. J. PELLEY, *President.*

The intent of these major oil companies, as disclosed by this memorandum of earlier discussions, obviously was (1) to "pressure" rail rates downward with a promise to distribute only via rail above 50 miles from seaboard; (2) to build higher the rail freight rate wall between this southeastern territory and independent oil refiners of the Southwest; and, (3) to eliminate the filling-station business of independents leasing railroad property.

That which concerns rail executives in the present writing is the attempt of major oil companies' lawyers at the hearing to shift the blame to the shoulders of the railroads by indicating that the conspiracy originated exclusively in railroads headquarters.

Far from being a proposal of the railroads, as oil-company counsel insisted, it was, as the opening paragraph of the letter clearly shows, a confirming memorandum of earlier conferences: I quote from the verbatim record of the hearing:

"The CHAIRMAN (interrogating Mr. E. S. Hall, senior counsel, S. O. N. J.). What was your understanding as to the initiative in this particular matter referred to in the Pelley memorandum?

"Mr. HALL. My understanding of the initiative is that it was a proposal by the railroads in the hope that they could persuade the petroleum industry to assist them in stemming this change in the mode of transportation from rails to motors, which had been going on so effectively for the last 10 or 12 years."

The constant reiteration of this standpoint finally brought from Mr. Leon Henderson, a member of the committee, this remark:

"Mr. Chairman, the language [of the Pelley letter] seems as clear to me as it does to you, that it was not Mr. Pelley's proposal."

Rail executives, dealing with a constantly dwindling volume of oil transportation, have sought as best they could to remain independent under steadily applied and ever-increasing major oil-company pressure, yet the commerce laws and antitrust statutes have long been available to curb too insistent shippers.

It remains to be seen whether recent disclosures like that of the Pelley memorandum and the exposure of the malpractices of the Great Lakes and Phillips Pipe Line Cos. will convince the rail carriers of the unwisdom of being too pliant to the demands of large shippers; it is the railroads, rather than the shippers, who can most easily be involved in the tools of regulatory action.

I placed before the T. N. E. C. a copy of a letter (later authenticated by the committee) from one of the so-called integrated oil companies wherein two railroads were distinctly warned that the granting of rate reductions to a group of independent refiners would result in reprisals; copies of this letter went to eight other major oil companies.

In the case of the Great Lakes and the Phillips Pipe Line Cos. I revealed to the committee the methods employed by these common carrier pipe lines for evading the commerce laws and the resultant consequences to the railroads and to independent all-rail oil shippers. This matter has had the careful attention of the Interstate Commerce Commission since I brought the facts to light.

Commissioner Aitchison, in his letter to me of July 20, 1939, commenting on the field tariffs of these two common carrier pipe lines stated: "The tariffs do not specifically authorize transit; (2) the 'policing' rules are inadequate; (3) the proportional rate to be applied should be that in effect on the date of movement from the point of origin; (4) the tariffs should contain specific provisions for collecting the interstate rates beyond the transit points."

For any needed interpretation of these tariff shortcomings, I suggest you consult your own rate or tariff compiling department.

Through documents authenticated by the T. N. E. C. I established the fact that the above enumerated faults were not the result of inadvertence but of clever and concerted effort through months of collaboration: Important as this was to the T. N. E. C., it is of much greater importance to you and to independent all-rail oil shippers, for in hitting the railroads below the belt they are at the same time dealing deadly blows to those independent oil companies who patronize the rails exclusively.

It is through such illegal and unfair practices that oil and gasoline common carrier pipe lines (perhaps I should include the natural-gas pipe lines also, as their operations have deprived the railroads of millions of tons of coal traffic annually) have continued to eat into railroad revenues.

The I. C. C. manifestly cannot nor should it be expected to initiate all necessary corrective steps; I feel the railroads should fight their own battles and most vigorously defend themselves against unfair or illegal practices of common carrier pipe lines, resorting to the law whenever conditions warrant.

It has been the policy of the railroads to refrain from entering into joint rates or arrangements with common carrier pipe lines; no doubt this policy is the result of pressure from the common-carrier pipe-line owners. The uneconomic character of such an unreciprocal policy is more apparent today than ever.

The Black Strap Molasses decision (I. C. C., I. & S. 4645). This decision is of far-reaching importance to all railroads and independent oil producers and refiners, as it paves the way for the movement by rail of oil in trainload cargoes at rates comparable with pipe-line rates. The rate set by the Commission, in this case approximately  $3\frac{1}{2}$  mills per ton-mile, which is about the cost by pipe line, according to pipe-line reports to the I. C. C.

To illustrate what well may have happened if the older policies were abandoned in favor of one not dominated by the major oil companies, take the case of the East Texas oil field: Had the railroads joined with independent gathering systems, legalized as common carriers, and created joint through rates to consuming centers, it is doubtful if many of the trunk pipe lines from this field would have been built and the railroads serving this gigantic oil field would be transporting a fair share of the hundreds of millions of tons this field is producing.

Sedulously avoiding any joint or common arrangements with connecting rail carriers, the common carrier gasoline pipe lines have built their entire rate structure on the all-rail freight rates; their thousands of published proportionals to the pipe-line terminals are only the difference between the refinery all-rail rates and the short-haul rates to destinations beyond the terminals; obviously the higher the former and the lower the latter the more the revenue share to the pipe lines, whose rates are arrived at only through arithmetical subtraction with no regard whatever to operating costs.

With respect to one-rate situations alone, the railroads of the north-central portion of the Middle West have needlessly lost many millions of dollars; regarding this one railroad president has written me: " \* \* \* the matter is being discussed with our traffic department to see if some action can't be taken to change the tariffs as you suggest." I had referred to him the several thousands of motor competitive rates published from gasoline pipe-line terminals.

Motortrucks cannot be employed at these terminals to carry gasoline "ex pipe line"; not only are the pipe-line proportionals published to apply exclusively when the movement beyond is by rail but rule 31 of I. C. C. Tariff Circular No. 20 precludes such proportionals to or from junctions with motor carriers.

Even at pipe-line terminal points where large movements terminate or refinery operations take place such motor competitive rates as are deemed necessary should not be made, or left effective, as to "ex pipe line" shipments; as to these, no motor competition can possibly exist, and the depression of the rates on this traffic only serves to deplete railroad revenues and to strengthen a bare-knuckled foul-fighting adversary by increasing the share it retains of the useful but unused all-rail rate.

To the gasoline consumer it would matter little if the rails continue their obedience to this fictitious competition, for he pays the all-rail rate in any event and what he does not pay the delivery road is invoiced to him by the oil-company owner of the "common carrier" pipe line.

Regulatory bodies and a greatly augmented Anti-Trust Division of the Department of Justice are available just as much for as against the railroads; competitors' infractions of the law should, in my opinion, be formally and vigorously exposed in self-defense.

In espousing the regulation of competing common carriers, all such should be included; self-interest alone warrants the active support of such legislation as the now pending Borah-Gillette pipe-line divorce bill in Congress; enactment of this bill would automatically remedy a host of evils depressing alike to our railroads and to independent industry; it should not be forgotten by you gentlemen that in 1930 the Association of Railroad Executives passed a resolution recommending divorce of the common carrier pipe lines from shipper ownership—a resolution that was buried as quickly as the major oil companies learned of it.

The obvious solution is to regard the competing mediums of pipe lines as the relentlessly growing rivals they are and to hold them, as regulated common carriers, to the same accountabilities, the same tariff conformances and the same rate-making principles as those to which they invariably hold the railroads.

That some of the various situations exposed by me before the Temporary National Economic Committee (Monopoly Committee) such as the conspiracy between the Association of American Railroads and the major oil companies operating in Southeastern territory will go unprosecuted by the Department of Justice seems inconceivable; if and when such prosecution is instituted it seems to me that the arrogance and ruthless power of the integrated oil companies should mercilessly be exposed by you gentlemen.

Criticism herein is meant to be purely constructive; shipper volume, of course, must be reckoned with, but that volume should be differently appraised when such shippers also have, as at present, the concerted control, as well as the means for steadily expanding, a competing medium of transportation which patently takes the cream for its owners and leaves only the skimmed milk for all other carriers.

The pipe lines have been built with transportation profits taken away from the railroads by unfair and probably illegal means; for the railroads to longer close their eyes to the matter is slow suicide.

Respectfully yours,

EUGENE L. ORVIS.

WASHINGTON, D. C., January 10, 1940.

## Aggressor Nations

## EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

RESOLUTION ADOPTED BY THE YOUNG DEMOCRATIC CLUB  
OF SACRAMENTO COUNTY, CALIF.

Mr. BUCK. Mr. Speaker, under leave to extend my remarks, and because I consider the resolution of sufficient importance to be embodied permanently in the CONGRESSIONAL RECORD, I include a copy of a resolution adopted by the Young Democratic Club of Sacramento County, Calif., on Friday, December 8, 1939:

Whereas President Roosevelt advocated a policy of quarantining aggressor nations in his address at Chicago on October 5, 1937; and Whereas the Sacramento County Young Democrats have consistently condemned aggressor nations such as Italy, Germany, and Japan; and

Whereas Russia has brutally attacked and inhumanly bombed civilians of the peace-loving democracy of Finland; and

Whereas the Government of Finland and its citizens have, through adherence and application of democratic principles of government, earned the highest respect and sympathy of American citizens: Be it therefore

Resolved, That the Young Democrats of Sacramento County condemn Soviet Russia for her unwarranted aggression; and be it further

Resolved, That we mail copies of this resolution to our representative in Congress and ask him to introduce it into the CONGRESSIONAL RECORD as an extension of remarks.

## Great Expectations

## EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

RADIO ADDRESS BY HON. J. WILLIAM DITTER, OF  
PENNSYLVANIA

Mr. DITTER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the CONGRESSIONAL RECORD text of an address which I delivered over the Columbia Broadcasting System, Saturday, January 6, 1940, as follows:

A few days ago I reread Great Expectations. It is a masterpiece. It is Charles Dickens at his best—an old-fashioned novel—true to life in its day—typical of lives today—hopes and fears—joys and sorrows—now a bit of humor, then a touch of pathos—sympathy, tenderness, selfishness, and cruelty, all woven into an intensely human story. And with it the heartache of a great disappointment.

You may have forgotten the plot and most of the characters, but the mere mention of the book, no doubt, will bring back to your mind the queer name of the hero, Pip. It's an odd name. It has an amusing ring to it but little else. It was a convenience, that's all, easy to get hold of, easy to toss about. It's just like a lot of the names that have come out of Washington during the last 7 years—creatures of convenience—nicknames and labels—easy to handle and easy to cast aside.

From the beginning the New Deal has made much of names and phrases. What it has lacked in wisdom it has made up in words. For a time the "forgotten man" had his day. That phrase drew people into the tent that could never have been attracted in any other way. It has come to an untimely end and has long since been buried. When the need arose, "the more abundant life" was a headliner. It became the heart of the gospel. It carried a hint of Biblical saintliness and a suggestion of worldly satisfaction. Both were tempting. Unfortunately neither materialized. That

phrase, too, has gone the way of all flesh, unto its reward, wherever that may be. Heaven, you know, has a high standard.

Name calling has gone hand in hand with phrase-making, so that "economic royalists," "tories," "tweedledees and tweedledums," like the 57 varieties, have become household expressions. After all, the name of Dickens' hero, Pip, could have been worse. But the tragedy of the novel was not Pip's name; the tragedy was the hope that was crushed; the expectation that never saw the light of day.

Seven years ago the New Deal flung up its flag. It may have been a great expectation to you, as it was to millions of other Americans. A balm of Gilead was promised for all the ills of our social, economic, and political life. A recovery program would provide jobs in private industry for idle men looking for work. The farmer would be relieved of the risk of sowing at one price and reaping at another. Government costs would be reduced 25 percent. "Stop the deficits" sounded like a certainty. Federal outgo would be brought into line with Federal income. An "old-fashioned account book" was recommended as a useful article to have in the Federal household. The young people were promised "an opportunity to make an honest living." Into every city, village, and hamlet—into every farm and factory—into every home and at every fireside—to all the men, women, and children of America from Maine to California a song of salvation was sung. The promised land was at hand. What a great expectation. That was 7 years ago, and, lo, "the harvest is ended, the summer is past, and we are not saved."

Today, you are aware, as millions of other Americans are aware, of the big difference between great expectations and real results. It's like hoping for a home run and seeing a strike-out. They have blown so many bubbles in Washington that they are running out of soap and water. After all, there is nothing very substantial about a fool's paradise. As the New Deal enters the home stretch, millions of men are still looking for jobs, while other millions eke out a bare existence on relief. Failure and futility cut their deep furrows on the faces of wives and mothers. Taxes soar to top-notch levels, and the Federal debt skyrockets to an all-time high. Private enterprise staggers around from successive blows of investigation and regulation, hanging to the hope that crack-downs may ultimately end. Class hatred, bitterness, and ill will have taken root. A contemptuous disregard of law and order has developed. Constitutional restraints have been toyed with, and the whole field of our social and economic life has been sown with the tares of discord and disappointment—another tragedy of a great expectation.

In his message on the state of the Union the President suggested that "we must look forward." That was sound advice. But looking forward would be much more pleasant if the effects of the immediate past were not so painfully pressing on us, if we had not been tantalized so long with breathless expectancy, if we were not so weary from waiting, if we were not so tired of marking time. You, and every other thoughtful American, share the feelings of the President that we should look forward, that we should look ahead with the welfare of our children in mind. But it does seem to me that it's rather late to start looking; and, further, the looking forward should not be confined to what the future may have in store for our children as a result of conditions abroad. Those conditions may, but we pray that they never will affect them. But there is one thing from which they have no escape. That is not a foreign force but the cost of our own spending spree of the last 7 years. That's the legacy that we leave to our children. As a matter of common sense and common honesty, too, you and I, yes, all of us know that the sad thing about it is that so much of that legacy could have been avoided if the spend for our own prosperity, spend for political privilege, spend for party purges had not been the order of the day.

The President's suggestion to look ahead carried me back to my old home and my mother. From her, whose counsel and advice have always been dependable, and the worth of which has been so abundantly proven by the experience of the years, I learned as a boy one of the most valuable lessons of life, and that is, "Whatsoever a man soweth, that shall he also reap." That's a rule of life that no amount of fancy phrases or honeyed words can set aside. It's as sure as the law of the Medes and Persians. If you sow corn, you'll gather corn. If you sow debts, you'll reap debts. If you sow dissipation, you'll gather dissipation. You cannot sow extravagance and not reap distress. You cannot sow as a spendthrift and not reap as a bankrupt. You cannot squander today and not feel the pinch tomorrow. You cannot indulge in the revelry of a prodigal and not endure the misery of a swine herder. And that applies to a nation just as it applies to every man, woman, and child.

The old biblical rule of my mother, it seems to me, is just another way of saying that it's wise to look forward. For instance, they might have looked forward when \$4,000,000 was sunk by the New Deal in a resettlement fling in the State of New Jersey that was reported sold a few weeks ago under the hammer by the sheriff and is said to have brought the pitiful sum of about \$12,000. I wonder whether they looked forward when the New Dealers started their cooperative store at that socialistic venture at Greenbelt, Md., which is still operating, even though it is reported to be running in the red to the tune of a thousand dollars a month. Might it not have been wise to have looked forward when the millions of dollars were frittered away during the last 7 years on one project after another of the same type as the gambling ventures in Jersey and Maryland? What a price we've paid for this great expectation!

On Thursday of this week the President gave notice to our children of something to which they can look forward. Another deficit of more than \$2,000,000,000. This is the President's seventh annual Budget message and the New Deal's seventh successive deficit. The country has heard year after year the unfailing promise of a balanced Budget—tomorrow; always tomorrow. Now the last Budget is in. It shows that the Government, in spite of \$4,000,000 of added taxes, is to run in the red again for more than \$2,000,000,000. Little in the way of excuse is offered. On the contrary, an attempt is made to justify squandering with the argument that going deeper and deeper into debt is the road to recovery. That statement may deserve a headline, as the President declared, but to most of us who try to pay our debts it's a headache.

No matter how grave may be the economic results of such reckless, spendthrift policies as we have seen during these 7 years, a far greater danger is found in the flagrant disregard of public pledges. Economic damage may be repaired in time. Suffering and sacrifice ultimately may pay off the burden of the New Deal's foolish extravagance. But the moral damage of worthless public pledges cannot be estimated. Such damage can be repaired only by a reestablishment of moral principles which will include the fulfillment of promises made.

The real danger to American institutions lies in the repudiation of public pledges. When the time comes that the pledged word of the leadership of America is regarded merely as political convenience, then the very fabric of self-government is torn to shreds and the foundations of ordered security are crumbled. Public morality is more than a phrase—it is the heart of the whole system of self-government—the very lifeblood of freedom. Without it we cannot look forward to either domestic tranquillity or to our general welfare, nor, indeed, to any great expectation.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, January 19, 1940

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mrs. Charles S. Demaree, of the Missouri League of Women Voters, published in the League Bulletin for January 1940, on the subject Trade Agreements—Your Affair and Mine.

I also ask to have printed an editorial appearing in the Kansas City Times of January 15, 1940, on the subject of the reciprocal-trade agreements, under the caption "Misleading import figures."

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the League Bulletin for January 1940]

#### TRADE AGREEMENTS—YOUR AFFAIR AND MINE

League support of "downward revision of tariffs" grew out of a study on "living costs"—the concern of every taxpayer, housewife, and consumer. Reciprocal-trade agreements reduce tariffs (taxes) between the United States and a specific country on the basis of what each wishes most to buy and sell and of what each is the "chief supplier." The unconditional most-favored-nation provision extends these benefits equally and automatically to all the world. The exception is Germany, whose governmental policy discriminates against the United States.

All agreements are on a short-term basis, usually running about 3 years. This provides flexibility and permits changes desired because of changing conditions. But this advantage becomes a disadvantage should the program be discontinued. An amendment to the 1930 Tariff Act made the trade-agreements program possible. Unless the amendment is extended beyond June 12, 1940, when it expires, tariff making will revert to the terms of the iniquitous Smoot-Hawley Act. This was the highest in our history and caused the whole world to retaliate against us. By 1932 United States foreign trade had fallen from nine to three billion dollars.

#### BASIC ADVANTAGES UNDER THE NEW METHOD

1. Reduces cost to the consumer.
2. Rates now worked out by experts. Agreements are often very complex and require a year or more to complete. Congressmen have neither the time nor skill to do the job successfully. The experts in the State Department, with the cooperation of the Department of Commerce, consider the national welfare, not just local demands, in effecting the agreements.
3. Eliminates logrolling. Because these experts are not up for reelection, they can be impartial and independent.
4. By treating with one nation at a time, a balance is afforded between the United States straight tariff and the subsidy or monopoly systems of other countries. Abrupt changes on a large scale are avoided, in contrast to the effects from a whole new act covering all rates on all trade.

5. By increasing imports into the United States, other countries are provided with the means of payment for our exports to them.
6. Offers an outlet for surplus, without which Government regulation and regimentation are inevitable. It thereby safeguards private enterprise and encourages initiative and expansion.
7. Increases labor and wages. In evaluating foreign trade the profit from conversion of the raw material must be included. A pound of sugar comes in. By the time it is sold as a box of candy innumerable industries have profited, including the paper-box manufacturer, etc. Wages, in turn, spent for meat, shoes, butter, etc., help the domestic market.
8. Promotes peace. "Access to raw materials" is given as a primary cause of war. The World Conference on Raw Materials offered one solution—increased trade. Secretary Hull says, "Without economic disarmament, enduring prosperity and military disarmament remain a forlorn hope."

#### ATTACKS

1. Senate demands for ratification. This is simply a device for reverting to logrolling. Congress retains its control through the enabling act.
2. Revenue bills taxing specific imports. This directly violates our agreements and justifies the affected countries in canceling their contracts offering concessions to us.
3. Equalize cost of production. In an open letter to Senator VANDENBERG (December 16, 1939), Secretary Hull writes, "Seldom can full cost data be obtained; and even when it is, there is a wide variation of costs among different producers. There is no such thing as 'the cost.' Other factors must be considered; the size of the imports in relation to domestic production; comparability of the imported and domestic products as to type and quality; seasonal factors; and a great many others."

It is important that we discover the facts before we conclude we are hurt. Venezuela oil is limited by quota to a small percent of United States production. It is the crude type used in oiling streets. United States producers refine their oil, thereby securing a higher quality and price. Argentine beef: By law no fresh meat can come into the United States from Argentina. Because there the supply is so much greater than the demand, they can the quality that in this country we use for steaks and roasts. United States packers have large plants in South America. Argentine canned meat is better and cheaper than ours. The Navy incident: A few months ago the Navy wanted to buy 48,000 pounds of canned beef and asked for bids. Argentina was low at 9 cents a pound. The lowest United States bid was 23 cents. By purchasing from Argentina, the Navy Department saved 14 cents a pound of the taxpayers' money. Under the "Buy American" Act a differential of 25 percent is established on purchases in excess of \$100. The lowest United States bid was over twice the differential allowed even by the "Buy American" Act. The whole purchase was small compared to the order Argentina had just placed here for over \$2,000,000 of automobiles. From 1924-38, Argentina bought from the United States almost one-half billion dollars more goods than we bought from her. This has forced her to turn to Europe for trade, and accounts for her temper at pan-American conferences.

With our European trade dislocated indefinitely by the war, it is essential as never before we develop this logical and friendly Latin-American market. No nation can sell without buying. This is doubly true of the United States, the great creditor nation of the world, controlling one-third of the world's economic wealth. We must learn to import and like it.

#### SPECIFIC RESULTS

Twenty-two agreements, including the renegotiated one with Canada; 8 in Europe; 1 in Turkey, important politically; 11 in Latin America. Pending: Cuba (supplemental); Belgium (revision); Argentina; Chile; and Uruguay. By 1937-38, United States trade with agreement countries increased 61 percent over the last nonagreement year, 1934-35. Increase to nonagreement countries was 37 percent. Since 1929, total United States foreign trade has doubled, from three to six billion dollars.

Mrs. CHARLES S. DEMAREE,  
State Foreign Policy Chairman.

[From the Kansas City Times of January 15, 1940]

#### MISLEADING IMPORT FIGURES

A considerable part of the farm opposition to the reciprocal-trade agreements is based on a misunderstanding of trade figures. A recent report from Washington that imports of live cattle and beef in the first 11 months of 1939 represented 8.6 percent of the total volume of cattle and calf slaughter in the United States in the same period was especially misleading.

In the first place, imports of 87,000,000 pounds of beef and veal in the 11 months were only 12,000,000 pounds more than in the same period of 1938. And total imports of 127,000,000 pounds of meat were only 4,000,000 pounds more than in the previous year. Both were off sharply in November, compared with a year ago.

Far overshadowing the import totals were 11 months' exports of beef, pork, and lard, amounting to 389,000,000 pounds, or nearly 35 percent more than in the previous year, with further expansion in pork and lard exports in prospect as a result of the coincidence of war in Europe and record hog production in the United States.

Live cattle imports did increase sensationally last year, but of the 734,000 head received in the first 11 months of 1939 fully two-thirds were animals in stocker and feeder flesh under 700 pounds, which proved a lifesaver for Kansas and Oklahoma pastures, many of which would have been empty last summer except for the record imports from Mexico. In fact, the light Mexican cattle went all

over the Corn Belt to help farmers cash in on surplus feed supplies, which might otherwise have been a dead loss.

And also overlooked by trade agreement opponents, more than half of the cattle that were imported last year were in the 200- to 700-pound weight division, on which no reduction in tariff applied, and the lower tariff applied on only a limited quarterly quota of other weight cattle.

## Defenders of American Form of Government

### EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, January 19, 1940

ARTICLE BY HON. EDWARD R. BURKE, OF NEBRASKA

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the RECORD an article prepared by me and published in the American Czech magazine of the issue of January 1940. The article is entitled "Militant Defenders of Our Form of Government."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### MILITANT DEFENDERS OF OUR FORM OF GOVERNMENT

(By Hon. EDWARD R. BURKE, United States Senator from Nebraska)

In a period in which the preservation of the American form of government is of vital importance it is gratifying to be able to rely upon our citizens who are of Czech extraction. It is significant that we do not find Czech names in the headlines on the frequent newspaper stories of subversive activities in this country. Instead our Czech people are prominent in such causes as the effort to preserve the Czechoslovakian democracy which was a victim of totalitarian authority in Europe.

The American people have a peculiar bond of sympathy for Czechoslovakia. Our Government was in some of its essentials the pattern of the Czechoslovakian Republic which emerged from the World War. The leaders of that Republic strove to foster the same democratic theories which are characteristic of our form of government. The present effort to preserve the national unity of the people rests upon principles which bring a response from the people of the United States.

Czechoslovakia was symbolic of the part played by the United States in the Peace Conference of 1919. The name of that country has significance to the American people in connection with President Woodrow Wilson's fight to obtain a peace treaty which would assure the right of self-determination for minority racial groups. The Republic which weathered the storms for 20 years was a credit to the ideas for which President Wilson stood in the memorable controversies of the immediate post-war period. That the Republic was not able to survive in the face of totalitarian power does not reflect upon the soundness of the theories upon which it was established.

The United States not only had a part in the building of the Republic in the post-war conferences but gave encouragement to its people while the war still was in progress. Our country was among the nations which prior to the armistice formally recognized the claims to independence declared by the Czechoslovakians. Consequently the American people had a special feeling of sorrow when the Czechoslovakian people found themselves again under the authority of an outside government.

Seldom has a nation, large or small, made a deeper impression upon other nations with respect to the high caliber of its statesmanship. Czechoslovakia was extraordinarily fortunate in the type of men who were the leaders in its movement for independence. The two educators, upon whom the burden of leadership rested, the late Thomas Masaryk, the first President of the Republic, and Eduard Benes, an associate of President Masaryk in the struggle for independence and later to become President himself, were unusual characters. The objective of each was the welfare of the Czechoslovakian people. Neither was actuated by the selfish motives which too often have been associated with political leaders.

President Masaryk was a true Czechoslovak, one parent being a Slovak and the other a Czech. He typified the melting pot which was the basis of the amalgamation of races. His policies as President were in keeping with ideals of democracy and individual liberty and in sharp contrast to the practices of dictatorships under which rights of citizens are ruthlessly restricted. It was Masaryk who established religious freedom in Czechoslovakia. Although strong in devotion to his own principles, Masaryk was always tolerant of those who disagreed with him. His attitude was one that was rare on the continent of Europe but one which strikes a sympathetic chord among the people of the United States.

Dr. Benes was a loyal supporter of Masaryk and a worthy successor as a leader of his people. It was characteristic of him that during his recent stay in the United States he should be unwilling to voice statements which might be considered improper while a guest within the borders of a country which was maintaining neutrality in European controversies.

Whatever may transpire in the future the Czechs have reason for pride in traditions which go back not only years but centuries before the Treaty of Versailles. Even in a very early period these traditions were associated with democracy. Czechs struggled against imperial aggression, and were a part of the Austrian Empire before the World War. Even under adverse conditions the people developed a distinctive culture and literature. In industry and agriculture Czechoslovakia has held an increasingly commanding position in recent years. The Czech national motto, "Truth Prevails," is significant of the principles of the people.

The 1,500,000 or more people in the United States of Czechoslovak birth or ancestry compose an element which has made a worth-while contribution to our melting pot. Many of these people, as in Nebraska, are farmers. In keeping with traditions handed down to them from their ancestors they are good farmers. They have helped materially to develop some of our western agricultural areas. And in many other fields Americans of Czech ancestry have attained distinction in Nebraska and elsewhere.

It is no accident that people of such an ancestry should be found in the movement to preserve the institutions which have been characteristic of our form of government for a century and a half. Even in the United States there have been signs of the world trend toward a centralization of the power of government and a denial of individual liberties. Movements in this direction represent an attack upon our basic principles which have made this country one to which people of Czechoslovakia and other countries of Europe have been glad to come.

In the light of the democratic principles associated with the traditions of our people of Czechoslovak birth or ancestry it is natural that they should now be found among the most militant defenders of our system of government.

## Unbelievable if You Did Not See It

The flimsy, unstable foundation upon which some decisions of the circuit courts of appeals, of the United States Supreme Court, have been based.

Federal judges, with Congress, share the responsibility for industrial strife.

### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

Mr. HOFFMAN. Mr. Speaker, one of the reasons for the maladministration of the Wagner law, which has caused some of the unemployment, some industries to leave cities which have not given them protection against sit-downs, slow-downs, and strike violence, was disclosed when the Smith committee called some of the Board's "reviewing attorneys" to the stand.

The testimony of these reviewing attorneys demonstrates that it has fostered strikes, aided the C. I. O. in organizing campaigns as against the A. F. of L. and independent workers, but it does not portray the complete misconception by the Board of the true purpose of the act.

It would be a good plan if unions and those operating factories would send someone representing them down to these hearings to take a look at some of these young women who are serving as reviewing attorneys. Not that the girls are not all right. They are good-looking, intelligent-appearing, well-groomed young women; but by no stretch of the imagination can the average citizen conceive of any one of them adequately performing a task which would tax the experience, the legal knowledge, and the judicial temperament of an experienced judge. And that is just the function—one which Congress never intended they should perform—which has been delegated to these young women.

To get the picture accurately, consider the procedure of the Board, which is this: When a labor dispute arises, the Board sends out an investigator. If he reports an unfair labor practice, a complaint is filed against the employer—never against the employee—by the Board. A trial examiner

is sent out. Too often the trial examiner has little knowledge of law, no experience with legal procedure or industrial operations. Too often he has been selected by the C. I. O. or its general counsel, Lee Pressman. The examiner takes testimony. Of one such examiner a United States circuit court of appeals said last week: "His purpose was deliberately to discredit the testimony" of the employer's witnesses.

After the testimony is taken, it goes to a reviewing attorney, who summarizes this testimony and then presents to the Board his or her conclusions as to what the testimony shows. The Board then directs this reviewing attorney to prepare a decision, which the Board later adopts. If the employer does not like this decision, he can appeal to the circuit court of appeals, and these findings, under the act, "if supported by evidence, shall be conclusive."

Do you follow the procedure? The circuit court of appeals must accept the findings of the Labor Board, whose practice it is to accept the findings of the reviewing attorney, which are all too often based upon unfair hearings by the trial examiner. Assuming that the trial examiner is fair, the whole structure has for its foundation the conclusions of the reviewing attorney, upon which the Board has based its decision.

Here is the point: The whole superstructure—that is, the finding of the Board, the decision of the circuit court of appeals, the decision of the United States Supreme Court—rests upon the conclusions of the reviewing attorney, who has examined the transcript prepared by the trial examiner and has orally stated his, the reviewing attorney's, views of what the transcript shows to the Board.

Who is the reviewing attorney? I wish you could have seen some of these reviewing attorneys—some who worked upon cases like that of the Ford Motor Co. and others equally important; cases which involved the jobs and the livelihood of thousands. Those who have so far appeared are utterly without experience which would fit them to express opinions in cases such as come before them—girls, some less than 29 years of age.

From the testimony of the Smith committee, take these facts as to two of these reviewing attorneys:

Miss Margaret McDuff Farmer, appointed March 11, 1938; a graduate of Columbia; admitted to practice law March 14, 1938.

Ann Landy Wolf, now 29 years of age; born in Hungary; came to this country in 1929; took out her first papers in 1930; became a citizen in 1935; completed her course at the law school of Western Reserve University in 1937; appointed as a reviewing attorney, February 1, 1938. She receives \$2,700 a year. Her husband, an attorney with another Government department, receives \$4,600 per year.

Mrs. Wolf has been assigned to some 14 cases; on one, the Ford case, at St. Louis, another reviewing attorney has been assisting her. The record in that case comprises more than 21,000 pages.

It already appears from the record that, in the files of the case which she is now reviewing, is an extremely prejudicial affidavit which is not a part of the record. There are other communications in the file which are not a part of the record. Yet, unless the practice is changed, this young woman and her associates will go before the Board and orally express their opinions as to what the decision should be. Then the Board will indicate its opinion, based on what it has been told, and, on appeal, the circuit court of appeals will "swallow" that decision.

In one case Miss Farmer wrote the decision for the Board—Sorg Paper Co., case No. R-633; reported in volume 8 of the Decisions of the National Labor Relations Board, page 657. Yet, when asked whether, in view of previous decisions, that decision was correct, stated that she did not know.

No criticism is offered because these reviewing attorneys are women or, more correctly speaking, young girls. Young men are doing the same kind of work, as are older examiners and reviewing attorneys who have no qualifications for the jobs to which they have been assigned.

LXXXVI—App—19

They are utterly without experience, either as an attorney, a judge, an industrial worker, or an employer. What can they or the young men possibly know about the difficulties which confront employers and employees in great industrial plants?

Nevertheless, these girls and these young men make conclusions, give the Labor Board findings, the result of which will make or break a great industrial enterprise, which may require that employer to pay thousands of dollars, or, as in Republic Steel, millions of dollars in back pay to employees, which conclusions are later adopted by a circuit court of appeals. No doubt the judges who adopted some of these opinions will be hot with indignation when they discover on what a flimsy foundation they have been basing some of their opinions.

One might just as well go to the kindergarten department of a local school and ask a 5-year-old tot how she would cook the noon dinner as to ask one of these reviewing attorneys how one of these industrial disputes should be settled.

And do not forget that the sworn testimony has disclosed that the Board's own secretary, on one occasion at least, that of Inland Steel, assisted in building the foundation for a strike, for a charge of unfair labor practice, which resulted in one of the most violent and disastrous strikes the country has witnessed; in the destruction of property and in industrial turmoil and legal proceedings which, combined, lasted 2 years 8 months and 27 days after the Supreme Court had decided the point at issue.

Do you wonder that some of us are impatient at the failure of Congress to remedy the situation? Would you be impatient if a Government agency, after the Supreme Court in a unanimous decision had said you did not need to sign a written contract, brought about a strike in your business and kept you in court for almost 3 years? Would you?

Yet that is just what the Board, through its secretary, Nathan Witt, did in the case against Inland Steel. That strike was brought about at Witt's suggestion that the union demand that the company sign a written contract. This, although the committee reporting the Wagner bill to the Senate had said that the act did not require the making of a contract.

This, although Senator WAGNER, as early as November 2, 1935, in a written statement to the New York Sun, had said:

The law does not require any employer to sign any agreement of any kind. Congress has no power to impose such a requirement.

This, although the Supreme Court of the United States, on April 12, 1937, had said that the act did not require the making of a contract.

Nevertheless, Witt, acting as secretary of the Board, met with Lee Pressman, general counsel of the C. I. O., and Philip Murray, vice president of the C. I. O., at Pittsburgh on June 2, 1937, and suggested the making of such a demand. The demand was made; it was refused, as Witt, Pressman, and Murray knew it would be, and a complaint followed on the 12th day of June 1937; and the issue was not decided by the circuit court of appeals until January 9, 1940.

The Supreme Court, several of the circuit courts of appeals, including the Circuit Court of Appeals of the District of Columbia and the District Court of the District of Columbia, have said that the remedy rests with Congress. That statement is undoubtedly true, but it is not the whole truth.

The courts themselves are charged, when cases come before them, with seeing to it that every citizen is given the equal protection of the laws; that, in all litigation, there is due process of law. The courts have failed miserably in construing the N. L. R. A. for they have denied to employees and employers alike their day in court in all representation cases. They have permitted the Board to deny to employees who have never been served with process the right to bargain collectively through representatives of their own choosing. They have permitted the Board to establish the practice of denying to American citizens the right to earn a livelihood at a job offered to them, unless they paid tribute to some union.

It is no answer to the denial of this right to say that Congress, by the Wagner Act, so ordained.

The Supreme Court, in the *Scottsboro* case, rightly held that certain colored men, accused and convicted of a statutory offense and condemned to death, had been denied a fair trial—due process of law. But when these cases involving the construction of the Wagner Act came before the Court, it held, even though the employees had not been convicted—no; not even charged with nor suspected of a crime—that the employees should not be permitted to bargain collectively through representatives of their own choosing, and so denied to them due process of law—equal protection of the laws—American Federation of Labor against *N. L. R. B.*, decided January 2, 1940.

That the battle is not over is evident from a recent decision of the Circuit Court of Appeals for the Ninth Circuit, where that court, on January 9, 1940, in deciding the case of *N. L. R. B. against Sterling Electric Motors, Inc.*, called attention to the decisions of the Supreme Court in the *Greyhound* cases and refused to enforce an order of the Board denying to a group of employees the exercise of the right to bargain collectively through representatives of their own choosing, as given them by section 7 of the National Labor Relations Act.

The result of the *A. F. of L.* case is that, if a citizen living on the Pacific coast wants to do longshoreman's work, he must first join the *C. I. O.* and pay tribute to it.

It is the duty of Congress forthwith to, by amendment, make the *N. L. R. Act* a fair and a just law. At the same time it would be well if the Supreme Court would come to a realization that it has been basing its decisions in these cases involving the Wagner law upon conclusions arrived at by a reviewing attorney rather than upon a judicial decision of the Board or of a circuit court of appeals.

Undoubtedly judges of the circuit courts of appeal will be amazed to learn—and they will learn if they read the record of the Smith committee—that they have been basing their decisions, not upon findings of fact made by the Board but upon the conclusions of a reviewing attorney who was utterly without qualification to do the job assigned to him.

### Supreme Court of the United States Renders Vital Decision

#### EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 18, 1940

Mr. LEMKE. Mr. Speaker, in the case of *John Hancock Mutual Life Insurance Company against Benno Bartels*, the Supreme Court of the United States, following a long line of decisions, in effect, by its opinion, informs some Federal judges that they must give full force and effect to the provisions of a constitutional statute; that they are not at liberty to annul an act of Congress by obvious misinterpretation.

The principal and ultimate question involved in this case was whether the intent of Congress, as expressed in unambiguous language, was to control or whether a few Federal judges could disregard, misconstrue, and twist the language so as to defeat the clear intent of Congress. In other words, the question was whether these judges could by judicial legislation annul an act of Congress. The Supreme Court says "No."

Mr. Chief Justice Hughes delivered the following opinion of the Court:

In this proceeding brought by a farmer under section 75 of the Bankruptcy Act, the district court dismissed the debtor's petition. The circuit court of appeals held that this action was contrary to the requirements of the statute and directed the proceeding to be reinstated (100 F. (2d) 813). Because of conflict in the rulings of the Court of Appeals of the Fifth Circuit, due to the differing views

of the judges composing the court in the cases cited<sup>1</sup> and because of the importance of the question, we granted certiorari, April 24, 1939.

Respondent Bartels presented his petition to the district court on December 2, 1937, asking that he be afforded an opportunity to effect a composition or extension of time to pay his debts under section 75. The court referred the matter to a conciliation commissioner, directing the debtor to appear before the commissioner and to submit to such orders as might be made in proceedings under that section. A meeting of the creditors was held on December 21, 1937, at which the debtor was present and was examined. It appeared that his debts amounted to about \$10,000 of which about \$8,000 (including interest and attorney's fees) was owing to the John Hancock Mutual Life Insurance Co., and was secured by a lien upon his home. As the debtor was unable to obtain an agreement with a majority of his creditors in number and amount, he notified the commissioner that he would apply to be adjudged a bankrupt under subsection (s) of section 75. That application was filed on January 10, 1938. The debtor asked that "his property be appraised," that "his exemption be set aside to him," and that he be permitted "to retain possession of his property under the supervision of the court." On the same day, the district judge entered an order adjudging the debtor a bankrupt and requiring further proceedings before the commissioner acting as referee under subsection (s).

On March 23, 1938, the John Hancock Co. moved to set aside the adjudication and to dismiss the debtor's petition on the ground that the debtor was not entitled to avail himself of the provisions of subsection (s); that he had not presented any feasible plan for a composition and extension of his debts, and that his petition "was not filed in good faith" or "with any hope or expectation of working out his debts and paying up his delinquencies but apparently for the sole purpose of hindering and delaying his creditors." The company also alleged that at the fair market value of the real property held by it as security there was no equity for the debtor and that the company would suffer irreparable loss unless the adjudication was set aside and the proceeding dismissed. The debtor denied these allegations and alleged that the land on which the company had a lien was worth unimproved more than \$7,000 and that the improvements were worth \$6,000 and that he thus had a large equity which would be lost to him unless he obtained the benefits sought under the applicable law.

At the hearing of the motion on April 5, 1938, the court received the evidence previously taken before the commissioner and additional testimony. Thereupon the motion was granted. The district judge said in his opinion that the debtor had not made any proposal which could be construed as a "good faith offer for an extension or composition," and hence the debtor was not entitled to be adjudged a bankrupt under subsection (s). The district judge observed that the evidence was conflicting as to the value of the land (100 acres); that, separating the land from its improvements, certain of the debtor's witnesses placed its value at \$70 an acre and the improvements at \$5,000 or \$6,000, while witnesses for the creditor valued the land at about \$40 an acre and the improvements at about \$2,000. He thought that there was no reasonable probability of the debtor's financial rehabilitation. In that view the district judge concluded "that the order adjudicating the debtor a bankrupt under subsection (s) was improperly entered and should be set aside and the case dismissed."

We think that the district judge failed to follow the mandate of the statute, and that the circuit court of appeals was right in reversing the judgment and ordering the proceeding to be reinstated.

Subsection (s) of section 75, as amended by the act of August 25, 1935,<sup>2</sup> prescribes a definite course of procedure. That subsection applies explicitly to a case of a farmer who has failed to obtain the acceptance of a majority in number and amount of all creditors whose claims are affected by a proposal for a composition or an extension of time to pay his debts. That was Bartels' situation. Provisions for proceedings by a farmer to obtain a composition or extension when he is insolvent or unable to pay his debts as they mature are found in subsections (a) to (r) of section 75. For that relief Bartels had presented his petition under subsection (c), and the district court had approved the petition as properly filed. According to the report of the conciliation commissioner to whom the matter was referred according to the statute Bartels had appeared at the meeting of the creditors and had submitted to a detailed examination concerning his financial condition. He proposed to sell certain property and to apply the proceeds to the payment in part of the amounts due to the John Hancock Co. the secured creditor. He succeeded in obtaining an agreement with certain unsecured creditors for an extension, but the secured creditor refused consent, as Bartels could not meet all his arrears. Bartels was thus precisely in the condition prescribed in subsection (s).

The subsections of section 75, which regulate the procedure in relation to the effort of a farmer-debtor to obtain a composition or extension, contain no provision for a dismissal because of the absence of a reasonable probability of the financial rehabilitation of

<sup>1</sup> See *Barter v. Savings Bank of Utica*, 92 F. (2d) 404; *In re Henderson*, 100 F. (2d) 820; *Wilson v. Alliance Life Insurance Co.*, 102 F. (2d) 365.

<sup>2</sup> 49 Stat. 943; *Wright v. Vinton Branch*, 300 U. S. 440.

the debtor.<sup>3</sup> Nor is there anything in these subsections which warrants the imputation of lack of good faith to a farmer-debtor because of that plight. The plain purpose of section 75 was to afford relief to such debtors who found themselves in economic distress, however severe, by giving them the chance to seek an agreement with their creditors—subsections (a) to (r)—and, failing this, to ask for the other relief afforded by subsection (s). The farmer-debtor may offer to pay what he can, as Bartels did, and he is not to be charged with bad faith in taking the course for which the statute expressly provides. The only reference in section 75 to good faith is found in subsection (i), which relates solely to the confirmation of proposals for composition or extension when the court must be satisfied that the offer and its acceptance are in good faith and have not been made or procured by forbidden means or except as provided in the statute. That provision manifestly hits at secret advantages to favored creditors or other improper or fraudulent conduct.

As Bartels' case thus fell within subsection (s), he amended his petition and asked to be adjudicated a bankrupt, as that subsection permits. He was so adjudicated. Bartels then asked, also as provided in subsection (s), that his property be appraised, that his exemptions be set aside to him as provided by State law, and that he be allowed to retain possession of his property under the supervision of the court—that is, subject to such orders as the court might make in accordance with the statute. The court failed to take that action. Instead of having the property appraised, the court received conflicting testimony as to value, discussed the chances of the debtor's rehabilitation, and dismissed the petition and all proceedings thereunder.

The procedure under subsection (s) is intended to protect all interests. It provides in paragraph (1) that after the value of the debtor's property has been fixed by the prescribed appraisal, the referee shall set aside the debtor's unencumbered exemptions and direct his retention of possession of the rest of his property subject to all liens and to the court's supervision and control. Under paragraph (2), if there has been compliance with the statutory conditions, the court is directed to stay all proceedings against the debtor or his property for a period of 3 years, and during that time the debtor may retain possession of all or part of his property subject to the court's control, provided he pays a reasonable rental semiannually. That rental is to be paid into court and is to be used first for the payment of taxes and the upkeep of the property, and the remainder is to be distributed among the creditors as their interests may appear. If the court finds it necessary to protect the creditors "from loss by the estate" or "to conserve the security," the court may order any unexempt perishable property of the debtor, or any unexempt personal property not reasonably necessary for the farming operations of the debtor, to be sold at public or private sale, and the court, in addition to the prescribed rental, may require payments to be made by the debtor on the principal of his debts in the manner set forth. Then it is provided in paragraph (3) that at the end of the 3-year period, or at any time before that, the debtor may pay into court the appraised value of the property of which he retains possession, "including the amount of encumbrances on his exemptions, up to the amount of the appraisal, less the amount paid on principal," for appropriate distribution to his creditors. There is the proviso that upon the request of any creditor or of the debtor, the court shall cause the debtor's property to be reappraised or, in its discretion, set a date for hearing, and thereafter fix the value of the property in accordance with the evidence; and the debtor shall then pay the value so arrived at into court, less payments made on the principal, for distribution to his creditors. In that way, by the order of the court, the debtor may regain full possession and title of such property, the ascertained value of which has thus been devoted to the payment of his debts. There is the further proviso, for the protection of secured creditors, that upon request in writing by any secured creditor the court shall order the property upon which the secured creditor has a lien to be sold at public auction. (See *Wright v. Vinton Branch*, supra, pp. 458-461.) The debtor is to have 90 days to redeem the property so sold by paying the amount for which it was sold, with interest, into court, and he may apply for his discharge as provided in the act. If, however, the debtor at any time fails to comply with the provisions of the section or with any orders of the court made thereunder, or is unable to refinance himself within 3 years, the court may order the appointment of a trustee and direct the property to be sold or otherwise disposed of as provided in the act.

The scheme of the statute is designed to provide an orderly procedure so as to give whatever relief may properly be afforded to the distressed farmer-debtor, while protecting the interests of his creditors by assuring the fair application of whatever property the debtor has to the payment of their claims, the priorities and liens of secured creditors being preserved. (See *Wright v. Vinton Branch*, supra; *Adair v. Bank of America Association*, 303 U. S. 350, 354-357; *Wright v. Union Central Life Insurance Co.*, 304 U. S. 502, 516, 517.)

We are not here concerned with questions which may arise in the course of the administration under the statute, but merely with the duty to follow the procedure which the statute defines and the district court failed to observe. We hold that on his amended petition invoking subsection (s) Bartels was entitled to be adjudged a bank-

rupt and to have his proceeding for relief entertained and his property dealt with in accordance with that subsection.

The judgment of the circuit court of appeals reversing that of the district court and directing the proceeding to be reinstated is affirmed and the cause is remanded to the district court with direction to proceed in conformity with this opinion.

It is so ordered.

The Frazier-Lemke moratorium has saved thousands of homes. It has kept from the relief rolls hundreds and thousands of men, women, and children who, but for this law, would have been evicted. This is testified to by hundreds of letters that I have received from every State in this Union. These letters come from lawyers, professional men and women, businessmen, and farmers alike.

Under this law the creditors lose nothing because the farmer who files under it will have to pay a reasonable rental and obey the orders of the court. If he fails in doing this, he is through. That reasonable rental is all the creditors could get if they owned the property, and is all that an honest creditor can ask for or is entitled to.

In conclusion, permit me to state that I feel that section 75 of the Bankruptcy Act is entitled to the same generous and liberal treatment at the hands of the district courts that has been given to sections 74, 77, and 77B. Surely the courts ought to be willing to give to a farmer the same consideration under section 75 as they have given the railroads and corporations under sections 77 and 77B. In accordance with the provisions of section 75, it is the duty of the district courts to continue a farm as a going concern. I repeat, there is nothing unusual in section 75. It simply applies well-established principles of bankruptcy law to agricultural indebtedness.

This may appear novel to some district courts, but there is no provision in section 75 that the bankruptcy courts of this Nation have not already made use of in some cases. The courts have allowed going concerns to remain in possession and to continue in business under trustees and without trustees. They have permitted possession and the payment of indebtedness of such concerns on the installment plan, with or without interest.

Sections 75, 77, and 77B of the Bankruptcy Act mark a new epoch. From now on, in the interest of the public, property and wealth will be conserved in the hands of those who created it—not destroyed. The debtor will be considered as well as the creditor. The Bankruptcy Act is going to become an act of conservation and not an act of wreckage.

During the depression and recession Congress, legislating in the interest of the Nation, saw fit to pass the sections referred to. It did this because it felt they were essential for the preservation of the Nation. The Supreme Court has approved that legislation and has given it a broad and liberal interpretation so as to effectuate the intent of Congress within constitutional limitations.

This amendment is a conservation act. Nobody loses anything—it conserves property and values. The creditors will get the present value of the property—that is all they could get before this amendment was enacted or that they are entitled to. In fact they will get more under this amendment than they ever would get by wrecking another million farm homes and destroying all values.

This is a case of bankruptcy. The legislation in question is legislation on the subject of bankruptcy. The only farmer who can take advantage of this act is a bankrupt farmer. A bankrupt is a financial wreck. The question of interest and profits in bankruptcy proceedings is generally out of the question. The question is one of salvaging, saving what can be saved out of the wreck.

Section 75 is legislation in behalf of the public welfare. Over 66 percent of all the farms of this Nation are mortgaged (*The World Almanac*, 1937, p. 346). Due to low prices, drought, and other adverse conditions over 170 farmers out of every thousand lost their farms by mortgage foreclosure, bankruptcy, judgment, or tax sales from March 15, 1933, to March 15, 1937 (Circular No. 417, Department of Agriculture, and February 1938 Circular, Bureau of Economics).

<sup>3</sup> What is said upon this point in Note 6 in *Wright v. Vinton Branch*, 300 U. S. 440, 462, was not essential to the opinion in that case and is not supported by the terms of the statute.

That is the problem that Congress dealt with in section 75 and will continue to deal with. In the solution of that problem the district courts must do their part. They must not obstruct remedial legislation by misinterpretation—by reading something into section 75 that is not there.

The power of the executive, the judicial, and the legislative branches of government are all derived from that same Constitution, and each of these three coordinate branches of our Government must respect the power of the other under the Constitution.

Obviously, if without redress the 94 district courts are permitted to ignore the plain language of an act of Congress and read their own ideas into the act, then there is nothing to prevent judicial legislation—the encroachment of one branch of the Government upon another.

### **Democratic Finance—A Serum Against Artificially Induced War Fever—A War Measure for the National Control of Credit—A Post-War Step Toward the Decentralization of Money Power**

#### **EXTENSION OF REMARKS**

OF

**HON. JERRY VOORHIS**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, January 22, 1940*

Mr. VOORHIS of California. Mr. Speaker, the National Credit for Defense Act is based upon a great lesson taught by the World War of 1914–18. That lesson is that there is neither sense nor justice in the way modern wars are financed. Wars are waged by the capacity of a people to make supreme sacrifices. This capacity for supreme sacrifice is the basis for the real credit of a people. It includes the mobilization of men and industry and agriculture and the moral resources of the people. These things come from the people and belong to the people; yet when the people go to war, they raise the money to carry on the war by pledging their real credit to the private banking system. The people pawn their own real credit and the banks consent to monetize the people's credit in the form of interest-bearing debt. The people fight and suffer the war; the banking system lends back to the people the use of the people's own credit. This is unreasonable and unjust.

#### **THE NATIONAL CREDIT FOR NATIONAL DEFENSE**

The National Credit for Defense Act calls into question this process of pawning the Nation's credit in wartime and afterward saddling the Nation with war debt. Instead this bill affirms the principle that the Nation is the rightful owner of its own credit, and that through the Congress the Nation can monetize its credit in a non-interest-bearing debt-free form, and thus pay for the war as it is fought without piling up a huge war debt.

All over the democratic world the idea is gaining ground that wars can be financed in such a way as not to increase the national debt. There is a profound difference between 1914, when finance was a mystery, and 1940, when people understand that banks create new money by book entries. Even the house organs of bankers, like the British magazine *Branch Banking*, no longer contest this fact. In its July 1938 issue *Branch Banking* admitted that the cat was irretrievably out of the bag when it declared that—

There are enough substantial quotations in existence to prove to the uninitiated that banks do create credit without restraint and that they do create the means of repayment within themselves.

If the banks can do that on behalf of themselves, why cannot they be instructed by a sovereign government to create war credits free of interest and free of debt on behalf of the people who are straining their will and offering their lives to win a war?

The people of the Province of Alberta, Canada, have asked that question, and last September the government of that Province passed a resolution stating that—

We believe that Canada should finance its share in this war, not by the creation of huge debts but in the following manner: By the creation by the Government of the necessary credit and currency combined with definite price regulations to prevent any serious inflationary rise in prices.

In the Commonwealth of Australia the Tasmanian Parliament and the South Australian Parliament have passed resolutions expressing the opinion that the national credit of the community should be used in the interests of defense, primary industries, and the people of Australia, while in the Federal Parliament of Australia there is a steady demand that the Commonwealth Bank be instructed to monetize the nation's credit resources without adding to debt or taxation. In England the Social Credit Party agitates for the conscription of money power, and its leader, John Hargrave, has declared for fighting the war "on tick." He advocates as a war measure that free equal rations be distributed to all and that the money system become merely a ticket system to keep track of production and consumption. Also, in England, Maj. C. H. Douglas has advanced a war-finance plan which directs that banks issue loan credits to industry supplying material to the Government, these loan credits to be free credits in the sense that industry's obligations would be discharged when the goods were delivered. No money would be paid back to the banks, either by industry or the Government.

These are signs forecasting that if the war goes on democratic nations will adopt national-defense measures, putting their banking systems out of the profitable business of lending the national credit at interest to peoples engaged in a life-and-death struggle and placing money as much in the service of the nation as are its men.

The National Credit for Defense Act is a bill with a triple reference. It is a bill that will help to prevent war and therefore it is a peace measure. It is a bill for financing without debt the military and naval expenditures of the United States in time of war, and it is therefore also a national-defense measure. Finally, it is a bill for financing the post-war transition from an economy of warfare to a consumers' economy, and it is therefore a post-war readjustment measure.

#### **A PEACE MEASURE**

As a peace measure this bill will operate to deter great financial interests from influencing our Nation's course toward war. The bill provides that if we are forced into war the Treasury shall issue United States currency notes to the amount of such appropriations for our Military and Naval Establishments as may be enacted by Congress, and these United States currency notes shall be deposited in special accounts called "National defense credit accounts" in the Federal Reserve banks to be used exclusively to meet all payments authorized by the appropriations for our armed forces. These currency notes, unborrowed and debt free, specially created for defense purposes, constitute a breach in the credit monopoly of the banks. They will take the private profit out of war finance, and by so doing they will be a deterrent to predatory finance. Because the bill holds up the prospect of a breach in the present private monopoly of money creation, it will also act like a serum against war fever artificially induced by propaganda indirectly emanating from great financial interests. It will tend to clarify and purify public discussion of war aims and thus better enable the people to form their own conviction of what they are willing to fight for.

#### **A NATIONAL-DEFENSE MEASURE**

Suppose that efforts to avert war are unavailing and the die is cast. In that event every effort must then be exerted to win the war, and the National Credit for Defense Act becomes a war measure, providing for the unstinted mobilization of debt-free money to win the conflict. Will this method of financing the war produce inflation? No. It is impossible for the debt-free funds deposited in the national-defense credit accounts to produce an inflationary condition, for, in

the first place, these funds are not eligible to be used as a cash reserve by any bank except as a 100-percent reserve against an equivalent total amount of deposit liabilities. In the second place, the bill declares that it would be "the intent of Congress to levy such wartime surtaxes in addition to current tax levies as will cause an increase in gross revenue over and above the revenue collected in the last fiscal year preceding such state of war, as nearly as possible equal to the anticipated rate of final consumption of all supplies by the armed forces of the United States." In other words, the money-creating provisions of this bill are so enmeshed with the taxation policy of paying as you go that the danger of inflation is removed. The new money will be created at the rate war goods are produced; it will be taxed back at the rate war goods are consumed. That is all there is to it. Uncle Sam will finance the war by creating Uncle Sam's own national money; the people, by means of an adjusted tax rate, will pay as they go for the war, but they will pay as they go to Uncle Sam, money issuer, and not, as has formerly happened, to Uncle Sam's money-lending creditors who have imposed on him a war debt.

#### A MEASURE FOR POST-WAR ADJUSTMENT

At the end of the war there will be an unexpended balance in the national defense credit accounts. It is proposed in the National Credit for Defense Act that wartime surtaxes be promptly repealed and that this unexpended balance be paid in pro rata shares to all citizens of the age of 21 or over, these shares to be known as the citizens' victory bonus. The payments can be made gradually over a period of 1 year. These payments may be regarded as a national dividend resulting from the net appreciation of physical capital which takes place in wartime. In the effort to supply the demands of war a nation expands and improves its industrial plant, it intensifies its agriculture and grows more food, it enlarges its productive capacity. It emerges from the war physically richer in many respects than it entered it, and the community should benefit from the increase of its dynamic capacity to produce. In the past, after a war, bankers have informed a victorious nation that it was poorer because of its war efforts, and must reduce consumption, tighten belts, and work harder. Soldiers have been promised homes fit for heroes. Instead they have been demobilized to join a swelling army of unemployed standing in breadlines, while at the same time plants were being scrapped and farms were going out of cultivation.

The citizens' victory bonus will give everyone a clear stake in victory. It insures that no one can maintain the war was fought for the benefit of profiteers. It will transform by gradual steps an economy of warfare into an economy of welfare. It will replace the demand for war goods with a strong demand for consumers' goods, thus enabling industry to shift from a war basis to a peacetime production basis without experiencing a disastrous post-war slump. It should be particularly noted that the victory bonus need not create inflation, because the net increase in money in circulation will be more than matched by a net increase in productivity which can be drawn upon. New goods will back effectively the addition to the circulating medium of the United States.

In the final analysis, the National Credit for Defense Act is a democratic monetary measure. It makes an inroad upon the privileges of the financial oligarchy, whose immense powers have been described by a former Chancellor of the British Exchequer, who is now chairman of one of the Big Five British banks, in these words:

They (the great banks) control the credit of the nation, direct the policy of governments, and hold in the hollow of their hands the destiny of the people.

But in making this inroad, this bill decentralizes and distributes money power to the whole population. That is the democratic essence of the bill. It does not wrest money power from a financial oligarchy only to make a political use of it and only to employ it for state purposes irrespective of the welfare of the individual, which is what the totalitarian powers do. In contrast to totalitarian finance, this bill democratizes money power. The Citizens' Victory Bonus puts

purchasing power into the trousers pockets of the individual, the safest place for it, according to President Andrew Jackson. The bill is an answer to the private money-power system, and it is an answer to the commu-nazi system of finance. It points the way to democracy's solution of the crucial question of how to finance the Nation's economic life, not only in the tragedy of war but also in peace, without prejudice to the democratic rights of the individual.

The first duty of Congress is to guard against this Nation becoming involved in war. To my mind, this measure, if passed, would be one means of accomplishing that very purpose.

### Tribute to the Late Senator Borah

#### EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

RADIO ADDRESSES BY SENATORS PITTMAN, VANDENBERG, AND SHIPSTEAD

Mr. McNARY. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD appropriate remarks on the passing of WILLIAM EDGAR BORAH made by three eminent members of the Senate Foreign Relations Committee, the Senator from Nevada [Mr. PITTMAN], the Senator from Michigan [Mr. VANDENBERG], and the Senator from Minnesota [Mr. SHIPSTEAD] over the National Broadcasting Co. network on Saturday night, January 20.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

#### ADDRESS BY HON. KEY PITTMAN, OF NEVADA

Ladies and gentlemen of the radio audience of America, Senator WILLIAM E. BORAH, the Lion of Idaho, the dean of the United States Senate, the statesman, lawyer, humanitarian, and patriot of patriots, has reached the end of the long and tortuous trail of official service. He has packed his burden with vigor and patience, and even during the latter end, as physical strength waned, he did not utter one word of complaint.

Senator BORAH was my intimate friend throughout the 27 years that we served in the Senate together. In serving with and under him upon the Foreign Relations Committee, I was granted a great privilege, an opportunity to obtain an insight into his lovable character, the breadth of his learning, and the sincerity of his purposes.

Senator BORAH was a serious, intense, and lonely statesman. His mind and soul were occupied by his devotion to his State, his country, and the peace and welfare of their citizens. Although he was always cordial and considerate, yet he made no apparent effort toward good fellowship. Intense, eloquent, sharp, and uncompromising in debate, he was ever tolerant, courteous, and considerate. Many of his colleagues differed from him with regard to vital public policies, and accepted his challenges to intense debate. And yet, in these debates there was rarely a division as to the high ultimate ends to be accomplished but rather as to the methods and processes to be adopted to consummate such ends.

Senator BORAH could be included in the definition of a progressive. He favored humanitarian laws, yet he was a strict constructionist of the Constitution and would not yield such principle to any momentary expediency. He recognized the natural growth of Federal jurisdiction, and yet his strong attachment to States' rights caused him to fear, and frequently to oppose, bureaucracy. His deep dread of war and his strong suspicion of all foreign governments made of him an absolute isolationist. And yet even those who differed with him never doubted his sincerity nor treated lightly his opinions. He brought intelligence, learning, reason, and light to every subject he debated. He bore no malice and he earned no enemies. This lonely, secluded statesman is missed and mourned in the Senate of the United States to as great a degree as any Senator whom death has taken away during my service.

A great and good man has passed into earthly silence, yet his words and deeds will live through all history.

#### ADDRESS BY HON. ARTHUR H. VANDENBERG, OF MICHIGAN

My fellow countrymen, the darkness of a deep sorrow rests upon the Capitol tonight. It reaches out to millions of American family hearthstones, where the name and the honor and the rugged

patriotism of United States Senator WILLIAM E. BORAH have become part of the American inheritance. Idaho mourns the loss of a brilliant son. The Nation mourns the loss of one who was literally one of its greatest institutions.

One of the Republic's pillars has fallen.

The Constitution's most stalwart and effective friend since Daniel Webster has been gathered to his fathers.

A great heart is stilled.

We shall not soon look upon the like of him again.

Thirty-three years ago last Monday he came out of the West with his first senatorial commission. He gave it back last night—without a spot or blemish on it.

He grew in stature each succeeding year. He grew in influence which leaped the boundaries of his native land and spanned the earth. He grew in the talents which made him the greatest advocate and orator of his time. He became the Senate's dean—not alone in years of service but equally in the personal prestige of a unique and mighty character which was worthy of the Senate in its richest tradition since this Government was born.

He loved America, and America loved him.

He believed in America and in her destiny with a passion that was the touchstone of his life. America—whether it always agreed with him or not—believed in him. It knew his courage. It knew his shining probity. It knew his soul-deep sympathy with human needs. It knew his deathless dedication to representative democracy. It knew his devotion to the common weal.

America will miss him. There is none to take his place. We shall bring the wreaths of our affection to his tomb. They will stay green as long as memory survives. God grant us some measure of his strength and vision.

Farewell, great patriot, great friend.

#### ADDRESS BY HON. HENRIK SHIPSTEAD, OF MINNESOTA

Friends of the radio audience, tonight and for years to come, the people of the United States, as well as people throughout other lands, will mourn the loss of WILLIAM EDGAR BORAH.

As a master defender of our Constitution and our system of constitutional law, as an orator, statesman, great American, and patriot, his place in history is secure.

I therefore shall speak of him more intimately as a man.

I deeply regret that out of the millions throughout the world who knew of him as a statesman, there were, necessarily, comparatively few who knew him as a man.

I first met him when I came to the Senate 18 years ago. He had then, by industry, ability, and strength of character, become famous throughout the world as a statesman—of whom all America was justly proud.

What first impressed me was that he carried his fame with becoming modesty.

To millions he represented a man with the heart of a lion. They called him "the lion of Idaho." They did not know that his heart was also as tender as a child's.

The suffering of others under persecution and injustice would arouse his own indignation to the most eloquent flights of oratory—because WILLIAM BORAH felt their sufferings to be his own.

It can truly be said of him "that the strong and the brave are the most tender."

Because he often traveled alone they called him the "lone wolf." But we must remember that only the strong can travel alone.

He could walk with crowds and keep his virtue and with "kings, nor lose the common touch."

In observing him, in his public career, I was often reminded of the story that is told of the Norsemen entering France centuries ago.

The French people noticed they did not wear a brass collar around their necks with the name of the owner stamped upon it. So they asked them, "Who is your master?" They answered, "We have no master; we are our own masters."

That could be truthfully said of WILLIAM BORAH. He was his own master.

His incorruptible integrity was the foundation of his independence. Such independence of character is conceded by many to have cost him the Presidency. He would not "stoop to conquer."

Nevertheless, WILLIAM BORAH never spoke ill of, nor carried rancor in his heart for, anyone.

Who shall say he was not well rewarded?

He was rewarded by the love and respect of his fellow men. He was, therefore, paid in a wage that does not cloy—a coin that leaves no sting.

He continued to walk among men with the modest dignity of the great. I venture to say that his name and fame will live for centuries as future students of American history read his classic orations in the Nation's archives.

We, his colleagues, who outside of his family, possibly, knew him best, mourn his loss—not only because we have lost a friend we loved—but because of the great loss to the Nation.

We are thankful that he could pass without suffering. And I am sure that when WILLIAM BORAH crossed the bar he was still "captain of his soul"—with his head up—and unafraid.

## Brooklyn Real Estate Board

### EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. TRUMAN. Mr. President, on Saturday, January 20, 1940, the distinguished Senator from New York [Mr. MEAD] delivered before the Brooklyn Real Estate Board a very able and interesting address on the housing situation. I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been told that you are interested in real-estate problems; in the development of property values; in the future building business that lies ahead. I am happy to be with you on this occasion to discuss with you the activities of the Federal Government in this your chosen field.

Because you are concerned with Government activities which promote the welfare of property owners and prospective property owners, I wish to discuss measures that have been and are being taken to assist these groups. When we make provision for a family to build a new home or to improve an old home, we are doing something concretely beneficial for that family and for you. I, therefore, wish to talk about housing as it affects you as an industry and as it affects our Nation as a whole.

The housing program of the Federal Government is many-sided and, at least one aspect of it, probably reaches every group of people in the Nation. From the clearing of unsightly slums, with public loans and grants, to the erection of large-scale multifamily housing projects, with private capital, for the medium-income groups, the Government has lent a hand to the problem of rehousing America.

A number of practical, effective methods have been used to protect and salvage existing neighborhoods. Efforts have been successfully undertaken to assist private industry in planning new and profitable developments. These efforts have made real dollar-and-cents savings for sponsors of new subdivisions and large-scale structures. These cooperative efforts have eliminated unnecessary streets, preserved space for dwelling construction, created park areas and playgrounds, and opened up land heretofore not employed for economically and socially useful purposes.

You, as real-estate men, have made a particularly valuable contribution toward the provision of better housing for our people. Vast potentialities for further contributions lie ahead. You know better than anyone else what the housing needs are in your community. You know better than anyone else what may be profitably, usefully, and effectively undertaken in your community with respect to private construction, and with respect to large-scale, partially subsidized public housing construction. You know better than anyone else the truth regarding real-estate values and real-estate problems. I am not going to dwell upon those phases because I would have little or nothing new to tell you. However, it is important for us to reflect that, during the 1920's, we built each year many hundreds of thousands of new dwelling units of one kind or another. During the midst of the depression this building program collapsed, and we built relatively few units—only 50,000 units in 1933 and 1934. This year it would not be misleading to predict that we may build as many as 400,000 units.

Now, we want to look at the record and see what has caused this progressive, salutary trend. As a community and as a Nation, we need more and better homes. A home represents a method of saving and a permanent asset. Home ownership introduces the element of stability into our national life. From economic and social standpoints, therefore, we wish to lend every practical encouragement to home building and home ownership.

One agency of the Government has directed its principal efforts toward stimulating among persons of average means a desire to own their own homes. At the same time, this agency has given them a method whereby this desire may be realized. To do this, it was initially necessary to loosen the log jam of private capital and to make it available for investment in what always had been one of the soundest and most lucrative resting places for idle funds—the small-home mortgage.

The record of the Federal Housing Administration indicates that these objectives have been carried out to an amazing and satisfying extent.

Do you know, for example, the F. H. A. ended 1939 with more than \$3,000,000,000 worth of home-financing insurance on its books, and approximately \$960,000,000 of this insurance was written during the past year, establishing a new record for F. H. A.

Through the F. H. A. nearly 12,000,000 persons have been able to improve their housing standards.

During 1939 there were 153,496 new dwelling units constructed under the F. H. A. program, or, more graphically, approximately as many dwelling units as there are in an entire city the size of Washington, D. C. About 95 percent of these were small single family properties with an average F. H. A. valuation of \$5,000 or less.

It might be interesting to reflect for a moment on the period during which this record was attained. At the time the National Housing Act was drafted the Government had come to the conclusion that the residential building industry would be unable to recover from the effects of the depression without governmental assistance. While other business indices showed encouraging improvement those concerned with residential building continued downward.

Building was at a standstill and construction men saw little hope of a return to predepression levels.

In combating this situation the F. H. A. first eliminated the second and third mortgages and contracts for deeds. With the F. H. A. insuring loans as high as 90 percent of the appraised value of a property, these secondary liens were no longer necessary, and are prohibited under the insured-mortgage system.

The second move was a recognition that the home mortgage, like any other obligation, should and had to be paid off. As a result, the amortized-mortgage plan was adopted and under the program the prospective home owner each month increased his equity in his home by paying something toward principal as well as the interest.

The net result of this program, as far as the building industry is concerned, is mirrored in the F. H. A. figures for 1939. Last year the number of new dwelling units provided for under the F. H. A. plan alone was approximately three times the entire national production in 1933, the year before the F. H. A. was established.

Setting up of a modern system of mortgage lending, however, was not the only task given the F. H. A.

Another obstacle to resumption of widespread home building was the lack of confidence by the public in the houses produced. Houses built during the boom days of the twenties were often poorly constructed, badly planned, and located in neighborhoods which deteriorated quickly. Before any sizable market for houses could be developed it was necessary to establish property standards and construction requirements which could serve as a sort of yardstick against which houses could be measured. These standards, localized to suit the needs of different climatic conditions, are enforced by F. H. A. inspectors who examine homes during the course of construction.

The purpose of the F. H. A. program, however, is probably less than half economic. Its first consideration is in providing a means whereby an ever-increasing number of American families can own their homes, or can improve and modernize the homes in which they now live. It is designed particularly to make home ownership available to the lower income groups, as well as to those more fortunate financially. Under this program a means has been provided whereby the factory worker, the artisan, the department-store clerk—just average persons whose annual income may range as low as \$1,200 per year—are not only able to improve their living conditions but also through purchases to swell the volume of building construction. In other words, it is now possible under the F. H. A. program for a man to buy a comfortable modern home for as little as \$25 per month.

It is interesting to note the effect of this program here in New York State. There is little I could say about the F. H. A.'s operations which would be more impressive than to point out the fact that about 400,000 New York families have participated in and benefited directly from this program. This number, of course, does not take into consideration the thousands of other families who have been helped in obtaining jobs through the expenditure of private capital insured by the F. H. A.

Four hundred thousand families in this State, however, have actually built new homes, financed existing ones, or repaired existing ones with funds totaling upward of \$350,000,000 obtained from banks, insurance companies, mortgage companies, and other private lending institutions under the F. H. A. plan. In addition, the F. H. A. in this State has insured the mortgages covering 6,900 rental housing units designed for people of moderate means. Last year, in the New York City metropolitan area alone, the F. H. A. accepted for insurance almost 6,000 small home mortgages totaling in excess of \$30,000,000. In addition, there were more than 25,000 modernization and improvement notes insured in an amount of almost \$20,000,000.

You are concerned, as we all must be, with the cost of any such program of this magnitude. It is especially gratifying, therefore, to be able to state that the F. H. A. during the current year will not cost the taxpayer one single cent. Stewart McDonald, F. H. A. Administrator, tells me for the 1941 fiscal year the Agency's income will exceed its operating expenses by approximately \$9,000,000. This amount will be added to the fund set up as a reserve against possible losses. The F. H. A.'s income is derived from appraisal

fees and insurance premiums—charges made for services performed by the F. H. A.

In brief fashion, I have outlined the achievements of the Federal Housing Administration and its benefits to this great urban center. I cannot, however, review the complete record of the Government in this field without a fleeting reference to another vast municipal housing problem.

In Brooklyn, in New York, in my own home city of Buffalo—yes, in every large industrial center—we can observe, with the most cursory investigation, the conditions of old and dilapidated houses, of overcrowded buildings and areas, of structurally unsound and insanitary home facilities—in plainer words, slums, or conditions very similar to slums.

Slum eradication and low-cost housing are big undertakings. They are municipal problems. Often they are too big and too expensive and too little profitable to encourage or invite private financing and supervision. Substandard housing is an unfortunate condition in this country. You have heard the statistics on crime, delinquency, ill-health, and economic disaster that fits into any recital of the evils of slum areas.

The metropolis of New York City has, of course, a housing problem of staggering proportions. The New York City Housing Authority has estimated that 516,000 families, or 28 percent of the total families in the city, are living in substandard housing. It is assumed that every dwelling unit in the city renting at \$30 or below is substandard. Perhaps that is not entirely accurate, but it serves to give us a yardstick with which to compute the housing needs of the city. The most conservative estimate possible would be 300,000 families in unsafe and wholly inadequate quarters. The report of the tenement house department for 1937 indicated 45,000 residential structures, housing 300,000 families, with major violations of existing minimum requirements set by law.

The Citizens' Housing Council of New York has publicized again and again the 58,000 old-law tenements without adequate fire protection, sanitary facilities, or light and air. It points out that no private builder in New York City has yet reached the rental average of \$10 per room per month. For the enormous number of families who pay less than \$10 per room per month—and thousands pay much less—there can be little immediate hope of an adequate dwelling except in publicly assisted housing. The council estimates that to provide for this low-income group, New York City alone could use \$130,000,000 a year for 20 years for capital investment.

New York City has pushed vigorously ahead in solving its slum-clearance and public low-cost-housing problems, with the assistance of the United States Housing Authority.

Public housing interests and benefits you when it properly restricts itself to a sphere where private investment and private construction is neither profitable nor attractive. The municipal, the State, and the Federal Housing Authorities can, through thoughtful and unselfish planning, accomplish vast good for the future. Their fields of endeavor should be clearly indicated, and in those fields we must commend their progress.

In conclusion, let me mention one other phase of private construction that could mean a great deal to you and to those affiliated with your industry in large municipal centers.

I am thinking of the tremendous possibilities for plant and shop expansion, for store and factory modernization, and for the purchase and use of new equipment.

Every important economic and business expert is predicting a continued business upswing for the remainder of 1940. I concur in that prediction. Every survey of business and all indexes of business lend us encouragement to believe that we are not only regaining the predepression levels but that we are approaching a sounder and more balanced economy.

The average independent industrial enterprise, however, is not in position to participate in this upswing because of the lack of available long-term capital and credit. This is no reflection on the local commercial banker who is now doing a splendid job in trying to loosen the log jam of millions upon millions of dollars of excess reserves or idle funds lying in the Nation's banks. However, in my judgment, our existing financial mechanism needs some substantial assistance, and we should not longer delay in applying ourselves to that need.

I am sponsoring a bill at the present time which would supplement the efforts of commercial banks in meeting the legitimate credit demands of legitimate business enterprise. My proposal would broaden the existing but limited industrial lending powers of the Federal Reserve System. It will require no additional borrowing on the part of the Government. It is logical in that it will utilize the present facilities of the Federal Reserve banks and their branches.

Loans will be made and passed upon locally where local community conditions are understood and appreciated. Loans will be made quickly and without consumption of time and red tape. Long-term loans will be encouraged and provided. The real and imperative immediate needs of business will be recognized and met.

I insist, in suggesting this assistance to banks, businessmen, and construction groups, that no new bureau of Government be created, that the Government must not stand to lose 1 cent in the operation of the law, and that the initial control of credit must remain in the hands of the local banks where it properly belongs.

I am not going further into this proposal at this time but I do want to impress upon you the vast potentiality for plant expansion which would accompany any effective method for releasing our dammed up idle funds. Through the extension of long-term loans at reasonable rates—assistance, in some respects similar to that we have granted home owners through the H. O. L. C., farm owners through the F. C. A. and home builders through F. H. A.—business could forge ahead and bring itself up to date. One middle-western banker wired me yesterday that he thought my proposal, if adopted, would put a million men to work in the construction and equipment field alone. That is why legitimate credit needs of business should be met and why you should be interested in seeing those needs met.

Local and Federal Governments have made great forward strides in the past few years. Private enterprise has demonstrated a willingness to keep apace. You know the tasks that lie ahead from the standpoint of practical local application—we think we are coming to know something about the problem from a national legislative standpoint—let us work together with common purpose for a common objective. Your counsel will help direct the Nation's housing program along proper lines.

### Let's Become Pro-American

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address which I delivered over a Nation-wide hook-up of the Mutual Broadcasting System, originating from station WOL, Washington, D. C., several evenings ago, entitled "Let's Become Pro-American," in which I discussed briefly my five-point program designed to preserve America for Americans. In this connection I wish to state that this five-point program is being sponsored by the American Vindicator, a monthly publication edited by myself and published by the Vindicators' Association at Washington, D. C., a non-profit organization chartered under the laws of the District of Columbia.

In employing the word "alien" I refer to foreigners who have come into our country illegally and remained here illegally and those who arrived lawfully and have remained here unlawfully, but who have not made application for citizenship; in other words, in referring to aliens, I mean noncitizens of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I wish to thank the Mutual Broadcasting Co. and its affiliated stations for providing me with this opportunity to acquaint their audience and my listeners with my five-point all-American program for keeping America for Americans. These fundamentals I have consistently advocated for many years. I shall discuss briefly each of the five major points.

I should like to hear by letter from those who favor this program without reservation. Likewise, I should appreciate hearing from any persons who may have ideas different from mine on how best to safeguard America.

This five-point program is as follows:

Point No. 1. Keep America out of war: To date, our part in the last World War has cost the American taxpayers approximately \$68,000,000,000 and more than 100,000 lives. Even now, 21 years later, our hospitals are insufficient to provide beds for our World War veterans requiring hospital care. Our veterans certainly should come first. Regardless of our personal opinions or sentiments, the United States should remain absolutely neutral. The age-old quarrels of Europe are no concern of ours, and we must not get mixed up in the present conflict. After all, this is only one of the many hundreds of wars in Europe within the past several centuries. We should devote our time, attention, and energies to the many problems here at home. Why should we waste effort in endeavoring to solve the problems of Europe? We must not let our sentimental attachments to the Old World lead us astray. We cannot be American and at the same time be pro-anything else. In a recent column by the pen of Gen. Hugh Johnson, he asserted that it was high time

that all of us became pro-American. I am in thorough accord with that direct-from-the-shoulder statement by that able writer who has the interest of the American people at heart.

Point No. 2. Fingerprint and register all aliens: At the present time no one knows how many aliens there are in the United States. Some say there are only 4,000,000. Others declare there are 7,000,000. Of these millions some arrived legally, while others came illegally. We should know how many aliens there are within our borders. We should know where they came from and when. We should know why they came and whether they arrived legally or illegally. But more important, we should know where they are now and what they are doing. This information can only be obtained by a law requiring the registration and fingerprinting of all aliens. Stop and think for a moment. If we were to become involved in a war today we would have millions of potential enemies and spies within our midst. There are now—even while we are at peace—thousands of aliens in the United States who are charged with espionage and who are suspected of sabotage. I have repeatedly stated that if we ever became involved in war there would be countless acts of espionage and sabotage. It would be difficult to lay hands on these enemy alien criminals because we have no registration and fingerprinting law in this country. We know virtually nothing about the whereabouts or the activities of our aliens. My prophecies have been borne out 100 percent by the records of the Bureau of Investigation, Department of Justice, which is under the able direction of the Honorable J. Edgar Hoover. The American people owe Mr. Hoover a vote of thanks for having built up the finest law-enforcement organization in the world. He deserves the undivided support of all true Americans.

Information provided by the Bureau of Investigation reveals that, in protecting our national defense, this Bureau is now receiving daily 217 complaints of espionage, sabotage, and violations of our national-defense laws, or at the rate of 78,000 annually. The rapid increase in this type of work is reflected in the figures which show that for 5 years before 1928 the Bureau handled on an average only 35 espionage and sabotage cases yearly. But in the year 1938, 250 of these cases were investigated. That is bad enough, but look at the record for 1939. In that year a total of 1,651 new espionage and sabotage acts were investigated. How our aliens are directly loyal to their home countries is best proved by the official figures of the Department of Justice. Note these facts: From July 1, 1939, to January 10, 1940, a total of 5,799 new cases were received by the Bureau for investigation, and today these complaints are arriving at the rate of 78,000 annually. If we had a law providing for the mandatory registration and fingerprinting of all aliens, the work of this Department would be materially lessened. Agents of the Bureau could locate these alien criminals now engaged in espionage and sabotage with much less trouble and expense to the taxpayers.

Point No. 3. Stop all immigration for the next 10 years: Our own American workmen should first be given an opportunity to get a job. With more than 10,000,000 Americans unemployed and additional millions working only part time, 3,000,000 on W. P. A. rolls, 300,000 young men in C. C. C. camps, and 750,000 boys and girls graduating annually from schools and colleges who cannot find work, here is a problem we all must face. So why should we permit the thousands upon thousands of refugees and foreigners from all sections of the world to enter the United States and take the jobs which rightly belong to our own people? Yes; it is high time that we became pro-American and looked after our own before we shed any tears about the unfortunates of other lands. American jobs should go first to American citizens.

Point No. 4. Deport all alien criminals and undesirable aliens: Our jails and penitentiaries are filled with alien criminals at the expense of American taxpayers. There are thousands of these aliens in our insane asylums and in our institutions for the treatment of those who have become habitual narcotic addicts. They are cared for, housed, clothed, and fed, and provided medical treatment with money taken from the pockets of the American people. We have too many law violators of our own without harboring those of other nations.

Crime costs the taxpayers of the United States more than \$15,000,000,000 a year, according to the estimation of the Department of Justice. This includes not only the direct costs, such as the maintenance of penal institutions, the losses occasioned by criminal acts, racketeering, and other unlawful activities, but the indirect costs, such as losses occasioned by the death of individuals through criminal activities. This is appalling. When will the American people awaken to this deplorable condition. No doubt the total cost will exceed fifteen billion in 1940, when the toll includes the destruction wrought by alien saboteurs. We should empty our prisons and asylums by sending these aliens, dope fiends, and dope peddlers back home. They should be the burden of their own nations instead of being a useless and costly burden on the American people.

Point No. 5. Abolish all "isms" except Americanism. Wipe out nazi-ism, fascism, and communism with equal enthusiasm. America should know only Americanism. Sweep from our shores every alien "ism" that would destroy the foundation of our form of government. Why should we permit these false doctrines to be spread in our midst? We are the only people upon the face of the earth who submit to these false doctrines which are being daily spread by outspoken enemies of the American Government.

I believe that the Dies committee has actually done more to uncover the poisonous groups engaged in un-American activities than any other movement. That committee has revealed the activities of the Nazis, Fascists, and Communists alike. That committee has

rendered a great service to the people of America, and the people owe a debt of gratitude to Congressman MARTIN DIES and his associates. The committee should be continued, and the Congress should see that it continues its excellent work by providing the committee at least \$100,000 more to pursue its investigation.

Harry Bridges, the west coast labor leader, has been whitewashed of the charge that he is a Communist. He came into this country from Australia by skipping ship at New Orleans and has remained here for many years illegally. He is still with us and, no doubt, will be permitted to remain here to carry on the same way he has for years past.

Earl Browder, the Communist leader who stated before the Dies committee that if the United States and Soviet Russia should become involved in a war that he would do everything he possibly could to stop such a war—even to turn such a war into a civil war. Think of it! This Communist leader declares without reservation that in case of a war between the United States and Soviet Russia he would try to stop it, even if he had to create a civil war or revolution in the United States. Communist Browder is now under indictment by the Federal Government for falsifying passports. Press reports reveal that he is about to become a candidate for a seat in the Congress of the United States. How much longer will the American people continue to remain the laughingstock of the world? How much longer will they allow minority, un-American organizations, possessed of unlimited funds from Moscow and elsewhere, to work night and day like a lot of termites with the avowed objective the destruction of the American Government?

Let's have more pro-Americans fighting for Americanism.

Let's have action.

Let's clean house.

Let's put our own affairs in order, attend to our own business, and look after our own people first.

Our citizens, our country first.

I thank you.

## Reciprocal Trade Agreements Program

### EXTENSION OF REMARKS

OF

HON. THEODORE F. GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

#### LETTER AND EDITORIAL FROM THE PROVIDENCE (R. I.) JOURNAL

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two extracts from last Sunday's Providence Journal. I do this because one of them consists of a letter from the president of the Rhode Island Textile Association, setting forth its consistent stand against reciprocal-trade agreements, and the other consists of a very interesting and convincing editorial from one of the Republican newspapers of the State taking the opposite side. I commend the discussion of the two points of view to the attention of my colleagues. It is a satisfaction to me to be able to find myself in accord with the policy of this Republican newspaper, with which I have had occasion to differ at various times in the past.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Providence (R. I.) Journal of January 21, 1940]

#### RECIPROCAL AGREEMENTS

##### EDITOR OF THE PROVIDENCE JOURNAL:

I happened to notice a recent editorial in the Evening Bulletin attacking at considerable length the "economic provincialism" of the Rhode Island Textile Association in its consistent stand against reciprocal-trade agreements because of their present harmful effects and their potentialities for much greater damage.

Already a highly skilled and specialized branch of Rhode Island's largest industry has been grievously affected.

Have you taken the trouble to inquire what decreases in value have come to stocks of wool nolls and waste due to the reduction in tariffs from 23 cents to 18 cents per pound in the British agreement? In the case of one Rhode Island mill alone this reduction in tariff will mean a yearly loss of \$75,000.

But for the intervention of the war, exceedingly serious effects for our importation of competitive fabrics would have come to this branch of the industry. Any approach to the normal will promptly bring that result, which may well become fatal.

If our defense of the right to a livelihood of so large a percentage of Rhode Island's citizens gainfully employed in the textile

industry be "economic provincialism," I am proud of my connection with such an association.

Is it misplaced "economic provincialism" to bend every effort to maintain such manufacture that the State as a whole and its several communities may be benefited?

The process of arriving at any sort of an understanding by reciprocal agreement, whether between nations or individuals, is the only sound procedure. It is not the theory to which objection is raised, but the method.

Have you taken time to inquire particularly as to the open hearings conducted in connection with the consideration of these several agreements? You would find, first, no indication given as to presumptive action; second, an almost complete ignoring of the advice of leaders engaged in the industry to be affected. In what way do trade treaties arranged by diplomats, depending on their own judgments, excel all other possibilities?

Reference is made to the fact that "the entire Nation will benefit and the losses will be made up in the general advantages flowing therefrom." I am very greatly interested in an elucidation. Are the farmers, the petroleum industry, or the zinc miners realizing a present benefit? They do not appear to think so. Can you find, either in Rhode Island or the country at large, an improvement in any business other than scrap iron or the makers of war supplies or machines for such supplies? I shall be very happy to have specific information as to the nature and amount of such gains.

Your editorial of the following morning appears to side with the practical value of the "economic provincialism" which strives to hold and strengthen present industry when it states, "It is good American business, of course, to capitalize every legitimate war-time opportunity to enlarge our foreign commerce. But at the same time we must realize, as most of our business leaders do, that an export-import trade increased under war circumstances must have an unhealthy reaction when inevitable post-war readjustments are required."

May we hope you will think well enough of the welfare of the citizens of Rhode Island to join our "economic provincialism" of endeavoring with might and main to keep its largest industry functioning.

ROBERT L. ANTHONY.

Providence.

[From the Providence (R. I.) Journal of January 21, 1940]

#### THAT WE MAY KEEP FREE

A Rhode Island textile manufacturer faces a yearly loss of \$75,000 because of a reduction in tariffs granted Great Britain in return for reductions given the United States under the reciprocal-trade agreement entered into with the Empire.

This circumstance is set forth in a letter from Mr. Robert L. Anthony, president of the Rhode Island Textile Association, in defense of the association's (we quote him) "consistent stand against reciprocal-trade agreements because of their present harmful effects and their potentialities for much greater damage." We publish Mr. Anthony's letter in full elsewhere on this page.

A newspaper cannot pretend to knowledge of the dollars and cents results to one manufacturer or to one industry as the result of specific provisions of a particular trade agreement.

The proper concern of a newspaper is with the principle of either unilateral action to impose tariffs or, in this instance, of their reduction by a negotiated agreement on a basis of reciprocity.

It is well for Mr. Anthony to publicly state the detail of a money loss to a Rhode Island manufacturer or industry. It is well for the Rhode Island Representatives in Congress to call public attention to the results of reciprocal-trade agreements upon the Rhode Island lace industry.

But it is distinctly one thing to set forth items of cash loss and quite another to commit the people of Rhode Island to the principle of opposition to all reduction of tariff and trade barriers by the negotiation of reciprocal-trade agreements.

Indeed, we note that the Rhode Island Textile Association does not now, as it might have a quarter of a century ago, presume to oppose all tariff reduction whatsoever. The Textile Association has said, however, that it favors such reduction by action of Congress alone. Of course, that is tantamount to saying that it opposes a reduction by negotiation on the basis of reciprocity because Congress cannot possibly negotiate a reduction. And, historically, we think it must be conceded that Congress will not, on any broad basis of national policy, effect a unilateral reduction of tariff. The tariff is no longer a question of party as it used to be when the South and West were almost altogether agricultural, and the Democratic Party was subject to an agrarian control. Tariff making in Congress is now more of a log-rolling, local issue than it ever was in Hancock's time. The Republican protectionist now scratches a Democrat's back with a higher tariff on one product and has the favor returned on another. That is the only way reciprocity seems to function in congressional tariff making.

But so far as the national interest is concerned, a vast change has been brought about in our economy as the result of two World Wars, and yet other more menacing readjustments seem inevitably to lie ahead.

We believe it of the utmost importance for the people of Rhode Island to come to some understanding of the causes and character of this change in our economic situation, and we do not believe that they can base their thinking altogether upon an item of a \$75,000

loss, nor even upon the circumstance of the plight of the Rhode Island lace industry.

Heaven knows there is no industry in Rhode Island more dependent upon the general industrial welfare of the State than this newspaper. But we do believe that the record of the post-war years shows incontrovertibly that when the world, including the United States, began in the post-war years to erect tariff and trade barriers, international trade in both volume and value was destroyed, unsalable surpluses were built up everywhere, vicious governmental controls over free enterprise resulted, the totalitarian dictatorships in Europe were largely born of these blind policies, and many of the artificial controls of the New Deal, including farm benefit payments, resulted from this destruction of world markets.

Of such importance to us then is the principle of negotiation for the elimination of these trade and tariff barriers on a basis of reciprocity. We plead for a recognition of this principle. We ask the people of Rhode Island to understand that the United States cannot sell abroad unless it buys abroad; that it has both manufactured products and surplus farm commodities to dispose of; and that if it does not have the channels of international trade open and reasonably free for that purpose, we will have to accept Government controls over agricultural production, Government subsidies to farmers, and stemming directly from such a nationalist-controlled economy, Government controls over industry and free enterprise in general; not controls for the purpose of social regulation, but price-fixing controls that are fundamentally political and totalitarian in character.

Then we might go further and say that our interest in free enterprise in the United States is based upon a belief that free enterprise is essential to free institutions, to free speech, even to free worship, and to our democratic way of life, which should be so precious to us, for that way, built upon our forefathers' concept of the dignity of the individual, is the very essence of the civilization we have been building upon Christian doctrine for nearly 2,000 years.

For there is a new challenge to the American people today to think, not only of what their liberties mean to them but of how they are inextricably interwoven and of how they may be preserved in a chaotic world. It is not alone the threat of invasion that faces our democratic institutions. It is the threat of totalitarianism, of which Hitler's military aggression is but one manifestation. What this world was facing even before the outbreak of hostilities in Europe was the destruction of free institutions through the destruction of free enterprise. For all the Government controls of totalitarianism were imposed in order that self-contained national economies might be built up and international trade might be carried on, not between individuals, but between governments and for political ends, which is to say for ends of national and military power. Even the European democracies have not escaped from this.

If Mr. Anthony speaks to us of the danger to a Rhode Island industry of a reduction in a British tariff, we would call his attention to the far greater danger to our manufacturers of the action of the British Government in buying up the entire Australian wool supply and of selling that at fixed prices to British manufacturers in order that the British Government might compel and direct an export trade in wool as a means to strengthen the British war machine. What chance has individual free enterprise in America to live in a world where this would be the basis of action of every other major country?

The export trades of Russia, Germany, and Italy were altogether instruments of political power before the war. The British and French export trades are becoming more and more of that character under the pressure of war. What sort of a world are we coming into at the end of this war? Is such national socialism to be the rule, and is the individual American manufacturer, with his system of free enterprise, to carry on against such forces? If the economic power of the United States gives it any chance by reciprocal agreement or otherwise to break down such political controls and to get an opportunity for free enterprise to thrive throughout the world, will not this be the greatest contribution that we can make to the saving of our own free enterprise and of our own free institutions, which we think cannot long endure under any system of Government control that goes beyond the point of social regulation and into the field of controlled production for fixed prices?

No greater service could be rendered the American people today, we think, than that intellectual and even spiritual leadership should make clear to them what is the relationship of free enterprise to free institutions and to our concept of Christian individualism. This is the very why of free enterprise; not just that we may have a money profit, for a personal satisfaction, or a personal security, but that we may conduct our working day by free choice to the utmost possible, and at least that we shall not become mere units of a state control which, beginning with the necessities for military reasons of control over economy, always finds in the end that it cannot make that control tight enough for its purposes until it takes all control of opposition, of free speech, of the free press, of education, and then of religion itself, because even the church might foster opposition to the state control as it has done in both the Protestant and Catholic churches in Germany. It needs to be made clear to the people what are Government controls imposed for social purposes, to seek betterments in working conditions, and what are controls imposed to the end that Government may operate the economy of a people. Such controls are to be suspected whenever any measure smacks of the fixing of prices directly or indirectly.

What brings about this tendency to impose such controls? Almost invariably, bad financial and economic conditions are the

plea in justification. These lead to efforts to achieve national self-sufficiency. The true isolationists of the world are not in the United States today. They are in Germany, Italy, and Russia. To get a self-sufficient economy, each nation wants land, and that has led to war. But, also, to get a self-sufficient economy, each of them creates trade barriers, imposes absolute government controls over all export trade, and carries on trade by government barter with blocked currencies. This threatens the free economies of other countries, and where it disturbs them, makes bad economic conditions within those countries, which in turn force national controls. This is the vicious spiral.

In the United States we have not been free from its effect, as we have seen. And, as additionally we have had an extravagant Government, we have created domestic conditions making in the same direction. The world-trade situation only in part forced farm benefits and the full extent of the New Deal agricultural control upon us. As we sought to protect ourselves by control of agricultural production, we put in force some very unwise control measures, which further reduced agricultural exports. And as these maladjustments created unemployment, and unemployment created relief expenditures, and relief expenditures were made greater than need be for political purposes, so were we caught in a vicious spiral. And the net result of all this is to impose more and more Government control, so that each step threatens our free enterprise and all our free institutions, though we have gone the least distance of any of the great powers.

But if national socialism is to be the character of the world after this war, we will not be able, we think, to resist the pressure. The answer must be in some measure the revival of international trade and the ending of these Government-controlled national economies. That revival must be undertaken upon a basis of reciprocity, for unilateral action is impossible in a situation of this sort and would not suffice. It is, indeed, a complex problem.

Our abnormal gold supply of nearly \$18,000,000,000, buried in the ground in Kentucky, makes it more so. Just what would the \$75,000 of the Rhode Island manufacturer be worth if he got his higher tariff and so did not lose them? Are they to be but bars of gold, also to be buried in Kentucky? If not—if they are to represent real consumable wealth to him—the \$75,000 must be related to the exchange of goods between nations. We cannot escape that. If there is no exchange of goods, the gold and the paper dollars representing the gold are meaningless, for gold has no value except for the settlement of balances on the exchange of goods or for credits to support the exchange of goods. We can't eat gold. Wealth lies in the exchange of goods.

We pretend to no knowledge as to whether the exchange should be in wool, or in lace, or in tinned beef from the Argentine, or to what extent. Mr. Anthony is quite right in saying we do not know how State Department experts carried on the negotiations for its trade agreements. We do not know their skill or their fairness. We do not know the detail of any item of any treaty. We recognize the importance of the details of each agreement. But we do believe that the principle of a revived trade by the reciprocal lowering of trade and tariff barriers, through negotiation by the Executive, is going to prove essential to world recovery; that the American people should understand a change has come about in our economic position, and that this must be faced by them and by their Government realistically and with vision.

### Jackson Day Address

### EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ADDRESS BY HON. FREDERICK VAN NUYS, OF INDIANA

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the Record an able and eloquent address delivered by the Senator from Indiana [Mr. VAN NUYS] before the Jackson Day Dinner at Alexandria, Va., January 18.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am duly appreciative of the fact that I was asked to appear on this program with my colleague—your own junior Senator—HARRY BYRD.

I have often made the observation to close friends that one of the greatest compensations growing out of service in the United States Senate today, if not the greatest compensation, is the acquaintanceship and friendship formed with its Members.

Among those friendships made during the past 7 years, I treasure none more highly than those of the two Senators from Virginia—Senators GLASS and BYRD.

CARTER GLASS to me is a valiant old political gladiator. He is an institution in American politics. Incorruptibly honest, fearless, dignified, but scathing in his denunciation of false premises and political make-believe, he is the most feared but best-loved Member of the United States Senate today. May the God of nations preserve him for many years of future usefulness.

HARRY BYRD is a worthy successor to his senior colleague. He loves CARTER GLASS with a filial devotion. Also incorruptibly honest, hard-working and painstaking, devoted to fundamental Democratic principles and traditions, possessed of a lovable personality and the gift of leadership, he has, as Governor and United States Senator, maintained and added to the historic prestige of the grand old State of Virginia. May he, too, be preserved to keep alive the altar fires of true Democracy for many, many years to come.

One of my own native Hoosiers, Claude Bowers, the historian and distinguished journalist and diplomat, makes this observation about Andrew Jackson:

"Andrew Jackson was the organizer of democracy. He mobilized the scattered forces of ordinary men, vitalized them with his energy, fired them with his faith and made sharpshooters of them, every one. He made the trapper in the wilderness, the worker on the wharf, the toiler in the factory, and the farmer in the field realize that the Government is his Government in days of peace as when he is solemnly reminded of it in days of battle."

Little can be added to this vivid description of the function which Jackson performed in the revitalization and preservation of American democracy.

We Democrats always ascribe to Jefferson the honor of founding our party, but Jackson was no less its champion and defender. At a crucial time, he vitalized and saved to the country the principles which Jefferson had written into it.

Jackson developed partisanship—bitter uncompromising partisanship—but at the same time he developed strong characters and strong political leaders. He was a self-made, sincere, loyal champion of constitutional government and democratic principles.

I really think that the best service which I could render on this occasion would be to recite simply the political philosophy and accomplishments of Andrew Jackson and let each one present draw his own conclusion as to the contribution which the life of Andrew Jackson makes toward the solution of present-day problems.

But I cannot refrain from giving brief expression to one or two of my own conclusions which are binding upon no one except myself. Such conclusions may be controversial and not meet with your approval, but surely a Jackson Day Dinner ought to be one occasion where we can be frank and sincere, one with the other.

I love Andrew Jackson's rugged Americanism. He was a fearless and jealous champion of the rights of the new American Republic. He was so extreme along this line that he even suggested the impeachment of Washington for using his influence to obtain the ratification of John Jay's treaty with England, which treaty recognized England's right to search our ships at sea. Jackson called it "daring infringements on our constitutional rights."

With greed, avarice, and cruelty now dominating most of the large governments of Europe, with the fall of all semblance of democracy and the return of barbaric force as the dominating note of such governments, with political termites at home boring into the very foundations of our own Government and praying for its collapse, I invoke tonight that spirit of rugged Americanism in defense of our Constitutional Republic for which Jackson and patriots like him offered their lives and fortunes.

There is no one of us here assembled who does not deprecate the atrocities being inflicted upon the smaller European nations by the brutal bullies who now lead the larger and stronger European nations through force and fear.

There is no one here assembled who does not stand aghast at the irreverence which shatters the accomplishments of church and school, the morals, ideals, and culture which have been built up through centuries of toil and sacrifice.

But, call me isolationist if you will, I have yet to be convinced that it is the mission of America to revamp and police this hectic world.

We have demonstrated through a century and a half that democracy is workable. We have vindicated the wisdom and foresight of the forefathers who predicated this new Republic upon equality, justice, and tolerance at home and freedom from entangling alliances abroad. Our generation and all those preceding us have been the beneficiaries of this new and wholesome innovation in modern government. We are today the strongest, richest, and happiest people in the world and as one who temporarily occupies a position of some influence, my every thought and act shall be to keep us that way—which means to keep both our men and our money out of the European vortex.

I love Jackson's political courage and independence.

All historians agree that he was frascible, hasty, and often petulant, but not one questions his courage and independence.

I think one of the most wholesome resultants of the activities of the present administration has been the exhaustive debate which certain proposals have incited.

Of all the enervating conditions inimicable to the continued growth and strength of our democracy, indifference and lassitude

upon the part of the electorate and their public officials is the worst.

One of the most encouraging results of the numerous national polls which are being so popularly conducted today is the overwhelming percentage of citizens who express definite convictions on practically every important public question. It shows that our people are alert, government minded, and giving close study to political problems. This is as it should be.

One of Jackson's chief sources of strength was that he awakened the American electorate to a sense of their rights—and also their responsibilities. As stated by Bowers—"he vitalized them (ordinary men) with his energy, fired them with his faith."

I hope the day will never come in America when the electorate or its public representatives shall lose that courage so typified by Jackson—that right and desire to speak up and defend one's honest conviction on any public or party question.

I know how hard it is today to resist political pressure brought on public officials by highly organized blocs and groups. The desk of every Member of the Senate is literally deluged by letters, telegrams, and petitions, either favoring or protesting the passage of certain legislation. Scores of visitors frequent his office for the same purpose.

These suggestions are helpful, but if a Member of Congress should try to please all of such callers and petitioners, his public service would be nil. If he permits such political pressure to control his vote, he is worse than nil.

I love Jackson's faith in the people and his consequent defense of States' rights.

As a member of the present administration, I am entitled to claim credit where credit is due and to acknowledge mistakes where they have occurred during the past 7 years.

I am not going to review the pall of uneasiness which has hung over this country for the last several years. It has not yet been dissipated but it has at least been checked.

In order to accomplish that result, unprecedented peacetime legislation was resorted to. Extraordinary powers were conferred upon the executive branch of the Government. Many functions, formerly believed to rest solely within the States, have been taken over by the Federal Government. Vast sums of money have been appropriated and spent by the Federal Government in order that men, women, and children might be housed and clothed and fed like human beings. Social-security legislation has been passed and is now working. With the objectives of these humanitarian measures, no one dissents. With the administration of many of the vehicles hastily created to administer these measures, there has rightfully been much criticism.

It was inevitable that in the monumental task of distributing billions of dollars for relief, inexperienced men, politically minded men, selfish and ambitious men should seize the opportunity to use these vehicles for personal or partisan ends. It was inevitable that a percent of the beneficiaries of these relief measures should abuse them, quit work, and look upon a living from the Government as a vested right.

It was inevitable that by reason of vast expenditures, huge taxes would be imposed upon those capable of paying.

These responsibilities are still with us, and the problem of readjustment is just as keen today as it has ever been.

How are we going to approach these perplexing situations? What general objectives should we constantly keep in mind?

Of one thing I am sure—we must not lose Jackson's faith in the people.

The minute I personally lose that I shall cease to be a Democrat. Faith in the people—what people?

Faith in the man who toils, pays his debts, obeys the law, rears and educates his family, daily adds to the wealth of the Nation, and shuns the importunities of labor racketeers.

Faith in business which invests its money, expands industrial enterprises, furnishes jobs, pays the Nation's debts, and obeys the law.

Faith in the electorate free from fear and coercion of the political boss, secure in his right to think, speak, and vote as his judgment and conscience may dictate.

Faith in the young men and women of the coming generation—confident that they will nurture, protect and add to the achievements of their forefathers.

Faith in the ultimate destiny of the Republic and the American people through the administration of their affairs by unselfish, clear-thinking, and patriotic public servants.

But, you say, these are generalities. Be more specific. I shall.

In my opinion, one of the first things Congress should do is to reclaim those constitutional rights which over a course of years it has so liberally delegated to bureaucratic agencies which are in nowise responsible to the people.

Curtail expenditures and impose upon government that first requisite of economic stability—live within your means.

Stop certain departmental heads from heckling business and give it a chance to rehabilitate itself.

In foreign affairs—stay in our own back yard and mind our own business. And as a corollary to that proposition, scrutinize the appropriation of every dollar asked for national defense, appropriate only that which is necessary and not a dime more.

Restore to the States those functions which they have exercised so willingly and successfully down through the years and avoid all semblance of autocratic Federal control.

In a word, reembrace and revitalize Jeffersonian, Jacksonian democracy. It worked then. It will work now.

You may say this sounds critical of the administration. It is not so intended but it is a criticism of that common trend which has been apparent for quite some time.

I think this administration has rendered valuable and enduring services to the country and its people. It has initiated reforms in our economic, social, and political life which will endure and become a permanent part of our national policy.

But I am not here simply to applaud our accomplishments and gloss over our mistakes. Those accomplishments speak for themselves. We ought to be big enough and brave enough to recognize and correct our mistakes if and when they occur. In this way—and this way only—shall we warrant the future confidence of the American people. In this way only shall we preserve untarnished those sacred ideals and traditions which have been committed to our keeping. I never believed more thoroughly than I do tonight that such sacred trust can safely be imposed in the Democratic Party.

I never pled more earnestly than I plead tonight that we who are now in public office, and these young men and women who will soon take over, shall ring true to the faith of the founders and defenders of that grand old historic party.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

#### REPORT OF BUSINESS ADVISORY COUNCIL

Mr. LUCAS. Mr. President, I ask unanimous consent to insert in the Appendix to the Record the report of the Business Advisory Council, organized by the Secretary of Commerce in June 1933, under the organic act authorizing the Department of Commerce—

To foster, promote, and develop foreign and domestic commerce.

The Council consists of a representative group of businessmen who are invited to serve without compensation for 1-year terms. It devotes itself to questions referred to it by the President and by the Secretary of Commerce and also acts as a clearing house for industrial views on governmental matters which affect business.

A report adopted by this organization, submitted to the Secretary of Commerce, Harry L. Hopkins, was read into the record of the House Ways and Means Committee now conducting hearings on the reciprocal trade agreements program.

A list of the membership of the Council indicates its non-partisan character and illustrates the broad fields of business activity included in the membership. The list follows:

F. B. Adams, Air Reduction Co., New York; William L. Bat, SKF Industries, Inc., Philadelphia; John D. Biggers, Libbey-Owens-Ford Glass Co., Toledo; James F. Brownlee, Frankfort Distilleries, Inc., Louisville; Vannevar Bush, Carnegie Institution of Washington, Washington, D. C.; C. A. Cannon, Cannon Mills Co., Kannapolis; W. Dale Clark, the Omaha National Bank, Omaha; William L. Clayton, Anderson, Clayton & Co., Houston; Carle C. Conway, Continental Can Co., Inc., New York; Harvey Couch, Arkansas Power & Light Co., Pine Bluff; W. Howard Cox, the Union Central Life Insurance Co., Cincinnati; William H. Danforth, Ralston Purina Co., St. Louis; R. R. Deupree, the Procter & Gamble Co., Cincinnati; William C. Dickerman, American Locomotive Co., New York; Gano Dunn, the J. G. White Engineering Corporation, New York; W. Y. Elliott, Harvard University, Cambridge; T. Austin Finch, Thomasville Chair Co., Thomasville; Robert V. Fleming, the Riggs National Bank, Washington, D. C.; J. F. Fogarty, the North American Co., New York; M. B. Folsom, Eastman Kodak Co., Rochester; Clarence Francis, General Foods Corporation, New York; H. B. Friele, the Nakat Packing Corporation, Seattle; Rolland J. Hamilton, American Radiator Co., New York; Henry I. Harriman, Division of Metropolitan Planning, Boston; W. A. Harriman, Union Pacific Railroad Co., New York; Henry H. Heilmann, National Association of Credit Men, New York; George A. Hill, Jr., Houston Oil Co. of Texas, Houston; Thomas S. Holden, F. W. Dodge Corporation, New York; Charles R. Hook, the American Rolling Mill Co., Middletown; Jay C. Hormel, Geo. A. Hormel & Co., Austin, Minn.; H. P. Kendall, the Kendall Co., Boston; Fred I. Kent, National Industrial Conference Board, New York; de Lancey Kountze, Devoe & Reynolds Co., Inc., New York; Arthur Kudner, Arthur Kud-

ner, Inc., New York; Morris E. Leeds, Leeds & Northrup Co., Philadelphia; C. K. Leith, University of Wisconsin, Madison; Paul W. Litchfield, the Goodyear Tire & Rubber Co., Akron; Earl M. McGowin, W. T. Smith Lumber Co., Inc., Chapman, Ala.; George H. Mead, Mead Corporation, Dayton; James D. Mooney, General Motors Corporation, New York; D. M. Nelson, Sears, Roebuck & Co., Chicago; J. C. Nichols, J. C. Nichols Investment Co., Kansas City, Mo.; Richard C. Patterson, Jr., Radio-Keith-Orpheum Corporation, New York; George A. Sloan, New York; E. R. Stettinius, United States Steel Corporation, New York; R. Douglas Stuart, Quaker Oats Co., Chicago; Walter C. Teagle, Standard Oil Co., New York; J. T. Trippe, Pan American Airways System, New York; Sidney J. Weinberg, Goldman, Sachs & Co., New York; W. H. Wheeler, Jr., Pitney-Bowes Postage Meter Co., Stamford; A. D. Whiteside, Dun & Bradstreet, Inc., New York; S. Clay Williams, R. J. Reynolds Tobacco Co., Winston-Salem; R. W. Woodruff, the Coca-Cola Co., Wilmington.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

#### REPORT OF THE BUSINESS ADVISORY COUNCIL

1. The Business Advisory Council favors businesslike and scientific methods in tariff making as indispensable to safeguarding our national welfare and the American standards of living.

2. The Council wishes to reemphasize its belief that the results of trade agreements must be regarded in the light of their effect on our national economy as a whole and not solely in the light of their effect on a given segment of industry or agriculture.

3. The Council recognizes that national interests require that, in tariff making, consideration be given to the international economic interests of American citizens as well as to the activities of American citizens at home. An enlargement of our opportunities for trade and investment in foreign countries is now essential to maximum national prosperity. These ends the Business Advisory Council believes will be served by an extension by Congress for a reasonable period of time of Executive power to negotiate and proclaim trade agreements provided for in the Trade Agreements Act originally approved June 12, 1934.

4. Since these agreements in a much higher degree than customary in international negotiations involve specific and practical commercial consideration of vital importance to large sections of our industry and agriculture, we urge an active and constructive cooperation with all interests involved. In the case of concessions which are to be made, our people are entitled to be assured of decisions which are calculated to conserve and foster enterprise to the benefit of the broadest interests of our economy.

5. The Council thus reaffirms the support which it gave in May 1933 to the efforts of the Government to promote our foreign trade through the instrumentalities of the trade-agreements program.

#### ALTERNATIVES

The necessity for the continuation of the trade-agreements program is emphasized when the alternatives are contemplated. Support for or opposition to the program must in final analysis rest on some fundamental conception of purpose and procedure in which domestic political issues play no part.

First with respect to procedure. No one, we believe, should wish to return tariff making to a system unduly influenced by sectionalism, group and class influences.

This result would follow either a failure of Congress to extend the Trade Agreements Act or an introduction into the act of a requirement that every individual agreement negotiated by the Executive must be submitted to Congress or to the Senate for ratification. Our reciprocity experience, particularly with the Kassar treaties, demonstrates that the requirement that such individual agreements must receive the approval of Congress merely precipitates another tariff discussion in Congress with all its political, regional, and class difficulties.

Such procedure precludes the development of a consecutive commercial policy such as this country needs. The Council, therefore, favors a policy under which Congress after laying down the principles and defining the limits which are to guide negotiations with foreign countries leaves the Executive free to negotiate and proclaim individual agreements.

As long as the administrative handling of this program is subject to congressional review or adjustment at reasonable periodic intervals, we have no fear of undemocratic abuses of the powers placed in the hands of the Executive.

Turning to the question of substantive policy, we conceive the purpose of the program to be the gradual and scientific adjustment of tariff barriers in this and in other countries to the end that there may be a more unrestricted and greater exchange of manufactured goods, products of the soil and of minerals. The alternative to the present trade-agreements program is a greater dependence on self-containment leading to a reduction in the standard of living and to economic isolation. Such act would tend to bring a degree of regulatory control destructive of free enterprise and of the democratic processes which we prize so highly. The logic of this tendency is found expressing itself in those countries which have endeavored to control their economies in this fashion.

Blocked or controlled exchanges, barter agreements, embargoes, military blockades, and bilateral negotiations seriously impede economic progress. Unfortunately there have been in certain countries an increase in the number of measures of this character, adopted for military and for economic reasons.

The trade-agreements program of the United States Government has been our answer to this movement. The leadership which we have thus assumed against destructive trends and toward a sound development of mutually beneficial trade should not now be surrendered. It is not the province of this report to consider the details of individual agreements. Available statistics demonstrate, however, that the trade agreements now in force have materially improved American trade and therefore have contributed to national prosperity and to an improvement of our national standard of living.

Moreover, they have contributed to international good will. The principles which they have reduced to practice should be kept alive not only because of their immediate benefit but also because they will become a point of departure for economic reconstruction at the end of the hostilities which now unhappily disturb the world. When nations begin to discuss constructive measures for economic and political peace the United States Government should not be without the flexible procedure provided in the trade-agreements program in making its contribution to the economic rehabilitation of the nations. In our opinion it would be disastrous for the United States at this time to abandon its leadership in the struggle against excessive economic nationalism. The problem of reconstruction to be faced after the war will vitally affect this country, and the trade-agreements program, as has been indicated, will provide an essential instrumentality for the reestablishment of sound and constructive commercial policies.

#### UNCONDITIONAL MOST-FAVORED-NATION PRINCIPLE

The unconditional most-favored-nation principle, introduced into our commercial treaty structure by Charles Evans Hughes when Secretary of State has become under Cordell Hull an active instrument for the establishment of equality of commercial treatment in world commerce.

Although criticism has been directed against the automatic generalizations of concessions to third countries entitled to most-favored-nation treatment, a more careful examination of the principles of trade negotiation indicate that this is sound policy. In negotiating trade agreements our Government adheres to the policy of granting major tariff concessions only on items of which the negotiating country is the principal supplier to the United States. In addition, it has introduced other provisions in trade agreements which protect all elements of our economy from unfair advantages which may accrue to third countries as a result of the unconditional most-favored-nation principle.

The affirmative advantage of this principle, however, must not be overlooked. It is a constant protection against discrimination which might arise at the time a trade agreement goes into effect or which may subsequently arise. In addition, at the same time that the United States Government generalizes concessions all other countries with which it has most-favored-nation treaties extend to the United States concessions made to other countries. A statistical analysis of existing trade agreements shows that many reductions in the tariff rates of foreign countries have benefited our commerce through the automatic operation of the most-favored-nation principle.

When negotiations begin under the principles of the trade-agreements program our negotiators consider not merely the effect of concessions made to the particular foreign country with which negotiations are being carried on but also the effect of any concession upon our entire commerce. In other words, negotiations under the trade-agreements program are in effect negotiations of multilateral arrangements, and concessions are made and received, having in mind their total effect after their generalization upon our domestic economy on the one hand and on the other upon our expanding foreign trade.

#### THE OVER-ALL PROBLEM OF OUR DOMESTIC ECONOMY

The council favors the trade-agreements program because it offers a scientific and flexible method, free from undue local political pressure, for appraising the over-all problem of our domestic economy, as well as the effect of concessions upon local and group interests.

Our great exporting interests—industrial, agricultural, and mercantile—are finding in the trade-agreements program protection against discrimination and other restrictions by foreign governments as well as a means of stabilizing reasonable tariffs. Resulting enlargement of foreign markets tends to create prosperity in enterprises engaged in export trade which in turn expands the home market in the United States for the products of our stockman and farmer, as well as for the goods of our manufacturers.

The flow of our people's savings abroad, particularly into productive enterprises, is closely related to the growth of trade. An integral part of any policy which looks toward trade expansion is the full support of the rights of American investments in foreign countries. We believe, therefore, that our Government in negotiating trade agreements with other countries might well place greater emphasis on the fair treatment of American investments as an important consideration in granting tariff concessions.

These agreements, in a much higher degree than customary in international negotiations, involve specific and practical commercial considerations of vital importance to large sections of our industry and agriculture. Because mistakes may be irreparable, we urge an active cooperation with all interests involved in any given case and that there be increased consideration of facts and arguments before conclusions are reached. Our people are entitled to expect that in determining concessions which are to be made the United States Government will base its decisions upon careful

analyses of competitive factors and effects on markets, and so conserve and foster enterprise to the benefit of the broadest interests of our economy.

### Silver Purchase Program

#### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ARTICLES FROM THE NEW YORK TIMES OF JANUARY 22, 1940, AND THE TRANS-PACIFIC, TOKYO, OF DECEMBER 28, 1939

Mr. TOWNSEND. Mr. President, I send to the desk a clipping from the New York Times of January 22, 1940, entitled "Silver Law Fails, 1939 Survey Finds." I send also a clipping from the Trans-Pacific, Tokyo, of December 28, 1939, entitled "Gold Rush Starts in East Formosa." This article tells of the efforts which the Japanese Government is making to increase the production of gold.

I ask unanimous consent that these two articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of January 22, 1940]

SILVER LAW FAILS, 1939 SURVEY FINDS—BUYING GOAL 291,000,000 OUNCES FURTHER AWAY THAN IN 1934—1939 TOTAL 341,400,000—UNITED STATES GOVERNMENT'S HOLDINGS UP TO 2,930,000,000, HANDY & HARMAN REPORT

The United States Government bought in 1939 approximately 341,400,000 ounces of silver, of which 60,600,000 ounces were derived from domestic ores, according to the annual review of last year's silver market by Handy & Harman, local bullion dealers. The year's acquisitions, added to the 2,588,600,000 ounces on hand at the beginning of 1939, brought the total of United States Government holdings of silver to 2,930,000,000 ounces on December 31, the review estimates.

"Once again," the review says, "the year-end figures proclaim the futility of attempting to meet the requirement of the Silver Purchase Act that 'one-fourth of the total monetary value of the gold and silver stocks shall be silver.' After 5½ years of operation, and after more than 2,200,000,000 ounces of silver have been bought, the goal set by the act actually is 291,000,000 ounces further away than it was when the legislation was passed in June 1934."

The firm estimates that world silver production last year was about 266,000,000 ounces, or about the same as in 1938. The production was apportioned approximately as follows: United States, 57,000,000 ounces; Mexico, 81,000,000 ounces; Canada, 24,700,000 ounces; South America, 34,700,000 ounces; all other countries 68,600,000 ounces. Supplies of previously mined silver coming into the market were estimated at 137,000,000 ounces, of which probably 65,000,000 were from Indian Government stocks and 60,000 from China. In 1938 other supplies of silver were almost 200,000,000 ounces larger than last year.

#### SILVER COINAGE SMALL

"Reports covering silver coinage," the review continues, "indicate a comparatively small consumption for that purpose during 1939—a total of 8,900,000 ounces. The United States minted 3,100,000 ounces for Cuba and 100,000 ounces for the Dominican Republic; the Bank of Mexico acquired slightly over 1,000,000 ounces for the Mexican Government; and the following exports from London were also considered to have been for coinage purposes: Poland, 1,500,000 ounces; Switzerland, 1,500,000 ounces; Hungary, 1,200,000 ounces; Sweden, 500,000 ounces.

"Our estimate of India's consumption of silver during 1939 is 26,000,000 ounces. The smallness of this figure may come as somewhat of a surprise in view of our previous statement that the Indian Government sold locally some 48,000,000 ounces, and when we add that imports totaled at least 25,000,000 ounces. However, the explanation is that 50,000,000 ounces of silver were on hand in the bazaars at the end of the year, and had not been absorbed by the people of the interior.

"We estimate that 34,000,000 ounces of silver were used during 1939 by the arts and industries in the United States and Canada, an increase of nearly 25 percent over the preceding year.

"Advices from England indicated that the arts and industries in that country consumed about 15,000,000 ounces during 1939. In the case of Germany, we have been unable to secure any information whatsoever, but we have made an estimate of 16,000,000 ounces for total consumption without attempting to subdivide into specific classifications."

## THREE PERIODS OF MARKET

Reviewing market developments last year, Handy & Harman divide them into three periods. From the beginning of the year to June 26 the price of silver of foreign origin was held at 43 cents an ounce by purchases at that level by the United States Government. The second period, comprising world-market fluctuations, continued from June 27, when the Treasury's buying rate was reduced, to the end of October, when imports of silver were prohibited from entering Great Britain and India except under license. In the third period, which extended from October 30 to the end of 1939, two markets existed—the world market represented by the Treasury price of 35 cents an ounce, and the Anglo-Indian market, represented by sterling and rupee quotations.

"Unless there occurs a substantial decline in production or an off-setting increase in consumption apart from United States Government purchases, neither of which development seems probable at present," the review says in conclusion, "the current price level of foreign silver can be maintained only by a continuance of Treasury support. Domestic silver production can be eliminated as a factor because, whatever the amount may be, it will be bought by the United States under the new statute of July 6, 1939.

"Foreign silver production has averaged over 175,000,000 ounces annually during the past decade. India's average yearly consumption for the same period was less than 40,000,000 ounces, and 60,000,000 ounces would constitute a maximum for use in the arts and industries. The complete elimination of China as a buyer and the great reduction in silver coinage leaves the scales of supply and demand well weighed down on the side of production, without taking into consideration any additional amounts of the white metal which might be forthcoming from demonetization or Government reserves.

"Whether the United States will continue to absorb all excess supplies of foreign silver is a matter for Congress to decide. If no action is taken to repeal the Silver Purchase Act, it is a reasonable assumption that the Treasury's buying rate will determine the lower limit of world silver prices and that any advances above this level cannot be long sustained, provided no artificial restrictions are placed upon the flow of silver."

[From the Trans-Pacific of December 28, 1939]

## GOLD RUSH STARTS TO EAST FORMOSA—GOVERNMENT-GENERAL STAKES CLAIMS TO MAJORITY OF LIKELY SITES IN REGION

The spread of news of the discovery of gold in eastern Formosa has resulted in a gold rush to the Takkiri gorges, according to the Yomiuri. But the Formosan Government-General has already staked its claims to most of the regions where gold is likely to be found so that these people are not likely to get much for their troubles. The roads leading to the Takkiri ravines have had police boxes constructed to keep out those who would violate the Government-General's ban. Therefore, these people, in order to get at the gold fields, must somehow find their way away from the already set paths.

The type of country the gold diggers are likely to find was described by Mr. Michio Ogasawara, a young mining engineer of the industrial development bureau of the Formosan Government-General, who was a member of the party which located the alluvial gold deposits. Mr. Ogasawara said that their prospecting party had been combing the Formosan wilds for about seven years before finding what they had been seeking. He believes that there are many more deposits of gold in Formosa in addition to those found. Already another gold deposit has been found in the Daidoku ravines by a mining engineer named Usami on December 11, he said.

Poisonous insects and venomous serpents they found in plenty, in addition to wild beasts.

The Formosan Government-General authorities are busily mapping out plans for the mining of the gold discovered. The first group of 200 persons was sent on December 10 to begin mining operations, under the direction of Mr. Ishizaki, a mining engineer.

## MINING COMMITTEE

The Government has decided to set up a special committee to carry out the decrees for the increase of gold production, according to Domei. The decrees were promulgated on November 11 and put into force immediately.

The special commission will consist of high Government officials and leading industrialists. It is understood that the personnel of the committee will be officially announced soon, so that the committee may be able to start its activities within this year.

Ceremonies took place on December 13 in the Takkiri ravines in Formosa marking the beginning of mining operations there, according to the Chugai Shogyo. After prayers were offered, Mr. Ishizaki, the mining engineer in charge of the operations, gave general instructions to the group and work was begun in earnest. The first gold nugget to come to light was about the size of a grain of rice, weighing about 2 momme.

## INCREASED OUTPUT PLANNED

HSINKING, December 14.—The Manchukuo Gold Mining Company expects to increase its output of gold by about \$5,000,000 next year by adding three new mining ships to its present mining fleet of seven ships. The concern is also gradually mechanizing the excavation to increase the gold production.

The three new mining ships are scheduled for completion by June next year, making the fleet number 10 when the mining season is at its peak in August and September.

The assembling of seven mining ships now in transit to Manchukuo will be completed early next year. When these ships are put into operation, the output of alluvial gold is expected to increase correspondingly.

## White House Conference on Children in a Democracy

## EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ADDRESS BY PRESIDENT ROOSEVELT

Mr. LEAVY. Mr. Speaker, under leave granted me to extend my remarks, I am including the address delivered by President Roosevelt on January 19, 1940, at the White House Conference on Children in a Democracy.

This address was heard by millions of Americans even though it was delivered to a small group in the White House, because all broadcasting systems carried it over scores of radios in every part of the Nation. The address is characteristic of all public utterances of our great President since he has been in office, and I think, as time goes on, it will stand out even above many of his remarkable state papers. It not only analyzes conditions, but displays a practical imagination concerning the present and the future, both immediate and distant.

Without in any way attempting to set out one part of this address over and above any other, still I feel that the reference made to my great State of Washington in regard to the practical hope that it holds for hundreds of thousands of splendid Americans and their children in the promise of transforming them from hopeless, despairing migrants into cheerful, optimistic home owners, away out in the Northwest, on the million and a half acres of fertile lands that are shortly to be made available by reason of the construction of the Grand Coulee Dam, fully justifies me in making this unusual address a part of our records in Congress.

I wish that it were possible for every Member of this Congress to personally visit the region referred to by the President in this address, and see for himself the practical possibilities that exist there, which would aid in solving, in part, the staggering social and economic problems now confronting us, and which in turn are creating such tremendous political problems. If the approach suggested by the President were more fully appreciated by us all, and we all joined wholeheartedly in efforts toward a practical solution, the things and conditions that now seem impossible would become fairly easy in accomplishment, and in their accomplishment there would come to each of us a joy and satisfaction that only comes when we know we have participated in the doing of something really worth while.

The President's address is as follows:

Miss Perkins, members of the White House Conference on Children in a Democracy, I come here tonight with a very heavy heart because shortly ago I received word of the passing of a very old friend of mine, a very great American, Senator Borah. I had known him for a great many years and I had realized, although perhaps on this or that or the other political problem we may have differed from time to time, yet his purpose and my purpose and the ultimate objective of, I think, everybody in this room interested in the future of America, were identical—and the Nation has lost one of its great leaders in his passing.

I am glad to come here in the thought that Senator Borah, of Idaho, would want us to go on with the work of building a better citizenship in the days to come in the United States.

You know, I go back, not as far as he did, but I go back a great many years. I go back to my days in college when I worked for an organization called the social service committee. After that, my wife came into the picture and, when we were engaged, I discovered that she was teaching classes of children on the East Side in New York.

And then, very soon after I was admitted to the bar, I got to know another very great American, an old friend of yours and mine, Homer Folks. And probably Homer does not remember it himself, but in New York in those days we were just beginning to take up the problem of providing milk for babies, for mothers, in all parts of that big city. And I, wanting to do something in addition to trying to learn a little law, went in with an organization which has long since ceased to exist because it was absorbed by greater organizations, the New York Milk Committee, and I worked for 2 or 3 years in trying to help in placing milk stations for babies on the East Side and West Side and up in the Bronx in New York City.

Homer Folks was one of the principal moving agencies in setting that up, and it is rather an interesting thing that the woman who was most greatly responsible for helping to provide milk for dependent poor children in the great city of New York was Mrs. Borden Harriman. I sent Mrs. Harriman as United States Minister to Norway 2 years ago.

Last April when this conference first met in this room I asked you to consider two things: First, how a democracy can best serve its children; and, the corollary, how children can best be helped to grow into the kind of citizens who will know how to preserve and perfect our democracy.

Since that time—since last April—a succession of world events has shown us that our democracy must be strengthened at every point of strain or weakness. All Americans want this country to be a place where children can live in safety and grow in understanding of the part that they are going to play in the future of our American Nation. And on that question, people have come to me and they have said, "What about defense?" "Well," I have said, "internal defense and external defense are one and the same thing. You cannot have one unless you can have both."

Adequate national defense, in the broadest term, calls for adequate—yes; on the one side—munitions and implements of war and, at the same time, it calls for educated, healthy, and happy citizens. And neither requisite, taken alone, taken all by itself without the other, will give us, will defend the national security.

And so today, in January 1940, it is my pleasure to receive from you the general conference report with its program of action. You have adopted this report after days of careful deliberation, preceded by nearly a year of study and discussion.

And, by way of illustration, I am having a problem with the Congress of the United States as to whether the problems of the United States are going to be decided after a couple of days of careful deliberation in each House or whether I am going to get a couple of million dollars for undertaking studies that would correspond to this year of study, this year of discussion, that you good people have been putting into the problem of children in a democracy. And I think I am going to win out.

When I started to jot down some notes about what I was going to say tonight—and so far I have been speaking, as you have observed, practically extemporaneously—I said to myself, "This is going to be the most dreadful speech I have ever delivered," because when I come to write down notes and dictate a speech I say to myself, "What is it in this particular subject that I am going to talk about that hits me between the eyes?" And on this particular subject of children in a democracy the thing that hit me between the eyes was what I got about a week ago, a list, a tabulation, a catalog of what you have been studying.

And so I felt that the Nation as a whole ought to realize that the subject of children covers several pages of a catalog. There are so many interests involved, so many problems involved. Almost everybody who is hearing me tonight I suppose in every State of the Union thinks of children in terms of two or three of these subjects on the average, two or three subjects in which he or she has special experience or special interest, such as education of children or the recreation of children or the health of children. Or he or she may have some great enthusiasm for one particular kind of child-welfare service. For instance, I myself am tremendously interested in crippled children.

But this conference report rightly calls on us to think of children as a whole, as each child is related, not to one life, not only to his own life, but to the lives of his brothers and sisters, the life of his family, and then inevitably to the life of his community, the life of his county, the life of his State, and the life of his Nation.

And that is why if people in this country are going to think of this problem as it really is, they have got to listen to a catalog for the next 10 minutes.

I can illustrate best the extent to which the interests of children are interwoven with the interests of families and communities by giving you these main topics of the conference, and I do not think there is any one of these topics of which we can say, "Well, that is awfully nice, but what relation has it to the problem of my child?" Well, of course it has; every subject here has.

And the first part of the conference report reminds us sharply that by every step we take to protect the families of America, we are protecting the children also. Well, put that in another way: It means that what Federal Government and State government, county government, town government, village government—everything else—what they are doing to coordinate the economy and the social problems of their own communities in relation to the whole population necessarily has an effect on every child in that community. Here we find in this report recommendations in general which constitute an argument for buttressing and strengthening, in the first instance, the institution of the family, the family as it relates again to a whole, and of other things—health, training, and opportunities of children in what we are pleased to call a democracy and, thank God, it still is.

This part of the discussion includes families and their incomes, families in need of assistance, families and their dwellings, and the family as a threshold to the future democracy of this country.

And then, following that group of topics, the report discusses a lot of other things that either enter or ought to enter into the life of every American child in every part of the country—schools, religion, leisure-time activities—mind you, these are all separate topics that we are trying to coordinate into one national picture—libraries, protection against child labor, youth and the needs of youth, the conserving of child health, the social services for children, children in minority groups, and, something that a lot of people forget, as I have good reason to know as the Chief Executive, the subject of public financing and administration.

But what I am specially pleased about is this: That this conference, made up of men and women that belong to every political party in every part of the country, has found that we have definitely improved our social institutions and our public services during these past 10 years. And the only thing that good old Homer Folks said that I do not agree with—he called them "these terrible 10 years," and I do not. I think they have been the most interesting 10 years since—what? Well, at least since the Civil War and maybe since the Revolution. And we are all glad we have had a part in them, because I believe that though we have had lots of trouble, lots of difficulties, that these past 10 years have been 10 useful and, on the whole, 10 years of definite progress in a democracy.

The conference concludes, and rightly, that to have made progress in a period of hardship and strain proves that America has both strength and courage.

But, again, I agree with the conference that we still have got a long way to go. Too many children—and you can find them in every State in the Union—are living under conditions that must be corrected if our democracy is to develop to its highest capacity. The conference tells me that more than half of the children of America are living in families that do not have enough money to provide fully adequate shelter, adequate food, adequate clothing, and adequate medical care, and adequate educational opportunities.

I have been called to task, as you all know, because I have reiterated, reiterated many times, something about one-third of America—the ill-clothed, ill-housed, ill-fed—criticized on the ground that I was saying something derogatory. I have been telling the truth, and you good people have sustained me by that statement that more than half the children of America are living in families that do not have enough money to provide fully adequate shelter, food, clothing, medical care, and educational opportunity. Why should we not admit it? By admitting it we are saying we are going to improve things.

Yes; and you are rightly concerned that provision be made for those who are unemployed, whether for economic or personal reasons. To keep families from starving while the fathers walk the streets in vain in search for jobs will not give children the best start in life.

Social insurance to provide against total loss of income, and appropriate work projects adjusted to fluctuations in private employment and both urban and rural needs, constitute the first lines of defense against family disaster.

And I am glad of what has been said tonight about urban problems. I think my very good old friend the mayor of New York would not mind my telling a story of what happened up at Hyde Park last autumn. He was up there lunching with us. We had a big lunch, 18 or 20 people, and we were talking about the problem of distribution of population in the United States. Well, that is an old thing that I have been sort of hobbing about for a great many years—20 or 30 years. And I talked about the problem of overcrowding the cities. I talked about whether it was a good thing, with a big question mark, about cities getting too big, the bigger cities getting still bigger, and whether we could not work on some plan for a greater decentralization of the population, the building up of the smaller communities. And then, as a sort of jest, I said, "You know, Florelo, I am going to say something awful that you won't agree with. I think your problem in New York City, with 7,000,000 men, women, and children in it, is a bad one. I think that the problem of civilized life in a community of that size is almost too big a problem, and I think that New York would be better off if it had six million people instead of seven."

And the mayor of New York looked at me, and he said, "Mr. President, I cannot agree." He said, "Mr. President, you are wrong." He said, "New York would be better off if it had five million people in it instead of seven."

And, by way of following up the same subject—this is just purely from memory—we were talking of conditions before the World War, somewhere around 1913 or 1914 when I was over here in the Navy Department. I read an extraordinarily interesting pamphlet which carried out the thought that you have heard tonight about rural populations. It was by a great French doctor who had made all kinds of examinations of records, vital statistics in half a dozen of the great cities of Europe, and he had come to the conclusion and had attempted to prove it by family statistics that any family that had been city-bred for three or four generations died out and that the only families in cities that survived were the families that had an influx of country blood every generation or two. Now, I do not know whether our modern medical friends will support that, but at least it is something well worth our thinking about in terms of the America of the future.

You tell me, in effect, in this report what I have been talking about for many years, that we have been moving forward toward the objective of raising the incomes and the living conditions of the poorest portion of our population, that we have made some dent

on the problem, and that most decidedly we cannot stop and rest on our rather meager laurels.

Yes; I agree with you that public assistance of many kinds is necessary. But I suggest to you that the Federal Treasury has a bottom to it and that mere grants-in-aid constitute no permanent solution of the problem of our health, our education, or our children, but that we should address ourselves to two definite policies: First, to increase the average of incomes in the poorer communities and in the poorer groups, in the poorer areas of the Nation; and, second, that we should address ourselves to an insistence that in every community, in every State, and the District of Columbia they should pay taxes in accordance with ability to pay.

The conference report, going on with this—what shall I call it?—Sears, Roebuck catalog—and it is very educational to read a catalog—has called attention also to the need for continuing and expanding public and private housing programs if the families in the lowest income groups are to live in dwellings suitable for the raising of children.

Last April, to take another item, I referred to our concern for the children of the migratory families who have no settled place of abode. I spoke casually to the press today about a study I am making. Up in the State of Washington we are spending a great many millions to harness the Columbia River, to put a great dam up there which will pump the water up onto a huge area of land capable of providing a living for 500,000 people, irrigated land, today a desert, which can be made a garden with the process of modern science. Who ought to go there? Are we going to treat that, 2 years from now, just as we treat the average irrigation project? Will it be a contract with the Government to pay out the loan over a period of years on the basis, first come, first served?

I have read a book: it is called *Grapes of Wrath*, and there are 500,000 Americans that live in the covers of that book. I would like to see the Columbia Basin devoted to the care of 500,000 people represented in *Grapes of Wrath*.

Migratory families, the situation of their children, children who have no homes, families who can put down no roots cannot live in a community—that calls for special consideration. But I am being practical. I am trying to find a place for them to go. This means, in its simplest terms, a program for the permanent resettlement of at least 1,000,000 people in the Columbia Basin and a lot of other places. And remember that the money spent on it after careful planning is going to be returned to the United States Government many times over in a relatively short time.

To go on, your report has devoted many pages to family economics. I know very little about that—my wife does. We all recognize that the spirit within the home is the most important influence in the growth of the child. In family life the child should first learn confidence in his own powers, respect for the feelings and the rights of others, the feeling of security and mutual good will and faith in God. Here he should find a common bond between the interests of the individual and the interests of the group. Mothers and fathers, by the kind of life they build within the four walls of the home, are largely responsible for the future social and public life of the country.

And, just as we cannot take care of the child apart from the family, so his welfare is bound up with a lot of other institutions that influence his development—the school, the church, the agencies that offer useful and happy activities and interests for leisure time. The work of all these institutions needs to be harmonized so as to give our children rounded growth with the least possible conflict and loss of effort. And the money and hard work that go into these public and private enterprises are again repaid many times.

And I think that religion, religion especially, helps children to appreciate life in its wholeness, to develop a deep sense of the sacredness of the human personality. In view of the estimate that perhaps one-half of the children of America are having no regular religious instruction, it seems to me important to consider how provision can best be made for some kind of religious training. We can do it, because in this way we are capable of keeping in mind both the wisdom of maintaining the separation of church and state and, at the same time, giving weight to the great importance of religion in personal and social living.

And I share with you the belief that fair opportunity for schooling ought to be available to every child in this country. I agree with you that no American child, merely because he happens to be born where property values are low and local taxes do not, even though they should, support the schools, should be placed at a disadvantage in his preparation for citizenship.

Certainly our future is endangered when nearly a million children of elementary school age are not in school; when thousands of school districts and even some entire States do not pay for good schools. This situation has been reported by many agencies, private and public, and the way I have got it down here in my manuscript, needs to be more widely understood. That does not mean anything. What I really wanted to say is this: I would like to put on the front page of every newspaper in the United States, a list of the most backward school districts, the most backward school States in the United States.

That is rough treatment, but if every person in the United States could know where the conditions are worst—education and health—those areas would get the sympathy, the understanding, and the help for improving those worst of conditions. And again, I have to suggest that the permanent answer is not mere handouts from the Federal Treasury but that the problem has to be solved by improving the economics in these poorer sections and an insistence, hand in hand with it, that there be adequate taxation in accordance with ability to pay.

We must plan also, on a larger scale, to give American children a chance for healthful play and worthwhile use of leisure. I agree with you that a democratic government has a vital interest in those matters. And I am glad that you have suggested a national commission, under private auspices, to study leisure-time needs and recreational resources.

More than in any previous decade we know how to safeguard the health of parents and children. Because of the advance of medical knowledge and the growth of public-health work, we have it in our power to conquer diseases that we could not conquer 10 years ago, and the ability to promote general good health.

New opportunities to us mean new duties. It was one thing to let people sicken and die when we were helpless to protect them, and it is quite another thing to leave a large portion of our population without care at all. It is my definite hope that within the next 10 years every part of the country, just to use an example—and I believe that hope can be fulfilled—every part of the United States will have complete and adequate service for all women during maternity and for all new-born infants. That we can do.

So, too, good nutrition is the basis of child health; and I am equally in sympathy with your suggestion that I appoint a national nutrition committee to review our present knowledge and to coordinate our efforts, looking toward the development of nutrition policies based on the newest and best methods, and we are making new discoveries every day.

You, all the members of the conference, have charted a course—a course for 10 years to come. Nevertheless, the steps that we take now, in this year of 1940, are going to determine how far we can go tomorrow, and in what direction.

I believe with you that if anywhere in the country any child lacks opportunity for home life, for health protection, for education, for moral or spiritual development, the strength of the Nation and its ability to cherish and advance the principles of democracy are thereby weakened.

I ask all our fellow citizens who are within the sound of my voice to consider themselves identified with the work of this conference. I ask you all to study and discuss with friends and neighbors the program that it has outlined—to study how its objectives can be realized. May the security and the happiness of every boy and girl in our land be our concern, our personal concern, from now on.

You, the members of this conference—this conference on children in a democracy—you are leaders of a new American army of peace.

## Extend Time for Filing Applications for World War Adjusted Compensation and Extend Eligibility of Payment to Others

### EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. RANKIN. Mr. Speaker, I have today introduced a bill, H. R. 8079, to extend the time for filing applications for benefits under the World War Veterans' Adjusted Compensation Act, as amended, to 1950, and to enlarge the class of dependents under such act.

There is no reason whatsoever for limiting the time in which these applications are to be filed. I use the date 1950 because that extends it for 10 years; but I see no reason why the limitation should not be entirely taken off, since these accounts will every one be paid at some time or other.

Under the law as it now stands, if a veteran does not leave a father, mother, wife, or children, then none of the rest of his dependents, or his estate, can collect this compensation. That vicious provision was inserted in the original law by those who did not want to pay the adjusted-service certificates at all.

There is absolutely no reason why this compensation should not be paid to the veteran's brothers or sisters, in case he leave no wife, parent, or child, or to his estate in case he leaves no relatives competent under the law to receive it. It is his; it is not a bonus but it is adjusted compensation. It is part of the pay to which he was entitled while he was in the service, and is due him whether he leaves any relatives or not.

Thousands of these boys have had dependent brothers and sisters, invariably cripples, who were unable to take care of themselves, but who could not draw one dollar of his adjusted compensation because of this limitation in the original act.

Many of these veterans die in debt, invariably their estates were unable to pay their burial expenses or their doctor's bills. This adjusted compensation should have been paid to their estates to take care of these accounts. If the veteran had known during his last illness or his last years that this would be done, it would have enabled him to secure better care and attention.

This bill will undoubtedly be referred to the Committee on Ways and Means and not to the World War Veterans' Committee, of which I am chairman. If it should come to the World War Veterans' Committee, I guarantee that it would be reported out almost immediately and brought to the floor of the House for a vote; and I have no doubt but that it would pass overwhelmingly in both Houses. If it does go to the Ways and Means Committee, I sincerely hope that we will be given an early hearing on it; that it will be reported out and passed at this session of the Congress.

Under permission granted me to extend my remarks in the RECORD, I insert the bill at this point in order that everyone who reads the RECORD may have an opportunity to familiarize himself with its provisions.

The matter referred to follows:

H. R. 8079

A bill to extend the time within which applications for benefits under the World War Adjusted Compensation Act, as amended, may be filed, and to enlarge the class of dependents under such act, as amended

*Be it enacted, etc.,* That subdivisions (b) and (c) of section 302, section 311, subdivision (b) of section 312, and subdivision (b) of section 604 of the World War Adjusted Compensation Act, as amended, are amended, to take effect as of January 2, 1940, by striking out "January 2, 1940," wherever the same appears in such subdivisions and section and inserting in lieu thereof "January 2, 1950."

SEC. 2. Section 505 of such act, as amended, is amended by striking out the following: "(beginning with the calendar year 1925 and ending with the calendar year 1946)."

SEC. 3. Sections 601 and 602 of such act, as amended, are amended, to take effect as of January 2, 1940, to read as follows:

"Sec. 601. If the veteran has died before making application under section 302, or, if entitled to receive adjusted-service pay, has died after making application, but before he has received payment under title IV, then the amount of his adjusted-service credit shall, as soon as practicable after receipt of an application in accordance with the provisions of section 604, but not before March 1, 1925, be paid to his dependents in the following order of preference:

- "(1) To the widow;
- "(2) If no widow entitled to payment, then to the children, share and share alike;
- "(3) If no widow or children entitled to payment, then to the mother;
- "(4) If no widow, children, or mother entitled to payment, then to the father;
- "(5) If no widow, children, mother, or father entitled to payment, then to the sister or sisters;
- "(6) If no widow, children, mother, father, or sister entitled to payment, then to the brother or brothers;
- "(7) If no widow, children, mother, father, sister, or brother, then to the estate.

"Sec. 602. (a) No payment under section 601 shall be made to a widow if she has remarried before making and filing application, or if at the time of the death of the veteran was living apart from him by reason of her own willful act; nor unless dependent at the time of the death of the veteran or at any time thereafter and on or before January 2, 1950. The widow shall be presumed to have been dependent at the time of the death of the veteran upon a showing of the marital cohabitation.

"(b) Payment under section 601 shall be made to a child if (1) under 18 years of age at the time of the death of the veteran, or (2) at any time thereafter and on or before January 2, 1950, incapable of self-support by reason of mental or physical defect.

"(c) No payment under section 601 shall be made to a mother or father unless dependent at the time of the death of the veteran or at any time thereafter and on or before January 2, 1950. If at the time of the death of the veteran or at any time thereafter and on or before January 2, 1950, the mother is unmarried or over 60 years of age, or the father is over 60 years of age, such mother or father, respectively, shall be presumed to be dependent.

"(d) No payment under section 601 shall be made to a sister or brother unless dependent at the time of the death of the veteran or at any time thereafter and on or before January 2, 1950.

"(e) No payment under section 601 shall be made to the estate unless such person or persons as would under the laws of the State of residence of the decedent be entitled to his personal property in case of intestacy be dependent at the time of the death of the veteran or at any time thereafter and on or before January 2, 1950: *Provided*, That in cases where the estate of the decedent would

escheat under the laws of the place of his residence, such payment shall not be made to the estate of the decedent, but shall escheat to the United States and shall be credited to the appropriation from which these payments are made."

SEC. 4. This act shall not invalidate any payments made or applications received, before the enactment of this act, under the World War Adjusted Compensation Act, as amended. Payments under awards heretofore made or hereafter made shall be made to the dependents entitled thereto regardless of change in status, unless another dependent establishes to the satisfaction of the Director a priority of preference under such act, as amended. Upon the establishment of such preference the remaining installments shall be paid to such dependent, but in no case shall the total payments under title VI of such act, as amended (except section 608), exceed the adjusted-service credit of the veteran.

## Our Gold Elephant

### EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ARTICLE BY HON. ROBERT LUCE, OF MASSACHUSETTS

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. ROBERT LUCE which was published in *Investor America* for January 1940:

[From *Investor America*]

OUR GOLD "ELEPHANT"

(By ROBERT LUCE, Representative in Congress from Ninth District of Massachusetts)

Seven years ago the gold and bullion available for use as money in the United States was reported by the Treasury as about \$4,000,000,000. Today it is about seventeen and one-fourth billions. We possess approximately three-fifths of the world's visible money supply of gold.

Were we to continue during the next 5 or 6 years to acquire gold at the average rate of the last 7 years, we would then have all the money—gold coin and bullion—now in the world. Including the metal that will be mined, however, it might take 10 or 12 years. On the other hand, it is not to be expected that the larger nations will let go of much more of their present holdings, so we might exhaust the world supply in 7 or 8 years.

Something must be done about it, and within a comparatively short time. What can be done? What ought to be done?

Before answering these questions it will be well to consider why and how the present situation came about. At the very outset, during his first year in the White House, President Roosevelt said in the opening phrase of his fateful message of January 15, 1934:

"In conformity with the progress we are making in restoring a fairer price level and with our purpose of arriving eventually at a less variable purchasing power of the dollar . . ."

He had already disclosed he was persuaded of the merit in the quantitative theory of money—the theory that the more money, the higher the price level. In October 1933 he had said:

"Ever since last March the definite policy of our Government has been to restore commodity price levels. The object has been the attainment of such a level as will enable agriculture and industry once more to give work to the unemployed. It has been to make possible the payment of public and private debts more nearly at the price level at which they were incurred. It has been gradually to restore a balance in the price structure so that farmers may exchange their products for the products of industry on a fairer exchange basis."

To that end, by the President's direction, Professor Warren, of Cornell, and Professor Rogers, of Yale, on October 25, 1933, began buying gold in the markets of the world. The price at which they were buying this gold was steadily advanced until it reached \$35 an ounce, at which figure it was fixed by the act of devaluation January 31, 1934. Thus the price of gold had risen between October 1933 and the end of January 1934 by approximately 60 percent—from \$20.67 an ounce to \$35 an ounce.

But throughout this period there was no distinguishable effect on prices of commodities. Any change therein may have been due to other economic factors. These factors have been at work ever since, and it cannot be said with any statistical proof that the \$35 rate has in any perceptible way caused whatever changes in the price level have taken place. Thus, in the most thorough test ever made, the quantitative theory of money has received a body blow from which it may not recover.

Possibly the effect on economic thought will prove to be the most useful result of the financial program of the last 7 years. There is

no doubt but that in periods of stress and of abnormal money expansion—what we call inflation—such as took place in Germany and Russia after the World War and had taken place in the case of the assignats at the time of the French Revolution nearly a century and a half ago—the buying power of money may drop calamitously with the corresponding rise in prices. But we now know that, normally, changes in the buying power of money are not speedily influential. Statisticians have found that increases in previous periods of stress have not shown appreciable effect for 2 years, save when so abnormal that fear started the spiral of inflation.

In time, of course, great discoveries of gold deposits will have effect on the general price level of other commodities, as after the findings in California and later in South Africa, but cost of production of gold and silver has had less to do with prices of other commodities than has anything else in the world. Their value in exchange is and for many years has been fixed by law. It does not depend on the finding of a new mine.

Men have resorted to many standards for use in the exchange of goods and services, but the more advanced peoples long ago came to prefer the precious metals, by reason of convenience in trading or hoarding. Here cost of production is distinctly subordinate. You never think of it when you pay or receive. The law says it shall mean so-and-so and, for you, that's the end of it. Striking illustration may be found in the matter of silver. Its cost of production has greatly lessened in recent years. Yet you handle silver as confidently as ever, because the law says so.

You care much less about gold currency because substitutes have been found which are more convenient and much less expensive. For example, more than nine-tenths of all our transactions are now accomplished by the use of bank checks. The effect of this is almost wholly ignored by those who would change our money laws. No way suggests itself by which the volume of this credit currency can be controlled. It rises and falls with the volume of business transactions.

Notwithstanding this, the volume of cash currency has greatly increased. For every man, woman, and child in the United States there is now in circulation on the average more than twice as much as when the Populists—and, afterward, William Jennings Bryan—demanded more cash currency. We have, without realizing it, gone beyond their wildest wishes. The only explanation is that we have kept up with the demand as an automatic response to the needs of business. There is no reason to suppose we shall not continue so to do, without any new legislation whatever.

Accepting, then, that cash currency is not involved in the gold question, how about the use of gold itself for other purposes? Why the national ownership of more than \$17,000,000,000 in gold?

It cannot be fairly said that all of this gold is hoarded. More than a tenth of it is in the exchange stabilization fund, used in conjunction with England and France to steady the payment of international balances of trade. A little more than one-fifth of it is reserved for the payment of sundry obligations, if and when necessary, for working balances and for the general purposes of the Treasury. There remains more than \$12,000,000,000 of gold, mostly in bullion, that can properly be called hoarded. The bulk of this gold is stored chiefly in the great vault built for it at Fort Knox, Ky.

How did we get this vast supply of gold? Treasury Secretary Morgenthau's informative letter to Senator WAGNER (Treasury Department's reply, dated March 14, 1939, to questions asked by chairman of United States Senate Committee on Banking and Currency) gave explicit answer, in substance, to the effect that it came mostly from abroad in payment of the debts resulting from our selling more than we bought in international trade, the balance being paid with shipments of gold. Also it has come for investment, sent by foreigners who sought safety for it in the safest place in the world. There appears nothing we can do about either of these things. We want to sell all the commodities we can, and there is no reason why we should prevent foreigners from buying all our bonds, public and corporate, for which they can pay. Foreign nations may presently forbid shipment of gold out of their countries if the war is prolonged. Otherwise we may get all the commercial gold in the world. In this particular changing our price for gold would have little or no effect on its flow into the United States.

What will be the effect of the war on the balance of trade is wholly conjectural. We shall probably buy less of commodities, both because of the difficulties of trans-Atlantic shipment and because of the transfer of European workers from field and factory to war fronts. Less food will be eaten in the fighting countries, less clothing bought, less of everything else consumed. We are likely to sell little abroad save war material and this must be paid for in cash at our wharves. We can but guess how much can and will be bought from us.

The war removes the likelihood of our doing any investing or lending in Europe and, under present conditions, of our doing much business in the Orient for awhile. It is barely possible that we shall send some of our gold to South America, either by way of Government loan or private investment, but not enough to make a dent in our huge stock.

If we are to keep that stock of gold intact for an indefinite time, can we not make it useful? At present \$12,000,000,000 worth of it appears to be idle, doing nothing of benefit to anybody, serving no social purpose. Yet that is not quite the case. The United States owns that gold, has the title to it, but lends it in the form of gold certificates to the Federal Reserve banks. Apart from payment for new purchases, it can be used by the banks only as reserves. This does not of itself create new money, but it makes that possible. A dollar of it can create about \$25 of check money—the money that is used in more than nine-tenths of our transactions. Thus it can bring about tremendous inflation, but only if

our banks do not continue to use the normal caution that they have hitherto for the most part displayed. At present they are unable to lend safely anything like the total funds at their command. If they go crazy, anything may happen, for it is of no use to argue what crazy men will do.

More useful will it be to consider the reasonableness of the suggestion that if we keep on buying gold at the present rate we may bring about the abandonment of gold for money use by some or all the nations of the world. Can anything be found as a substitute for gold in settling trade balances between civilized countries? The possibility of this is extremely remote. Likewise is that of a universal currency. The League of Nations has shown why.

There are those who would have us go back immediately, at one jump, to the old gold price of \$20.67 an ounce, and stop buying gold. Undoubtedly this would work much havoc, but it would do no more harm in reverse than the precipitate jump up in 1933-34. Yet that wrong does not warrant another. Furthermore, it is quite impracticable to try, by creating a new set of sufferers, to reimburse those who suffered then.

In this case the mischief could be lessened if we lowered the price of gold a little at a time, say a dollar a year for 14½ years. Even this would accomplish little. The price of gold is an arbitrary matter, based on common agreement. One figure is as good as another if everybody agrees. Anyhow, this would require agreement by all the nations of the world, which is, of course, impracticable, at least while the nations war.

When peace comes again there is a possibility, even though remote, of peace treaties and international conferences that will bring us a world standard as exact as the bronze bar in the Bureau of Standards in Washington that indicates what shall be a yard measure.

Meanwhile, although the probability of cash currency inflation is not enhanced by our huge gold supply, the menace of credit inflation hangs over us like a black cloud, adding to the fear on the part of our businessmen and our investors generally.

## Working for the Government

### EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ADDRESS BY HON. W. ARTHUR SIMPSON, DIRECTOR OF OLD AGE ASSISTANCE FOR THE STATE OF VERMONT, AT BENNINGTON, VT., ON JANUARY 11, 1940

Mr. PLUMLEY. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I would like to include therein remarks made by the Honorable W. Arthur Simpson, the Director of Old Age Assistance for the State of Vermont, who, speaking in Bennington on January 11, said:

Working for government and living off government has become the great American profession and is continually being promoted, developed, and expanded. Practically every organized group in the United States is seeking subsidies, concessions, or benefits from the Federal Treasury. We pride ourselves on our adherence to the American system, when as a matter of fact the American system of government as our fathers and grandfathers knew it is fast vanishing from this country. Under our two-party political system militant minority groups exercise an utterly unwarranted influence because of their ability to play off one group of politicians against another. Only when the issue is clear cut, as in recent elections in California and Ohio, is the sanity of the American voter able to assert itself.

Working for government has become a highly technical and professionalized vocation. It has recently been estimated that out of every hundred persons in this country 22 are engaged in agriculture, 55 are in business or industry, 3 are receiving public assistance or relief, and 15 work for government. This takes no account of subsidies or benefit payments to special groups. The system of creating in government more jobs for more people to do less work is in full operation throughout the Nation. We may not have yet reached that happy stage in Vermont, but on the basis of national averages we should have about 90,000 persons, or nearly 25 percent of our population, working or indirectly supported by working for local, State, and National Government or receiving some form of public aid.

We have taxed and harassed private initiative and industry to the point of possessing the greatest accumulation of idle money in the history of this country. We are not only rapidly taxing our people still engaged in productive enterprise into public dependency, but we are busily mortgaging the future ambitions, abilities, and thrift of the younger generation and generations yet unborn. Even though great economies could or should be achieved in government, the gesture against increased taxation is futile

because both increased taxation and economies are now the only alternatives to inflation and repudiation.

We have inaugurated the greatest and most liberal program of social insurance and categorical assistance that the world has ever known. We have yet to learn whether our industrial system can support the colossal expenditures which will be necessary to support the programs. Everybody believes in the principles of social and economic security for our people, but we have apparently lost sight of the fundamental idea that security must be earned. Moreover, Americans are prone to be too impatient of results; we want to build quickly instead of soundly, and in recent years we no sooner adopt a new program than we are off on another high-sounding social experiment. Those who administer public assistance and similar programs are confronted with conditions, not theories. We are in a position to know how much they were needed and what they have accomplished, but we also realize how easily they can be wrecked. No one can disagree with a sound and humanitarian system of public assistance, but sound policies are only developed by patient understanding, economical administration, definite eligibility requirements, and a sound system of finance.

The complacency of the citizens of this country, when considering our financial situation, is disheartening. The general public has been so overwhelmed by financial fantasies running into the millions and billions that it has no adequate conception of the financial catastrophe which lies ahead.

We pride ourselves on our political affiliations, when as a matter of fact, both the Republican Party and the Democratic Party have undergone tremendous changes and bear little semblance to the party faith or policies possessed by them a few years ago. We may need a coalition form of government to solve the problems of the Nation and combat the continual clamor for increased subsidies or their equivalent from each and every group in our Nation.

### Dies Investigating Committee

### EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. BLACKNEY. Mr. Speaker, I am emphatically in favor of House Resolution No. 321, a resolution to authorize the continuance of the Dies investigating committee for the purpose of investigating un-American activities. This is in pursuance of House Resolution No. 282 of the Seventy-fifth Congress, and the committee was authorized to investigate, first, the extent, character, and objects of un-American propaganda activities in the United States; second, the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of domestic origin and attacks the principle of our form of government as guaranteed by our Constitution; and, third, also other questions in relation thereto that would aid Congress in any necessary remedial legislation.

We hear a great deal on the floor of Congress in favor of freedom of speech. I know full well the constitutional provision which guarantees to each one freedom of speech. But I wish to call the attention of the House to this thought: That there is a vast difference between the freedom of speech guaranteed by the Constitution and unbridled license of speech as used by the Communists and radicals who do not believe in American principles.

I think the time has come in America when, instead of shedding useless tears in favor of those who do not believe in American institutions, we should pay some attention to the great mass of honest citizens who do believe in the Constitution and who do believe in the orderly processes of government.

In my judgment, one of the great causes of the spread of subversive doctrines in America has been the loose administration of our immigration laws. I believe in immigration properly regulated, but I do not believe in letting down the bars of immigration so that radicals from foreign countries who believe in every other "ism" but Americanism should be allowed to come to this country and spread their nauseating doctrine of hate.

I have every respect for those from foreign lands who came to the United States with the intent of making this

country their home, of becoming attached to American institutions, and who learn to love the Constitution of the United States, and who are willing to become American citizens, and do become law-abiding American citizens. For these people I have the utmost respect, but for those who come from foreign soils, unwilling to become citizens of the United States, unwilling to take the constitutional oath as citizens, but who come here for the sole purpose of undermining the principles of our Government—for those people I have the utmost contempt.

I think the quicker we put teeth in the immigration laws, the better for us. I think the quicker we deport aliens illegally here, the better for America. In other words, if aliens come from foreign soil, unwilling to adapt themselves to American principles and to become law-abiding citizens, let them be sent back to the land of their birth. America has no use for such people.

I can honestly state that the Dies investigating committee has done much to alleviate the radical situation in my home State, and the effect of this committee's activities, particularly in my home State, has been greatly beneficial and salutary. I am constantly receiving letters, letters by the hundreds, from patriotic citizens of my district, who stress the thought that the United States should free themselves from those radicals who do not believe in our form of government; that those who are here illegally should be deported; that the immigration laws should be greatly strengthened and then rigidly enforced. If we are to preserve the great heritage of American institutions and love of country, then this must be done, otherwise the great sacrifice made by loyal American soldiers who were willing to give their lives for the preservation of the Constitution and the American form of government was in vain. The great majority of legionnaires, of Spanish War Veterans, and of other soldier organizations are preponderantly in favor of the continued investigation by this committee.

I think this appropriation should be granted and the committee authorized to proceed fearlessly in their investigation, and let the chips fall where they may. There is no politics in this resolution. Every Republican, every Democrat, every man loyal to American institutions should stand back of this committee. I think the committee should be congratulated upon the splendid work that they have done.

I know full well the obstacles that have been placed in the committee's progress from certain sources, but again I state that if we are to preserve America, as you and I have been taught to believe in America, if the America of the future is to protect our boys and girls as we have been protected, then this committee should be authorized to proceed further.

I shall gladly vote for an adequate appropriation for this committee in order that fair and fearless investigations may be conducted, knowing full well that should this resolution carry, as I believe it will, that it will check the ruthless and subversive groups whose sole purpose is the change or destruction of America as you and I know it and the substitution in its place of a government that will not conform to the great American ideals which have been the actuating motives that have made America the leader of the world.

### The Natural Law

### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ADDRESS BY THE MOST REVEREND JOHN F. O'HARA, C. S. C., D. D., AUXILIARY BISHOP OF THE UNITED STATES ARMY AND NAVY DIOCESE

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the Record, I include the following sermon

given by the Most Reverend John F. O'Hara, C. S. C., D. D., auxiliary bishop of the United States Army and Navy diocese, at "The Red Mass" Sunday, January 21, in the National Shrine of the Immaculate Conception.

"For when the gentiles, who by nature have not the law, fulfill the requirements of the law, these, though they have not the law, are a law unto themselves, showing as they do the demands of the law to be written in their hearts."—Epistle to the Romans ii: 14-15.

Every man who comes into this world, whatever be his color or nationality or social position, is a transient and a traveler. Since we have not here a lasting city he is destined for some point beyond his present dwelling place, and it is all important to know exactly what that destination is, if he would make certain of reaching it. It is useless, therefore, for him to talk about law until he has first determined whither he is bound. For law is ordained to point out his path and direct him in his course and he must of necessity know where he is going if he is to be directed there.

If man's end were this world; if he, like the beast of the field, perished when he drew his last breath, then the law of the jungle or the code of the libertine would suffice for him. If there were no reckoning to be made after his stay in this world, why should he work or suffer or endure poverty, if these things could be avoided? If by sloth or plunder or murder he could enjoy this life to the full, it would seem senseless not to use those means. Law in such case should direct him to the nearest tavern where he might eat, drink, and be merry, or to the nearest theater where he might have his fill of amusement.

But we know that man's destiny is not this world, and that the laws of expediency and of Bacchus are insufficient for his needs. "God created man of the earth and made him after His own image. He created of him a helpmate like to himself. He gave them counsel, and a tongue, and eyes and ears, and a heart to devise, and he filled them with the knowledge of understanding. He created in them the science of the spirit. He filled their hearts with wisdom and showed them both good and evil. Moreover, he gave them instruction and the law of life for an inheritance. He made an everlasting covenant with them, and showed them His justice and judgments, and their ears heard his glorious voice, and He said to them, 'beware of all iniquity.' And he gave to everyone of them commandments regarding his neighbor."—Ecclesiastes xvii: 1 et seq.

Man might object to being governed by the laws of another world while he is still living in this one, did not God see fit to instill into his very nature direction sufficient for his guidance. This direction is called the natural law, because it is inseparable from his very nature. The beasts of the field, having no power of reason, are led by God instinctively to their end. But man being a rational animal, the law which guides him must be based on reason so as to conform to his nature. Those who have lost their reason are no longer governed by the natural law. The law is, as it were, suspended in their case. That is why they are not held responsible for their acts. That is why the insane are not executed or imprisoned they are cared for in an asylum.

Every rational creature has a certain light from God that is totally lacking in the lower animals, and in those deprived of reason; a certain apprehension of good and bad in the intellect; a certain tendency in the will toward moral goodness and an aversion toward all evil. This apprehension is not studied but spontaneous, and it is before any knowledge that comes from study or revelation or human law and customs, although it exists side by side with them. It comes to us from our nature to enable us to lead a higher life than the animals, who are guided simply by sense. Some people refer to it as the natural moral law.

Conscience is certainly allied with the moral law, but should not be confused with it. Conscience is the intellect sitting in judgment on the moral goodness or badness of an act to be performed. Conscience takes into consideration much more than the natural law. Its conclusions are formed from every form of divine law that is made known to it, and its chief function is to reduce law to action and to make application to the particular cases which arise.

The natural law, as we know it, is man's participation in the eternal law, and its authority comes from God. It is false to say that there is no absolute standard of morality, which is everywhere and constantly identical. Morality is not made by kings or councils, nor does it depend on popular opinion or the customs and traditions of places. No human sanction, whatever be its power or however vast be the extent of its influence, can turn wrong into right. The reason it is so hard to blot out truth is because the conscience of mankind as a whole has a true instinct that prevails in the long run over any perverting of the moral code. For a time, it may be, the moral sense of a community or a country may be darkened owing to extraordinary circumstances. Wicked fashions may become more or less general; but the conscience of men in general is usually right. A prevailing moral code, such as divorce or birth control, that is at variance with the divine code of moral law does not become right from the fact that the state sanctions it and everybody is doing it; neither will it exempt transgressors from punishment in this world or the world to come. If men choose to ignore principles so that they may enjoy unlawful pleasures, their action does not abrogate those principles or render those men less guilty in the eyes of God. The very results of such actions will always enable them to judge which are false and which are true, regardless of custom.

Man, therefore, can offend against the natural law only under penalty of not obtaining his natural end. The obviousness of this fact is probably the cause of its frequent denial by people—people who would never fail to follow the maker's directions in the use of inanimate things. An automobile, for instance, must be used according to its maker's directions if it is to attain the end for which it was manufactured. It cannot be used as a pile driver or a rowboat without disastrous results. So, too, man must follow the directions of his Maker if he would attain his proper end. If he embraces something his reason tells him is evil he violates the end of his nature.

The dictates of natural law, then, are summed up in one general principle: "Do good and avoid evil." By a proper use of reason, man can live according to that principle. But because of man's weakness and his tendency to avoid things which are difficult, the natural law has been codified in the Ten Commandments and given in more elaborate detail in the human positive law. Lest man declare the natural law too vague to be understood, and for that reason invalid and inoperative, God has provided him with other means of knowing the precepts of this law.

A single example of how the principle of the natural law has filtered down into human positive law might be shown thus: The principle "Do good and avoid evil" is made more specific in the commandment "Thou shalt not kill." In turn this prohibition is enacted into human positive law which forbids murder and other forms of homicide. And it is further elaborated in divers statutes, such as those regulating the sale of firearms and even those regulating traffic, for it is admitted that the latter statutes lessen the loss of lives resulting from the use of motorcars. But without any of these last-mentioned laws, normal man knows from the dictates of reason that it is unlawful for him to kill.

It is true that not all positive laws can be traced back directly to the principles of the natural law, because many positive laws may be said to be morally indifferent. They are in themselves neither good nor bad. They are made for reasons of convenience rather than because their omission would be really harmful or the transgression of them a sin. But all those positive laws which direct man to his final end are based on the natural law and can be learned from reason by a normal individual. Human law-makers have, of course, not attempted to codify virtue in their legislation, and for this reason man in his journey to his final end will not always find a complete set of signposts along the way. Wherever the road is not marked by statutes of the positive law, man's reason must supply him with the necessary knowledge. In other words, the natural law must supply signs for whatever roads have been left unmarked by the positive law, and must even determine when a sign is turned the wrong way and may lead the traveler astray. It is not, then, God's will or a spiritual force of any sort that determines man's direction, but the natural law acting through reason.

Need I say, then, that whenever the proper end of the individual is lost sight of, lawyers, law schools, and governments go astray. The lawyer, for instance, who, rejecting God and eternity, thinks that man is answerable to no one except himself for his actions, who spurns all ideas of objective right and wrong, and sets utility as the norm of all human actions, will speedily annihilate reason, and strive for results rather than for justice. Perjury, intimidation, false witness are all lawful in his code, provided they serve the utilitarian purpose. That a just man has been sent to prison or the electric chair, or that a murderer is set free to do more murder, makes no difference to the man who has substituted utility for reason. His one and only determination is to win his case at any cost, and since he has eliminated God and destroyed reason he has nothing to fear as long as he evades the clutches of the civil law. I need not tell you that such characters exist, and that they dignify themselves by the name of lawyers. The gangster profession would die a natural death tomorrow if it were not for crooked lawyers who live on gold that these gunmen have taken at the point of a gun. In many ways they are worse than the gangsters because their profession marks them as protectors of the people, guardians of society, and they prey like so much vermin on the very people that their knowledge should protect.

Law schools which once taught law and its correlative justice have degenerated into institutions teaching laws rather than law. Some prominent schools are now even abandoning a teaching of laws as well as law, and they have preferred to ignore all norms of human conduct. Their students apparently have been tossed out of the lap of the empiricist and into the hands of no one—unless it might be the clairvoyant.

Governments become arbitrary dictatorships when they cease to be governments of law and become instead the vehicle of the whim of a ruler. Russia, in endeavoring to force communism upon its people, thought it necessary to destroy religion and to form anti-God societies so that the sanction of law might be destroyed in the minds of the people. If the state is supreme, if man is a subject of the state and has no rights except those he receives from the state, if the sanction of law comes not from God but from the dictator or his council, then there is nothing that the state may not demand from the individual, provided the ruler believes it to be for the advancement of the state. Purge after purge has taken place in Russia. Thousands have been executed in cold blood without even a trial because the dictator believed it to be for the benefit of the Soviet Union. Yet the rank and file of the Russian peasants have recognized the injustice of the dictator. No amount of propaganda has been able to vitiate man's reason to the extent of wiping out the natural law in the hearts

Russia took the children away from their homes, trained them in Government schools, forbade them to go to church, schooled them in atheism, and, at the end of 20 years of experimentation, has had to admit that religion is still strong among the people. Persecution and propaganda have not been able to destroy man's reason, and man's reason tells him that there is a God who rules the destinies of men and of nations; that man is dependent on God, that there is an eternity where the seeming inequalities of this life will be made equal, and the seeming wrongs of this life will be righted, and the peasants teach their children prayers despite the edict of the ruler, and steal off to places of worship, notwithstanding the prohibition of the dictator.

Since the natural law comes to man through reason, since through reason he is able to judge between good and bad, between right and wrong, it behooves the lawyer to develop reason assiduously and to use that faculty to the very best of his ability. And yet, sad to say, some so-called lawyers seem to cultivate every other faculty except reason. They depend on trickery or browbeating or the confusing of witnesses or the clever picking of a jury to win their cases. The justice of the case, the righting of a wrong, is not a consideration at all, or a very secondary consideration at best. To win a case on a technicality that violates justice, however clever it may be from the viewpoint of the magician, cannot win the acclaim of the moralist or the Christian gentleman. The lawyer should be a man of sterling character since the welfare of his neighbor is so often in his keeping, and since his neighbor puts so much confidence in his probity. He holds in the interpretation of civil law the same place that the clergyman holds in the interpretation of the divine law, and the binding force of both these laws is from the same source. If he is a man of sordid character, if he sells out the rights of his neighbor to the highest bidder, he is like the police officer who helps the burglar through the window of a neighbor's house, or like the clergyman who leads his flock away from the Master by his evil preaching and teaching and his own bad example.

My dear friends, we are united today at the foot of this beautiful altar, our hearts joined in prayer that the Holy Ghost may enlighten our minds to know and our hearts to do only what is just and good in the eyes of God. It is to the simple and good, to the "little children" that the Kingdom of God is made manifest.

May the Holy Ghost enlighten us with His wisdom and prudence, that the laws we make may be in accordance with the divine plan for our salvation, and that in interpreting and executing the dictates of right reason our model may ever be the Divine Judge to whom in the end, all of us must answer.

It is related of Roger Taney, brilliant Chief Justice of the Supreme Court, that one Saturday night in Baltimore he stood in line with other penitents at the confessional. A priest, seeing him, invited him to move up to the door of the confessional, saying: "Mr. Chief Justice, it is not right that a man as busy as you are should lose time here." And the great man replied: "Not Chief Justice here, but a prisoner at the bar."

My dear friends, if the lawyer and the lawmaker, the judge and the jury, will be guided habitually by this humble reflection of Judge Taney, there will be no fear that expediency will supplant justice in our land.

### The Dies Committee

### EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

LETTER BY BRUCE HANNON, SECRETARY-TREASURER OF THE MARITIME FEDERATION OF THE PACIFIC

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I wish to submit a letter from Mr. Bruce Hannon, secretary-treasurer of the Maritime Federation of the Pacific. I believe Mr. Hannon has made a very good appraisal of the work of the Dies committee.

The letter follows:

MARITIME FEDERATION OF THE PACIFIC,  
San Francisco, Calif., January 20, 1940.

Congressman L. E. GEYER,

House of Representatives, Washington, D. C.

DEAR SIR: A bill to continue the work of the Dies committee is scheduled to appear before the House Rules Committee January 22. We feel that we must express ourselves upon this issue so that you may know the opinion of the maritime workers on the Pacific coast toward the activities of this committee.

You have, undoubtedly, read some of the excellent detailed reports by various representative American groups on Congressman DIES' apparent aims and objectives. It is needless for us to go into detail on this matter except to point out that Congressman

DIES, in his report to Congress, listed 14 C. I. O. unions as Communist controlled. Among those numbered were the International Longshoremen and Warehousemen's Union, American Communications Association, and the National Maritime Union, which are affiliates of ours. Congressman DIES, nor any of his committee members, had the American decency to contact any official of the I. L. W. U. in order to verify the statement that the I. L. W. U. was Communist controlled, taking the word of such people as Larry Doyle and Harper Knowles, two antilabor elements that have been thoroughly exposed in Dean Landis' report on the Harry Bridges deportation case.

The facts he has found concerning the National Maritime Union have been based, almost entirely, upon the testimony of a thoroughly discredited and expelled member of the N. M. U., by the name of McCuiston. This person, at the present time, is under an indictment for murder, being accused of deliberately shooting down in cold blood an agent of the N. M. U. in New Orleans.

The same sources are responsible for the attacks made upon the American Communications Association.

We firmly believe Congressman DIES' whole efforts and activities are directed toward destroying labor organizations and every progressive element in these United States that in the least way, challenge the domination of that small circle in American society, whom Congressman DIES represents.

If Mr. DIES were honest in his attempts to uphold the Constitution of these United States and, in his own fashion, really endeavored to better the conditions of his own constituents, we could perhaps view with some leniency these things for which he is responsible. However, we must point out that Congressman DIES is nothing but the political expression of a State notorious for the prevalence of peonage, wage slavery, and poll-tax politics. Congressman DIES is so much a part of that notorious political machine entrenched in office through disenfranchisement of workers that he would not uphold the Constitution of these United States by voting for the antilynching measure, which, if passed, would make our Constitution a fact as well as a theory in the Southern States.

We believe that a vote for a new appropriation for the Dies committee will unleash another series of Palmer raids. We believe that these moneys can best be used to help alleviate the appalling distress so prevalent among the millions of unemployed citizens in these United States.

We suggest that a determined effort can be made to safeguard American democracy by removing the greatest threat to our Nation, which is unemployment and poverty. This means increased expenditures for relief, W. P. A., National Youth Administration, and C. C. C. campaigns.

Our American democracy cannot be safeguarded by forgetting our social needs and devoting moneys to witch hunts.

Yours very truly,

BRUCE HANNON,  
Secretary-Treasurer.

### Congratulations to Governor Heil

### EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. ELLIS. Mr. Speaker, one of the most promising signs I have seen of late is the Associated Press statement carried throughout the Nation on January 15 to the effect that Gov. Julius P. Heil of Wisconsin, on that day pledged himself to seek elimination of Wisconsin's 15-cents-a-pound tax on oleomargarine. He is quoted as follows:

GOVERNOR HEIL'S PROPOSAL TO ELIMINATE A TRADE BARRIER

We've only got one trade barrier—our tax on oleomargarine. I am going to try to eliminate that barrier by trying to educate our people against it. But while we're trying to work this thing out, the South shouldn't put a rope around our necks with retaliatory measures.

Governor Heil is very aptly referring to the possibility of the South placing similar boycott taxes on the products of Wisconsin, if the oleo tax is not removed.

One of the very purposes of our present form of government, as manifested by prohibitions in the Constitution against such taxes, was that free trade might be enjoyed as between the States, thus giving to each section of the Nation those natural advantages which it should enjoy. Almost immediately the States prospered, in contrast to the great trade difficulties that existed in the days of the colonies. The Wisconsin tax does not amount to much, for it brings in

only around \$15,000 annually, but it constitutes another of those barriers which automatically throw the South into the category of "colonial possessions."

The South congratulates Governor Heil on his statement. It will anxiously await the results.

## Twentieth Anniversary Dinner of the Federal Bar Association

### EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ADDRESS BY HON. ROBERT H. JACKSON

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Robert H. Jackson, Attorney General of the United States, at the twentieth anniversary dinner of the Federal Bar Association, Washington, D. C., January 20, 1940:

Almost exactly 6 years ago I arrived in Washington to become general counsel for the Bureau of Internal Revenue. Promising myself and my clients that it was for a year only, a good deal bewildered at the size and complexity of the Government machine I joined the ranks of Government counsel.

The Federal Bar Association promptly extended a hospitable hand. In it I found men and women who entered the Government service under many different administrations, who are divided in political affiliations, in social viewpoint, in race, and in creed. They are, however, in two things united—in devotion to the Federal legal service and in maintaining for that service the best ideals and traditions of our profession.

That spirit has been increased by the leadership of your distinguished toastmaster, with whom I worked in the field of legal organization long before I thought of entering Government service.

Your invitation to speak tonight was extended to the Solicitor General of the United, and as such I accepted it. Lawyers know that office as one of the few in Government where one's energies may be devoted to the philosophy of the law and to courtroom advocacy without having his mind constantly littered with administrative detail. Of course, the title gives the public some difficulty in understanding the function of that office. A high-school girl in Kansas recently wrote to me that her class was making a study of the Department of Justice, and she asked me to send her "all available free material on soliciting in the Department of Justice." Any humiliation from this incident was overcome a short time later when a niece of one of your members wrote home about her visit to Washington and referred to me as "the Celestial General." From such a pinnacle a mere Attorney Generalship would be a demotion. I congratulate Government counsel throughout the service that Francis Biddle, a lawyer known to many of them and familiar with the problems of government, has been willing to leave a lifetime judgeship to become Solicitor General. That reveals the esteem in which he holds that office—an office which involves the greatest professional opportunity and intellectual satisfaction of any in all the Government.

I accepted your invitation gladly, not merely because the invitation is in itself a compliment, but also because I was told that we would unite in honoring as the guest of the evening Mr. Justice Stone. Those who seek to combine high professional standards with public service could find no more inspiring example of each than in our guest tonight.

Harlan Stone would have become a great lawyer even if every law book in the world had been burned the day he was born. Underlying his scholarship is a fine native sense of ordered relations among men, of proper balance between property rights and personal rights, and of what is just and square in a work-a-day world. He is understanding toward the mistakes and weaknesses of his fellow men, and is impatient only of evil purposes or of bad workmanship. He shares wholeheartedly the democratic aspirations that have produced our great American experiment in government by the consent of the governed, and his service on the Supreme Court will be remembered for its statesmanlike as well as for its lawyerlike contributions to our constitutional development.

When I undertook to speak tonight, not being gifted with the foresight of a columnist, I did not know that I was to become his remote successor in the Attorney Generalship which he filled with such distinction.

It is not too much to say that he took it over at a time when the country felt actually unsafe because of the misuse that had been made of its powers. Happily no successor of his has ever

had a problem comparable to that which faced Harlan Stone. He cleaned house and accomplished a quiet regeneration of the Department of Justice. He reorganized the Federal Bureau of Investigation, put it on a professional basis, and properly confined its activities to investigation of violations of Federal law. He brought into the service of the Government clean, energetic, and nonpolitical lawyers, many of whom are with us still. Moreover, it is interesting to note that in some respects he anticipated the New Deal. For he recommended in 1925 four crime laws which did not become law until in 1934 they were enacted by the Seventy-third Congress, as a part of the crime-control program of this administration.

The rank and file of the Department cherish affectionately the tradition of an informal, democratic, easily accessible, kindly, and understanding Attorney General. He went into court frequently and personally took the heat of the opposition, because he had a deep devotion to courtroom work and to the development of the philosophy of the law which is the underlying function of advocacy. It is good for one's humility to engage in this personal advocacy. Every advocate knows within himself how inadequate is his performance compared to his opportunity—for he knows that his actual argument is never the stirring thing he planned, nor is it ever equal to the one he thinks of the night after. Attorney General Stone inspired his staff by example and by generous credit to those fellow workers on whom the record of every executive must so largely depend. It has been said that he regarded none of his lawyers as subordinate, but all as associates.

In this weird city, where so many are making speeches and so few listen to them, you may have overlooked a great speech by Mr. Justice Stone, which, both as a tribute to our guest and as an inspiration to our bar, should be republished in your excellent journal.

He welcomes searching criticism of our cherished professional ideals and traditions, including that of our leadership in public affairs, because to no other group in this country has the state granted comparable privileges or permitted so much autonomy. As victims of changes in economic and social life of whose nature and effect we are still not wholly aware, he says our need is not merely to focus our attention on petty misconduct in the disreputable outer fringes of the profession. Instead he goes to the root of the matter and shows that most of the mistakes and major faults of our time are to be ascribed to a failure to observe the fiduciary principle, old in equity and recognized by law—the principle of trusteeship, without which our kind of society cannot permanently endure. The lawyer in America, as he points out, has reached his highest position in public esteem in dealing with public questions which have become identified with forms of legal right, such as the historic controversies, out of which grew our Bill of Rights. He demands with earnest eloquence a fresh and active devotion on the part of men who wield power to the principles that govern trusteeship.

Justice Stone has thus summoned the bar to an old and exacting standard, but one entirely practical and attainable for Government counsel. Every lawyer, true to his profession, dwells constantly in a climate of confidence and of trusteeship, and in the daily admonition of law and of tradition that he must serve no end that conflicts with his trust. I have never hesitated to be a critic of my profession. Its performance of its social obligation is sometimes pretty bad. But it remains true that no group can show a record of higher average fidelity to its trust. Indeed it is probable that both the private and the Government bar more often err on the side of overzeal than on the side of betrayal of trust.

We lawyers, who sit temporarily in the position of Government counsel, are subject to admonitions to duty in office that those outside of the profession never know to exist. To every one of us, our standing among our professional fellows, our name among lawyers who are our most severe, yet most fair judges is a fixed asset compared to the volatile values of politics. And a lawyer's standard includes not only zeal to protect the interests of Government but also respect for the legitimate rights of adversaries. One of my able predecessors in the Solicitor Generalship reminded us that Government does not lose any case if, by its result, justice is done. Mere statistics of success form no criterion by which to judge Government counsel. Fundamental things in our American way of life depend on the intellectual integrity, courage, and straight thinking of our Government lawyers. Rights, privileges, and immunities of our citizens have only that life which is given them by those who sit in positions of authority.

In all of our doings there is of course a great difference between the mere belligerency and bluster that used to be the courtroom manner of the lawyer and the dispassionate pursuit of justice which our modern manner calls for. But Government counsel is not required to be dull in order to be temperate, nor is he required, in devotion to the ideals of his profession, to be so afraid of public movements and the intellectual or political currents of his time that he fears to endorse anything—except his pay check. We are citizens as well as lawyers.

Woodrow Wilson would deserve immortality had his only public service been to speak these lines:

"\* \* \* Every man who takes office in Washington either grows or swells. \* \* \* The mischief of it is that when they swell they do not swell enough to burst. \* \* \* But the men who grow, the men who think better a year after they are put in office than they thought when they were put in office, are the balance wheels of the whole thing."

No place in our profession offers greater opportunity and urge to grow than the legal service of the Government. In any of the departments, in the special agencies, in the Department of Justice, the daily tasks well done will soon make one a person of special authority in his line. The volume of experience, the intensity of it, the sheer pressure to explore special problems, can hardly fail to make faithful Government counsel, however humble his beginnings, outstanding among the competent men of his time.

A large and able and respected private bar is engaged in the work of molding the law slowly but steadily in the private interest. In its pleas and strategy it puts strong pressure upon courts and administrators to develop the science of law in the direction of extension of private rights. The response to that pressure must be exerted by us. We must guide the processes of our courts in the direction of the public interest if we are to avoid a one-sided evolution of the law.

We lawyers must at times risk ourselves and our records to defend our legal processes from discredit and to maintain a dispassionate disinterested, and impartial enforcement of the law. In spite of any temporary passion or hysteria, I have an abiding faith in the fairness and discernment of the sober second thought of the American people. We must have the courage to face any temporary criticism until this judgment arrives. The prestige of the law and the moral authority of our legal process rests upon their disinterestedness and impersonality. These ideals that we, as Americans, hold most dear are much a trust in the hands of Government counsel. We will keep the faith.

### Finnish Relief and Domestic Problems

#### EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

#### LETTER FROM A CONSTITUENT AND ARTICLE FROM THE LOS ANGELES DAILY NEWS

Mr. GEYER of California. Mr. Speaker, under the permission granted me by this body to extend my remarks, I ask to have printed in the RECORD a letter from one of my constituents, and an article by the columnist, Ted LeBerthon, appearing in the Los Angeles Daily News.

The letter, followed by the article, appears below:

WILMINGTON, CALIF., January 17, 1940.

DEAR LEE GEYER: I am enclosing a clipping which reminds me of at least one actual case I know of where an almost tragedy occurred because of our W. P. A. policy of a 3-months lay-off. There were probably scores of more or less similar cases. Anyway, if there are to be loans floated for any purpose we have many heroic people who have uncomplainingly lived on a pittance and still kept their democratic ideals. When you find plotters, at least reported as such, you find they are not the downtrodden much maligned W. P. A. worker but members of swanky clubs and semi-militaristic organizations.

Now the Finnish people rate anyone's sympathy, but so did the Czechs, Slovaks, Abyssinians, and the people of Spain for that matter, to say nothing of the Chinese and let us not forget the Irish. We all have sympathies for suffering people, but where I live I can see a few without seeing them in the newsreel. I'm selling products from door to door now and meet some very different ways of living. Politicians aren't able to meet the people in their own homes as I do, and watch their struggles, successes, hopes, and failures. Many tell me their most private secrets because they figure it can't possibly be worth my retelling and they need a confidant. It amuses me to hear that there are no slums in California. Next time someone wants to find a few, have them look me up. They won't find them out Wilshire way or Orange Drive, but people do live in chicken coops and houses you can see through.

There are many other things we need to take up from a home standpoint, before we barge off to help people of another hemisphere. Does Hoover own stock in those nickel mines, or is he just one guy who still believes he could be President again if he wanted to be? Well, the people I've met never did catch up with those chickens, but a few are living in the garages with more room because of no car in them. Then, of course, they save money by not having to buy gasoline. This is no way a complaint against the Roosevelt administration because the chicken promises were pre-Roosevelt. In fact, I've had a few of the promised fowls only since he was elected. Many advances have been made—I'm an admirer of the housing projects and also have watched the F. H. A. houses going up with more than just interest. The farmers, small, aren't sailing as smooth as I'd hoped they would be by this time.

Guess the Associated Farmers are doing pretty well for themselves, however. Three cheers for LA FOLLETTE. Your letters are very good reading and I pass them along. When I see a connection between them and what I'm interested in, i. e., union auxiliaries, I'm always glad to have them to read to the meetings. Two so far have made the grade. As a junior member of Congress you probably can't make a big dent on your colleagues, but don't forget there have been young members before who were not afraid to stand by an idea until it was put across. I hope we are in agreement on the matter of staying home and keeping our dollars working in the Western World. I'm personally very fond of some Finns and I just met some interesting Norwegians, but I still think we have a battleground in Imperial Valley and portions of the South that have a prior right to our money and our sympathy. I won't say that I may not be voicing a popular sentiment, but it should certainly have a few adherents. Anyway, here is my vote on that particular problem.

Yours sincerely,

(Mrs.) FREDA LEE BRANNON.

[From the Los Angeles Daily News]

NIGHT AND DAY

(By Ted LeBerthon)

One day toward the end of last August a slight, grizzled, good-humored man with sharp features, graying hair, and hauntingly gentle eyes, was laid off one of the W. P. A. cultural projects in accordance with the ruling of the National Congress requiring all persons who had been on the project 18 months or more to take a 3-months lay-off. He had one of the better W. P. A. jobs and had been getting around \$90 a month. However, his wife had been a paralytic for some time and he had not only taken very tender personal care of her in his off-hours but had been under an almost insufferable burden of expense. But he was one of those men who never speak of their personal problems. On the project he was known for his quiet, infectious mirth and his faculty for lifting up the spirits of everyone around him. He was not only a very conscientious worker, but was almost always doing unobtrusive favors for his fellow workers.

He never spoke of his past, and it was doubtful if he had any children. It was only last summer that it became known that his wife was a bedridden invalid. And this was only learned because, in great joy one day, a joy that had to overflow, he told one other person in the office that she had actually gotten out of bed and taken a few steps. It seems that she had shown steady improvement under his wise, kind care. It was as if, under the sun of his love and laughter, no malady could long endure. And he had told this one person in the office how she had to learn to walk again, like a small child learning her first steps.

And then, as so often happens in modern life, a Nation-wide ruling affecting several million lives struck its cruel, impersonal blow that same week, almost as if it were directed at him alone personally. But so, of course, must the blow have seemed to hundreds of thousands of human beings. He was laid off, and it was quite a shock.

He wanted to keep it from his wife, but that was impossible. He was up to his neck in debt through her long illness, and had no money saved so that he might seek work in private business or industry, so hard to find anyhow, especially for a man of his years. So he hurried with pounding heart to the State relief administration office, and got on relief, knowing that after 3 months he could possibly be recertified back to the W. P. A. rolls.

Somehow, he could not manage the old smile at home. His wife saw he had been hurt inwardly. The reason was because the relief budget would not be sufficient to keep her under as good medical care as had been provided by her poor old loyal helpmate when he was on the W. P. A. pay roll. There was a nervous tension set up in the household, and a few days later she suddenly went to pieces. It was a serious relapse this time, and her physician said it would be absolutely necessary for her to be removed to a sanitarium.

A sort of hysteria had taken possession of her. She and her husband, it turned out, had gone through long years of one adversity after another, and she simply hadn't been able to stand up under any more worry. So the S. R. A. had her moved to a county sanitarium, where she has been ever since. And there her husband visited her faithfully.

A little before Christmas he had a piece of good luck to tell her about. He had been recertified back to the W. P. A. at his old salary. He was working again. This was very happy news because he had walked a good deal of shoe leather off trying to get a job in private business or industry. The "economy bloc," which sponsored the lay-off measure in Congress, had believed that private industry would absorb many of those laid off. But private industry had only absorbed some 5 percent. Locally, the aircraft industry had been about the only one to absorb anyone, and it absorbed only younger men with plastic minds, men who could learn aircraft construction. "You can't teach an old dog new tricks."

Furthermore, the increase in aircraft employment had merely been due to foreign war orders, and orders based on the apprehension of war, which is always a profitable business for a few international money lenders. Anyhow, the slight, gentle, grizzled man was happy to be back on the W. P. A.

He had some happy meetings thereafter with his wife in the county sanitarium. He bought her several needed things for Christmas. He told her he was planning, with his first full W. P. A.

pay check, to brighten up their home a little, so that it would be nicer for her when she eventually came home.

Shortly after New Year's Day he noticed a letter from the S. R. A. on his desk. He opened it. It was another blow. He had thought his wife was being cared for gratis. He learned that under a ruling which made no exceptions he would now have to pay the S. R. A. \$90 for the back care of his wife for 3 months past in the county sanitarium, and \$30 a month henceforward, seeing that he was back on the W. P. A. We human beings are prone to dream and he had been dreaming of better times ahead, with a little surplus, having no idea whatsoever that he owed \$120 already for his wife's care.

The next day he appeared at work as usual. And as usual he smiled gently, helped everybody he could, and said friendly things in his husky, low-pitched voice, a voice no one had ever heard him raise, either in anger or astonishment. However, late in the afternoon one of his fellow workers told another that he had seen the slight, sharp-featured man crying. He had seen him standing behind some files, with tears rolling down his cheeks and his small fists clenched together as if in desperation.

They were futile tears, of course, because no local official of the Work Projects Administration or State relief administration could change rules. The fellow worker who had seen him weeping had said nothing, because grief is usually very private, and it is embarrassing to catch a man who is in his fifties weeping. So no one then knew what he was weeping about.

The day after that was his day off, and it rained most of the day. But he made the long trip to the sanitarium to see his wife. They had been married a long time, and she depended on that weekly visit, and he loved her, which is perhaps explanation enough. Anyhow, he refused to let a little thing like a driving rain bother him.

But he had been so churned up, so agonized inside, and had been so tense and strained trying to smile in chatting with his wife; and he had been so careful to hold back the impulse to tell her about owing \$120 for her care to date; that when he left her a reaction set in, and he felt ill and feverish.

He got caught in a pelting rain, and when he got home was drenched and coughing badly. So he went to bed. When he awakened the next morning his small chest was as if held in a vise. He ached and pained all over and could scarcely get a breath. He tried to get up, but collapsed and fell down and could not get up again.

A neighbor, coming in by chance, found him and soon an ambulance had come over, and he was taken to a hospital, where the doctors said he had a bad cold in his head and chest, principally induced by a severe case of nerve exhaustion abetted by the exposure.

Pneumonia set in and two days later he died.

A few days ago he was buried. His wife, at the time, did not even know he had died. Just some of the fellows from the Work Projects Administration office, and a couple of old friends, and a neighbor or two turned up to hear the ever strangely stirring words of eternal faith, hope, and love: "I am the resurrection and the life: he that believeth in Me, although he be dead, shall live; and every one who liveth, and believeth in Me, shall never die."

No one in the office knew anything of the slight, grizzled man's past, but his fellow Work Projects Administration workers are wondering if ever again anyone will appear in that office who will do so many little things with such unobtrusive kindness, and with such a happy faculty for lifting up the whole tone of the office. And I am wondering how many other obscure tragedies were set in motion when the "economy" bloc in our National Congress experimented with so many thousands of lives. But, I suppose, "rugged individualists" will experiment.

### Flood Control

#### EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

EDITORIAL FROM ARKANSAS GAZETTE

Mr. ELLIS. Mr. Speaker, on January 16 there appeared in the Arkansas Gazette a most excellent statement regarding the administration's proposal, through its Budget recommendation, to reduce the amount to be expended for flood control in the Nation for 1941 from \$135,000,000, which was appropriated last year, to \$70,000,000. I quote the article in full:

[From the Arkansas Gazette]

President Roosevelt's Budget estimates for next year allow money for only about half the flood-control construction Army engineers report they could carry on in the alluvial valley of the Mississippi,

and only one-third as much general construction of that kind as they are in position to proceed with during the 1941 fiscal year.

Of course Government spending must be cut down if deficits are to be reduced and the Treasury's books eventually brought back to balance. It is said with a good deal of truth that when Congress begins considering retrenchments everybody couples his approval of economy with: "But don't cut me."

It certainly seems, however, that any justified flood-control project—any project that plainly must be constructed if adequate protection from flood damages and danger is to be provided—should be carried through as soon as is feasible. Flood control is one field of Government activity where the cost of prevention is repaid, many times over in some instances, by the losses that are escaped.

The \$70,000,000 recommended by President Roosevelt for the 1941 general flood-control program compares with \$208,000,000 which the engineers have reported they could profitably expend, and with an actual appropriation of \$133,000,000 for this year, when according to the engineers \$195,000,000 could have been profitably spent. For the alluvial Mississippi Valley the Budget proposes \$30,000,000, while the engineers report that they could expend \$50,000,000 with benefit.

The Mississippi Valley projects for whose early completion Arkansas is specially concerned include the Wappapello Dam and Reservoir to reduce flood crests on the St. Francis River, and the White River backwater levee. Approved Arkansas projects on the general flood-control program comprise the Blue Mountain and Nimrod Reservoirs in the Arkansas River drainage basin; the Clearwater and Norfolk Reservoirs in the White River Basin. Over the generations floods on these rivers have inflicted immeasurable losses and suffering.

### Reciprocal Trade Agreements Program

#### EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

STATEMENT BY HON. HENRY A. WALLACE

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very excellent statement made before the House Committee on Ways and Means by the Secretary of Agriculture, Mr. Wallace, on the reciprocal trade agreements program.

There being no objection, the statement was ordered to be printed in the Record, as follows:

When your chairman invited me to come here today to discuss, from the point of view of agriculture, the desirability of continuing the trade-agreements program, I was glad to accept. The fact that I did not appear before your committee in 1937, when the Trade Agreements Act was up for renewal, was interpreted by some as meaning that the Department of Agriculture was not in accord with the trade-agreements program. Because of that interpretation I addressed a letter to your chairman on February 8, 1937, stating emphatically that the Department of Agriculture was in accord with the program and giving the reasons why. Later I amplified those views before the Senate Finance Committee. In concluding my statement before that committee in 1937, I said:

"\* \* \* The Department of Agriculture does not consider the trade-agreements program a cure-all for our agricultural problem or a substitute for other farm programs. We do consider it an important and highly desirable supplementary program. \* \* \* We cannot get away from the fundamental fact that our agricultural plant, as it exists today, will in years of ordinary weather produce more than can be consumed at fair prices within the United States. We believe that it is extremely important to maintain, on a sound basis, as large a foreign outlet for our export products as possible, consistent with sound soil-conservation practices. We believe that this can only be done through permitting larger imports of goods and services from abroad to pay for our larger exports and through securing reductions in extremely high foreign-trade barriers. The trade-agreements program is making definite progress along this line."

I stand on that statement today. Even though the trend of world events has kept the trade agreements from having the full beneficial effects on international commerce and on our exports of farm products that we had hoped they would have, the program has been distinctly worth while. I believe that, from the standpoint of agriculture, as well as the welfare of the Nation as a whole, discontinuance of the authority to conclude reciprocal-trade agreements would be extremely unfortunate. A program of this kind will be particularly important in the days of a post-

war world, which all of us, I am sure, sincerely hope are not too far away.

I came here today primarily to make a positive statement as to the position of the Department of Agriculture on the question of the continuation of the trade-agreements program. I hope that I have made that position clear. It is not, I take it, my place to discuss at length the more general aspects of the program, its legal basis, or the actual accomplishments in the way of agreements concluded, concessions given and obtained, and the like. These matters will be covered fully by others and particularly by the Department of State, which has the program directly in charge.

But I do think it will be appropriate for me to comment briefly on certain phases of the program that bear most directly on agriculture. These are phases on which much has been said already and on which much more will doubtless be said in the days and weeks immediately ahead.

First, I wish to refer to the perennial question of agricultural imports. It has been charged repeatedly that the trade agreements have caused a flood of agricultural imports and by so doing have ruined particular agricultural industries. Presumably this refers to the effect of duty reductions on particular agricultural imports.

Now what are the actual facts? Well, one fact is that imports of agricultural products of a kind similar to those produced in the United States rose considerably during the first 2 or 3 years following the original enactment of the Trade Agreements Act. But this rise in imports can be entirely explained by two developments. First, there were the disastrous droughts of 1934 and 1936, which made it necessary for us to import a relatively small amount of certain products, which are ordinarily on an export basis, in order to supplement our much reduced supplies. The second development was the improvement in economic conditions in the United States which, as is always the case, led to increased imports of certain products which are regularly imported into this country because our production does not equal our own requirements. A case in point is wool.

It should only be necessary to point out that in all of the more important cases of increased imports, such as wheat from Canada, corn from Argentina, wool from Australia, and hides from Argentina, there had been no change whatever in the tariff rates established in the Smoot-Hawley Tariff Act of 1930, to dispel the myth that trade agreements were responsible for the temporary rise in imports during the middle thirties. I say "temporary" because since 1937 imports of the so-called competitive products have declined to approximately the level that prevailed in 1934 and 1935 before the trade-agreements program had really gotten under way.

It is also a fact that some reductions have been made through trade agreements in the duties on agricultural products. But I do not know of a single case where such duty reductions have seriously inconvenienced an American agricultural industry. As a matter of fact, in cases where a damaging influx of agricultural products might take place as a result of duty reductions, meticulous care has been taken to see that safeguards were introduced to prevent such an influx.

Numerous examples of such safeguards might be cited but I shall refer to only one—that on cattle. In the first place, in the trade agreements with Canada the duty was reduced only on the kind of cattle which Canada predominantly supplied, namely cattle weighing over 700 pounds and calves. This made it impossible for Mexico, the only other source of cattle imports into the United States, to bring in any large quantity of cattle under the duty reduction made in the agreements with Canada. In the second place, the duty reduction was made applicable only to a certain number of cattle. In the first Canadian agreement of 1936, this number, in the case of heavy cattle, was 156,000 head annually. In the second Canadian agreement, which replaced the first agreement in 1939, the number was 225,000 head. The first number represented about 1 percent of our estimated total cattle slaughter in 1935 and the second, 1.5 percent of our total slaughter in 1938. But, in the case of the larger number in the second agreement, the further precaution was taken to limit the imports in any one quarter to not more than 60,000 head. This step was taken partly because of the complaints under the first agreement that, while the number involved was small, the fact that they could all come in within a limited period was likely to result in damaging competition.

Now it has been argued and it doubtless will continue to be argued that, while the quantity of cattle imported from Canada under the trade agreement is quite small in relation to our total cattle slaughter, the arrival of such cattle on particular markets in particular days causes a glut which results in reduced prices in that market. Some even go so far as to say that this reduction spreads then to markets throughout the country but the Department of Agriculture has seen no concrete evidence to this effect. It may be admitted, however, that the arrival of a certain number of cars of Canadian cattle at a market which has already received a much larger percentage of domestic cattle might cause a temporary market decline. This is not a peculiar attribute of Canadian cattle. Such a decline will just as certainly take place under similar conditions upon the arrival of a small number of cars of domestic cattle.

Whatever may be the case with local market situations, it is an undeniable fact that prices received by domestic producers of cattle in the United States since the enactment of the Trade Agree-

ments Act have been consistently higher than they were in the period immediately preceding the program, and in some cases as high as they were back in the pre-depression years. As a matter of fact, even in 1939, when imports of cattle reached record levels, the farm price of cattle was at or above parity every month of the year. Actually the prices received by American cattle producers are determined almost exclusively by the number of domestic cattle produced in a given year and the economic conditions in the United States during that year. If these conditions are such as to make for high prices, then we shall have some imports of cattle. If they are such as to make for low prices, then we shall have only small imports of cattle, notwithstanding the concessions made to Canada in the reciprocal-trade agreements.

Here is another point on imports: There has been a good deal of loose talk about agricultural industries being singled out for sacrifice in the trade-agreement bargaining process. There is absolutely no foundation for such statements. In the first place, reference has already been made to the fact that, when necessary, special safeguards, such as customs quotas, have been introduced in connection with duty reductions in trade agreements. These customs quotas (with only one or two exceptions) have been applicable to agricultural products. Furthermore, an analysis shows that, on the basis of 1937 trade figures, only 14 percent of the total imports of agricultural products into this country are affected by any of the duty reductions made under the trade-agreements program up to November 1, 1939. On the other hand, almost 22 percent of the imports of nonagricultural products were affected. Of the 14 percent of agricultural imports affected, almost half consisted of sugar, the imports of which have been subject to strict quantitative limitation, and have not prevented the total acreage of sugar beets and sugarcane harvested for sugar in continental United States in 1939 from being the largest in our history. In short, the part of our agricultural imports that have been affected by duty reductions under trade agreements is only about one-third as large as the part of the nonagricultural that have been affected. This does not look as though agriculture has been sacrificed on the altar of trade agreements.

Within the last few weeks there has been a great deal of agitation, on the part of opponents of the trade-agreements program, over the supposed harm that was going to come to agriculture from a trade agreement with Argentina. As you know, the negotiations for such an agreement have been recently terminated. Enemies of the trade agreements now assert that this break-down of the Argentine negotiations is just a subterfuge, and that as soon as the act is extended the Argentine agreement will be concluded and agricultural interests in the United States will be sacrificed to Argentine competition. But this accusation overlooks two things: First, it overlooks the fact that an important reason for the break-down of the negotiations was the firm stand made by the United States Government for quantitative limitations on the amount of competitive farm products which could be imported under a reduced tariff; second, it overlooks the reputation for integrity of Secretary Hull and his associates. Anyone who knows anything at all about Secretary Hull knows that the kind of trickery which is now being imputed to him is entirely foreign to his nature. If the handling of the Argentine negotiations proves anything, it proves that this administration is looking out for the interests of agriculture and is not sacrificing the interests of agriculture to those of industry.

It is remarkable what can be done in demonstrating a preconceived notion by the careful selection of figures. For instance, opponents of the trade-agreements program have frequently compared our agricultural imports during 1932 with those during 1937. During 1932, because of business depression in this country and large farm surpluses, agricultural prices hit bottom and farm imports reached an extremely low point; whereas imports were much higher in 1937, when business was at a post-depression peak and our farm prices, which had been substantially strengthened by the operation of the Triple-A program, had been boosted to an even higher level by the extraordinary droughts of 1934 and 1936. A precisely opposite impression as to the effect of trade agreements on agricultural imports would be shown if one were to select a figure for any year during the 1920's and compare it with imports in any year since the trade-agreements program became effective. I shall not engage in any statistical legerdemain of this kind. But I do think it is legitimate to point out that the imports of agricultural products into the United States of a kind similar to those produced in this country were smaller in the last fiscal year, 1938-39, than they were in the first year of the trade-agreements program, 1934-35, and were less than half as large in terms of value than were the average annual imports of such products during the entire decade of the twenties.

So much for the matter of imports. In the case of exports it is also possible to distort the figures by a deliberate choice of particular years, since, in this case, too, factors other than trade agreements have played a large part in the ups and downs of agricultural exports in recent years to such an extent as largely to obscure the effect of trade agreements. The most important of these, of course, is the droughts of the middle thirties. But there is one comparison which it seems to me is valid. That is the trend of our farm export trade with countries with which we have concluded trade agreements as compared with those with which we have no agreements. For example, our agricultural exports to the 16 countries with which trade agreements were in effect during the entire fiscal year 1938-39 were 15 percent larger than the exports to the same countries in the fiscal year 1935-36. On the other hand, our

farm exports to all other countries declined 19 percent during this particular period.

This, it seems to me, is concrete evidence that the trade agreements have been getting results from the standpoint of improving the foreign market situation for our agricultural export products. Nevertheless, it must be admitted that our agricultural exports have not gotten back to predepression levels. The outstanding reason for this is to be found in the rise of the totalitarian states during the 1930's. The economic policy of these states, particularly that of Germany, has been directed toward national self-sufficiency with respect to foodstuffs and agricultural raw materials. Moreover, the vast expenditures for armament in practically all European countries in recent years has without doubt diverted a vast amount of purchasing power away from our agricultural export products.

There is another aspect of the relation of trade agreements to agriculture upon which I should like to touch briefly. It is frequently assumed that any bargaining power used to obtain improved export markets for our manufactured goods is wasted so far as agriculture is concerned. This is by no means the case. Improved export outlets for our surplus industrial products cannot fail to improve economic conditions and purchasing power in our industrial centers and thereby improve our own domestic markets, which are, of course, the most important markets for our agricultural products. For instance, the increase of almost \$100,000,000 a year in exports of manufactured goods to Canada since the first trade agreement with that country has certainly raised urban purchasing power in the United States for our agricultural products above what it would otherwise have been. Moreover, it has benefited not only our great export products but also, and especially, such products as beef, milk, and eggs, which depend almost entirely on the domestic market.

It is my opinion that the trade-agreements program has made remarkable progress in the face of extremely adverse conditions. But it is also apparent that the program was not able entirely to overcome these conditions. That is not the fault of the trade-agreements program. If the program or a similar one had been given a chance to operate a few years earlier, it is entirely possible that the conditions underlying the growth of totalitarianism might have been ameliorated to such an extent as to have largely avoided its subsequent growth. That is something upon which we can only speculate. The fact is that the trade-agreements program did make remarkable progress in certain countries but not in the countries which for one reason or another adopted national self-sufficiency as their primary goal.

It is my feeling that little progress in the way of trade agreement negotiations can be expected in Europe during the continuation of the European war. I do feel that the trade-agreements program can operate usefully in Latin-American countries, that it will help to build up a feeling of solidarity in the New World, and that in contributing to such a feeling of solidarity it is valuable peace insurance.

I am strongly in favor of closer relations between the countries of the Western Hemisphere. But I do not believe that even the Western Hemisphere as a whole can expect to remain unaffected by chaos in the rest of the world. The United States and its Latin-American neighbors should, in their own interests, look forward to positive collaboration in the reconstruction of international economic relations after the war is over. It seems to me that the trade-agreements program, conducted much along the line that it has been conducted in the last 6 years, together with special international agreements in the case of such commodities as cotton and wheat, can be an extremely important factor in the economic reconstruction of the post-war world.

In the current debate over details of the trade-agreements program, I believe there is danger that the real issue, so far as agriculture is concerned, will be overlooked. That issue continues to be, as it has been ever since the World War, the question of what kind of tariff will really benefit the American farmer.

On the theory that high tariffs would cure the agricultural depression which set in after the first World War, the Fordney-McCumber Tariff Act was passed in 1922 and the Smoot-Hawley Tariff Act was passed in 1930. Both these tariff acts, in their initial stages, were supposed to give relief to the farmers by eliminating foreign competition. Actually, in both instances, the industrial interests, which long have fattened on tariff protection, seized the opportunity to boost their own tariff walls. The net result, especially in the case of the Smoot-Hawley tariff, was great injury to the farmers through the loss of a large portion of their foreign markets.

I do not have time today to go into detail concerning the results of that "tragedy of 1930," but the whole world today is paying the cost. The acts and policies of the United States in the international sphere during the twenties and early thirties—combining as they did the stimulation of foreign loans and the insistence on collection of the war debts with the erection of higher and higher tariffs—these acts and policies threw the tremendous prestige and commercial power of this country on the side of the restrictive forces at work in the world. After the Smoot-Hawley act was passed in 1930, foreign countries felt obliged to erect prohibitive trade barriers in retaliation, international trade swiftly dried up, and what started out as a mild recession soon became a world-wide economic disaster of cataclysmic proportions. The financial collapse of Austria was followed by the financial collapse of Germany, the abandonment of the gold standard by England, the bank panic in the

United States, the rise of totalitarianism in Germany and other capitalistic countries, the break-down of the League of Nations, and finally a major war.

All this is past history and would not need to be recited here, except for the fact that the industrial interests which are trying to scuttle the trade-agreements program are apparently preparing for another "tariff grab" like those of 1922 and 1930. They are apparently attempting to induce certain farm interests and certain labor interests to act as the shock troops in this campaign, so that they themselves can stay in the rear and come up in time to walk off once more with the major share of the booty.

There is always a certain amount of enticement for the farmers in talk about raising tariffs high enough to shut out competitive imports entirely. There is no doubt that farmers are as much entitled to tariff protection as any other group. If the kind of protection given them in the Fordney-McCumber and Smoot-Hawley Acts had really helped them, then there would be ample reason for repeating that kind of help today. But the events of the last 15 years show how desperately injurious that supposed help for agriculture turned out to be. To repeat it now would be the height of folly.

As I said a moment ago, the farmers are entitled to effective protection. They fought in vain all through most of the 1920's for such protection in the form of the McNary-Haugen bill, with its equalization fee. They finally got such protection in 1933 in the form of the processing tax, only to lose it again when the Supreme Court killed it in January 1936. Now they are working for such protection again in the form of the proposed farmers' income certificate plan, which would guard the prices of their important export commodities against the impact of world surpluses.

From the standpoint of the friends of the trade-agreements program, there would be a great advantage in the enactment of some such plan as the farmers' income certificate plan, in preference to another tariff boost like that in the Fordney-McCumber and Smoot-Hawley Acts. That kind of tariff interferes so seriously with foreign trade as to dry it up entirely, whereas the farmers' income certificate plan would permit international trade to increase in a healthy manner through the assistance of the trade agreements.

I am mentioning this aspect of the agricultural problem here because it has such a close relationship to the trade-agreements program. The position of the Department of Agriculture is that the interest of agriculture would be best served by a program which combined the trade agreements, special international agreements to assure our fair share of the world market for such commodities as cotton and wheat, and some plan like the farmers' income certificate plan which, without interfering at all with foreign trade, would give the farmers' income equality in the domestic market.

### Jewish Exiles in Poland

#### EXTENSION OF REMARKS

OF

HON. WILLIAM H. KING

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

LETTER FROM OSWALD GARRISON VILLARD

Mr. KING. Mr. President, daily we receive authentic information concerning the cruel and sadistic policies of Hitler, and his efforts to destroy large numbers of persons of the Jewish race, as well as other residents of Poland, Austria, and Czechoslovakia. The Nazi Government has robbed millions of persons of their possessions, and has adopted policies which have resulted in the death of hundreds of thousands. Hitler is making of Poland a concentration camp into which thousands and tens of thousands of persons are herded, where many of them will die as a result of the persecutions to which they are subjected.

I have here a copy of a letter written by Oswald Garrison Villard, a distinguished American, a man of ability and courage. He recently visited Germany and other European countries; and in his letter he describes some of the tortures and cruelties to which the people of Poland, Austria, and Czechoslovakia are subjected. He states that unless the Germans are defeated in this war the only hope that remains to many of these persons who are the victims of Hitlerism

is for the people of other nations to protest against the concentration-camp policy, and to keep up the protest. Mr. Villard is not alone in his condemnation of the brutalities of the Nazi Government and the barbarous treatment to which the Jews and others are subjected by Hitler.

I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times]

JEWISH EXILES IN POLAND—MR. VILLARD REVEALS HORRORS OF HITLER INFERNO IN LUBLIN AREA

TO THE EDITOR OF THE NEW YORK TIMES:

The American public should not be misled by the news that Hitler has temporarily stopped the forced migration of the Jews of Germany, Austria, Czechoslovakia, and Poland to the so-called Jewish state in Poland. If this horror has been held up for the moment it can only be a temporary interruption, for the determination to wind-up the Jewish situation in this way was manifest when I was recently in Berlin. The explanation undoubtedly is that reported by the London Daily Telegraph at the end of November—that an outbreak of typhus and other contagious diseases had occurred among the 40,000 to 50,000 people already jammed into what was intended to be the greatest concentration camp in history, and if the policy is continued will become one vast charnel house. For sadistic cruelty—yes, for deliberate wholesale murder—I know of nothing in history to surpass this atrocity. It is reported that the land near Lublin which has been assigned for this purpose is the worst in Poland, but that is relatively of no importance. If it were the very best soil available in Europe it would in nowise mitigate the savage and deliberate intention of Hitler to destroy what is left of the Jews in this way.

#### ROBBED AND EXILED

The week before I was in Vienna 84 Jews who had been summoned to leave for Poland committed suicide, of whom 36 were women. Every remaining Jew, wherever he may be in Germany or in Czechoslovakia, sits in his home expecting with every ring of the doorbell that his death sentence has arrived. Those who have been selected are compelled to leave on 24 hours' notice and are allowed to take with them only 300 marks and such clothing and belongings as they can carry—of course, few of them have the heavy winter clothing needed for the trip to Poland. They are robbed of all they possess in accordance with Nazi custom, for they are deprived of furniture, property of all kinds, jewelry, etc., which are at once appropriated by the Government. The victims are jammed into open cattle cars without heat or conveniences of any kind or proper food. They are days on the road, for the trains proceed as if they were freight trains, under conditions that would be forbidden by law if the contents of the cars were cattle and not human beings. I have seen letters to American consuls protesting against these horrors, letters written by Aryan Germans who said they could not stand it any longer without appealing to the United States Government to protest in the name of humanity. I still hope that the Government will do this, just as it protested during the administration of Theodore Roosevelt against the Kishineff massacres. Those massacres horrified the world then and were stopped by public opinion in Europe and the United States. They were merciful compared to what Hitler is doing.

#### PROTEST IS URGED

The only hope that remains, unless the Germans are defeated in this war, is to protest against the concentration-camp policy and to keep up the protest. I believe that if it is in any way possible and the infectious diseases are stamped out, Hitler will again undertake the enforced transportation of the remaining Jews. He is obsessed with this policy of moving minorities, just as he has moved the Tyrolean Germans and is moving the 800,000 Baltic Germans. When the latter arrive in Germany they are met by officials and committees and Red Cross delegations, and all sorts of preparations are made in advance for their reception and their housing. They are, moreover, to be paid for the properties they have to leave behind them. By contrast, no arrangements whatsoever are made for the transportation of the Jews to Poland. They are simply jammed into this camp with their 300 marks and, according to the statements made to me by reliable persons in Germany, are left to starve or perish or to find meager shelter in homes abandoned by the Poles who have been moved away. When it is considered that the large majority of the victims of this policy are people of refinement and culture, or white-collar workers not accustomed to bitter hardships and exhausting manual labor, the deliberate wickedness of the whole undertaking becomes patent and undeniable. Of course, nothing is known of this by the German people; I saw not one reference to it in the German newspapers during the nearly 4 weeks that I was there. What news has come out has found its way chiefly to Holland.

It is my earnest hope that the Times will continue to focus public attention upon the plight of the Jewish victims of Hitler bestiality.

OSWALD GARRISON VILLARD,  
New York, January 4, 1940.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

#### EDITORIAL FROM THE EMPORIA GAZETTE

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Emporia Gazette of January 18, 1940:

[From the Emporia Gazette of January 18, 1940]

#### A WARRIOR BOLD

Americans might as well make up their minds to it, that the old idea of a high protection, which was merely socialistic subsidizing of various industries, is impossible in the world economy as it stands today. Some tariff? Yes; but not log-rolling high tariffs, not the Smoot-Hawley bill. One of the things that brought about the depression was the Smoot-Hawley bill. The Gazette said so at the top of its lungs before the Smoot-Hawley law was finally formulated, while it was passing, and after it had become a law. That tariff law was an offense against economic stability, not only in the United States but all over the world. It is one of the sad, terrible commentaries on the present Democratic administration that it has neglected so long to revise the Smoot-Hawley tariff law.

The principle of reciprocal tariff to undo and offset the Smoot-Hawley tariff is entirely defensible upon the theory of our national economy. Of course, in any Congressman's district he can take counsel of his fears and vote against this tariff by scaring his constituents to death about the damage it will do to their local special industries. For instance, take cattle: The increase of the percent of total imports of cattle—say 44 percent—is frightening. But that 44-percent increase is only 8 percent of the cattle inspected and probably about 5 percent of the beef actually consumed in the United States. That is a small percent. It has not seriously affected the average annual price of cattle.

We are fundamentally in disagreement with Governor Ratner and the Kansas Congressmen and Senators who opposed these Hull treaties. For these treaties surely strengthen our national economy. They certainly bring in more business and more money to the country than they take out. Unless we see our national economy as a whole and national prosperity as a unit, we never can recover. We can't recover by patching up a hole here and plugging a hole there in our economy. We cannot recover unless we plan recovery on a Nation-wide scale.

If, for instance, the farmers of Kansas are scared of these treaties because of what they will do to the farmer, the Kansas farmer should remember that the farmer will never be prosperous until the Nation as a whole has prospered also. These treaties certainly do work for national prosperity. If, when the treaties are in force, it is found that the farmers are bearing too much of the burden, which may easily be true, then subsidize the farmers directly. But don't stop the rise of national prosperity by timidity about individual losses. If times are good, prices will be good everywhere.

Another and most vital thing: The peace of the world depends first upon the international flow of goods, to give all nations of good will access to raw materials, and second upon mutual economic help among nations. Economic supernationalism has led the world into war. Unless there can be among the civilized nations of the world some basis of negotiation whereby each nation can develop its own economic strength under its own peculiar geography and in its own economic position there is no hope of peace. National jealousy will keep on breeding international hates.

Wars will succeed wars. In the peace conference which must follow this war American influence can be potent in the struggle for world peace. But we can serve the world only if America comes with a reputation for fairness to her neighbors now. Suppose we defeat these Hull treaties. What a pie-faced old hypocrite Uncle Sam will be at that conference, counseling other nations to give up a little for the greater blessing of peace. In that hour when a lasting peace is possible for the world we shall be bound and gagged by our own selfish isolationist policies. Here in these Hull reciprocal treaties is the hope of the United States in helping to promote a just peace in the world.

Without that just peace the tribulations of the last decade, 10 terrible years of shuddering under the threat of war will be with us for another generation. This is no time for partisan talk of local advantage. The prosperity of our Nation depends upon the peace of the world. If America cannot take the larger view the hope of the world is blasted. Our civilization cannot go forward along its appointed evolutionary way, amid the atmosphere of international envy and the hates that grow where nations are oppressed in economic poverty.

The Republican party is going to make a sad mistake if it goes into this campaign on an old-fashioned, high-tariff-platform policy. The Hull idea theoretically is right. Maybe he is not implementing it with the best instruments. But certainly he is expounding a principle that will work. It will be better for the Republicans to help him make his plan workable than to try to defeat his principle. In the meantime, no warrior bold with spurs of gold ever went more bravely to the fray than Cordell Hull is going into this fight.

### Elimination of Stream Pollution

#### EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. ELSTON. Mr. Speaker, last year the Senate passed S. 685, the purpose of which was to create a division of water-pollution control in the United States Public Health Service. Thereafter hearings were held on this bill before the House Committee on Rivers and Harbors, which committee has favorably reported the same, with certain amendments, to the House.

The provisions of this bill are the culmination of years of study by public and private agencies for the purpose of solving the serious problem of stream pollution. During the Seventy-fifth Congress a similar bill passed both Houses but was vetoed by the President for certain technical reasons. The revised bill which the House will soon consider has entirely eliminated the objections of the Chief Executive. Under date of February 15, 1939, the President sent a message to Congress in which he indicated that he had fully subscribed to the general purposes of the act which he had vetoed and that he had withheld his approval of it because of the method provided for the authorization of loans and grants-in-aid. In this measure the President expressed the hope that "at this session the whole problem of water pollution may again receive your attention."

S. 685 seeks to bring about the elimination of water pollution through voluntary cooperation between the Federal Government, the States, other political subdivisions, and industry. Other proposed legislation on the same subject seeks to accomplish the same result through compulsion. It is obvious that attempts to use coercive methods will raise serious constitutional questions which will delay and may entirely defeat all efforts to remove one of the Nation's greatest menaces to life and health.

As evidence of States' willingness to cooperate with the Federal Government attention is directed to the interstate agreements already approved by 15 States and the District of Columbia to control and correct the flow of sewage in 4 of the Nation's major river basins.

Industry can likewise be depended upon to cooperate. Statistics show that industry is already cooperating and that compulsion is unnecessary. In this connection, Mr. Speaker, under leave to extend my remarks, I insert the following editorial from the January 1940 issue of Municipal Sanitation, a monthly journal of modern waste disposal:

#### TWO STRIKES ON POLLUTION LEGISLATION

For two sessions, stream-pollution bills have meandered through Congress and ended up blind alleys, but another session comes up this month and with it comes another opportunity for establishment of a national policy for eventual elimination of stream destruction by municipalities and industries. True, there are two strikes on pollution control, but many a ball game has been won after there has been two strikes on the last man.

But successful fight for pollution legislation cannot be waged while factions are fighting themselves to a condition of stalemate, rather than pooling their interests in the fight against the common foe—sewage and wastes. Nor can this sensible cooperation between different schools of thought be achieved until certain conflicting philosophies are dissipated, sincere though they are.

The conflicting bills which have been placed before puzzled legislators may appear to be as far apart as the poles, but they are not. Clarification of certain issues, coupled with mutual trust of

each faction for the aims and purposes of the other, should aid materially in producing the cooperation between these factions which is essential to successful legislation.

Among these issues which need clarification is the question: Can industry be depended upon to cooperate in stream-cleansing programs without the big stick of compulsory law hanging over them? To restate the question: Is industry attempting to gain action by Congress on the more lenient bill, because they can "stall" under those provisions, and could not under a bill requiring immediate treatment of their wastes?

Without looking under the surface for any conditions which may be fomenting, it is instructive to "look to the record" on the matter of industrial cooperation with pollution abatement agencies. Has there been such cooperation?

Pollution from the pulp and paper industry of Wisconsin threatened to destroy the streams of that State. In 1926, a meeting of mill interests and State agencies resulted in the formation of an industry committee of seven to work with the State in the correction of waste pollution. The Advisory Committee on Waste Disposal has aided in the elimination of much pollution; there is, indeed, more to be done, but a spirit of cooperation has been demonstrated.

In speaking before the Central States Sewage Works Association recently, State Sanitary Engineer Klassen related that the population equivalent of industrial wastes in the Illinois River, exclusive of the Chicago Sanitary District, will have been reduced from 2,200,000 in 1930 to only 300,000 by 1940.

In a recent survey carried out by Municipal Sanitation Among State Sanitary Engineers, 27 States reported that industrial-waste treatment plants had increased from 179 to 565 in the decade from 1928 to 1938.

The record says that cooperation can be obtained, that cooperative effort between industry and health officials is not unattainable. The "big bad wolf" of industry is not as bad as its "huff and puff."

What is needed now is cooperation between the conflicting and divergent pollution abatement interests. If we are to obtain effective legislation even after two strikes have been called on the sincere efforts of all who hope for clean streams.

### What Goes On in Congress

#### EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

RADIO ADDRESS BY HON. WILLIAM J. MILLER, OF CONNECTICUT

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on January 21:

May I, in the opening sentence of my broadcast, express my appreciation to station WTIC for making possible a continuation of the monthly broadcasts which I started a year ago, in January, on the subject of What Goes On in Congress. May I also wish for every one of my listeners, a happy and prosperous new year.

It is my belief that 1940 will go down in history as an important year in the life of not only the United States, but of the entire world. I hope and pray that before this year draws to a close we will once again be enjoying world peace.

Here in the United States we face serious domestic problems of long standing that must be solved before we can hope for permanent prosperity. Now, more than ever before, it is important that every citizen interest himself or herself in the affairs of the Government—National, State, and local. Recently, I asked several persons this question, "If Congress would enact just the legislation you want, what would you ask for at this time?" Perhaps some of my listeners will write and tell me just what they would like to have the present Congress do to bring about recovery.

The real interest in the convening of a new session of Congress is usually the President's message on the state of the Union, delivered in person by the President to a joint session of the Senate and House. This year the message was delivered on January 3. It seems to be the consensus of opinion among Members of Congress in both political parties with whom I have talked that the President's message this year was disappointing and, possibly, misleading. Disappointing because it showed no reversal of the administration's spending program and misleading because a casual reading would indicate some anticipated decrease in the deficit for the fiscal year 1941. This message differed from any other message President Roosevelt has delivered on the state of the Union as there was, for the first time, no promise of a balanced Budget; there were no threats against any group of our citizens. In fact, instead of discussing the state of the Union and

possibly offering a solution for some of our problems, most of the message was devoted to a discussion of affairs in other parts of the world. The President stated that we could not expect prosperity here while existing conditions prevailed in Europe. This statement, while true, was interesting in view of the campaign speech made by President Roosevelt in 1932. At that time the "smear Hoover" campaign was under way and Candidate Roosevelt would not admit that the 1929 depression was largely due to a general world-wide economic collapse.

At best, the President's Budget message can only be a guess at the amount of money he thinks the Government will spend and the amount of income from all possible sources. This year the President has guessed that the Federal Government can operate on a Budget of \$9,000,000,000, including old-age pension payments. The President guesses the income to be about five and one-half billion dollars. If this guess proves correct, it will mean an increase in the Government income of about \$400,000,000. In the past 7 years the President's guesses both as to income and expenditures have been rather poor. In fact, the administration has spent anywhere from three hundred million to three billion dollars more than was guessed in the various Budget messages.

If the Congress follows every recommendation of the President contained in the 1940 Budget message, the national debt will be within \$61,000,000 of the debt limit set many years ago at \$45,000,000,000. In order not to exceed the debt limit of \$45,000,000,000, the President points out that it will be necessary to collect \$460,000,000 in additional new taxes. It will also be necessary to take \$700,000,000 from some of the Government lending corporations now in existence. This means a use of \$700,000,000 say, for example, from the Reconstruction Finance Corporation and, in itself, is misleading and does not bring the Government any nearer to living within its income. It is exactly the same, for example, as a man who, having an income of \$2,000 and, in a given year, spends \$3,100, but who had cashed a thousand-dollar bond he had tucked away for his old age. Certainly, such a man could not claim that he had only gone \$100 in the "red." As a matter of fact, I believe everyone will agree that that man was worse off at the end of the year by having spent his \$1,000 reserve.

Many columns have been written about the need of balancing the Budget. Everyone who has given any serious thought to the subject realizes that the Budget cannot be balanced this year or next. We gradually increase Government spending from \$3,500,000,000 to \$10,000,000,000 a year. There must be a tapering off in the deficit and a gradual increase in tax income as business responds to the effort toward restoration of a sound fiscal policy.

The Budget of the United States is not going to be balanced until definite control of all appropriations has been restored to Congress.

There must be no more blank checks issued by Congress to either the President or to any of the 30 or more Government owned corporations. At the present time no one really knows how much of the contingent liabilities carried in the Budget the Treasury will have to be called upon to make good. Last year, for example, the Surplus Commodity Corporation came before the Appropriations Committee and said our capital is impaired to the extent of \$119,000,000. Congress had no choice but to make good the impairment. It is known that many of the water-works bonds held by the Reconstruction Finance Corporation are in default. Example after example can be cited where Congress has refused to appropriate money for a given project, only to find out that in a short time the project was under way with funds from one of the numerous independent corporations or from the relief set-ups.

We know now that the Home Owners' Loan Corporation has had tremendous losses which some day will be paid for out of the Treasury.

It is a safe guess that if the whole truth were known, our national debt is at this minute over \$45,000,000,000.

The President is aware of the seriousness of continual deficit spending year after year. In his Budget message to the Congress in 1933, speaking of the unbalanced Budget and deficit financing, he said: "With the utmost seriousness I point out to the Congress the profound effect of this fact upon our national economy. It has contributed to the recent collapse of our banking structure. It has accentuated the stagnation of the economic life of our people. It has added to the ranks of the unemployed. Our Government's house is not in order, and for many reasons no effective action has been taken to restore it to order. Upon the unimpaired credit of the United States Government rest the safety of deposits, the security of insurance policies, the activity of industrial enterprises, the value of our agricultural products, and the availability of employment. The credit of the United States Government definitely affects these fundamental human values. It therefore becomes our first concern to make secure the foundation. National recovery depends upon it. Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger. It is too late for a leisurely approach to this problem. We must not wait to act several months hence."

That is, I remind you, what President Roosevelt said in 1933. Of course, if we take seriously a part of the President's Jackson Day speech delivered in Washington just recently in which he said that there was really a lot of fun in his job since he had learned not to worry, we have cause for alarm, and it is certainly

imperative that we move in the direction outlined in his 1933 speech when we realize that we have added at least \$25,000,000,000 to the national debt since the statement just quoted was made to Congress by the President.

Just as there are parts of the New Deal program that are good and should be continued, there are some recommendations in the President's message which should be followed and I am happy to say that Members of the House of both political parties are anxious to carry out any sound economy program.

In this year's Budget message we again find the use of the word "investment" in connection with Government spending. Just how money spent for providing work relief, much as it might be needed but from which there is no return, can be termed "investment" is beyond me.

I want to particularly call your attention to the item in this year's Budget amounting to \$1,100,000,000 for interest on the public debt. The President quite correctly pointed out that this item could not be reduced, but said we should remember that the rate of interest paid by the Government is today one-third lower than it was in 1929. The average interest rate paid on the public debt for the fiscal year 1929 was 3.9 percent; the present computed rate is 2.6 percent. A hasty reading of this quotation might indicate an accomplishment on the part of the administration, but it is interesting to recall that the taxpayers of the country are suffering from this reduction in interest rate on Government obligations. At the present time 71 percent of the American people's money on deposit in banks is invested in Government bonds, and 60 percent of the bank earnings in the United States comes from Government bonds. These figures support of the statement recently made by the bank commissioner of Connecticut to the effect that the New Deal administration was responsible for the low interest return to bank depositors. This reduction of interest is felt by every citizen who has a savings-bank account or even a small life-insurance policy, and works a hardship, particularly on those of our elderly citizens who had retired secure in the thought that through their existing rates of interest they were adequately provided for during their remaining years.

Unusually low interest rates are not, in themselves, a blessing. It is also a fact that while this year we are spending \$1,100,000,000 as interest payment on our national debt, in 1926, with the higher interest rate, this item in the Budget amounted to only \$836,000,000, which means we will pay \$264,000,000 more on our interest indebtedness this year than in 1926, and this year's interest charge is up \$50,000,000 above last year.

In discussing this question of balancing the Budget we often hear it said that the unemployed must be cared for and that our people are perfectly willing to pay for social security. Both of these statements are true. Very few, if any, of our citizens object to spending money for needed relief, but there are many items in the Budget that could be reduced or wiped out completely without causing hardship to anyone. We are not going to balance the Federal Budget until the President and the Congress indicate a real desire and willingness to balance the Budget. We can certainly start now by cutting out every unnecessary expense. I am reminded of my first employer, a man pretty well along in years and very comfortably situated financially. He was owner of a substantial hardware and mill supply business that occupied a five-story building in the city of Lawrence, Mass. It was not at all unusual to see that man walk through some of the upper floors of the building turning out electric lights that were not being used. I am not advocating that our Government employees spend their time turning out lights, but even the turning out of lights would be more productive than a lot of what they are doing at that.

I was interested a few days ago in securing a copy of the 1926 Budget of the Federal Government. Because of certain reorganization measures and the transferring of functions from one governmental department to the other, it is difficult to make a fair comparison of many of the departments but we can do so in two or three cases. Let's take, for example, the President's own department, listed in the Budget as the Executive Office of the President. In the 1926 Budget Congress appropriated \$439,960, while in the 1941 Budget the President asks for \$3,471,250, an increase of \$3,031,290. In the matter of White House salaries, including the President's own salary which has not been increased since 1926, we find an expenditure for 1941 of \$222,800 as against \$92,260 in 1926. This is partly accounted for by the six assistants made possible under the reorganization bill enacted by the last session of Congress which was supposedly to bring about economy in the Government. It is not only the six assistants at a salary of \$10,000 each, but the three or four secretaries provided for the new assistants. Another item in the Budget that is subject to fair comparison is that of the Civil Service Commission. In 1926 we appropriated a total of \$997,000 for salary expenses, printing and binding. In the 1941 Budget for the Civil Service Commission, including the same items of salary expenses, printing and binding, we find an appropriation of \$5,295,000. The Budget Account requires each department, in submitting its budget, to list separately the items of printing and binding. In the Civil Service Commission again, for example, we will spend during the fiscal year of 1941, \$170,000 for printing and binding as against \$58,000 for the same items in 1926. The Department of Agriculture, for printing and binding in 1926, spent \$738,000, while in 1941 the Budget will amount to \$1,586,000 for this item. I could spend the remainder

of this broadcast period citing examples of tremendous increases in the so-called routine functions of the Government. Millions could be saved on the item of printing and binding alone. It is no secret that tons and tons of printed matter from the various bureaus are destroyed or sold for waste paper every year. Millions are wasted in preparing expensive lithographed propaganda documents. It is in this classification that real savings could be made, because no one objects to the expense involved in sending out worth-while Department of Agriculture bulletins or pamphlets from the Treasury Department or Department of Commerce which are of value to so many of our citizens.

The cost of providing for national defense has been increasing year after year since 1933. A good deal of this increase has been justified with the world either involved in war or threats of war; no intelligent person wants our Government to bury its head in the sand and neglect to provide an adequate Army, Navy, Marine Corps, and air service capable of protecting our own territory. This year national-defense items call for a larger percentage of the total Budget than ever before.

With the vote on the emergency deficiency appropriation bill for the fiscal year 1940, Congress was faced with the opening wedge in the extensive defense program planned for this session by the administration. You will recall that in September, a few days before the opening of the special session, the President took advantage of his emergency powers and authorized the expenditure of these funds for defense purposes. Certainly at that time there was no emergency with respect to our defense system so great that it could not have waited for a few days until the convening of Congress. And yet, by Executive order, and without the approval of Congress, the President authorized the expenditure of \$267,000,000 of our money. This action, and the very dictatorial manner in which it was performed, seemed to indicate the attitude of the administration toward the expansion of the national-defense program. In the light of this "curtain raiser" was it any wonder that the 1941 Budget should include almost \$2,000,000,000 for national defense?

Before further discussion of the question of national defense, it might be well for me to reiterate my position on the question. We have heard a great deal about an "adequate national defense"—a much-used but apt catch phrase. I have said before, and I repeat: I approve of a defense program to insure the safety of our country. But frankly, with the presentation of a \$2,000,000,000 item in the Budget for defense, I am inclined to feel that we face a very real danger in overexpansion of defense measures. I have no fear of our being able to provide and maintain an adequate national defense, but I do fear that, with the public sentiment strong for such a program and the New Deal, as ever eager to spend, we shall go beyond reasonable bounds. Certainly no one can deny that a nation is strong in exact ratio to its economic soundness. We can go on with a magnificently conceived defense program, building more planes, more guns, and more battleships, but if the realization of this program means an ever-mounting public debt and burden, our entire economic structure will collapse. If we have a dangerous crack in our defense armor it is our huge national debt and unsound fiscal policy. As a startling example, we have only to glance at Germany. For the past few years the Reich has been pledged to a program of steel. All normal social and economic functions of Government have been suspended for the advancement of a program to make Germany strong in arms. And now, at last, we see Germany at war, statistically terrifying and formidable in terms of planes, tanks, submarines, and guns, but economically weak, her people rationed, not only on the necessities of sustenance but completely rationed as regards food, clothing, fuel, paper, metals, etc. The economic impotence brought on by such a program is almost too obvious to be impressive.

Let us glance at this \$2,000,000,000 defense Budget and see what we will get for our money. The Army plans to spend its \$900,000,000 as follows: The enlisted strength rises by 17,353 to a total of 227,384; officer strength will rise by 379 to a total of 13,831. The Reserve Corps is to be enlarged; the Air Reserve will be almost doubled, and the National Guard will rise to an enlisted strength of 235,000 men. Field armies are to be trained 21 days instead of the usual 14 days, while the National Guard will have 27 training days as against 15 formerly, with 60 armory drills instead of 48. There will be a new air base at Anchorage, Alaska, and a third set of locks for the Panama Canal. Provision is made for the maintenance and replacement of an air force of 5,500 planes. Educational orders and equipment such as gas masks, antiaircraft guns, etc., will also be included to the amount of 79 millions. So much for the Army's \$900,000,000.

The Navy, under this defense program, will spend \$1,100,000,000. For that sum we will see an increase of 5,250, or a total of 150,250 enlisted men. It might interest you to know that Britain and France, both of whom are involved in war, operate their naval vessels with crews 25 percent smaller than we provide for our peacetime Navy. Aside from ships already on the way, 2 battleships, 1 aircraft carrier, 2 cruisers, 8 destroyers, 6 submarines, 4 tenders, and 1 mine sweeper will be constructed. Guam will get four million, possibly the first step in the two hundred and fifty million development of this island as a naval base, and Wake Island will be improved. Naval planes will take \$30,000,000 more. And, so to glance back to the past 3 years, with one billion spent for defense in 1938, one and one-half billion spent in 1939, and two billion proposed for 1941, our total defense bill for 3 years is four and one-half billion, or what I would consider more than adequate defense expenditures.

These plans, to be carried out under the \$2,000,000,000 figure for 1941, in some instances have merit, but taken as a whole the program

is of importance as indicating a reversal of the long-established policy of our Government with regard to its armed forces. Previously our defense programs have been built around the basic idea of a small standing Army for obvious reasons. The maintenance cost of a large standing force is tremendous. Therefore it would seem that under the 1941 defense program the most laudable feature is the provision for the increase in the National Guard and the Reserve forces. These forces can be increased, training can be intensified, and efficiency stepped up without a necessary increase in the enlisted forces of the Regular Army, with their accompanying maintenance costs.

As regards the proposed increase of the naval strength in tonnage, perhaps the best proof of the unsoundness of the proposed expansion in that quarter may be found in the fact that the chairmen of the two congressional Committees on Naval Affairs—Mr. WALSH in the Senate and Mr. VINSON in the House—cannot agree on how much of the naval construction for which money has been appropriated is either under way or completed. In the first place, there are several ships still on paper, authorized but not yet appropriated for, which will bring our fleet to an increased strength, and it might be well to find out where we stand before we plan more construction. Secondly, the recent proposals to build superbattleships of fifty or seventy-five thousand tons are certainly proposals which need more practical backing than we have had as yet. The present conflict at sea between Germany and Great Britain has not shown to any very satisfactory degree the superiority of large craft over smaller ones, and it is doubtful if battleships today can long survive the increasing threat of aircraft. Thirdly, battleships of all types are tremendously expensive to maintain and may become quickly of little value if bombing efficiency continues to improve.

This last point brings us to a very vital factor in the \$2,000,000,000 defense plan. It is the factor of continued expenditure, the maintenance cost, for this \$2,000,000,000 force. Under the usual administrative procedure, it is part of the strategy to consider the 1941 defense item of "only two billion" as a final item, a total cost, so to speak. But if the American public is to be sold such a plan, it is being sold under false pretenses for the program under consideration will not be completed nor paid for in any one year, but one which will cost two billion the first year and no one knows how much for 1941, 1942, 1943, 1944, and 1945. Men in arms, training planes, new bases, new weapons—all of the component parts of a defense scheme make constant demands on the Treasury and can soon become, as in Germany, parasites upon the public purse.

There can be little doubt but that in proposing this vast defense program, the New Deal is taking advantage of public sentiment. To doubt this would be to deny the President's pride in his sense of timing with regard to other questions of equal import. With spending for the sake of spending in bad favor with the public, with internal conditions still unimproved in a Presidential year, it is only to be expected that the administration should make every effort to hold public attention to a matter of vital importance which has been brought up by an external situation. If this is another New Deal method of "pump priming" as might be suspected, we had best analyze it very closely before we succumb to its persuasion. If the two billion for defense is to be regarded as a New Deal spending agency, I say let us provide a sound basis for the defense of our shores at minimum cost and spend the rest on the human equation and relief.

For my February broadcast I hope to be able to devote the full 30 minutes to a discussion of the Reciprocal Trade Treaty Act. The House Ways and Means Committee opened hearings last week to determine whether or not this act should be continued for another 3 years. Secretary Hull presented a carefully prepared statement to the committee, urging a continuation of the act. Other witnesses in favor of the trade treaties are now being heard and next week those opposed to the continuation of the act will have an opportunity to present their point of view. It is rather difficult to get a true picture of the working of the Reciprocal Trade Treaty Act as the chief source of information is, of course, the State Department, and that Department is committed to a continuation of the act. The members of the Ways and Means Committee are anxious to hear from any witness who has a particular knowledge of the subject. If any of my listeners desire to appear before the committee, I will be glad to arrange an appointment for them if they will write to me as soon as possible.

I might pause here long enough to again remind all those who write to me on the different legislative subjects to be sure their name and address are plainly written on the letter so that I might reply to them.

Congress is now working on a study of the routine appropriation bills, 14 in number. After these appropriation bills have passed the Congress, many other legislative matters of importance will be considered.

In addition to the continuation of the Trade Treaty Act, it is expected that amendments to the Wagner Act will be proposed as a result of the hearings being conducted by the committee appointed to investigate the working of the National Labor Relations Board, more commonly known as the N. L. R. B. Most of our citizens agree that the Wagner Act should be amended, while just a year ago many people were demanding that Congress vote against any and all amendments to the Wagner Act. These same people have modified their demand and are asking that Congress vote against any amendment that would weaken the declared purposes of the act. I see no danger that Congress will do anything to weaken the declared purpose of the Wagner Act. Employers and employees are both anxious to have the act amended

in such a way that the right of labor to organize and negotiate through leaders of its own choosing will not be destroyed.

Undoubtedly, in view of experiences, amendments will also be proposed to the wage-hour bill.

Congress will very soon be called on to make an appropriation to continue the United States Housing Authority slum-clearance program.

A great deal of time will undoubtedly be devoted to the Walter-Logan Act, the enactment of which will assist many who have been harassed by the regulations issued by various governmental bureaus.

In closing, may I repeat the wish expressed in my opening paragraph that each of you have a happy and prosperous New Year.

## Loan to Finland Should Be Made Now

### EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. PITTENGER. Mr. Speaker, when the House of Representatives convened on January 3, I advocated that immediate steps be taken to aid Finland in defending itself against the attack by powerful and ruthless Russia's communistic government. I indicated then and I repeat now that Finland should be given a loan or credit so that that country could purchase things necessary to carry on its defense. Delay has followed. Questions have been raised as to whether the executive or legislative branch of the Government should act first. Of course, we must act through the Government agencies, operated by the executive branch of our Government. Congress ought to make possible the exercise of that power at once, either by making a loan to Finland or by other effective steps.

Reports indicate that opposition to the proposed loan has developed on the ground it violates the neutrality policy and law of the United States. I cannot subscribe to those objections. Communism is seeking to dominate the countries of the world. The first victim of the brute force of communistic Russia is to be Finland, and then other small countries—Sweden, Norway, Denmark—are to be new victims to this new doctrine that the Communists shall rule by the sword. I repeat that Finland is fighting the battles of all civilized countries. I see no violation of neutrality when the issue is one against communism. The proposition is well put in an editorial in the Christian Science Monitor for January 20, wherein it is pointed out that a loan to Finland is not a loan that will lead this country to enter this second world war to protect its creditor interests. The editorial points out that the loans in the first World War were enormous in character, and there was a war boom which encouraged the Allies' point of view in the United States.

What we do to aid Finland now may mean enormous savings to this country in the years to come. The United States cannot escape the effects of a world struggle where communism is opposed to countries of a different political philosophy. We can do no less than our neighbor Canada, which realizes the significance of the Russian fight against little Finland. I note in a recent newspaper account from Winnipeg, Canada, regarding oats and oat products in Canada that have been purchased for the purpose of shipping the same to Finland. And so we may not be surprised to find that other needed materials are being supplied. It should be done.

In this connection, Russia should begin to have proper attention. Again, I suggest that we can do no less than our neighbor Canada. A member of the Canadian Parliament has stated that the sale and export of wheat to Russia from Canada should be stopped because such procedure is in effect giving food to an enemy. He concluded his interview by saying that the more wheat sent to Russia, the more of Russia's own wheat would be available for the enemies of England.

It seems to me that the news items relating to the report of the Carnegie Endowment for International Peace amounts to a conclusive argument in favor of the loan to Finland. This is a peace organization, and the report strongly indicates that, unless help is given by the United States, Finland will suffer defeat. A very significant quotation from the report reads as follows:

If America decides to do nothing [for the Finns], then the expectation is that the Scandinavian countries will go down one by one.

This is no time, Mr. Speaker, to let partisanship influence us, when the peace and future happiness of the world is at stake. We want to see Russia defeated, and the best way to bring that about is to cease friendly gestures and furnish Scandinavia what they need to make sure of their success.

## Testimonial Dinner

### EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ADDRESS BY FRANK GANNETT

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Frank Gannett delivered at a testimonial dinner tendered to him by the citizens of Rochester, N. Y., and distinguished editors of the country at the Powers Hotel, Rochester, N. Y., January 16, 1940:

I am deeply touched by these tributes and the great honor you have paid me tonight. No one could be in my place and not be profoundly affected.

Of course, you make me happy. It would be gratifying to anyone to receive such praise, commendation, and applause. To me it is doubly pleasing because it comes from those with whom I have worked, from those with whom I have been associated, from those who know me best, from my own fellow townsmen. To all of you who made this wonderful dinner possible, I owe my sincere thanks. To many who have come long distances for this occasion, I am particularly grateful.

Delighted as I am that you hold me in such esteem and high regard, I realize my own shortcomings and have my own natural doubts whether I possibly merit all that has been said here tonight. Furthermore, you make me conscious of grave responsibility.

When men and women like you express such confidence in me, I feel I must do my very best in every act and deed to approach these expectations.

Naturally, I share with you pride in the city of Rochester, in my opinion, the finest city in all the world. It has been my privilege to visit most of the important cities and I can say truthfully that I know of none superior to this our own home town, as a place in which to live and labor.

I count it a most fortunate day when I decided to make Rochester my home. I owe much to Rochester, my home city, and I will do all in my power at all times to promote its best interests and the well-being of all its citizens.

What you have so generously said here tonight and what others in all parts of the country—indeed more than 10,000 citizens have written me—is more than a gratifying tribute—it is a call to action.

Men and women high in the Republican Party, leaders in all walks of life, in education, labor organizations, in farm organizations, in business and the professions, have urged me to become a candidate for the nomination for President.

There is no room in the ranks, or at the top, for any man's personal ambitions.

We are in one of the most critical periods in our Nation's history. What course we take in the next few months may determine the future of America.

Shall we protect and preserve our constitutional form of government and its system of private enterprise?

Shall we maintain the American way of life, with progressive reform that is constructive and healing?

Shall we respect the right of the individual—his right to be the master, not the servant, of his government?

Or shall we slip, as we have been slipping, further and faster toward one-man government—toward complete submerging of the individual and his right to be a free man?

Let us make no mistake about it. If the New Deal had gone, unbridled, down the road President Roosevelt started us on 3 years ago, we should have nothing left today but the empty form of constitutional democracy. The substance would be gone with the wind. Why, just think of it. Mr. Roosevelt's original executive reorganization bill would have given him, or any successor, power even to abolish the office of the President, or change its name and alter its functions. It would have allowed him to annul laws passed by Congress. This, too, was in that original bill. And that is but a sample of what the New Dealers set out to do—to your country and mine.

Let us remember there was little real freedom in the world—political or religious—until our Constitution was adopted. And there is little chance that freedom can survive if the principles written into our charter of freedom are abandoned. Unless we fight to maintain those principles, unless we stop the destruction of private enterprise, unless we put an end to the New Dealers' insidious, creeping accumulation of power over our lives, the black-out of liberty will come to America as surely as it came to the dictator-ridden countries of Europe.

Because I have seen people living under nazi-ism, fascism, communism, I know what it means to be deprived of the precious liberties guaranteed by our Constitution. You can't possibly realize what conditions are in those dictator-ridden countries until you see them in all their horrors; then you would know that anyone who has enjoyed the freedom of our country would find life in a totalitarian state not worth living.

Because I have seen the terrors of dictatorship and studied the encroachment of tyranny upon the liberties of the people in Europe, I long ago pledged myself to do all in my power to protect our country from the same fate. I have devoted myself to fighting all attempts to weaken the safeguards of our democracy.

By arousing the public to support patriotic Senators and Representatives, we were able to defeat the New Deal's four major assaults on the foundations of our constitutional system. They were four camouflaged grabs for dictatorial power.

Court packing wore the disguise of "reform"; Government reorganization, the mask of "efficiency." The un-American "purge," however, was just plain New Deal vindictiveness. The political lending-spending spree was dressed up as the "Spirit of Benevolence." All were frauds. Thank God, the American people saw through them in time to defeat all four of them.

I am happy to have had a part in all these victories. They renewed everybody's confidence in government by the people.

But the new dealers proclaim their purpose to continue their policies. Their plans are just as dangerous as their performances. New dealers do not believe in private enterprise. They will continue to substitute for it their planned economy—a time-worn discredited failure.

The only way to stop them is to get rid of them.

Our form of government will be menaced until the New Deal and its theorists are cleaned out, root and branch.

But rooting them out is not enough. We must plant again and cultivate the abundant fruits of private enterprise. Dictators rise out of the suffering that comes from economic disorganization. We in America shall not be safe until we correct the economic conditions which breed discontent and revolution.

We can have recovery and good times.

We can have jobs for all willing workers—and relief for the unfortunate.

We know how to do something more for the poor than talk about them, and something better for the unemployed than putting them on the dole.

We can create opportunity for youth and reinspire youth with ambition and hope.

We can assure farmers a decent income without making them regimented wards of the state.

We can revive initiative, thrift, expansion, and development.

We can have again a dynamic, surging America.

We have endured 7 years of failure. In the place of the New Deal theorists we want men and women who are products of the private-enterprise system, who believe in it because they understand what it is and what makes it work.

The Nation cannot exist half collectivist and half private enterprise. The country cannot carry a burden of crooked yardsticks, a back-breaking weight of taxes, mounting debt, and an ever-growing load of bureaucrats—and still carry on.

We cannot expect prosperity unless we give the constructive economic forces of the country a chance to function; until we stop trying to run everything and everybody from Washington. Then, and then only, can we put idle men and idle money back to work. We can then stop piling up debt. We can then restore national income so as to balance both private and public budgets and produce surpluses that will give real abundance to all—not the poverty of the New Deal.

Under our Constitution, with its system of free enterprise in 150 years this country achieved more progress in every line of activity, raised higher the standard of living, provided more liberty and happiness than ever existed in all the preceding countless centuries. Under our form of government this Nation grew great and strong. We must cling to it and protect it from all attempts to substitute nazi-ism, fascism, communism, new dealism, or any other "ism." There must be no substitute for Americanism.

So long as the present administration remains in power it will continue to menace democracy and constitutional government, even though it continues to praise it. The only way to put an end to

these assaults on our democratic system of government and our economic system of free enterprise is to drive from power those who are responsible for these attacks.

Toward that end I will assume any task assigned to me. I know that millions of citizens like you, who cherish the rich heritage our fathers gave us, will fight to preserve it, but they must have experienced and competent leadership. All who believe as we do must go forward together.

We enter this fight with complete confidence. We have turned back the new dealers in their most dangerous assaults on the safeguards of our liberty. By the same methods of arousing people to action, we can bring back and preserve democracy, along with prosperity. We can bring back the rule of common sense. We can bring justice and opportunity for all who work with hand or brain, whether on the farm, in the factory, the store, the office, or the home.

We can stop promoting class hatred for political purposes.

We can stop fostering costly strife between employer and employee.

We can end a foreign policy that swings from month to month between war talk and pacifism. We can keep our country out of foreign entanglements that lead to war.

We can promise every mother and father that their sons will not have to take up arms for a foreign cause in a foreign country. We must keep out of war.

By making democracy work in America, we can help to restore peace to the world. So shall we renew faith in the ideals of true liberalism.

I realize what it means to be a candidate for the Republican nomination for President—what it means in responsibility, in hard work, in sacrifice. Yet it is a call to duty that no citizen can ignore. My answer is yes. If mine is the task of leadership, I will lead—to the very best of my ability. If it is to follow, to fight in the ranks, as I have fought, there you will find me—fighting.

We have won on every issue where we have aroused the people to realize just where the New Deal is leading us. We can win again. We must win.

Let us begin now a new march of victory and progress for America, making sure that "government of the people, by the people, and for the people shall not perish from the earth."

## What Democracy Means

### EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. GURNEY. Mr. President, under permission granted me, I present for printing in the RECORD a speech delivered by Senator BRIDGES, of New Hampshire, at the Westminster College Political Forum, Fulton, Mo., Tuesday, January 16, 1940.

The address is as follows:

The fundamental test of any government is the value which it places upon the human soul. The totalitarian state—whether Communist, Nazi, or Fascist—is repugnant to us because it places so little value upon the dignity and worth of man. Whatever form it may take, man is the slave of the state because he is deemed unworthy of any rights—incapable of using freedom wisely. Decisions must be made for him, his future must be planned by the state, because he is either a fool or a scoundrel, and cannot be trusted to think or to plan for himself.

Such a conception is a tragic repudiation of human progress and thought—an abandonment of human hope and struggle for over a century and a half—a reversion to the days when a few were born to rule and the many to follow. This doctrine is at war today with the democratic ideal of man, not only on the field of battle but in the hearts and minds of men. Today, as never before, it is essential that we in America inspect our foundations and rededicate ourselves to the fundamentals of our faith if we are to preserve the democratic way of life.

American democracy is based upon the belief that man, as a child of God, is capable of self-perfection; that he is therefore endowed with certain sacred rights; and that government is instituted of man to protect these rights and to free him that he may attain the destiny that is his. It is man's quest for liberation—physical, mental, and spiritual—not only from the bondage of oppression but from the human weaknesses of hatred, greed, and fear. It is his quest for self-fulfillment, born of the conviction that every individual has some contribution to make to the enrichment of life, and that the progress of human civilization and culture lies in the release of the creative energies of men. It is

freedom, not merely for freedom's sake but for the use that men will make of it. Inspired by man's sense of the dignity of his race and by a vision of his own potentialities, it was born when he stood determined to be master of his fate. Such a conception takes account of human weakness as well as human strength, but it is founded upon the faith that the divine spark in man can conquer the beast in him, and the belief that government must encourage his highest and restrain his baser instincts.

Our forefathers knew that no government could make its citizens equally rich or successful any more than it could endow them with equal physical or intellectual gifts, but the equal dignity of men and the equal right to self-fulfillment, these it was the duty of their government to preserve.

The civil liberties the American citizen cherishes—freedom of conscience, freedom of speech, press, and assembly, freedom of his person and property from unwarranted search or seizure, equal justice under the law, an equal voice in the conduct of his Government—these are his by right as essential to his dignity and development. The opportunity to rise as high as he is fairly able, which has made America the mecca of the oppressed of other lands, is the right of every man to carve his own destiny.

This was the equality, this was the opportunity which men sought to establish in the New World not only for themselves, but for future generations of their race. This was the equality and opportunity which made America a symbol of hope to all mankind. Such was the faith of early Americans in themselves and in their fellow men to succeed under a Government based upon these ideals that they did not ask that security be bestowed upon them by the Government, but rather the chance to make their own future secure. This, I am confident, is all that Americans ask today.

Conscience demands that we care for those unable to care for themselves. Yet our crime against the unemployed has been not that we failed to render them aid, but that we have failed to enable them, through a revival of our system of economy, to regain the independence of working for themselves in private industry, the dignity of caring for themselves and their loved ones, and the opportunity to rise as high as their toll and their talents will permit. There is no greater task before us today. It is a task we must accomplish if freedom and opportunity are not to become hollow words.

Because American democracy places the highest value upon the individual, it requires in return the highest and best in men. It demands that he be capable of that self-government which is self-restraint; that he accord the same justice, respect, and tolerance to others that he asks for himself; that he use his freedom not merely for self-advancement but for the benefit of his fellow men. Thus the democratic evaluation of man embodies more than a conception of his rights. It emphasizes no less his responsibilities. It is no less a conception of his duty toward his neighbor. He can succeed to the extent that men meet the democratic test of manhood. It is a challenge to life at its richest and fullest, and to that undaunted spirit which rises above defeat and surges forward to new conquests for all the race.

Upon this rock was our Government founded as the supreme law of the land. Not satisfied to specify the fundamental rights of man in the Constitution, our forefathers provided a system of checks and balances between the executive, legislative, and judicial branches of the Government as a further guarantee that these civil liberties would not be denied to any citizen. Thus, the Government they established is not a system empowering the Chief Executive to control the judiciary by enlarging it at will, or to dictate "must" legislation to the Congress. Thus, it is not, in the words of Jefferson, an "elective despotism"; nor is it one of license by a majority of the people to disregard the rights of any minority. Thus, election by a majority of the people does not bestow a "mandate" upon any President; nor does it entitle him to "purge" representatives of the people who dare to disagree. It is rather a government of laws designed to safeguard liberty and prevent its abuse; laws deriving their force from the consent of the governed; laws written and administered by representatives elected by the people and responsible only to them.

In a democracy the people are the master of the state, which is their instrument of achieving justice and order which are necessary in their quest of truth and their attainment of self-fulfillment. The justice they seek is equality of all men before the law. The laws which they seek to establish are not laws to restrict but laws to free. They know that man cannot be free to advance if he lives in fear of the arbitrary decree of rulers and uncertainty as to his rights. They therefore seek to limit the power, both public and private, of men over each other, by defining his rights by law. The function of public officials is the protection of those rights by the fair and impartial administration and enforcement of these laws.

The limitations enforced by law upon the citizen are therefore not to dominate or regulate his life but to define the limit beyond which his actions interfere with the rights and liberties of others. For example, a citizen may drive along a country road at 50 miles an hour without violating the rights of others or the law. As he approaches a city, he is required to slacken his speed. Within the city limits he may not be permitted to exceed a speed of 20 miles an hour. He is required to wait for traffic lights that others may enjoy the same privileges. Yet at no time is he told the exact speed at which he must proceed. He is merely required not to exceed a limit beyond which he may endanger the lives and prop-

erty of others. Within the area of safety he is permitted to travel at the speed he desires. This is the spirit of law in a democracy. As our lives become more complex, new laws are constantly necessary. But their purpose must remain the same—not to regiment the citizen but to preserve the rights of life, liberty, and the pursuit of happiness of all the people.

The same principle applies in the relationship of the Government to our economic system as well as to our political and personal rights. There was a time when a theory of laissez faire prevailed, when a man's business was considered his own to do with it as he wished. Today we know that economic license spells chaos. But the alternative is not a planned economy by the Government. It is rather to define the economic as well as the personal and political rights of the individual, leaving the citizen free to operate his business within these limits. We believe, for example, that the worker has a right to decent wages and hours and working conditions and a right to collective bargaining. We believe that the individual should enjoy the opportunity to succeed in any legitimate enterprise according to his own abilities. We therefore seek to prevent monopolistic practices and the unfair competition which arises from sweatshop conditions. A democratic government may then establish minimum wages and hours based upon economic conditions, assure the worker the right to vote for the union of his choice, and regulate the merging of companies. But if by dictating all wages and hours, a government seeks to regulate all production and thus to control supply and dictate demand; if it attempts to dictate the set-up of every corporation; if it dictates the union to which the worker belongs—then there is no longer a free economy which is essential to free men, but a planned economy dictated by Government officials. As soon as the Government ceases to act as a policeman and regulates every move of the citizen, then democracy is no more. The aim of all reform must be not to change the form of our government, but rather to adopt such measures as prove necessary to preserve its spirit and purpose.

Since the people themselves are responsible for the enactment and administration of legislation, since a three-fourths majority may amend the Constitution at any time, they must look to themselves rather than to any mechanism of government for the preservation of their liberties.

Despite the human weaknesses to which such a government is subject, the achievement that is America has justified the faith of American democracy in man. It has also demonstrated the adaptability of our form of government to changing needs. But that is not enough. The question is whether we of today will carry forward and bequeath to our posterity, as have those who went before us, an enriched democratic ideal. We must face the fact that where it has failed it is we who have weakened it by indifference; we who have perverted it for private gain; we who have failed to translate the ideal into the practical solution of our problems. If we have failed to achieve what we have a right to expect of ourselves, it is partly because we have not fully realized that democracy, a thing of the spirit, cannot be preserved at the ballot box alone, but must guide the everyday relationships of man to man.

The faltering in the democratic faith which has been so tragically evident throughout the world has not failed to take its toll in America as well. It has been manifest in a tendency to look to Washington for the solution of every problem; in wishfully thinking that it could be solved by creating another government bureau and vesting it with sufficient power. It has led to the wholesale surrender and delegation of powers of Congress to the executive department and to numerous Government agencies. It has led to attempts at planning our national economy from Washington; to extending the controls of government ever further.

If democracy is to be preserved, we must return to the conception of a government of laws, not to control our lives but to curb new abuses, to prevent the exploitation for personal power of new developments designed to enrich the lives of all. Congress must once more assume the duties entrusted to it by the people. Essential Government agencies must be so regulated and so administered that the citizen knows his rights and is confident of justice. A friendly Government must encourage the individual in every honest endeavor.

If democracy is to survive, we must meet squarely the objections of its enemies. The charge that men are incapable of self-government can only be met by the progress of men under a democratic system. The charge of irresponsibility of citizen and Government official alike can be refuted by men who meet the duties which are theirs in a democracy. The charge of inefficiency can be gainsaid by men united by a common ideal and aim.

If the democratic ideal is to survive, we must teach our children not only the blessings but the responsibilities which are theirs as American citizens. We must imbue them with the democratic philosophy of life, which is perhaps best illustrated by Christ's parable of the talents. We must teach them to look upon life as a gift that must be used well if it is to benefit oneself as well as one's fellow men.

At this fateful hour in the history of the world, when disheartened men have faltered in the democratic faith and surrendered to leaders who promised Utopia for obedience, the challenge to America is once more to demonstrate the democratic solution of the problems with which men are faced. That challenge is to banish the defeatism which teaches that frontiers and opportunities for individual achievement are gone, and to seek with the courage, faith, and vision which

led our forefathers onward in the conquest of a new world, to conquer the endless frontiers of science and invention. It is to realize that material advancement will profit men little unless it is accompanied by spiritual progress. It is a challenge to us all—businessman, worker, and farmer alike—to attain the greater tolerance, understanding, and cooperation demanded as men's lives are more closely interwoven by the vast industrial civilization they themselves have built. It is to demonstrate that mass production can lead to the enrichment of the lives of all, not by the surrender of individualism but through that higher individualism, born not of selfishness but of constructive contribution by each to human progress. It is to achieve that unity, not enforced from above by regimentation, but inspired within the hearts of men united of their own free will for the progress of mankind.

Only thus can we meet the challenge of the highest ideal man has ever set for himself. Only thus can America, when nations have turned once again to the ways of peace, be prepared to light the path of human progress to a new and better world.

### A Creed for 1940

#### EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ARTICLE FROM THE WASHINGTON POST OF JANUARY 20, 1940

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of January 20:

[From the Washington Post of January 20, 1940]

THE ONCE OVER

(By H. I. Phillips)

A CREED FOR 1940

I believe:

That what the country needs more than anything else is a return to horse sense, homespun philosophy, and the belief that all you have a right to demand from Congress are spring vegetable seeds.

That nobody should campaign for any public office as Santa Claus.

That not more than 65 percent of a businessman's mail should consist of questionnaires, summonses, new tax forms.

That the country needs more government by suggestion and less government by whip snapping.

That we have a youth problem because no big employers are adding to the pay roll and that the reason they are not adding to the pay roll is that the Government is making it unprofitable for them to do business on a scale that would justify more people on the pay rolls.

That a great many employers are reactionary, timid, smug, narrow-visioned, and full of the sulks, but I think it is a somewhat natural condition, due to constant ambushes, poisoned-arrow attacks, blows in the dark, kicks in the pants, and the rise of brass knuckles to a position of accredited dignity in government.

That America needs a campaign to impress upon the people that the national anthem is still The Star-Spangled Banner and not Pie in the Sky.

That everybody should paste in his hat a copy of President Roosevelt's speech denouncing name-calling, intolerance, and the stirring of class against class and group against group; and that they should all raise a terrific howl the first time anybody violates the idea on the air, in the home, on the public platform, and on any level from the street corner to the White House.

That there should be a general acceptance of the truth that you can't unscramble an egg with a microphone.

That there is no chance of industry staging a sustained recovery while the company president has to spend half of his time before Washington commissions, while the general manager is all tied up with a strike committee, and while the production chiefs are all buried under Federal "don't" lists.

That the only major question for the United States Congress to decide is, Are we mice or men?

That there aren't a dozen business houses in America that are not too shadow-shy, apprehensive, jittery, careworn, and nervous to function with full efficiency; and that there will never be real prosperity again in America until the men who shoulder the pay roll find that it pays to take chances, think fast, build big, aim high, and, on occasions, to shoot the works.

That the foremost need of the times is a device to separate baloney from facts, applesauce from theory, and hassenpfeffer from blueprints.

Bishop John F. O'Hara

#### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ARTICLE FROM THE SOUTH BEND TRIBUNE

Mr. HARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the South Bend Tribune on the testimonial dinner given to Bishop John F. O'Hara, the newly consecrated auxiliary Bishop of the United States Army and Navy Diocese.

Bishop O'Hara, who for the past 30 years has been actively associated with the University of Notre Dame, is known and loved by many citizens the country over. As president of the university during the past 6 years, he brought increased vigor into the intellectual life of America, and under his direction the university has become a recognized leader in the arts and sciences.

Bishop O'Hara was signally honored when he was selected by President Roosevelt as a delegate to the South American Conference in 1939. His friends in all walks of life wish him Godspeed in his new calling. The Army and Navy Diocese is to be congratulated on his selection and elevation.

[From the South Bend Tribune]

TESTIMONIAL DINNER GIVEN FOR PRELATE—BISHOP-ELECT GUEST OF 375 CITIZENS IN HOTEL

Most Rev. John F. O'Hara, C. S. C., D. D., retiring president of the University of Notre Dame, who recently was appointed titular bishop of Milasa and auxiliary to the archbishop of New York by Pope Pius XII, was the guest of honor last evening at a testimonial dinner in the Oliver Hotel given by South Bend citizens.

The dinner was served in the rotary room and the two adjoining rooms on the south, 375 persons occupying the attractively laid tables. The speakers' table across the north side of the rotary room was beautifully decorated with roses, chrysanthemums, and greenery and silver candelabra supporting lighted candles. In front of the honor guest was a long mound of flowers and greenery.

The wall back of this table was done in blue and gold with the American flag as an appropriate center as Father O'Hara's duties as bishop will take him into work in the United States Army and Navy. Representatives of both the Army and Navy were present to pay honor to the guest. Through the dinner the Curran trio softly played.

Following the impressive invocation by Rabbi Albert M. Shulman, of Temple Beth-El, and the dinner service, extracts from letters of congratulations were read by F. A. Miller, chairman of the general committee. Congratulations came from the following:

Most Rev. Francis J. Spellman, archbishop of New York, "I know that Notre Dame and South Bend are making a sacrifice in contributing Bishop O'Hara to the service of the Army and Navy but it is a sacrifice for the welfare of the country."

PROOF OF HIGH POSITION

HON. ROBERT A. GRANT, Member of Congress from this district, "the spontaneous expressions of joy at the high honor that is paid him and the Holy Cross order, mingled with the expressions of regret that he will no longer be with us in person in our daily life, are convincing proof of the high position that he has won for himself in the hearts of this community and the men of Notre Dame."

"During my 6 years at the university I was privileged to live in that atmosphere that is today one of the most potent forces in the world for the preservation of peace and brotherly love. The contribution that Father O'Hara has made to that force cannot be measured. We know that his unselfish service to the students at Notre Dame will likewise assure a higher morale among the men of the United States Army. We are sorry to lose him but we rejoice in the honor that is paid him and is rightly his due."

Gov. Herbert R. O'Connor, Annapolis, Md.: "Maryland sends greetings to Bishop O'Hara tonight and joins in tribute to him upon elevation to the episcopate."

Most Rev. Joseph E. Ritter, bishop of Indianapolis: "South Bend has no better friend than Father O'Hara and I am sure he will carry this love and devotion even into the more extensive field of action assigned to him by the holy father."

Rt. Rev. Thomas H. Shannon, Chicago: "At the moment he will fill a position of great importance but depend upon it that this is

the first step in a great career for his country, for his church, and for his government."

#### HIGH ESTEEM AND REGARD

Dr. Deno F. O'Connor, Chicago: "No words of mine suffice to express the high esteem and regard in which we all hold Father O'Hara, but I sincerely appreciate the opportunity you are giving me to express my best wishes for his happiness and success in his new appointment. I trust that I may have the privilege of doing this personally in the near future."

Most Rev. John F. Noll, bishop of Fort Wayne: "No one was more pleased than I to learn of the elevation of Father O'Hara, beloved at Notre Dame long before he was advanced to the presidency of the university. The greatest need of America is the largest possible number of young men who will think straight and live straight; and the formation of just such young men was the never-ceasing effort of Father O'Hara. He understood the grown-up boy and therefore easily won his confidence, two requisites for successful guidance."

Hon. James A. Farley, Washington, Postmaster General: "Father O'Hara has rendered an eminent service to his church and to his country and has won the esteem and affection of American citizens in all walks of life. His assignment to difficult and important responsibilities will add new distinction to his great work. As a devoted friend and admirer I extend my best wishes to Father O'Hara and to the citizens of South Bend who have assembled to do him honor."

#### APPEAL TO COURTS

P. C. Reilly, Indianapolis: "This is one time when I wish the church and the state were not separated, for if they were united we could appeal to the courts for an injunction to restrain Father O'Hara leaving Notre Dame and the State of Indiana. I would have several bases for the injunction; among others (a) he is doing at Notre Dame such a wonderful work in educating young men in all ways for higher intellectuality and love of country and its form of government; (b) because Indiana claims him as her own, as one of her distinguished sons and its citizens would not willingly permit him to depart from its boundaries."

"This is a selfish attitude, I know, and possibly we shouldn't so express ourselves, yet our respect and admiration for him are such we would wish to hold him. But we cannot stop him and he will soon leave us to give himself and his fine ability to each of the States and Territories of our Nation. His departure is a loss to the university, to South Bend, and to the State, for he is a great president of a great university, a great prelate, and a great citizen, whose influence enriches for good wherever he is located."

#### WIDER FIELD FOR WORK

"His appointment as bishop of Milasa is, of course, a recognition of his accomplishments and is an advance for him and gives a wider field for work and we shall, with reluctant resignation, accept his departure with the knowledge his fine work will extend his influence to even greater fields. We wish him every success and good health in his new field."

Dr. Walter G. McGuire, Chicago: "His excellency has been an outstanding figure in education circles and his administration has added prestige to the university over which he has so ably presided. The times call for enlightened leadership in church and state and Bishop O'Hara's background, experience, and acknowledged ability qualify him in an exceptional way for the high office he has been appointed to."

Rev. James A. Burns, C. S. C., assistant superior general, Congregation of the Holy Cross, Notre Dame: "It is appropriate that the people of South Bend should thus show their esteem and love for Bishop O'Hara. In doing so they are showing also their esteem and love for the university over which he has so happily presided. The years have been bringing South Bend and Notre Dame into ever closer bonds of mutual regard."

#### DEPARTURE A LOSS

"In this promotion to a higher and an entirely different sphere of work Notre Dame is losing much and South Bend is losing scarcely less. It must be a pleasing thing to him during these days of parting to know that what he has accomplished is appreciated no less here in South Bend than on the campus at Notre Dame. We cannot wish him better than that the remarkable success which has attended his unselfish labors, both as head of the department of religion and as president at Notre Dame, may be continued in even wider spheres of activity and that, with God's blessing, it may be crowned with even greater and more beneficent fruits for the glory of God and the welfare of our common country."

Ambrose O'Connell, Washington, Second Assistant Postmaster General, former president of the Notre Dame Alumni Association: "Kindly present my congratulations and heartiest best wishes to our mutual friend, Father O'Hara, who so richly deserves the great honor that has been conferred upon him by His Holiness Pope Pius XII. Father O'Hara's outstanding achievements not only in the work of the church but also among the youth of America are a source of pride and gratification to his host of devoted friends. Our best wishes for a continuation of his success follow him into his new and wider field of endeavor."

#### FRIENDS THROUGHOUT COUNTRY

Edward J. Doyle, of Chicago: "Father O'Hara, by the force of his wonderful personality and zeal, has won thousands of friends throughout the country and we are happy to see his work so well recognized. Please convey to him my warmest regards with my

wish that he may enjoy good health and that he may be highly successful in the exalted position to which his past work has fully entitled him."

Bill Cerney, Mendota, Ill., assistant football coach, University of Notre Dame: "The first time in the history of the university that the team lost two football games and the president is made a bishop. If we had lost five you probably would have been shipped across the pond. My prayerful congratulations on your appointment."

Following reading of congratulations Mr. Miller introduced Paul G. Hoffman, president of the Studebaker Corporation, as toastmaster. Mr. Hoffman presented Mayor Jesse I. Pavey, who spoke for the city, saying:

"I received the suggestion of many of our prominent citizens a few weeks ago that recognition should be taken of the value of Father O'Hara to this community, and I was happy to appoint a general committee to provide proper means for the citizens of South Bend to express their appreciation for his contribution in maintaining and making still more pleasant the relationship between the University of Notre Dame and the city."

#### FOR THE CITIZENS

"So it is my great pleasure and happy privilege tonight to represent the citizens of this city and in their behalf to honor and pay tribute to a man who has contributed so much to the betterment of our community; a man who for the past few years has been the president of Notre Dame University."

"It falls to the lot of one in my position many times to speak in a complimentary vein on similar occasions and it is rather difficult at times to properly fill the assignment, but on this occasion the feeling of the people whom I represent is so genuine and appreciative that it becomes a distinct pleasure as well as a privilege."

"Unlike most cities South Bend has never simply been exposed to cultural and religious influences. She grew of age with the University of Notre Dame adjacent to its borders and is grateful for the background it affords our city and for the influence it has exerted on her citizens. South Bend from infancy has absorbed and interwoven into her everyday existence those finer things which give her citizens a richer life. Under the leadership of Father O'Hara marked progress has been made by the university and at the same time as its representative he has been instrumental in preserving and knitting more closely a community of good neighbors."

#### CREATES PERMANENT PLACE

"Hence we are meeting with him tonight, meeting as a testimonial to Father O'Hara, a man of God, who, through his sincerity and priestly life, has created for himself a permanent place in our hearts and because of the cooperative spirit he has always shown, his vision and judgment, he is held in high esteem and affection by all of our people as a respected leader of men."

"While we have realized, Father O'Hara, your term as president of the university would soon end, and we approached that time with true and sincere regret, it has now ended sooner than we had anticipated."

"It is with sorrow that we see your term of office concluded and know you are soon to leave this community. However, we are happy and rejoice with all your friends everywhere upon your recent merited appointment as bishop."

"When you depart from our midst you will leave with the full knowledge that you have endeared yourself to the entire citizenship of South Bend, and we unite in extending to you our best wishes and our humble prayers for your future health and welfare."

Mayor Pavey was followed by former Congressman Samuel B. Pettengill, who paid high tribute to Father O'Hara and closed by presenting him a beautiful platinum, open-face watch engraved on the back of which are these words: "Presented to Bishop John F. O'Hara by his South Bend friends, January 9, 1940."

#### BELONGS TO CITY

Mr. Pettengill said:

"This evening belongs neither to the university nor to the church. This evening belongs to South Bend. Neither race nor creed separate us. They unite us. There is Rabbi Shulman, who asked God, as Tiny Tim might have done, to bless us every one."

"You will recall Schiller's great story of Nathan the Wise. It concerned a Jew and a Christian. They were friends for many years but they could not wholly obliterate the thought that a line divided them. Finally in some great crisis, as in a lightning flash, they saw each other plain. And then the Christian cried, 'Why, Nathan, you are a Christian.' And Nathan replied, 'What makes me to you a Christian makes you to me a Jew.'"

"And there is Dr. Baillie, a gentler Jonathan Edwards living in our midst. Father, I'll let you in on a secret about Dr. Baillie. He is a Presbyterian with leanings toward Christianity. [Tremendous laughter.]

"It is not a bad way for men to live together. The wide world, to its good profit, might follow our example. There was Tay Pay O'Connor, the great Irish M. P. He used to say, 'Look at Ireland, Protestants at the north of it, Catholics at the south of it, always at each other's throats. Why can't they be heathen so they could all live together like Christians?'"

"A tolerant world. I was Father O'Hara's guest one day at Rockne Field. The race went not to the swift nor the battle to

the strong all through the first half. Up in the grandstand was a loyal alumnus who tried to assuage his grief with what the old Romans called *aqua fortis*, but known to us moderns as *spiritus frumenti*.

#### "HE MAKES A THREAT"

"But at the half he could stand it no longer and called out, 'Father O'Hara, if you don't get those Irish clicking I'm going to turn Methodist.'

"Yes; a tolerant world.

"So many faiths, so many creeds,  
So many roads that wind and wind,  
When just the art of being kind  
Is all this old world needs."

"To those of us who have been living here in this world-famed city, tolerance, like the charity of which it is a part, began at home. It has abolished all boundaries between town and gown. We are not like the walled cities of medieval times. No moat; no drawbridge divides us. We of the town and you of the gown are the common inheritors of a great and happy tradition.

"Great men of both the city and the university will that it be so. To mention only one of a noble galaxy, I cannot forget at this moment genial, lovable Father Cavanaugh. God rest his soul in the peace that he deserves. How many times in this very room did the magic of his eloquence make us forget that we were Catholic, Protestant, Gentile or Jew, Greek or barbarian.

#### "IT UNITES GOOD MEN"

"It was old St. Thomas Aquinas himself who said, 'Among all worldly things there is nothing which seems worthy to be preferred to friendship.' For friendship unites good men, preserves and promotes virtue. It is what all men need in whatsoever occupations they engage. In prosperity it does not thrust itself unwanted upon us nor does it desert us in adversity. It is what brings with it the greatest delight, to such an extent that all that pleases is changed to weariness when friends are absent.

"But *primus inter pares*, first among equals. No one, Father, none of those who handed down to you from Father Sorin's time the lamp of knowledge and the torch of Christ, none has done more than you have done to cement us as Americans all, proud of Notre Dame, proud of South Bend's fame, jealous of Indiana's name, first among States in the greatest Nation in the world.

"It is not appropriate, Father O'Hara, that I dwell at length upon the course to which duty and God have called you. As I remember the Good Book it becometh not to speak of him that girdeth his armor on but rather him who layeth it off. No doubt there will be moments of anxiety, but your wit will see you through. But if you ever get in a really tough spot, remember the Irishman before the Irish judge. The judge said, 'Haven't I seen you here several times before?' 'No, Your Honor. The only time in my life I ever saw a face with the look of eagles upon it like yours was when I once gazed upon the picture of an Irish king.' 'Case dismissed.'

#### IN GOD'S KEEPING

"Notre Dame and South Bend will not seem the same with Father O'Hara absent from us. But we can still rejoice that he will be in God's keeping and doing God's will. Woodrow Wilson, whose spirit had been tried in the fire of great hopes crushed to dust, in what I think was his last written message to his fellow Americans, said: 'Our civilization cannot survive materially unless it is redeemed spiritually. It can be saved only by being permeated with the spirit of Christ and being made free and happy by the practices that spring from that spirit.'

"I am profoundly convinced, now more than ever, as we see the modern godless Caesars return to ancient Romes, living and perishing by the sword, crushing all that is decent in the relationship between man and man and man and his Maker, that the supreme crisis of our times is a moral failure and that no party, no statesman, and no government can redeem us from our sins.

"The God-fearing men who laid the foundation of this Republic knew well that:

"'Except the Lord build the house  
They labor in vain that build it,  
And except the Lord the city keep,  
The watcher but waketh in vain.'

#### FATHER O'HARA A MAN

"My fellow citizens of South Bend and Notre Dame, Father O'Hara would not wish us to catalog at length the qualities for which we love him. I will pass over his scholarly attainments, his rare administrative ability under which his beloved Notre Dame has grown like a green bay tree and from whence his thousands of boys have gone forth to enrich our lives with their faith in themselves, in Notre Dame, and our common country.

"But I cannot close without one word concerning Father O'Hara as a man. And for its expression in language beyond my power I go back to what Sallust said of the elder Cato, one of the noblest men whose name is like a shining bead on the rosary of time:

"'As for Cato, his only study was moderation, regular conduct, and, above all, rigorous severity. He did not vie with the wealthy in riches, nor in turbulence with the factious but taking a nobler aim he contended in valor with the brave, in modesty with the modest, in integrity with the upright, and was more desirous to be virtuous than to appear so; so that the less he courted fame, the more it followed him.'

#### "TOKEN OF ADMIRATION"

"Father O'Hara, wherever you go, you will have 'honor, love, obedience, troops of friends.' But I trust it will always be a happy memory to you to recall these faces of your old fellow townsmen who love you best of all. In their behalf, and at their request, I present you with this slight token of our admiration and our love."

Father O'Hara responded in a feeling way which indicated the depth and sincerity of his appreciation of the compliment paid him by South Bend and also of the gift. He pointed to the close relationship which has developed between South Bend and Notre Dame and its significance and hoped it always would exist. He referred to the great responsibilities confronting him in his new work and the possibilities it offers.

Following the singing of the first stanza of "America" the benediction was pronounced by Rev. Charles Tupper Baillie, D. D., pastor of the First Presbyterian Church. For a long time after the early adjournment Father O'Hara was kept busy receiving congratulations from men present and in autographing the evening's program the first cover page of which bears a most excellent picture of him.

#### FROM OUT OF CITY

Among those from out of the city attending the dinner were Col. George Miller, Culver Military Academy, Culver, Ind.; John C. Tully, president of the La Grange National Bank, La Grange, Ill.; Bishop Campbell Gray, Mishawaka; Byron V. Kanaley, Chicago, president of the board of lay trustees of the University of Notre Dame; Daniel Hilgartner, Jr., Chicago, president of the Notre Dame Alumni Association; and John Dwyer, of Chicago.

Father O'Hara is preparing for his consecration ceremonies which will take place in the Church of the Sacred Heart, Notre Dame, next Monday. The limited capacity of the large church will be filled.

## Nebraska Public Power and Irrigation Projects

### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ADDRESS BY DOUGLAS G. WRIGHT

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Douglas G. Wright, Assistant Chief Project Engineer of the (Nebraska) Public Works Administration, on the subject "Nebraska Public Power and Irrigation Projects and the Stabilization of River Flow."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A meeting of a particular association has one thing very much in its favor—we all speak a common language. I am reminded of the rich leather merchant, who was attending one of his wife's parties. Cornered by his irate spouse with the remark, "You are not talking to our guests," he replied, "No; they don't know anything about leather." We are at a decided advantage. We all know about irrigation and its related problems.

Another subject which not only members of this organization, but every person in this State understands, because he has not only read about it daily these past years, but many also have lived directly with it, and that is the protracted drought problem which has taken hold of Nebraska. Newspapers recently published accounts of the Governor's visit to Washington in order that he might carry an appeal to the President for Federal aid to farmers struggling through the worst drought the Cornhusker State has yet known.

To overcome this handicap imposed by nature constitutes, without a doubt, the greatest problem confronting Nebraska today. Upon its satisfactory solution depends the economic future of thousands and thousands of acres of farmlands which have become unproductive because of the inadequate rainfall. To supplement the deficiency, we must turn to the artificial watering of fields. In other words, we must develop irrigation. While pump irrigation has its place, a semiarid region as extensive as that of central Nebraska calls for the complete conservation and utilization of the rivers which flow through it. The problem of drought, irrigation, and stabilization of river flow go together as naturally as meat, potatoes, and gravy.

There is no question that provision must be made for direct and immediate aid for those counties hardest hit through lack of rainfall. However, permanent rather than temporary correction is needed. The farmer is, after all, a very self-reliant sort of fellow.

He is not looking for continual Federal and State aid. He is asking, rather, for the means by which he can help himself. Irrigation will give him a degree of assurance for his income, whereby through careful planning and hard work, he can rebuild into ultimate prosperity and financial security.

Nor has the central Nebraska farmer been "let down." To check the retrogression of its agricultural industry, the citizens of this State have undertaken a \$64,000,000 Public Works Administration financed public power and irrigation program. In doing so, Nebraska becomes a pioneer in the coordinated development of water resources as local, public undertakings.

A river valley in semiarid country is not abundant in crops simply by virtue of lying close to a stream. Water is a resource that must be used in order to be of benefit. The stream flow must be diverted onto the land before it can produce bumper crops. To put its rivers to beneficial use there are at present being built, or have been constructed, five public power and irrigation projects in the severely drought-ravaged sector of this State.

Two of the projects are comparatively small. They divert the flow of separate rivers and because of abruptly rising tablelands are confined to the first valley levels of the respective streams. These projects have been in complete operation only one season. In this brief time they have well demonstrated their possibilities to the North and Middle Loup Valleys through the utilization of the continuously flowing North and Middle Loup Rivers. Since they take their source from the great underground reservoirs of the sand hills, they have a sufficiently uniform flow during the irrigation season to meet the water-supply requirements of the districts.

These two projects will place some 60,000 acres of rich farm lands under irrigation. They make every promise of developing a stock-feeding center and highly productive area of diversified and intensive farming practice which should match the phenomenal progress of the Scotts Bluff region, to which every Nebraskan points with pride.

The other three public power and irrigation projects offer a considerably different picture. They are not so local in aspect, and they hope to add to the benefits of irrigation the additional benefit of cheap electrical energy.

Of the three, the Loup project, located at Columbus, is designed for the generation of hydroelectricity only. It draws water from the Loup River, which is a confluence of the Calamus and the North, South, and Middle Loups, and their tributaries. This project found it unnecessary to construct any large man-made storage facilities to regulate the flow of the Loup River for two reasons: First, this stream, although subject to some fluctuation, is not subject to large flood run-offs or long periods of very low flow, as are numerous other rivers; secondly, the coordinated operation with the Sutherland and Tri-County plants, whereby through perfectly synchronized transmission-line connection, the large storage facilities of those two projects can be employed for peak-power demands, makes it possible for the Loup district to utilize completely the water of the Loup River with only daily storage regulation.

The Sutherland and Tri-County projects, designed for the dual service of irrigation and generation of hydroelectricity, are not so favored by natural conditions. The Platte, from which they take their water supply, is a river of extremely fluctuating flow. During some months of the year it carries a large volume of water. By late summer, however, the flow generally becomes so small that for miles there is only a stretch of dry river-bed sand for water appropriators. Therefore, in order to conserve and put to beneficial use the plentiful winter and nonirrigation-season flow which is now unused, together with impounding floods of any magnitude which may sweep down the river, great storage reservoirs must be built. It is by impounding this otherwise wasted flow that water can be sent down irrigation ditches during the crop-growing months of the following season.

As I have said, the North and Middle Loup projects serve the lands within their individual valley beds. They operate separately because they divert water from separate streams. While the Loup project at Columbus takes water separately and apart from the Sutherland and Tri-County projects, it is desirable for economic reasons, because of the nature of its service, that the three major projects be coordinated. The question is often asked: Since these three districts are dependent so necessarily one upon the other for their most economical operation, why have three separate projects?

In engineering, as in every other line of work, hindsight is better than foresight. There are five separate public power and irrigation projects because, at the time the Public Works Administration was organized and the applications for allotments were filed by the districts, the crying need was to "put men to work" through the construction of useful and permanent public works for the good of the people. Public Works Administration did not receive the Nebraska applications simultaneously, nor was it in a position, under the emergency conditions, to take the time to correlate every application within an area with all other applications from the same region of the State. Each application was considered on its own merit and without consideration of its relationship to the others. Consequently, allotments were made to the five districts in the order in which they were found eligible.

In the light of the experience gained after construction started, it would have been much better if the Nebraska applications had been filed simultaneously and considered as a single program. A combined State-wide development would have eliminated any possible

overlapping of construction, and would have guaranteed the most efficient and economical set-up in the program of Nebraska water conservation. All changes which the Public Works Administration has recommended have been in an effort to eliminate some of the conflicts which have resulted from separate project programs, and to provide for an economic set-up which will provide ultimately the greatest utilization of the water resources and prove of the greatest benefit to the State as a whole.

The picture is further complicated because while the Loup, Sutherland, and Tri-County projects have as one of their objectives the generation, distribution, and sale of electric energy, the Sutherland and Tri-County projects have as their principal objective the furnishing of storage water for irrigation. Both Sutherland and Tri-County depend upon the flow of the North Platte River for their source of water supply and any action of one obviously affects the other. Because of these common objectives and similar design, a coordinated plan of operation will not only accomplish the greatest utilization of the water resources and offer the highest degree of public service to the State, but will work also to the mutual economic operation of each of these three projects. Through coordination and cooperation, the major districts can meet their common problems on a common basis.

I have digressed from my main subject because to those who have not worked directly with the construction of the projects, the present program of coordination of the Loup, Sutherland, and Tri-County projects might be difficult to understand.

There is one other point upon which I would like to touch in a discussion of the Nebraska public power and irrigation program. In the construction of these projects, much controversy has been carried on because of the development of hydroelectricity. When considering the purposes of the projects, we must remember that they are designed, first of all, to serve irrigation. The development of hydroelectricity is secondary, but very necessary. Running water through turbines doesn't change its properties. It is just as wet when it is sent down the irrigation ditches to be carried out over the fields, but it comes to the fields with a double advantage. In addition to providing the moisture needed for the cultivated crops, it has to a considerable percentage already paid for its own irrigation service by first lending itself to the generation of electricity. Without the sale of electrical energy to carry its proportionate share of construction costs, the districts could not sell irrigation at the reasonable prices it is sold, and one that is within the reach of the farmers' pocketbooks.

There are other reasons why the systems have been designed as multiple-purpose projects. This plan of operation offers the most advantageous use of money expended for construction. One dollar does the work of several when the same system embraces irrigation, flood control, generation of hydroelectricity, and other related purposes. This multiple design in the utilization of Nebraska's water resources is the plan most in keeping with our present day mode of living.

So necessary is the sale of hydroelectricity in the program of irrigation service that the north and middle Loup districts included as a part of their applications the plans for sending electricity over transmission lines to towns within their project territories. Revenues derived from such service will assist them in repaying construction costs and in reducing the acre-foot charge for water service to the farmers. The two plans dovetail perfectly, and the districts are working out this phase of operation. Cooperative support and an interchange in revenue is given in that the north and middle Loup projects buy electrical energy from the major public power districts for resale to their local communities.

A brief study of the physical nature of the three larger projects will indicate that their basic possibilities are designed ideally for cooperative and coordinated operation in order to secure the maximum development of water resources.

The Loup project at Columbus is primarily a run-of-the-stream generating plant, with only sufficient storage regulation to enable the project to carry a portion of the peaks of the power load served by the three projects.

The water of the Loup River can be utilized by the project at all times up to the maximum capacity of the power canal, which is approximately 3,100 second-feet. This permits the regulating reservoir to be maintained at such a level that the plant can use the average water available and yet to a large extent carry the peak loads of the system.

The Sutherland and tricounty projects form an almost unbroken chain on the Platte River from the Kingsley Dam near Ogallala to the Johnson No. 2 powerhouse, which is south of Lexington. The Kingsley Reservoir has sufficient storage capacity to regulate the flow of the Platte River almost 100 percent over the entire period from 1930 to 1938, based on State water records available for that time.

In the coordinated operation of these projects, there are certain waters which must be passed at all times in order to satisfy prior water requirements. In the case of the South Platte River, no on-river storage facilities are available, but the flow to some extent can be utilized by the public projects by passing the water through certain canals, regulating reservoirs, and power plants which lie below North Platte but above the points where the water is taken from the river by irrigators with prior water rights.

To my mind, it is this flexibility of the Sutherland and tri-county projects, permitting practically all the water in the river to be carried through their canal systems almost to the present diversion points of existing private company ditches, which offers the greatest possible conservation along the Platte River.

For example, the water required by privately owned ditch companies in the Platte Valley between Brady and Lexington can be passed in a great measure through the Sutherland Canal system, then the Sutherland power plant, then the Jeffrey section of the tricity supply canal, then the Jeffrey power plant, and then be discharged back into the river just above the head gates of the first two private ditches east of North Platte. Sending this water through the canals of the public projects, in my opinion, will eliminate to a considerable extent the river losses which are so marked in the wide river bed of the Platte throughout this section.

Further, there is sufficient capacity in the tricity supply canal for the water requirements of the Elm Creek and Kearney Ditch Co. to be carried in the canal from North Platte and released back into the river at a point about 3 miles west of the Elm Creek ditch head gates, thus saving river loss in the channel for some 60 to 70 miles. This arrangement, I believe, will improve the problem of water delivery to these ditches, a matter which has caused endless controversy.

Returning for a moment to the actual operation of the projects themselves, I shall outline how it will be possible to secure the maximum utilization of the water of Nebraska's rivers.

As I have stated previously, the Columbus project should be operated continuously in order to make use of the water available from the Loup River, to the capacity of the canal system. Power generated will be classed as base-load power to a major extent, with sufficient daily regulation, however, to enable the plant to furnish peak power during the peak-load periods of the districts.

The Sutherland and tricity projects must be operated, primarily, to furnish irrigation water for the lands under their respective systems. In addition, operation must be carried on to insure protection of the rights of holders of prior water rights. In order to meet these two requirements, it is necessary that the water released for this purpose be discharged at a constant rate to the irrigators.

The power which can be generated with the water passed for prior water requirements, plus the water passed for the public districts' own irrigators, together with the flow of the South Platte River which can be passed through the tricity power plants, can be added to the power generated during low water by the Loup project. This combined generation classed as base-load power, thus comparatively is uniform throughout the year. Every drop of water available can be used, first, to satisfy irrigation demands under the project systems, and, second, for power generation to form the power generated by each of the districts to such a point that there should be very little so-called secondary or dump power.

The Sutherland Reservoir, and the numerous small reservoirs along the tricity supply canal, make for flexibility of the systems in operation so that the projects can, to some extent, store floodwater of the South Platte River which now is unused. At the same time the water levels in the canal system can be maintained to permit operation of the power plants of the three projects and provide the necessary irrigation service.

As an example of the operation which I have just discussed, let us take a typical day during the summer irrigation season. Let us suppose that the projects are completed and in full operation. Let us say that the Loup River is flowing some 1,500 second-feet. The Loup project would be operating their regulating reservoir at variable levels between half of its capacity and full capacity. In other words, during peak periods they would be drawing their regulating reservoir down to carry the daily load peak. During the late night and early morning hours very little water would be taken through the Columbus plant, thereby refilling the reservoir which had been drawn down during the hours of peak load.

This procedure could be followed and still allow the Loup project to utilize all water available to it from the Loup River. At the same time we will say the Tricity and Sutherland projects are running the entire flow of the Platte through as much of their systems as possible for prior water requirements. In addition, they are releasing irrigation water from their storage reservoirs for the irrigation of lands under their own systems. Obviously it is necessary that there be delivered into the canals a continuous flow of water to meet irrigation requirements. It is for this service that the numerous reservoirs along the Sutherland and Tricity canal systems have their greatest value.

It is possible by varying the level of these small reservoirs and running water through the various plants at different times to maintain not only a constant delivery of irrigation water to the canals but also to operate the power units as nearly as possible at their maximum efficiency. For example, the Jeffrey regulating reservoir could be drawn down during peaks of power demand at a much faster rate than required by irrigation deliveries, and the water stored in the Johnson regulating reservoir. During the next day the same constant rate of delivery could be maintained out of the Johnson regulating reservoir and the flow from the Jeffrey plant reduced and the peak load carried by a faster delivery of water from the Sutherland Reservoir into the Jeffrey regulating reservoir to refill it.

This flexibility in the operation of the systems, as well as the perfectly synchronized coordination of the Loup project, makes it possible for the districts to gain a two-purpose use of the waters of this State, and enables them to operate both as irrigation and electric generation projects, with the mutual economic benefit of both.

Much has been said, and much has been written, about the objectives of the Nebraska public power and irrigation projects.

Even more has been said and written as to whether they will be able, physically, to accomplish these objectives. I know of but three objectives of the projects with which I have come in contact.

These three objectives are:

First. To develop and utilize Nebraska's greatest natural resource, her water;

Second. To furnish irrigation to as much land as possibly can be served by the projects at the cheapest possible price; and,

Third. To utilize the energy in falling water as it winds its way to the irrigation ditches by the generation of electric power to be furnished as reasonably as is possible to the people of this State, and whose revenues are to be used to help pay the cost of furnishing supplemental water to Nebraska's farmlands.

Personally, I know of no reason why these public power and irrigation projects, as they are being constructed, cannot fully and completely fulfill these objectives. The engineering work has been done skillfully and men recognized as foremost authorities in the construction of projects of this nature have been consulted for approval of the designs. Without question, mistakes have been made in the building of these public projects, but such mistakes as were made have been corrected. Every effort is being made to bring about as nearly perfect operation of these man-made structures as is possible.

The question now is not, Will these projects work? It is rather, Are the people of Nebraska giving these projects the support necessary for their successful financial operation? These districts are business organizations and for their income they depend upon the sale of their services. It is true they are organized for a public service, and are nonprofit corporations, but they must have a market and customers for their services just as a drug store, a grocery store, or a meat market must have customers before it can sell its commodities.

It is difficult to conceive of projects more worthy of support than are these public power and irrigation districts located throughout central Nebraska. That the present uncertainty of agriculture is a serious menace to the future economic importance of this region now is too obvious longer to be ignored. The Nebraska Blue Book for 1938 states that crop production in general was reduced heavily by drought during the period 1934-38, and we know that 1939 was anything but a bumper crop year, where crops were dependent upon rainfall. Unfortunately, production expenses have not decreased proportionately, leaving the farmer with a low buying power insofar as the sale of his commodities is concerned. According to newspaper figures, over 1,300,000 acres of land have passed from private to insurance-company ownership. That isn't a healthy situation for a State dependent solely upon agriculture as its basic industry. If the rest of the State then looks to the prosperity of the farmer as its yardstick for financial prosperity, the sensible and only possible solution of the problem is to give the farmer, who is the first producer of wealth, an assurance for his income. Now that central Nebraska has been provided with adequate irrigation facilities to bring irrigation to thousands of acres of semiarid farmlands, it is up to the residents of this region, and the entire State, to give the projects support by purchasing their services. There is no alternative to that situation. Without financial support the projects cannot operate; and without irrigation, the desolation of central Nebraska cannot be checked.

Due to the success of irrigation along the Platte Valley, and because of the devastating effects of continual drought years, Nebraskans are now irrigation-minded. At present, plans are under way for the formation of several new districts along the Platte in the more eastern counties. Renewed efforts are being put forth also by residents of the Republican Valley in order to obtain Federal allotments for river flood-control and irrigation projects. The committees in charge of sponsoring the projects are doing everything possible to make Nebraskans realize that the waters of the Republican should be conserved.

There is no doubt that additional irrigation projects are needed. Farmers certainly cannot continue to pay taxes when they have no crops, and the loss of taxes affects the whole State. There is, however, a question which rightfully can be raised of any future development of such projects. It isn't reasonable, and surely not in keeping with good business practice, to expect the Federal Government or any financial institutions to help build more projects unless the people of Nebraska first show that they have every intention of supporting the public projects which have already been built, and which are now ready to render both irrigation and electrical service.

The projects to be built will involve many of the same engineering problems and difficulties as were encountered on those that have been constructed. Any new projects will require financing from some source, either from the Federal Treasury or private capital, and when they are completed they must have the support of the residents of the particular areas in order to operate successfully. If, then, the citizens of Nebraska are really in earnest in wanting additional projects, the surest way to get funds is to give to those projects already in existence the best kind of support.

In conclusion, I would like to repeat that the Nebraska public power and irrigation projects can be operated in such a way that they will accomplish their objectives. Each project will benefit through cooperation and unified operation. Furthermore, the entire Platte River Valley will have greatly improved water conditions due to the full regulation of the North Platte River by the Kingsley Reservoir, and the saving of water losses in the wide river bed, which can be accomplished by the full use of the projects' canal systems.

**St. Lawrence Seaway—Growth in Population and Real-Estate Values in the Great Lakes Area Assured Upon the Completion of the St. Lawrence Seaway**

**EXTENSION OF REMARKS**  
OF  
**HON. FRANCIS D. CULKIN**  
OF NEW YORK  
IN THE HOUSE OF REPRESENTATIVES  
*Monday, January 22, 1940*

Mr. CULKIN. Mr. Speaker, the soundest navigation and power project in the United States, if not in the world, is the Great Lakes-St. Lawrence seaway. The project is based on sound nationalism and tested economics. I feel I am on safe ground when I make the following conclusions as to this great national development:

First. Its construction will add 3,576 miles to the coast line of the United States by admitting ocean vessels from the Atlantic to the Great Lakes. It brings the seven seas 1,200 miles inland!

Second. It will mitigate, if not entirely cure, the economic handicaps of adverse transportation costs to the vast area in the interior of the American continent. This area embraces 22 States with a population of more than 40,000,000 people who gain their livelihood from agriculture and manufacturing.

Third. Without doing violence to existing investment it will bring electricity at low cost to the manufacturer, farmer, and house dweller in the northeastern part of the United States.

These great and permanent benefits from this project have been frequently discussed by me on the floor of the House. Today it is my desire to stress more particularly the stimulating effects of the seaway on population and real estate in the Great Lakes area.

The classic example of the effect of waterways on population and real estate is found in the latter-day history of Corpus Christi, Tex. Corpus Christi, Tex., is an old city which did not really come into its own until it was established as a Gulf port in 1926. In that year only 6,170 tons of cargo were moved out of that city. The port was improved and year by year the tonnage increased until 1939, when the tonnage was 6,000,718 tons. In 1920 it had a population of approximately 25,000, but under the stimulus of maritime development the 1940 census will show at least 60,000. This growth in population and in commerce is being reflected in one of the most remarkable real-estate developments in the history of the country.

Mr. Ernie Pyle, a special writer for the Scripps-Howard group of newspapers, says in a syndicated story which appeared in the New York World-Telegram on January 3, 1940, that the development and growth of Corpus Christi is due in large part to the fact that it had become a seaport. Mr. Pyle states that no city in America is growing faster than Corpus Christi, and that this year's building permits total more than \$7,000,000, with real-estate values going up by leaps and bounds.

Corroborating this, Mr. Pyle says:

Two miles out of the city limits a lot 100 by 400 feet costs you \$5,000. In a yet-vacant section this side of that (which the owners are holding) the land is almost priceless. One man has 320 acres still in cotton and has turned down \$250,000 for it.

Taking a leaf from the book of Corpus Christi, I have no hesitancy in saying that the growth and development of the Great Lakes ports, upon the completion of the seaway, will be as remarkable. It is worthy of note that other independent publicists, free from the influence of selfish interests, are agreeing with Mr. Pyle and say that when the St. Lawrence seaway is completed every city of the Great Lakes area will, within a period of 10 years take on an extraordinary advancement in population and real-estate values. The seaway will convert more than 85 inland communities of the United States into seaports. The following is the list of lake

ports that will be profoundly and favorably affected by the completion of the St. Lawrence seaway:

Lake Superior: Grand Marais Harbor, Minn.; Duluth-Superior Harbor, Minn. and Wis.; Cornucopia Harbor, Wis.; Ashland Harbor, Wis.; Ontonagon Harbor, Mich.; Presque Isle Harbor, Mich.; Marquette Harbor, Mich.; Grand Marais, Harbor of Refuge, Mich.; Warroad Harbor and River, Minn.; Agate Bay Harbor, Minn.; Port Wing Harbor, Wis.; Washburn Harbor, Wis.; Bayfield Harbor, Wis.  
Lake Michigan: Manistique Harbor, Mich.; Menominee Harbor and River, Mich. and Wis.; Oconto Harbor, Wis.; Pensaue Harbor, Wis.; Big Suamico River, Wis.; Green Bay Harbor, Wis.; Harbors at Washington Island, Wis.; Algoma Harbor, Wis.; Kewaunee Harbor, Wis.; Two Rivers Harbor, Wis.; Manitowoc Harbor, Wis.; Sheboygan Harbor, Wis.; Port Washington Harbor, Wis.; Milwaukee Harbor, Wis.; Racine Harbor, Wis.; Kenosha Harbor, Wis.; St. Joseph Harbor, Mich.; South Haven Harbor, Mich.; Saugatuck Harbor and Kalamazoo River, Mich.; Holland Harbor, Mich.; Grand Haven Harbor and Grand River, Mich.; Muskegon Harbor, Mich.; White Lake Harbor, Mich.; Pentwater Harbor, Mich.; Ludington Harbor, Mich.; Manistee Harbor, Mich.; Portage Lake Harbor, Mich.; Frankfort Harbor, Mich.; Leland Harbor, Mich.; Charlevoix Harbor, Mich.; Gladstone Harbor, Mich.; Petoskey Harbor, Mich.; Waukegan Harbor, Ill.; Chicago Harbor, Ill.; Calumet Harbor and River, Ill. and Ind.; Indiana Harbor, Ind.; Michigan City Harbor, Ind.

Lake Huron: Cheboygan Harbor, Mich.; Alpena Harbor, Mich.; Saginaw River, Mich. (Bay City, Essexville, Saginaw, Milwaukee); Harbor of Refuge at Harbor Beach, Lake Huron, Mich.; Mackinac Harbor, Mich.

Lake Erie: Monroe Harbor, Mich.; Toledo Harbor, Ohio; Put in Bay Harbor, Ohio; Port Clinton Harbor, Ohio; Sandusky Harbor, Ohio; Huron Harbor, Ohio; Vermilion Harbor, Ohio; Lorain Harbor, Ohio; Rocky River, Ohio; Cleveland Harbor, Ohio; Fairport Harbor, Ohio; Ashtabula Harbor, Ohio; Conneaut Harbor, Ohio; Erie Harbor, Pa.; Dunkirk Harbor, N. Y.; Buffalo Harbor, N. Y.

Lake Ontario: Olcott Harbor, N. Y.; Rochester (Charlotte) Harbor, N. Y.; Great Sodus Bay Harbor, N. Y. (Sodus Point); Little Sodus Bay Harbor, N. Y. (North Fairhaven); Oswego Harbor, N. Y.; Cape Vincent Harbor, N. Y.; Ogdensburg Harbor, N. Y.; Sacketts Harbor, N. Y.; Morristown Harbor, N. Y.; Waddington Harbor, N. Y.

Connecting channels: Detroit River, Mich. (Detroit); Black River, Mich. (Port Huron); Clinton River, Mich. (Mount Clemens); Rouge River, Mich. (River Rouge); Black Rock Channel and Tonawanda Harbor, N. Y.; Niagara River, N. Y. (Niagara Falls).

**Labor Endorses Dies Committee**

**EXTENSION OF REMARKS**  
OF  
**HON. J. PARNELL THOMAS**  
OF NEW JERSEY  
IN THE HOUSE OF REPRESENTATIVES  
*Tuesday, January 23, 1940*

LETTER FROM LOUIS P. MARCIANTE, PRESIDENT, NEW JERSEY STATE FEDERATION OF LABOR

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I have received from Louis P. Marciant, president, New Jersey State Federation of Labor, expressing approval of the work which the Dies committee has performed and of its continuation of the investigation which it is making into the activities of subversive groups within the United States:

JANUARY 19, 1940.

HON. J. PARNELL THOMAS,  
Congressman, House Office Building,  
Washington, D. C.

MY DEAR CONGRESSMAN: I take this opportunity to commend you and the members of your committee for your splendid contribution toward the maintenance of our American traditions and American democracy in your investigation of subversive activities in our Nation. No one realizes better than myself the tremendous inroads that have been made by subversive forces in our country. I believe that any labor leader who is committed to our American traditions realizes as forcefully as I do, the progress made by the communistic element established in certain branches of the labor movement. No labor leader I have talked with doubts for one moment that the apparent trend toward restriction of labor's right has been due, mainly, to the activities of Communist agitators and seekers of revolution working within certain organizations of organized labor and using unionism as a cloak for their destructive activities.

New Jersey has been particularly harrassed by this element. I have contended for some years and charged that many of the leaders in the newer organizations were Communists and as a result had

to withstand the abuse that they and their fellow travelers heaped upon me verbally and through their publications. I, therefore, feel particularly grateful to your committee for the exposures that have been made and which have proven conclusively my contention that these men were revolutionists and not trade unionists.

I feel, however, that the work of your committee is far from having been completed and that there are many other things the people of this country could learn by continuing the work of your committee. You are, I am sure, familiar with the sad experiences New Jersey has had with the Nazi bund and it is my hope that you commit your investigation to expose the machinations of these agents of a foreign power who would destroy the processes and institutions that guarantee us our freedom and democracy.

With all best wishes for the personal well being of yourself and the members of your committee, I am,

Most cordially yours,

LOUIS P. MARCIANTE,

President, New Jersey State Federation of Labor.

Dr. Rizal

## EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ADDRESS BY HON. HARRY B. HAWES

Mr. TYDINGS. Mr. President, I ask unanimous consent to have inserted in the RECORD an address delivered by former Senator Harry B. Hawes, of Missouri, who had much to do with one of the independence bills for the Philippine Commonwealth, on the subject of Dr. Rizal, who was one of the great Filipino patriots at the time of the Spanish-American War. Dr. Rizal was executed by a firing squad. He was a great Filipino hero, and there is so much of interest, lore, and information in former Senator Hawes' address that I ask that it be inserted in the RECORD. The address contains some historical matter probably never heretofore printed; and anything that applies to Philippine-American relationships is not only interesting but may become increasingly important in the future.

In addition, I approve his observations on the subject of religious liberty and tolerance—a matter so signally demonstrated in the early history of my State.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends of the Filipino community of Washington, rough, hard, beset by danger, with suffering, and with death, is the road to democracy.

Through all the centuries men and women have made the supreme sacrifice in its pursuit and for its attainment; and today, in the year 1939, are again giving all they have, upon the sea and the land, throughout Europe and Asia, for the return and the preservation of freedom.

In the United States and in the Commonwealth of the Philippines we have democracy; our problem is not to secure, but to hold, to retain, to preserve, and to perpetuate.

The best way to that end is to inform each generation what the preceding generations have done, to hold as beacon lights their heroic sacrifices that future generations may live in liberty.

If we gather about a Christmas tree, sing the old songs, tell the old stories, pass around the gifts, listen to the laughter, and watch the smiles of dear ones, we may forget for the day why we possess the opportunity for the gala period and right to enjoy peace and freedom.

Along the years that went before men had been preparing the way. And among these was Dr. Jose Rizal. National heroes sometime become heroes of all humanity. There have been men who at first have been a torch for a single nation and become a guiding beacon light for the world. Rizal was one of these. But a few months ago it was Poland, today it is Finland, who has through sacrifice rekindled the sacred fire of democracy.

Rizal, whom we now commemorate, was an artist, poet, author, physician, world traveler, and patriot. He destroyed with a book cruel control, as Cervantes had destroyed with a book false knight-hood and the shams of a fanciful chivalry.

Thirty-three Philippine revolts stretched over 200 years before he arose.

The manner of Rizal's death sent more men to arms than the war bugles of the King.

On December 30, 1896, troops of soldiers held back the people; Rizal walked to the appointed place; he requested that he be shot facing the squad; the officer in charge said he must obey orders; he then asked that they aim at his heart, not his head.

In the face of the supreme test, he was calm. A military doctor, amazed at his fortitude, inquired, "May I feel your pulse?" It was hardly a beat above normal. At the age of 36, the poet, the patriot, made his supreme contribution for democracy.

He was cast into an unmarked grave. Today, a great shaft, a noble monument, marks the spot. On this anniversary it is covered with wreaths and flowers. Men, each year, review his sacrifice and revitalize the cause of liberty. In many trips to your country, I looked morning and afternoon from my window upon the monument of a people's love. It was not difficult to envision what went before, and it was always a compensation for the very small part I have had in advancing his desire for an orderly liberty through a democracy.

Fifty thousand Filipinos in America pay him their annual tribute, today, as those in every province, in every barrio of "The Christian Spearhead," Philippine bands play, people march and again recall his sacrifice for liberty.

That night, 43 years ago, Filipinos sharpened their knives, oiled their muskets, and formed their army. Moving forward, driven back, again onward they went through the ordeals behind their visible leaders. The invisible but real leader was Rizal. Men sat in the trenches with him, they trailed through jungles, they marched, they died, they gave their all as they went with him to the death that won victory. They carried the torch of democracy, but it was held in his lifeless hand.

Soft sentiment was not the cause. Rizal's execution brought the realization that if a kindly man who raised his voice and expressed his ideas in a book should forfeit his life, then knowledge was treason, patriotism a crime, justice was in shackles, and the quest for liberty meant death.

It was then better to die in open places than in prison.

Rizal's execution was intended to be a deterrent. Instead, it fortified a fixed determination; it welded an unbreakable will for self-determination.

Then followed 3 years of struggle until Spanish armed forces were driven into Manila and were there surrounded. Admiral Dewey entered the bay, sank every Spanish warship, and destroyed all forts. There was for a time friendly cooperation between Americans and the Filipinos.

Then the American Army came; it entered the Spanish citadel; Philippine troops were not admitted. This brought ill feeling and misunderstanding, heightened by the absence of competent interpreters.

In the war that began with that unhappy misunderstanding, which lasted 3 years, Americans lost 4,000 men, the Filipinos 16,000, a toll of 20,000 lives.

Spain had received \$20,000,000 for a land and a people she could not deliver.

War came through a mistake of motive. We can only speculate upon events, if what followed could have been known at the time.

At the beginning of American occupation there was military rule; civil administration followed.

After American soldiers, came school teachers, American executives were succeeded by Philippine administrators, roads were built, sanitation was introduced, newspapers increased, education extended, suffrage was granted, democratic court procedure was provided, liberty was assured, happiness and understanding appeared.

Repeated American promises of ultimate independence were made by our Congresses and our Presidents.

The Philippines increased in population from 7,000,000 to 16,000,000. Manila, the ancient oriental trading outpost for the Pacific, outgrew its walled city and extended for miles in all directions. From 200,000 it has now grown to 600,000.

Americans remained, entered into business, introduced the American way. Under their inspiration, both imports and exports grew amazingly. Today, taking in all of Asia, Africa, North and South America, and all Europe, we find, before the late war began, only Japan in Asia, Canada in America, and England and France in Europe, exceed the Philippines in purchases from American farms and factories.

You are our fifth best customer in the world, and, in return, 80 percent of all your exports are purchased in America.

Commerce and religion are strong ties; but the most binding is the union found in a common love of democracy. Without it we could not have the other things that bring contentment. It is worth fighting for—Rizal thought it worth dying for.

Millions of men are in battle today that it may survive.

A hundred years before Rizal's time, men in America, through privation, suffering, death, after 7 years of struggle, decided for a government in which all could participate and each have a voice. Purified by war, they met and wrote a set of rules called a Constitution, which provided for government by a majority.

The work seemed good, but wise men said there are certain rights that should be made definite and inalienable, a guide for legislatures, executives, and courts.

The original draft described how a majority should rule, but it did not describe how a minority should not be disregarded.

Wise men know that a minority of today may in a democracy become the majority of tomorrow and a minority abused, wronged, coming into control, might inflict punishment upon the late majority.

Following the revolutionary period of our country there came from the new border State of Kentucky resolutions dealing with search and seizure, the right of castle, and finally under the guiding hand of Jefferson, came the first 10 amendments, called our Bill of Rights. This charter of civil and religious liberty tells a majority what it may not do; it denies not only the right but the power to do certain things.

They knew the annals of tyrannies down through the ages. They were familiar with the records of despotism and oppression. They were resolved to place safeguards against repetition in our land. They protected America against the absolutism of the monarch, against the injustices of a majority. They marked a line over which a majority could not pass. They decided there could not be a rule for one man and another for another man.

If a man owned a farm, a horse, a dog, it was his property; it might be a factory, a bank, a railroad, a woman's home, or even the child's doll. They could be taken from their rightful owner only by gift, by sale, or due process of law, without the protection of which, provision for old age, support for the helpless, would all be lost.

Freedom of speech, liberty to print, right of petition, trial by jury confronted by the accuser, right of counsel, proof of guilt only beyond a reasonable doubt—all these were guaranteed.

And freedom of worship was made inviolable: A Chinese may have his Confucius, an East Indian Moslem his Mahomet, a Japanese his divine Emperor, a Jew his Moses, a Christian his Christ, that is a matter of choice, a matter of conviction with which the State may not interfere.

Jefferson proposed that each man should select his own God and be a better man for the stronger conviction.

As a statesman, he knew pioneer Americans came from divergent and antagonistic religious groups. There were 13 States with local control, and intolerance guiding one State might have been Puritan, another Baptist, another Presbyterian, another Episcopalian, another Methodist, and another Catholic, sectarian wars might be waged, destroying all unity under one Confederation.

Better a square with a courthouse, justice in the center, with a Protestant church on one corner, a Catholic church on another, a Jewish tabernacle on a third, and a lecture hall on the fourth, than a regimented State-controlled temple for every man's God.

Nearly 20 years ago, in the House of Representatives, I said, "It becomes the particular duty of those in a majority to insist upon the preservation of the rights of the minority, and the fight against religious intolerance should be made by the Protestant for the Catholic and by the Catholic for the Protestant, and, because of numerical weakness, of both Protestant and Catholics for the religious rights of the Jew."

A score of years has passed and with added experience my mind has been strengthened in this conviction.

Men last saw Rizal before a firing squad. Time has marched on for nearly half a century. Always toward a goal he had before his eyes as the rifles flashed.

If Providence permits, he now may view a successful revolution in both thought and government. He may be saddened by the deaths at sea, in trenches, high in the air, in the shambles of wrecked cities while the struggle for democracy is carried on.

But if his vision reaches only his beloved Philippines, and its American partner, the United States, it will give him joyful satisfaction. In the White House in Washington President Roosevelt supports a democracy in the Philippines; the leaders in both Senate and House, despite some small dissent, wish the Commonwealth success.

The Pacific Ocean has been kept clear.

The Japanese attempt to strangle China, after 3 years' efforts, has not been successful. The war goes on with barbarous ferocity; it gives grave concern to all thoughtful people for the Philippine future.

My original bill was an independence offer of 15 years' reciprocal trade, and then, with experience, a plebiscite of all the Philippine people in 1951. This was changed and the plebiscite was placed at the beginning, so decision was made without the longer experimental period.

President Roosevelt has sent as High Commissioners three able men representing the external policy of the United States. They made friends and are now strong advocates of Philippine advancement upon plans approved by Filipinos. All agree, if a change comes, it must first be recommended by the Commonwealth.

The greater the prosperity of your people, the greater the inducement for their acquisition by a foreign state.

We have before us Austria, Czechoslovakia, Poland, and now plucky Finland. With the American flag flying, soon to be supported by the world's greatest Navy, as an ever-great democratic Nation it will be invincible; conquest could not succeed, would not even be attempted.

If Rizal looks down, he finds in the ecclesiastical palace a native-born Irish archbishop, a man of broad humanity, sparkling wit, and tolerance; beside Catholic cathedrals are Protestant churches and a Jewish synagogue; native Philippine Governors of all Provinces and mayors of all cities, a legislature selected by ballot, representative of the districts from which they are selected.

Five thousand Americans remain protected in property rights and civil liberties, with children and grandchildren. Fine old Spanish families fitting in and adjusting themselves to the new order. English, German, Chinese, helping to carry on under Philippine leadership.

Filipinos drilled, ready to fight for their own land, anxious to fight for their friend, the United States.

And when Dr. Rizal looks into Malacañan, home of the old Spanish Governors, home of American Governors, he will find in the seat of authority, formerly occupied by them, a native Filipino, His Excellency Manuel L. Quezon, President of a Philippine Commonwealth—a Commonwealth that possesses all the powers of each State of the American Union—its international control alone being limited.

The latest history, that of this year, by Captain Sexton, records, in his *Soldiers of the Sun*: "A particularly refractory insurgent captured at this time was Maj. Manuel L. Quezon. This 23-year-old youth had been a law student at the University of Santo Tomas at the outbreak of the insurrection and had forthwith enlisted in Aguinaldo's army as a private. Promotion had been rapid and an almost fanatical belief in the righteousness of the insurgent cause motivated him to remain hostile to the Americans even after Aguinaldo's proclamation. Following his capture, he was rewarded for his efforts by 6 months' imprisonment."

With the establishment of peace he engaged in law practice and then drifted into politics, still a passionate, if peaceful, apostle of Philippine Independence.

Possessed of a brilliant mind, a pleasing personality, and capable of forensic eloquence, he saw his ideals materialize 35 years later in his own inauguration as the first President of the Philippine Commonwealth.

He has his head in the air but keeps his feet on the ground; he has vision and plans and hopes of greater things to come but long experience with men will keep aspirations within practical limitation.

Miles are of the same length, the oceans are as deep and wide; and yet the world has grown smaller, voices come direct into the home of each from all the capital cities of the world, from Europe, Asia, Africa, and South America.

And on this day come all the voices of the Philippines, in one grand chorus, proclaiming one name, "Rizal."

## Unicameral Legislature of Nebraska

### EXTENSION OF REMARKS

OF

### HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ARTICLE BY JOHN P. SENNING

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by John P. Senning, of the University of Nebraska, upon the Unicameral Legislature of Nebraska, and its operation in two sessions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the National Municipal Review, vol. XXVIII, No. 12, December 1939]

#### ONE HOUSE, TWO SESSIONS

(By John P. Senning, University of Nebraska)

"The one-house legislature, restoring the legislative branch of government to the coordinate position it once held and giving the direct representatives of the people as great power as that of the chief executive, is the essence of democracy."

The first two sessions of Nebraska's streamlined, unicameral legislature have clearly demonstrated the wisdom and foresight of the man who was responsible for its adoption, Senator GEORGE W. NORRIS.

Although the work of the legislature is by no means perfect, the institution and its accomplishments are so generally accepted by the electorate that all attempts to abolish it and reinstate a bicameral body have proved abortive. A measure introduced in the last session to double the membership and return to partisan elections could not muster the requisite vote to force it out of committee.

Another indication of the attitude of the electorate is shown by statements of men running for State office that their determined opposition to the unicameral legislature before adoption has now changed to approbation.

One is constantly met with the question that, if the one-house legislature is a success, why have not other States followed the example of Nebraska. Newspapers and speakers throughout the United States have given the unicameral body much publicity, mingling fact, fancy, and misrepresentation. A speaker in California, for instance, announced to his audience that Nebraska had once adopted a one-house legislature but had abandoned it in disgust a few years ago; a writer in a midwestern newspaper gave an estimate of the 1939 session using 1937 statistics. A politician,

addressing a political science club in a large State university, asserted that Senator Norris had told him in confidence that he wished he had not sponsored the unicameral legislature since it failed to work out as he anticipated. Senator Norris wrote to the newspaper publishing the statement that he had never had any conversation with the speaker.

Foundation for the nonpartisan election of legislators was built upon the long and generally accepted use of the nonpartisan ballot for many officials, independent voting in general elections, and the crossing of party lines in the legislature when an important economic or social issue was before it. Naturally the party leaders resented further inroads on party domination but the electorate as a whole has made little objection.

In the first election in 1936, when there was a Democratic landslide, 22 Democrats and 21 Republicans were chosen. In 1938, 24 Republicans and 19 Democrats were elected. A statehouse reporter in commenting on this election said: "There are a few more Republicans than Democrats in the unicameral. If election had been on a partisan ballot the Republicans would have outnumbered the opposition at least 2 to 1, as election returns indicate. Thus we would have had a Republican legislature making faces at a Democratic Governor and vice versa, if faces can be made that way; and how much shorter and more harmonious a time would not have been had by all at the Capitol this winter."

A few legislators, who aspire to higher political office or who shifted responsibility in the bicameral legislature to the shoulders of the political parties, have denounced nonpartisan elections on the plea that legislators are political orphans.

Does party influence inject itself into the operations of the legislative body? In the first session the speaker was a Republican, the clerk a Democrat. In the second session there were predictions that since the Republicans had a majority of five the nonpartisan attitude would be discarded in the choice of legislative officers. The speaker is a Democrat and the Democratic clerk was re-elected by an overwhelming majority. In deliberation on measures which might be given a partisan slant there has never been a clear-cut alignment on a party basis. For instance, the legislature has withstood enormous pressure from the political parties in both sessions for the enactment of a law providing for preprimary conventions.

It has been contended by some that since the legislature is nonpartisan it lacks leadership. To answer that question one must first determine whether the people want a rubber-stamp legislature controlled by the Governor or the party or whether they want legislation passed on the basis of thorough discussion and sound judgment illumined by facts. True, the legislature is deliberate and the last session was the longest in Nebraska history, 111 days. It must be taken into consideration, however, that State legislation is now concerned with complicated and intricate social and economic questions.

In the extended debate on the electric power bills in 1939 the knowledge of and information on rates, public ownership, costs, and electrical machinery shown by the legislators, whether farmers, lawyers, or professional men, would have done credit to almost any body of men one could assemble.

As a matter of fact, each member of the one-house legislature feels that he is a representative of the people and has the right to express his opinion untrammelled by any domination. A Lincoln newspaper editor who has observed every legislative session beginning with 1891 says on this point: "The fact is that there is leadership, but it does not rest in the hands of one man or several men, but in the power of reason and common sense."

#### LEGISLATIVE PROCEDURE

The outstanding feature of the simplified procedure is that at any and all stages of progress, from committee consideration to final passage of a bill, there is fixed responsibility which cannot be shifted or overturned by a second house. Every bill is accorded a public hearing, announced 5 days in advance, so that everyone, whether lobbyist or private citizen, is apprised of the time and place of the hearing. If a second or adjourned hearing is held it too must be given 5 days' notice.

There are no secret executive committee sessions. Though the public is excluded the press is always present and reports the action of the committee even to the votes of the members on important measures.

When a bill reaches the floor of the house it is subjected to two thorough considerations. On the first calendar, called general file, the bill is read section by section, debated, and amended if so voted. At this point it can be advanced to the second stage, select file, sent back to the standing committee, or indefinitely postponed.

Three days must elapse between the first and second considerations and, in the meantime, the measure is in the hands of the committee on enrollment and review for a check-up on arrangement, phraseology, and correlation. That committee has no authority to make changes in bills without the consent of the legislature but by reason of the careful scrutiny given them it has already developed into an important revisory agency.

The second consideration, select file, really takes the place of a second house. Here bills are subjected to another thorough consideration, first upon the basis of recommendations by the committee on enrollment and review, and second upon the merits of the measure as a whole. Only a specific amendment is permissible on select file. For amendments of a general nature the measure must be referred again to general file and, if amended, pass again through the committee on enrollment and review on its return

to select file. With the spacing of time between the first and second considerations, judgments have matured, weaknesses, if any, have been discovered, and differences of opinion have been ironed out.

After advancement from select file, the committee on enrollment and review makes a final check-up and engrosses the bill. It is then printed in final form and must be on the desks of the members for at least one legislative day before third reading and final passage.

Instead of hasty legislation, as predicted by the opponents of the unicameral amendment, the one-house legislature has in fact slowed down deliberation.

Notwithstanding the fact that almost every citizen, individually or through some organization, is a potential or active lobbyist, there still persists the notion that the lobbyist is a dark and sinister specter which stalks through the legislature gathering up the hapless victims of its wiles. The lobby is here to stay and has a distinct function in legislation, through the expression of public opinion and the presentation of factual information. In the one-house legislature the advance notice of public hearings gives everyone an equal opportunity to be heard.

In each session there have been about four times as many registered lobbyists as legislators. Powerful interests have attempted to force members to support their bills but the legislative procedure is so direct and open that no member can conceal his vote and none wishes to admit that he is the tool of a lobby. The right of a single member to demand a record vote also curbs the power of the unscrupulous lobbyist as does also the absence of party control. The small house is a deterrent to the efforts of the predatory lobbyist who is the loudest advocate of a large membership and partisan elections.

#### LEGISLATIVE AND EXECUTIVE HARMONY

The present Governor, who had been a State employee for 12 years before he was elected chief executive on the Democratic ticket, began his first term when the last bicameral legislature, predominantly Democratic, was in session. Two years later, during his second term, he faced the changed relationship with the one-house body.

There were no serious clashes between the chief executive and the legislature in 1937 except that the Governor resented the increase in the budget above his recommendations. In the second session the relationship was that of 2 coordinate branches of the government working in cooperation. The Governor sent numerous messages to the legislature, particularly on the measures dealing with Federal-State relationships, giving the legislature pertinent information which he had received from the Federal Government. He also called in chairmen of committees and committee members to discuss bills in which he was interested. In 1937 he vetoed 17 bills, 1 of which was passed over his veto. In 1939 he vetoed 6 measures. In every case the veto was imposed because of policy and not for faulty drafting or technical inaccuracies.

The weakness of the legislature lies not in the legislative product, which has been considered very satisfactory, but in the volume of legislation introduced—581 bills in 1937 and 523 in 1939. The members are working on various plans to reduce the number in the next session.

This year the outstanding achievements accomplished by the legislature were the reduction of the budget by over \$4,000,000 as compared with 1937, the reduction in the cost of the 1939 legislative session over that of 1937 by \$2,000 (the total cost this year was \$100,000), the defeat of 12 bills regulating various kinds of business, the passage of acts leading to a peaceful solution of the private versus public electric-power issues, more drastic provisions in the county budget and accounting law, the placing of assistance on the basis of need, and the authorization of the supreme court to promulgate rules of practice and procedure for all courts.

A word should be said about the care with which the appropriations bill was prepared. The appropriations committee met the afternoon of each legislative day. The findings and results of each day's work were mimeographed and distributed to members of the legislature the following morning. Every expending agency was called before the committee and its accounts and spending practices investigated. All bills containing appropriations were acted upon before the budget bill was brought out on the floor and it contained every cent appropriated for the coming biennium so that the electorate might see the exact amounts involved.

#### ADVANTAGES OF SINGLE BODY

Viewing the entire process of legislation in the one-house legislature, in comparison with the bicameral system, one sees that it centralizes responsibility in legislation, brings the whole legislative process from behind the multiplicity of barriers into the open where the conscientious legislator has protection against measures of reprisal and double-crossing and where the chicanery of the dishonest legislator is easily discovered; it brings to a common focus in a face-to-face discussion all the varying viewpoints as to the merits or demerits of a measure, which according to the test of experience is essential to intelligent deliberation and enables the public to follow and understand the proceedings through simplified reporting by the daily press.

It is almost 20 years since the National Municipal League published its model State constitution. Although its compilation was the result of study, conference, and judgment of some of the soundest and best-informed minds in the country, nevertheless one is struck, in the light of accomplishments and progress in State government during the last two decades, with its almost prophetic vision. The powers of the Governor, the executive budget, the crea-

tion of judicial councils, home rule for cities, the merit system, and legislative councils are familiar features of the laws or constitutions of many States.

The league's plan for a single-chambered legislature has been adopted by only one State, notwithstanding the soundness of the proposal. The one-house legislature, restoring the legislative branch of the government to the coordinate position it once held and giving the direct representatives of the people as great power as that of the chief executive, is the essence of democratic government, and it is the earnest hope of the advocates of the unicameral body in Nebraska that this plan of the National Municipal League, which has lain almost dormant for the last 20 years, will become a living issue in the Commonwealths of the United States.

## Discontinuance of Chattanooga News

### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

#### ARTICLE FROM THE NEW REPUBLIC

Mr. NORRIS. Mr. President, a few weeks ago one of the great newspapers of the United States, the Chattanooga News, suspended publication. The story of the passing of that great newspaper is very well told in an article in The New Republic of January 15, 1940, written by Mr. Gordon Gaskill. I ask unanimous consent that the article may be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New Republic]

A NEWSPAPER IS KILLED  
(By Gordon Gaskill)

At 4:18 p. m. on Saturday, December 16, 1939, an opened switch stopped forever the presses of the Chattanooga (Tenn.) News, long one of the most aggressive liberal newspapers of the New South.

The death of the News, violent and sudden, was the result of a foreclosure which lacked none of the suspense and tension of a good murder play. The leading characters:

George Fort Milton, 45, noted liberal editor and author; anti-lynching leader; close friend of Cordell Hull and for a time special assistant to the Secretary of State.

Abby Crawford Milton, 54, his stepmother; suffragette leader; active Democratic clubwoman; poet.

Roy McDonald, owner of the Home Stores grocery chain in Chattanooga; Republican enemy of public power; publisher of the Chattanooga Free Press, rival afternoon paper which bought the corpse of the News.

The action began in 1924 when George Fort Milton, Sr., died. His will left News stock in an unusual fashion; the majority of income went to Mrs. Milton, but the majority of control went to his son George. Mrs. Milton had expected the News for herself and a rift quickly developed between her and her stepson, both talented, both strong-willed.

In 1928 Milton was told that his stepmother was considering an attack on her husband's will in order to gain the paper for herself and then sell it to Col. Luke Lea of Nashville, would-be kidnaper of the Kaiser, publisher of four large Tennessee daily newspapers and, along with Rogers Caldwell, involved in the building and crashing of a fabulous southern financial empire.

To prevent both the rumored family court fight and the rumored sale, Milton agreed that year to buy out his stepmother's interest. He paid the fat price of \$295 per share and, with an associate, gave her a considerable amount of property—and personal notes for \$270,000. This price, although high, then seemed not unreasonable. But in the fury of the depression, the load on Milton and the family newspaper was enormous and almost crippling. Mrs. Milton, however, declined to lighten the burden. Milton, bleeding the paper white, managed to pay her, within 8 years, about \$400,000 in all. This from a paper whose circulation was about 40,000 at its peak.

Early in 1936, Sam McAllester (attorney for Mrs. Milton, onetime attorney for and secretary of Roy McDonald's Home Stores, also secretary of the News) devised a plan whereby Milton and his associate could be relieved of the personal debt upon them. It was transferred to the Chattanooga News Co. in this fashion: The paper's bonds were increased from \$120,000 to \$325,000 and its preferred stock issue from \$100,000 to \$150,000. Most of the new securities went to Mrs. Milton and her daughters.

Thus the financial burden on Milton was lightened, but at this risk: (1) If the bonds became delinquent Mrs. Milton as majority bondholder could foreclose on the paper, and (2) if defaults were

made on the preferred stock, this stock would come into voting and controlling power over the paper. Thus endeth the first act.

There now enters a cross plot: The death battle between the champion of the people and entrenched greed. From its beginning in 1933 the Tennessee Valley Authority had found a strong supporter in the News. And in 1934 Milton opened a campaign to bring cheap municipal electricity to Chattanooga, then served by the Tennessee Electric Power Co., a subsidiary of Commonwealth & Southern. It was a furious, bitter fight without quarter. Commonwealth & Southern contributed \$20,000 to the Citizens' and Taxpayers' League, which fought public power. The local utility arranged to have two pieces of real estate transferred to more than a hundred of its employees, thus enabling them to vote in the city election. Whisky, generally believed to be bought by power interests, was distributed near the polls. By supporting the rights of trade-unions in a city whose 400 were wealthy manufacturers, Milton had already won powerful and unforgiving enemies. His personal stubbornness had won more, and at the peak of the war he often lunched alone at the exclusive Mountain City Club. These foes quickly joined the T. E. P. Co. in its battle to destroy the News by killing its advertising. The Chattanooga Times, parent and yet stepchild of the New York Times, took the power company's side. But the News did not yield and in 1935 the people of Chattanooga voted, more than 3 to 1, for public power.

The News was never forgiven its victory. The power company was determined to keep fighting as long as there was an injunction left in America. It joined with other power interests in the now famous Eighteen Companies suit against the T. V. A. But to continue the war it needed a newspaper. The Times was sulking in its tent and was disinclined to take up the cudgels anew.

Thus on September 1, 1936, a new afternoon daily suddenly entered the lists to compete with the News. It was the Chattanooga Free Press, until then a free semi-weekly throw-away sheet, printed by Roy McDonald to advertise his grocery stores. The complete ramifications of the financial backing of the Free Press are not entirely known, but some little of it appears in public records. In November 1938 the Tennessee Railroad and Public Utilities Commission charged that the Tennessee Electric Power Co. had committed 917 specific acts of "undue preference and advantage" in favor of the Free Press and the Home Stores.

From September 1936 (when the Free Press became a daily and began to do battle for the T. E. P. Co.) until January 1938, the Free Press was allowed to become delinquent in its light bill to the tune of thousands of dollars. It was, incidentally, in January 1938 that Senator Norris had introduced a bill calling for an investigation of utility propaganda against public power. On that date the Free Press owed more than \$6,000 for power; the Home Stores owed \$16,255.79. The commission ordered immediate payment. Curiously both paper and stores were allowed the 5-percent discount for prompt payment—more than a year late.

The congressional committee investigating the Tennessee Valley Authority found that the T. E. P. Co. was the largest advertiser of the Free Press—and that the T. E. P. Co. had stopped advertising in the News 1 week after the public voted for the power bonds. Thereafter, for 3 years, the News received only \$240 in T. E. P. Co. advertising; the Times got \$40,000; and the Free Press, during only 2½ years, got more than \$50,000. "Moreover," the congressional committee reported, "the power company paid the Free Press for such advertising at an abnormally high rate." For example, the power company paid \$1.26 per inch, whereas a comparable customer paid only 54 cents. (The State commission termed this a "method whereby the newspaper was enabled to receive money from the power company.")

Both State commission and investigating committee noted another form of subsidy. The latter reported: "The largest holder of Free Press preferred stock (outside of Roy McDonald, the publisher) is Silas Williams, an attorney for the Tennessee Electric Power Co. During the fall of 1937, the power company paid Mr. Williams \$10,000 for legal services of an undetermined nature; during the same period, Mr. Williams purchased \$10,000 worth of Free Press stock." Draw your own conclusion.

Two dailies could not prosper in Chattanooga's limited afternoon field and the News suffered the vicissitudes of virtue. The Free Press, oddly enough, never seemed to mind its obvious losses.

The attack on the News was withering, but Milton retrenched and prepared to fight. He formed a new company which leased the paper and began to operate it with radically diminishing losses. Advertising boomed and when the T. E. P. Co. sold out to the T. V. A. in August 1939, it seemed that the days of the Free Press were numbered. Thus act two ends on a note of optimism.

But in the final act, the forces presented in the first two combined to destroy the News. Interest and amortization payments on the bonds and payments on the preferred stock were an intolerable burden on a paper already fighting for its life. The payments were defaulted in the summer of 1939 and Milton began efforts looking toward a short moratorium. Four insurance companies, controlling some \$120,000 of the bonds, were inclined to grant the respite. Reassured by their sympathetic attitude, Milton devoted himself to directing the News in a sensationally rapid gain in advertising. Then in October rumors circulated in Chattanooga that the Free Press and allied interests, hostile to Milton, were trying to induce the bond and stockholders to foreclose and suspend the paper.

The denouement came on November 29. A messenger from Sam McAllester delivered to Milton a proposal by Roy McDonald of the Free Press addressed to the stock and bondholders of the News. McDonald offered to buy out the News, paying about \$50,000 in cash, along with bonds and preferred stock in a new corporation,

subject to a 3-year moratorium. The offer was to expire at 6 p. m.; it was delivered to Milton at 5:15 p. m. Apparently Milton realized for the first time the gravity of the situation but felt that all was not yet lost. The deed of trust provided that 90 days must elapse before the trustee could foreclose the paper after giving formal demand. And no demand had yet been served on Milton as president and general manager—or so he believed.

On the morning of December 1, he called all employees into his office and advised them of the peril. They voluntarily agreed to take pay cuts amounting to \$700 per week—the amount necessary to meet the weekly payments on the bonds. That afternoon, Milton told the bondholders about the pay cut that would guarantee the payments. He also revealed he would have \$15,000 in new working capital. The insurance companies seemed impressed; but the majority bondholders (representing Mrs. Milton) declined to answer.

Milton described the crisis to his employees in another meeting Saturday morning. The amount of the delinquency stood at \$15,000; Milton confessed he was unable to lay his hands on that much ready cash immediately; he had already mortgaged his home and borrowed to the limit of his life insurance. The employees decided to raise the money themselves.

That night, a delegation of nearly a hundred employees called on Mrs. Milton, appealing to her to save the family newspaper. It was a fantastic scene. Printers who had known no other paper but the News during their lives pleaded with her, tears in their eyes. Reporters who had spent 25 years on the News made speeches. Mrs. Milton said the matter was out of her hands. Actually McDonald's offer to buy the News had already been accepted.

The delegation then went to Sam McAllester's home. He told them that the deal was closed and that there was nothing they could do to save the News. Still hopeful, the employees continued raising that \$15,000 fund and, on Wednesday morning, it was complete. Some sold their cars; others borrowed on insurance; still others mortgaged their homes and appealed to friends. Reporters "touched" news sources on their beats; two newsboys put up \$100 each of their savings.

That afternoon, Milton and representative employees offered the \$15,000—covering the full delinquency—to the trustee, on the condition that the News be allowed to continue as formerly. But the majority bondholders (Mrs. Milton's representatives) declined to take it. They instructed the trustee to demand immediate physical possession of the News. Even then, Milton prepared to fight. He had not, he said, received the formal demand required by the deed of trust, and he believed he still had 90 days of grace. But here he had a rude awakening. In July, the bank, as trustee, had sent to Milton a letter (not registered) instructing him to comply with the sinking-fund provisions of the deed of trust immediately. A copy was also sent to the secretary of the News, Attorney Sam McAllester.

Apparently, if he received this letter, Milton did not consider it to be the formal notice of demand as required by the deed of trust. For if he had recognized it for the harbinger of disaster it was, it seems he would surely have acted with the energy he displayed when the true situation burst on him. He could have raised the delinquent money and obtained the voluntary pay cuts in July just as well as in December. But the race was over. Milton's attorneys advised him that the letter had indeed constituted a notice. They told him he could not successfully resist foreclosure.

Thus on December 16—the nineteenth anniversary of the opening of its new building—the News went down with all flags flying. It died in the fifty-second year of its useful life and, paradoxically, enjoying its best business health in 5 years. It had gained steadily in advertising and its circulation was honest and sound. The operating cash-out-of-pocket loss for the first 10 months of 1939 was only about \$35 per week, and the paper would have finished the year in the black, thanks to Christmas advertising. It did not die; it was done to death.

On its final day the News published two instead of its normal three editions. At 3:08 p. m. the last page went to the stereotypers. In the city rooms a cardboard helling Hitler (booty of a football game) stood with his arm bent so that the outstretched fingers touched his nose in vulgar defiance. A copy boy left, out of habit punching the time clock. Associated Press and United Press teletypewriters ran unwatched, their ribbons of news coiling on the floor. There was a crap game, for this was pay day, albeit the last.

At 3:23 four chimes sounded throughout the building, signifying that the presses were starting for their last run. There was silence, followed by the thunder of the accelerating presses. The last press run was set at 19,850 papers. As the counting device approached 19,000 Milton was called. He walked through the composing room, shaking hands with all the printers, wishing them Godspeed. There were many tears.

The pressroom was crowded. Milton walked to the control switches. The presses roared at full speed, screaming their swan song. A pressman, watching the counting device, lifted his hand. Milton pressed a black button and, unwillingly, the presses began slowing down. In a moment they were still. Milton reached down and picked up the very last issue.

Then he managed to smile, waved his hand, and walked away. It was not a moment for speaking.

Milton published his farewell statement under a four-column spread on page 1.

"Perhaps," he wrote, "[the paper's] doom resulted from the fact that it has believed in principles. Nonetheless, I am sure that no newspaper is worthy of public trust and confidence unless it shall be ready and willing to sacrifice itself for what those who direct it believe the public good."

A few hours before the News closed, Milton was offered \$15,000 by Free Press interests if he would agree not to publish a newspaper in Chattanooga for the next 5 years. Although the cash must have glittered before him, he declined.

The fear implicit in that offer has already come true. Milton has already obtained a charter for a new paper to be called the Evening Tribune, another afternoon daily. It is expected to begin publication about January 22, and a new press is on its way to Chattanooga. The old News circulation lists are properties of the individual carriers, not of the paper itself; thus the new paper expects a ready-made subscription of about 20,000. Although Milton has lost much, he has rid himself of a \$475,000 debt. The Free Press has assumed that debt and has still not obtained a monopoly of the afternoon field.

The new paper is capitalized at \$25,000, with 10,000 shares of no-par value. A considerable portion of these is being sold to the public at \$10 a share. Milton already has obtained a good amount of backing. He won much admiration during the crisis of the News by his efforts to cushion the shock for his employees.

The new Tribune, expected to be more than ever a "people's paper," has a fighting chance for success. It is impossible to stamp out overnight the spirit of a paper which has played so vital a part in a city for 51 years. The Free Press is Republican, antilabor, archconservative; the Times, like its New York parent, is motherly, sedate, lukewarm. The News was a liberal Democratic paper in a city that is overwhelmingly Democratic. Despite a 6-day Newspaper Guild strike last May, the News enjoyed generally the confidence of organized labor, which adopted many resolutions deploring its passing.

Milton's "Paradise regained" will be as fascinating a story as his "Paradise lost."

## William Edgar Borah, George H. Mallon, and Other Heroes

### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. ALEXANDER. Mr. Speaker, we have at the state funeral of Senator William Edgar Borah of Idaho done homage to a great American citizen and patriot, and it is well that we have done so, for he was indeed a true patriot, giving to the Nation at all times, like every hero, the last full measure of devotion.

In America today we have another class of heroes whom we honor with lip service, the great heroes of our wars who have performed their heroic deeds on the bloody battlefield of some foreign land and on whom we have as a result bestowed the Congressional Medal of Honor and other badges to indicate our approbation and appreciation. That they bared their breasts to the cold steel of the enemy or to the hot poison gases, that representative government might live, we, the people, are fully conscious, but the Congress of the United States has been too busy with itself or too immersed in other things to give attention to the needs of these heroes and of their widows and orphans.

We give to the wives of deceased members of Congress \$10,000 in cash, but to the wives and families of our war heroes we give such a miserable pittance that most of them, deprived of the support of their husband and father are living in poverty, rags, and squalor. A sad commentary, indeed on the ability of the Members of Congress to do the things which will foster and promote the type of Government which makes men want to die for it. In fact, the rank and file of our dollar-a-day soldiers have been and are being miserably treated, notwithstanding the apparent and the imminent need for some more heroic service, if we are to preserve government dedicated to freedom, to liberty, and to individual human justice.

But to think that in the case of men especially cited for their valor and for heroic deeds done above and beyond the call of duty, we should be so forgetful and so unmindful that

we would let them die in poverty and want, and that we would let their widows and orphans suffer for years unending, is almost beyond human comprehension. That this is true and that it is going on every day is a fact which can be proven by citing but two illustrations. There are many others.

The first of these is in my own district in Minneapolis where the widow and two children of Capt. George H. Mallon, one of Pershing's Hundred Heroes of the World War are living, and the second is the case which was reported front-page in this morning's Washington Times-Herald as follows:

[From the Washington Times-Herald of January 22, 1940]

**BROKE, WIDOW CAN'T ATTEND CHRISTENING—GOT BID TO NAME SHIP AFTER HERO HUSBAND**

NEW YORK, January 21.—Because the Navy Department wants her to christen the destroyer it will name after her hero husband soon, Mrs. Sadie L. Monssen was unceremoniously yanked from her poverty-stricken seclusion today.

In her four-room Flatbush apartment Mrs. Monssen ruefully displayed the official invitation to the christening in Puget Sound on the Pacific coast.

"I have little or no money to live on," she said, "and they ask me to travel across the country."

Mrs. Monssen is living on remote Rutland Road, under the name of Munson, to hide her plight from her old friends. It is the second haven she has sought since she lost her home in Brooklyn because she was unable to maintain H. O. L. C. mortgage payments out of the \$30-a-month pension the Navy gives her.

She gave up the home in 1938 rather than be evicted. Now she lives with her daughter, Sally, 27, a former chorus girl, who does occasional work for the W. P. A.

Mrs. Monssen is the widow of Lt. Mons Monssen, who was awarded the Congressional Medal of Honor in 1904 for heroically saving the battleship *Missouri* by fighting a gun-turret blaze during target practice.

Thirty dollars a month for the widow of a man honored with the Congressional Medal of Honor who gave his life for his country as Captain Mallon did, and as others likewise have done. Read here the exploits of Captain Mallon as taken from the Government files:

MALLON, GEORGE H. In the Bois-de-Forges, France, September 26, 1918. R—Minneapolis, Minn. B—Ogden, Kans. G. O., No. 16, W. D., 1919. Captain, One Hundred and Thirty-second Infantry, Thirty-third Division.

Becoming separated from the balance of his company because of a fog, Captain Mallon, with nine soldiers, pushed forward and attacked nine active hostile machine guns, capturing all of them without the loss of a man. Continuing on through the woods, he led his men in attacking a battery of four 155-millimeter howitzers, which were in action, rushing the position and capturing the battery and its crew. In this encounter Captain Mallon personally attacked one of the enemy with his fists. Later, when the party came upon two more machine guns, this officer sent men to the flanks while he rushed forward directly in the face of the fire and silenced the two guns, being the first one of the party to reach the nest. The exceptional gallantry and determination displayed by Captain Mallon resulted in the capture of 100 prisoners, 11 machine guns, four 155-millimeter howitzers, and 1 antiaircraft gun.

Twice wounded in action, signally decorated by the Allied Powers, he died a premature death and left behind a family, and a record for valorous and heroic patriotism. Listen to his record as I give it to you in more detail:

In May of 1917 he entered the first officers' training camp at Fort Snelling, Minn., and, upon completion of his training course, was commissioned a captain and sent to Camp Dodge, Iowa. From Camp Dodge he was sent to Houston, Tex., where he was assigned to Company E, One Hundred and Thirty-second Infantry, Sixty-sixth Brigade, Thirty-third Division.

The Thirty-third Division sailed for France in May 1918 and went into action in the Somme sector in June 1918. The One Hundred and Thirty-second Infantry participated in the following battles: Albert, Hamel, Harbonniers, Mort Homme, Dun-Sur-Meuse, Consenvoys, Bois de Chaume, Dannervoux, St. Hilaire, and Butgnville. Captain Mallon covered himself and his organization with glory. After the war, when General Pershing set about to locate the position of the American lines, he called upon Captain Mallon to assist him, especially with record pertaining to the Somme sector. Captain Mallon was twice wounded, first in July and again in October. He survived and came home to be of further service, this time to his community in which he lived. He served two terms as county commissioner and was a candidate for Lieutenant Governor. He also served as the business manager of the Minneapolis Building Trades Council.

General Pershing was asked to name the outstanding heroes of the World War, and the name of Capt. G. H. Mallon is on the list of General Pershing's One Hundred World War Heroes. Cap-

tain Mallon was awarded the following medals for bravery in action: Congressional Medal of Honor, French Croix de Guerre with palm, French Legion of Honor, Italian War Cross, Belgian Medal of Honor, Military Order of the Purple Heart, United States Victory Medal, and a citation for valor in the Philippine Insurrection.

Captain Mallon passed away at the Veterans' Hospital in St. Cloud on the 2d day of August 1934.

As a consequence of this condition of affairs, and being positive that the best people of America are not in accord with our neglect and misconception of our duty to these brave and heroic men and to their lonely, grief-stricken families, I have prepared an amendment to the Medal of Honor Roll Act of April 27, 1916, which act provides for a special pension of \$10 per month for these men after they reach 65 years. My amendment is as follows:

A bill to liberalize the provisions of the Medal of Honor Roll Act of April 27, 1916

*Be it enacted, etc.,* That the act entitled "An act to establish in the War Department and in the Navy Department, respectively, a roll, designated as 'the Army and Navy medal of honor roll', and for other purposes," as amended (U. S. C., 1934 ed., title 34, sec. 365; title 38, secs. 391-394), is amended as follows: (a) By striking out "who has attained or shall attain the age of 65 years" in the first sentence of section 1; (b) by striking out "a special pension of \$10 per month for life, payable monthly" in the first sentence of section 3 and inserting in lieu thereof "a special pension of \$30 per month for life, payable monthly, and when such person attains the age of 65 years, \$40 per month for life, payable monthly"; and (c) by adding at the end of such section 3 the following new paragraph:

"When any such special pensioner dies leaving a widow or a minor child or children surviving him, the Administrator of Veterans' Affairs under such rules and regulations consistent with the pension laws as he may prescribe, shall pay such surviving person or persons a special pension at the rate of \$40 per month, which, in case there is more than one such surviving person, shall be apportioned as the Administrator of Veterans' Affairs shall prescribe."

Sec. 2. The amendments made by section 1 of the act shall take effect on the 1st day of the month following the month during which this act is enacted, and no benefits shall be payable for any period prior to such day by reason of the enactment of such amendments.

Under this amendment we will pay these men if they survive their heroic acts, a special pension of \$30 per month before they reach 65 years and \$40 per month thereafter, with the same amount to their families if surviving after the death of the father.

Even this is a small pittance to reward so great service and sacrifice, and had Captain Mallon lived, it would not have been asked for by him, as is indicated by his oft-repeated statement recently quoted in the Minneapolis Labor Review as follows:

He was a brave man, but he was a modest man.

When time and again he was decorated he always declared as the decorations were being pinned on him, "You should decorate my men as well as me. They are just as deserving of decoration as I am." Bare handed and alone Captain Mallon captured an enemy machine-gun nest—there is no finer example of a brave and noble man, nor of unselfishness and sacrifice.

His death was no doubt hastened by the physical and mental shocks he sustained when wounded, and also by the other nerve-racking experiences of war service. How can anyone escape harmful reactions from such experiences? Anyone who has been in any kind of an accident, automobile or otherwise, knows they are never quite the same again, and such an experience is only one of similar but worse, daily and even hourly experiences in war service.

Had he lived he would have provided well and amply for his family. His salary had ranged around \$300 a month in life and now the family struggles on about one-tenth of this sum.

I hope the members of the Invalid Pensions Committee, to which my amendment will be referred, and all Members of the House and Senate will take up this cause at once and see that a great wrong shall be righted without further and unforgivable delay.

There may be other methods of accomplishing our objective. If so, I have been unable to unearth them, although I have made a considerable study of the problem. Nothing has ever been done for any of the Pershing Hundred Heroes, the most outstanding of many immortals of the World War.

In support of this statement allow me to quote W. C. Gilbert, Director of Legislative Reference Service of the Congressional Library:

We have checked the United States Statutes for any action by Congress with respect to any of the persons included in General Pershing's Hundred Heroes of the World War. No action of the sort is found. There were, however, a number of bills introduced.

So let us do something about it, by adopting the above amendment at once.

## Government Ownership of Utilities

### EXTENSION OF REMARKS

OF

### HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 23, 1940

ARTICLE FROM FORUM MAGAZINE

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Forum magazine entitled "Should Government Own Our Utilities?—A Debate."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Forum Magazine]

#### SHOULD GOVERNMENT OWN OUR UTILITIES?—A DEBATE

##### I. POWER BELONGS TO THE PEOPLE

(By Richard L. Neuberger)

Housewives in the Puget Sound city of Tacoma pay \$1.70 for 100 kilowatt-hours of electricity. The same amount of power costs \$3.09 in San Francisco, \$3.65 in Chicago, \$4.70 in New York, \$5.24 in Boston, and \$6.25 in Tampa. There is a municipal power plant in Tacoma. The rest of these communities are served by private utility companies.

The woman in Tacoma who wants to lighten her tasks can cook, refrigerate, wash, and clean with electricity and pay \$5.30 for 500 kilowatt-hours. At many places in the Nation this alleviating of household drudgery is denied to millions of people in the lower income groups; 500 kilowatt-hours in New York, for example, cost \$12.95.

The Federal Government has completed great hydroelectric dams on the Tennessee, Colorado, and Columbia Rivers. These developments encompass huge expenditures. Grand Coulee Dam, now under construction in northeastern Washington, alone is requiring \$181,101,000. Such projects as this and the T. V. A. point toward a national policy of public ownership.

Public ownership invariably means cheaper rates. One hundred kilowatt-hours in Tacoma cost less than 40 kilowatt-hours from private companies in nearby towns. Cleveland consumers pay \$9.30 for public power billed at \$11.90 by the private utility in Toledo. Los Angeles buys electricity from Boulder Dam and enjoys the lowest rates in California. Power from the Federal dam at Bonneville is helping the Oregon town of Eugene charge a commercial rate of \$13.53 for 750 kilowatt-hours, a few miles away, in Corvallis, storekeepers pay a private utility \$27.25 for the same service.

Congressman JOHN E. RANKIN, of Mississippi, says that T. V. A. rates throughout the country would reduce the national electric bill \$923,973,000; Tacoma rates would reduce it \$1,100,833,000. People in the State of New York now pay twice as much for electricity as they would under the rate schedule of the T. V. A. Florida's citizens pay considerably more than twice as much. Two hundred and fifty kilowatt-hours from Bonneville Dam will cost less than 100 kilowatt-hours in Boston.

For many years the claim has been made that publicly owned plants charge these low rates only at the sacrifice of valuable tax payments which private utilities are assessed. Listen to a recent statement by the Federal Power Commission:

"Publicly owned utilities paid 17.3 percent and privately owned utilities paid 13.2 percent of their gross revenues in the form of taxes and net cash contributions during the year 1936."

Nor is that all. The same statement cited 8.5 percent of gross revenues rendered by public systems in the form of free services such as pumping sewage, lighting schools, and operating traffic signals. Private plants do virtually nothing of this sort.

Towns along the transmission lines of the T. V. A. have power rates far lower than in most of the Nation. Yet, as Senator GEORGE W. NORRIS, of Nebraska, has pointed out:

"The T. V. A. requires a municipality to pay the same amount of money to the proper officials which it would pay, if its plant were taxed as it would be if owned by a private company."

The rates charged by public systems are based on actual values. Gov. George D. Aiken, of Vermont, is one of the adversaries of the power program of the Roosevelt administration. Yet even he has said:

"During my public life I have seen utility companies benefit from the inflation of values. I have seen them spend your money and mine in working for selfish ends. I have seen them unload tax burdens on the breaking backs of those who could scarcely stand."

Inefficiency there may occasionally be in public-power systems; the human equation is omnipresent, whether in municipal bureau or corporation office. But the annals of public ownership contain no episode to parallel even remotely the greed and recklessness which resulted in the collapse of the Central Public Service pyramid of holding companies. And there have been other utility failures.

A frequent criticism of public ownership is that it would plunge the power business into politics. A decade ago the Federal Trade Commission revealed that no institution was more entangled in politics than private power companies. They have maintained costly lobbies and raised huge political slush funds. They have tried to influence newspaper editors, college professors, school teachers, and clergymen. Community clubs are constantly plagued by their agents. The Townsend movement is still strong in the Pacific Northwest, and so we find numerous Townsend leaders in that region employed as service supervisors for power companies seeking to resist the advance of public ownership.

The generating and distribution of electricity as a public function is not consistent with the American form of government, insist the partisans of the utility companies. Senator Norris, Secretary Ickes, and other advocates of public ownership have been denounced as Bolsheviks.

Seventy-two percent of the country's cities own their own waterworks. This fact has never been represented as a threat to the Republic. It is difficult to understand what great philosophical difference there can be between water pumped into a house through a pipe and water impelled there over a wire.

Much as the utility companies would prefer the Nation to believe otherwise, the promotion of public ownership is by no means exclusively the work of radicals and agitators. Boulder Dam, which will ultimately produce 6,000,000,000 kilowatt-hours of current, was begun during the administration of Herbert Hoover. "I've got to give CHARLIE his dam," said President Roosevelt, as he signed the authorization for the great project at Bonneville. He was referring to Senator CHARLES L. McNARY, of Oregon, the Republican leader in Congress.

Among cities with public power plants are Cincinnati, Knoxville, Cleveland, Memphis, and Kalamazoo. These are not communities notorious for crackpot notions. They are average, middle-class American cities, where the people want their homes lighted and their food refrigerated as inexpensively as possible. Public power has no better endorsement than the fact that the 259 towns with municipal plants are not turning back to private ownership.

Public plants pay off their bonds and reduce rates as they do so. Private utilities seldom amortize investment. This distinction has a bona fide meaning to the people who use electricity. The average national rate per kilowatt-hour is 4.8 cents. Each household in the country consumes an average of 710 kilowatt-hours annually. But in Tacoma, where the public power system charges 1.68 cents a kilowatt-hour, every home averages 1,565 kilowatt-hours a year. Think what that difference of 855 kilowatt-hours means to the housewife working in the kitchen, to the schoolboy studying at night, to the family entertaining guests.

Electricity is so vital to contemporary society that it may readily be asked whether this force should ever be in private hands. The country takes for granted the public ownership of fire departments, police bureaus, school systems, trolley lines, and waterworks, yet electricity is as indispensable as any of these.

The New Deal has shown that, in generating power, other resources can be developed as well. In the T. V. A. not only kilowatt-hours have been produced. There are many byproducts. Floods have been prevented, and forests and fields saved. Bonneville Dam sends steamers up the Columbia River to the farms of the Inland Empire. Grand Coulee Dam will spin the world's biggest chunk of electricity—and reclaim 1,500,000 acres of land sorely needed by the wandering migrants from the Dust Bowl.

Such benefits as these are lost when power companies, confronted by increasing resistance to private control of rivers and streams, turn more and more to steam as a source of electricity. In an exhaustive study, the New York State Power Authority has pointed out that power can be generated at Bonneville, Boulder, Grand Coulee, and the St. Lawrence waterway project for approximately one-half the cost of steam production. Coal must constantly be replenished; the rivers flow on forever.

Electricity, like the air and the water, is the heritage of every person. It is the product of water. It does not belong in the possession of any individual or group of individuals. There is no more reason for the private sale of power than for the private sale of water.

#### II. SOCIALIZATION MEANS WASTE

(By Frank A. Newton)

This is not a question of whether local municipal ownership of electric plants may or may not be a success in isolated instances.

Mr. Neuberger has gone squarely for a complete Government monopoly.

How Mr. Neuberger expects this complete Government monopoly of electricity to be accomplished he does not pause to suggest. He ignores the facts that the electric industry, today, represents an investment of nearly \$14,000,000,000 and has over 27,200,000 customers and that municipal plants sell less than 5 percent of the total electricity of the country.

But let us, too, forget practical matters and meet the issue as an abstract proposition—but with facts instead of assertions. First of all, let us inquire into his statement that "public ownership invariably means cheaper rates." Let us keep in mind that the majority of the users of electricity in this country do not live in the large centers like New York, Chicago, San Francisco, and Boston. The great majority live in small cities and towns and on the farms. The private electric companies have brought electricity to over 30,000 villages of less than 1,000 population each, and one-half of these have populations of less than 250.

The Federal Power Commission on March 29, 1939, released a report which shows clearly that the residential rates of the private companies are lower than those of the public plants, and this is true without regard to the taxes paid by either group. In 16,831 communities served by private plants, 85 percent paid less for 25 kilowatt-hours and 100 kilowatt-hours than the communities in the same classifications served by municipal plants. For a use of 250 kilowatt-hours, 95 percent of the communities were better off under private operation. Of 1,947 communities served by publicly owned plants, 68 percent were paying higher rates for 25 and 50 kilowatt-hours than the communities of comparable size served privately.

The 1937 United States Census of the Electric Light and Power Industry reports that the average rate paid by the customers of municipal plants in the country was 27 percent higher than the average paid by the customers of the private plants. Since the annual revenue of the private companies is roughly \$2,000,000,000, it follows that the users of electricity would have paid \$540,000,000 more than they did pay if the rates of the municipal plants had prevailed throughout the country.

The same United States census report showed that, despite the discrepancy in the average rate in favor of privately owned plants, the municipal plants in 1937 paid but 1.5 percent of their revenues in taxes, while private plants paid taxes amounting to 14.2 percent of their revenue. Mr. Neuberger refers to a statement of the Federal Power Commission:

"Publicly owned utilities paid 17.3 percent and privately owned utilities paid 13.2 percent of their gross revenues in the form of taxes and net cash contributions during the year 1936."

Let us see what the Federal Power Commission did report. It showed that in 1936 publicly owned plants paid but \$1,204,000 in taxes, which were only 1.1 percent of their base revenue, while the privately owned companies paid \$275,000,000 in taxes, or 14.4 percent of their base revenue. It is evident that the "net cash contributions" made by the publicly owned plants to the municipalities must be very large. This is emphasized by the fact that of the total amount of taxes paid by the country's municipal plants, 42 percent were paid in 1 State, and 76 percent of the whole amount were paid in 5 States. The report also shows that in 14 States the municipal plants paid not a penny in taxes and in 11 additional States the total taxes paid by all the municipal plants amounted to less than \$1,000.

The significance of the Federal Power Commission's heading over "net cash contributions" of the municipal plants becomes evident. That word is "estimated." The private utilities operate in a gold-fish bowl. Every dollar they spend is recorded under Government-prescribed accounting classifications and reported to State commissions and Federal bureaus. But, in the case of municipal plants, the word is "estimated." No reference is made to the fact that, in the same year, the taxpayers of the country contributed in taxes to the Federal Government \$181,000,000 for publicly owned electric plants. It is also significant to note that of the total "estimated" net cash contribution of municipal plants, 27 percent were made in two States. The fact is not mentioned, however, that very large loans were made by Federal agencies to municipal plants in those States. It is interesting at the same time to note the amounts of some of these "estimated" contributions. In Florida they amounted to over \$2,537,000, while in the great and populous State of New York these "estimated" contributions amounted to only \$276,000. Again, the "estimated" contributions in North Carolina amounting to over \$1,279,000 might be compared with the contributions of all the public plants in Illinois, which amounted to but \$224,000. In this connection, the statement made by Senator NORRIS in the Senate, April 19, 1939, is significant:

"A proposal from a great association of Tennessee says, in effect, 'Let the T. V. A. property be subject to taxation the same as everybody else's property.' On my desk now there is a printed amendment intended to be offered which provides that all property of the T. V. A. shall be subject to taxation everywhere under the local laws of taxation. If we go to that extreme, Senators can see that the T. V. A. would be out of business in 3 months."

The 1937 United States census of the electric light and power industry brings out another fact, namely, that the average pay per employee in the privately owned utilities is 16 percent higher than in the municipal plants. Maybe this fact, among others, may have led Mr. William Green, president of the American Federation of Labor, to say:

"Analysis of the industrial situation shows that electric power is the greatest contributing factor toward the increased efficiency and productivity of the working people in our country. Both employers and employees in America have been free from the domination of autocratic controlled governmental dictation such as prevails in some of the lands. \* \* \* Let us hope our Nation will always remain free from governmental autocracy and dictatorial control of its industries and workers."

Less than one-third of the output of the electric utilities of the country goes to homes and farms. The greater part, by far, goes to large commercial and manufacturing establishments, which is a fact Mr. Neuberger is not perhaps familiar with. It will be granted, I am sure, that the power to dominate and control American industry through Government monopoly of the electric industry is a most dangerous power to put in the hands of any government. One can see the inevitable wirepulling and logrolling between different States and different sections of the country, trying to secure and hold industries, which would result.

It has been pointed out that the private utilities have taken electricity to practically every hamlet in the United States, to over 30,000 villages and towns with less than 1,000 population each. The supplying of water has no such record, largely because it has been chiefly a municipal undertaking. Recent analysis of 883 communities served by Consumers Power Co. in the State of Michigan (all, by the way, receiving uniform rates for electricity regardless of the size of the community) showed that over 85 percent of these communities had no waterworks systems and no sewage systems. Of the 816 communities served by Alabama Power Co. and all served under the same rate for electricity, 71 percent were without waterworks systems and 82 percent without sewage systems. In other words, while private initiative and private enterprise has brought electricity to practically every community and at the same low rates prevailing in the large cities, municipal enterprise has failed to supply such essential service as waterworks and sewage systems to the majority of the smaller communities.

Mr. Neuberger says:

"Such benefits as these (water power) are lost when the power companies, confronted by increasing resistance to private control of rivers and streams, turn more and more to steam as a source of electricity."

Unfortunately, we are unable to move Niagara Falls to Iowa or Grand Coulee to Pennsylvania or the T. V. A. dams to South Dakota. Coal remains and will remain the chief source of fuel for the production of electricity. Approximately 65 percent of the Nation's supply of electricity is not generated by water power.

President Roosevelt appointed a National Resources Committee to inquire into the resources of the country and the generation of electric power. The Committee reported:

"Present low costs of steam plants necessitate discrimination in developing water-power sites. \* \* \* In most regions of this country the hydroelectric plant should be considered as complementary to the steam-power plant rather than the main power source. \* \* \* Improvements in plant design and in operating technique have lowered greatly the cost of generating power in steam-electric plants."

This country was not built up to the point at which it produces one-third of the world's electricity on any theory of socialization of industry. Many, perhaps the majority, of those who contend for a Government monopoly of the electric business have not the slightest intention of stopping at that point if they are successful. From there they will start their drive for the socialization of all other utilities and the other great businesses of the country.

Let us agree with President Roosevelt:

"I do not hold with those who advocate Government ownership and government of all utilities. I state to you categorically that, as a broad general rule, the development of utilities should remain, with certain exceptions, a function for private ownership and private capital."

Since January 1, 1939, 25 elections on proposed municipal plants have been held. The most significant was in San Francisco, where a municipal-ownership proposal was defeated for the eighth consecutive time by a ratio of two and a half votes to one. In 25 municipal-ownership elections, 14 communities with a total population of 671,618 voted the proposal down, and 11 with a total population of but 22,339 approved the proposal.

During the 56-year history of the electric-utility industry in the United States, about 4,000 municipal plants have been established. Approximately one-half have been sold or abandoned. Today only 4.3 percent of the country's electricity is sold by municipally owned plants. Public ownership has utterly failed to make a record sufficient to convince the public of the United States that public ownership is efficient or desirable.

### III. REBUTTAL

(By Mr. Neuberger)

Mr. Newton says that in 85 percent of the communities private power costs less than public power. He does not say that these are mainly very small communities. The issue is not the number of communities but the number of people. Approximately 86 percent of the residential light customers of the United States pay higher rates for private than for public power.

Mr. Newton tries to imply that William Green, president of the American Federation of Labor, is opposed to public ownership, totally overlooking the fact that many national conventions of the

American Federation of Labor have gone on record for public ownership of electricity.

The statement quoted on the alleged superiority of steam power to hydroelectricity was originally made by a consulting engineer for private power organizations. In a report to President Roosevelt the New York State Power Authority said the statement was erroneous and "based upon incorrect figures."

With evident approval, Mr. Newton cites a portion of President Roosevelt's Portland speech. Why does he not quote that part of the same speech in which the President said that the big utility companies were overcapitalized to the extent of \$520,000,000, or that part in which he said that any locality discontented with its electric service had "the undeniable basic right" to establish a public power system?

The apparent unpopularity of public ownership is dwelt on by Mr. Newton. Well, the utility companies have propagandized so deviously to attempt to bring this about that in 1928 a United States Senate dominated by Republican Members voted an investigation of their activities.

Mr. Newton contends that perhaps a majority of the individuals favoring public ownership of power really want a socialized nation. This is fantasy. Is Senator Norris, whom the New York Times calls "a growingly useful Senator," such a radical? We should not forget that Alfred E. Smith was once denounced as "socialistic" for his views on power.

### The 1940 Labor Scene

#### EXTENSION OF REMARKS OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. TENEROWICZ. Mr. Speaker, events on the labor front come tumbling over each other with great rapidity at this juncture. The forces of retrogression and destruction are mobilizing to smear the New Deal and scuttle its splendid program of social legislation. Emasculation of the Wagner Act and curtailment of the powers of the National Labor Relations Board are major objectives of this attack.

Increasing activity all along the front is discernible as this session of the Seventy-sixth Congress enters its fourth week. The A. F. of L. and the C. I. O. have filed their legislative programs. The Smith committee investigating the Labor Board pyramids thousands of words, much of it hearsay, into the records as it depletes an appropriation not to exceed \$50,000. The Dies committee—anti-New Deal, anti-Labor Board, and anti-C. I. O.—after already scattering \$125,000 of the people's money, has brought in a deceptively innocuous report, hopeful that today it will receive a third large bequest.

And during these first days of 1940 one could not help but note that the Chamber of Commerce of the United States has called upon member organizations to vote on a four-point program of restrictive amendments to the Wagner Act. Neither could one overlook the recent appointment of a well-known Michigan Republican colleague to the House Labor Committee.

While all these and other events too numerous to follow, converge in this year of destiny for labor, I come before you fresh from a study of the fourth annual report of the National Labor Relations Board.

And I am more convinced than ever that here is an able, conscientious body, doing the best job possible in the face of numerous fabricated harassments.

To me the Board's claim that the number of strikes called to obtain the right to organize had been decreased by two-thirds, seemed highly significant.

Here, I assert, is a notable instance of progress. Here is living evidence that a constantly increasing number of the Nation's employers are friendly to collective bargaining and are working in complete amity with different union groups.

The fourth year of the Board's operations, according to the report, was characterized by an increasing resort to Board facilities, instead of the strike. In this connection it is to be remembered that in 1936 the number of strikes exceeded the number of Board cases by 33 percent.

The report also makes heartening claim to an increase in written contracts. And I was particularly pleased by the statement of Mr. Madden that the benefits of the Wagner Act continue to fall impartially to both the A. F. of L. and the C. I. O.

As a representative from one of the world's greatest industrial districts I have never given credence to charges that the Board was biased in favor of one as against the other of our two great American labor federations.

From close association with members of both groups I am aware of the giant conspiracy that is trying constantly to widen the gap between these two great organizations. Furthermore, enlightened elements in both groups are now aware that a mere handful of men are responsible for this divergence. And it is around this growing, enlightened nucleus that hope for ultimate peace must be based.

In all sincerity I feel I should know something of the problems of the American worker. The great industrial cities of Detroit and Hamtramck are both represented in the First Congressional District of Michigan. Encompassed in Michigan's First are some of the mightiest industrial units on the face of the earth. A partial list embraces Plymouth, Dodge, Chrysler, and Chevrolet.

And Hamtramck, which comprises a busy one-eighth of my district, and whose population is almost exclusively composed of industrial workers and their families, on four occasions did me the honor of electing me its mayor.

I know a great deal about such things as seasonal lay-offs and the problems and heartaches that come to an industrial community in times of withering depression. I was mayor of Hamtramck in 1931-32 and witnessed nightmares of distress, which I now deliberately choose to recall every time I am forced to listen to a labor baiter or every time I sense plottings which I interpret as hostile to the well-being of a revitalized unionism.

As a doctor, I know that death and disease are the result of the depression soup kitchens. And as a doctor, I know, too, that unemployment is a disease which racks the body and mind even when food is available. But no conscientious attempt can be made to solve this great curse of modern civilization while hide-bound misconceptions continue to prevail.

History records that the rights labor is now seeking in America have long since become accepted truths in the great countries of Europe, even though most of the great industrial countries of the world do not have any labor statutes like ours. And the reason for this absence of labor legislation in these countries is that in these countries it never occurred to the great body of employers that they had the right to deny to their employees the freedom of organization which they claimed for themselves.

Only a few years ago I remember reading that a judge in England denounced the managers of an American corporation for trying to bring to that country some of our own particular kind of labor spying and coercion methods.

Until about a century ago it was a crime in America for working people to organize to improve their conditions. The members of a society of shoemakers in Philadelphia in 1806 were found "guilty of a combination to raise their wages," and they were fined and assessed costs. In 1842, however, the Supreme Court of Massachusetts, reversing a conviction for labor conspiracy, ruled that a combination of employees to improve their conditions is not essentially different from a combination of people to fight the evils of intemperance. That was the beginning of emancipation for the American workingman.

Other courts thereafter took the same view and for nearly a hundred years the legality of labor organizations has not been questioned. But until the Wagner Act was upheld by the Supreme Court in April 1937 the legal rights all favored the employer and class strife was the inevitable result. Up until the validation of the Wagner Act, freedom for the great masses of American workers to organize meant only freedom from prosecution by the Government. In the pre-Wagner Act days employers were free to destroy unions by spying on those who joined them, were free to use the

"yellow dog" contract and organize their own company unions with forced memberships.

Our new collective-bargaining process, duly sanctioned by the law of the land, is not yet 5 years old! Why is it that such age-bound groups as our chambers of commerce and our associations of manufacturers, with years of tradition behind them, do not exhibit a little patience and forbearance of honest collective-bargaining processes, which are scarcely yet out of the diaper stage?

The Interstate Commerce Commission and the Federal Trade Commission took years to become effective. Certainly there was less impatience shown toward them as they were going through the stage of "growing pains." Yet, there is no patience whatsoever shown toward the Labor Board which is asked to mediate the "hottest" type of controversy known to modern civilization.

As was stated, I should know something of employer-employee relations. I have had many close friends among both groups during the past feverish decade. I was chief executive of Hamtramck, when the great sit-down strikes of 1937 engulfed the mighty plants of my little city. And I have reason to be proud of my record of fairness during that critical period.

Dues-paying union members as well as their leaders are my friends. And I likewise know and share the respect of many of my district's great industrial executives. Many of these great employers, I like. All of them, I admire for their genius at getting things done. But too many of these great employers seem to share a lust for efficiency and speed—a mania which I fear some seem to carry over into their appraisals of social facts.

Can it be that some of these men who have confounded time and space, whose inventive and organizational genius is destined to live in history—can it be that some of these men are possessed of a mortal blind spot when it comes to passing judgment on the evolving social picture? Can it be that some of them—ostrich-like—have forgotten so quickly the menace that simmered back in 1932 as they now seek in 1940 to get back their old domination over their workers?

Happily, I am not referring to all the great mass employers of my area. A number have manifested from the beginning a deep and sincere understanding of the new relationship between capital and labor.

These are the progressives. These are the employers who abide with wisdom the numerous small exactions and adjustments so that the greater end may be served. This type of employer is too fully gifted with a sense of history—if not of prophecy—to condone, let alone abet, the petty little conspiracies that seek to impede realization of a sound, full-grown, collective-bargaining system.

This is the type of employer who, multiplied by the thousands, is at present working in complete harmony with the Wagner Act. He has no complaints to offer, so his name never makes the newspaper headlines.

But I gravely doubt and suspect the die-hards of the other employer classification. How they get that way I do not know. Whether it is because old age has cursed them with incurable antagonisms or whether they are merely the deluded victims of malicious advice, I am in no position to say either as a layman or as a physician.

But I do know that they are not neutral as this momentous year for labor opens.

Who is it, I would like to know, that subsidizes the carpet-bagging labor baiters who are now filling the air waves and the pulpits in the Detroit area with their psalms of hate and fury? The term "carpetbagger" seems oddly appropriate. For it happens, purely by accident of birth, that two of Michigan's three, current radio scourges are native to the South. And I know my colleagues from the South will understand I mean no offense when I thus refer obliquely to two of its nomadic and fanatic sons. Nomads, I would like to assert, who, though they apparently neither sew nor spin, happen to be doing quite nicely in the busy metropolis of my State.

LXXXVI—App—22

So notorious is this pair of pulpiteers that I refrain from spreading their names upon the records of this honorable House.

No; I doubt very much the neutrality of certain great employer groups at this time of seething antilabor activity.

But to get back to the two special House committees. Why does not the Smith committee or some other committee present an unbiased picture of employer-employee relations under the Wagner Act? What about those happy marriages between capital and labor? Surely, as in the case of real-life marriages, the happy marriages must greatly outnumber the unhappy that find their way into court and into the newspapers.

It seems strange to me that almost every day we should be reading of attacks on the Board and its personnel, but hardly anyone thinks of attacking or even criticizing the conduct of those employers who have flouted the law of Congress and who have been found guilty of violations that the courts have condemned.

If we had a little more criticism of those who engage in unfair labor practices and who defy the law of the land, and a little less criticism of those who are honestly trying to carry out their oath of office in enforcing the law, we would get a better perspective on the perplexing problems of labor relations with which the Government has been trying to deal by means of the Wagner Act.

But it would be foolhardy, indeed, to expect that anything sound and constructive will ever emanate from either of these two special committees, which at this time are being nursed along to election-year climaxes, boding no good for the Wagner Act or the cause of liberal democracy. And I say this with deep sympathy and respect for the minority liberals of both groups.

Coercion, intimidation, and bluster are the tools of the Dies inquisitors. Thus far the only disclosures that have emanated from the Smith committee's searchings have been both petty and quibbling. They are, however, doing a first-rate job of heckling the working staff of the Board and distracting it from the job that remains to be done.

I voted against the Dies and Smith committee appropriations last year and I intend to do so every time they come around passing the hat. Both these groups would like to hang the same bogeyman to the lamppost, and this bogeyman happens to be progressive unionism.

Need I point out that the Dies committee recently was subjected to disapproval by the distinguished, though conservative, Walter Lippmann.

Mr. Lippmann, whose interpretations are sometimes pretty difficult to follow, was crystal clear when talking about the Dies group, as follows.

I quote:

The Dies committee are official vigilantes operating in an area, that of the political underworld where there is as yet no effective law and there is, therefore, no order. The committee, like their vigilante predecessors on the American frontier, are therefore themselves often lawless and disorderly in their methods. This accounts for the somewhat shame-faced approval which thoughtful men have given to the work of the committee. \* \* \* It is plain that the committee needs to be reformed so that its methods will, in spirit at least, be lawful, and, therefore, capable of commanding the respect of law-abiding citizens.

Mr. Lippmann was really too gentle. He failed to rebuke or even mention the committee's dangerous misuse of power in influencing elections, such as their ugly part in the defeat of Frank Murphy in the 1938 Michigan gubernatorial race.

The Smith committee, I suspect, would like to see the Wagner Act encumbered with all the vicious amendments proposed by the Chamber of Commerce of the United States and the National Association of Manufacturers.

If I recall correctly, the gentleman from Virginia [Mr. SMITH] at the very outset expressed a fear that workers were being "regimented" by national labor organizations or by members of the National Labor Relations Board. But he failed entirely to mention the most familiar and most undemocratic example of such regimentation, i. e., company unions, outlawed by the present act, but which, I suspect, the

gentleman from Virginia [Mr. SMITH] and the National Association of Manufacturers would like to bring back to legal life.

This is a year when news from the labor front will be grotesquely distorted and when vilifications will fly fast and thick.

I am no prophet and am therefore unable to say whether this Congress will strip the Wagner Act of its teeth, but I hardly think it will. I am of the opinion that the liberal element among us is strong enough to forefend any such senseless action. But this year the "red herrings" will be cast about with abandon by the opposition, and everything progressive is likely to be dubbed communistic. And a lot of misstatements will find their way into print.

Which reminds me, before I conclude: The newest member of the House Labor Committee seems recently to have veered from his usually veracious path in speaking of Akron, Ohio. Or, at least, so it would appear from a clipping taken from the January 9 issue of the Akron Beacon Journal.

The editorial is self-explanatory. I quote it:

WHAT PLAN? WHAT PAUPERS?

Akron, according to Representative CLARE E. HOFFMAN, of Michigan, is a city where "the National Labor Relations Board's plan to force employees into the C. I. O. has pauperized businessmen."

That statement made in a speech before the House deserves an answer from Akron's own Congressman, DOW HARTER. Unless HARTER corrects the Record, Congress is liable to get the idea that HOFFMAN knows what he is talking about, and there is truth in the ghost-town yarn after all.

As a matter of fact, there are no pauperized businessmen here who can lay their condition to the N. L. R. B. And whatever the Labor Board's sins elsewhere may be, Akron has yet to see first-hand evidence of any plan to force employees into the C. I. O. or into the A. F. of L., either, for that matter.

Meet Editor Ibid

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

EDITORIAL FROM THE NEW YORK SUN OF JANUARY 10, 1940

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Sun of January 10:

[From the New York Sun of January 10, 1940]

MEET EDITOR IBID

President Roosevelt introduced another character of American folklore in his Jackson Day dinner speech:

"I have in mind the predicament of one of the ablest editors of a great paper today, who some time ago said to me very frankly:

"I'm really in complete sympathy with your program, Mr. President, but I cannot say so publicly, because the readers and the advertisers of my paper are 90 percent Republicans, and I simply cannot afford to change its unalterable policy of traditional opposition to anything and everything that comes from Democratic sources. Of course, Mr. President, you understand."

"And may I add that the President understood."

We know this bird. He is a cousin of the prominent businessman who used to turn up at the White House and, after being confronted with the Budget, regularly broke down and confessed that he could not see how Mr. Roosevelt could reduce expenses. The businessman's name is Anthony Anon; the editor is Ichabod Ibid. Ibid is a great-grandnephew of Mrs. Gamp's friend Mrs. Harris. He came to this country in the famous ship *Wabble* and, after an association with Feodor Vladimir Larrovitch and Lafayette Mulligan, took the Hugo N. Frye course in journalism conducted for a few minutes by the Cornell Daily Sun in 1930.

Editor Ibid is a delightful fellow, not a whit less tactful than his cousin Anon. Somebody has described them as the most obliging nonexistent men in existence. They will agree with anybody about anything. Ibid, it is well known, writes his editorial articles in invisible ink on pure ether, but tears them up first. He likes to talk about the Democratic platform of 1932, because, like himself, it was fictitious, and about the governmental surpluses that

used to be, because, like himself, they are invisible. Let us have more about Editor Ibid's quaint sayings; the Brothers Grimm are out of style.

Herty Forest Institute

EXTENSION OF REMARKS

OF

HON. W. BEN GIBBS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. GIBBS. Mr. Speaker, realizing that pulpwood, from southern slash pine, will be the chief raw material for cellulose products of the future and that preservation, control, and development of the slash pine forests of the South are most essential for that expansion, the foundation of the Herty Forest Institute at Waycross, Ga., is being proposed.

Serving a twofold purpose—primarily to carry out a widespread educational program on the possibilities of the southern slash pine forests and secondly to memorialize the late Dr. Charles H. Herty, eminent Georgia research chemist—the institute is being sponsored by the Slash Pine Forestry Association of Waycross.

By taking its educational program into the pine-forest sections of the South, the institute would further acquaint schools, civic clubs, farmers, foresters, timberland owners, and mill operators with the absolute necessity of continued preservation and further development of the South's forests working in conjunction with the agencies of the Federal and State governments.

Entering a broad field with its program, the institute proposes the continuous training of youths from 4-H Clubs, Future Farmers of America, Boy Scouts, and vocational students in forest preservation. Fashioning its training courses after the Canadian Forestry Association's Junior Forest Wardens, the institute would enlist youths pledged to save the forests of the South.

More than 10,000 Junior Forest Wardens are enrolled in Canada. Uniformed in red shirts, green berets, and scarfs, the Junior Warden patrol covers forests from coast to coast, reporting forest fires, warning travelers to extinguish camp fires, lighted matches, and cigarettes. Their services have proven highly effective and have resulted in extinguishing hundreds of incipient fires, in addition to being responsible for the reforestation of waste areas.

The institute would engage the services of an experienced and highly qualified forester and an assistant to direct the educational program. The establishment of modern forests along the main highways as demonstrations and the training of young people in best forestry practices will be among the aims of the institute and its personnel.

The need of an organization with the purposes and the program of the Herty Forest Institute is clearly revealed by the fact that annually in the South damage, estimated by the United States Forest Service, at approximately \$30,000,000 results from forest fires. While forest fire is one of the most interesting problems in the South, it at the same time is one of the South's most complex.

A striking example of the tremendous annual damage caused by forest fires is afforded by the naval-stores belt of Georgia. That area of Georgia is typical of some 40,000,000 acres of land reaching from South Carolina through the intervening States to Mississippi, a region which produces about two-thirds of the world's supply of naval stores.

It is an appalling situation revealed from data furnished by the Forestry Service, which shows for the year 1937 more than 153,000,000 cubic feet of pine timber were destroyed, as compared with 114,000,000 cubic feet used by man for all purposes. It is obvious that continuation of this condition means a disastrous end to the forests of the South, and preservation, fire control, and reforestation are the remedies.

"If our forests are to be a source of income—perpetual—we must protect them and manage them so as to increase their productivity," declared the late Dr. Herty, whose death removed from the ranks of American scientists one who devoted his life, his personal fortune, and his brilliant talents to the creation of new industries from Southern slash pine.

Experimenting for years with pulpwood from second-growth pine trees, long considered too resinous for use in manufacture of fine paper, Dr. Herty proved that pulp of young trees can successfully be used to make newsprint and other grades of white paper, and thus was born a new industry for the South.

As a result of the successful and startling experiments of Dr. Herty, a native of Milledgeville, Ga., a new era of business and commerce faces the South and already marked progress has been made in that direction. Dr. Herty's first contribution to the pine-forest industry was the introduction of the Herty cup, destined to save the naval-stores industry from self-destruction and ending the early box method and opening tremendous possibilities in pine-gum production.

The institute would be a memorial to that great Georgian, who gave to the South the vast pulp and paper industry and brought about a development that amazed the world. Within the short period of a year and a half 14 mills, with a total output of 4,295 tons of pulp daily, were erected in the South, each standing as a monument to the genius and the scientific research of Dr. Charles H. Herty.

As director of the Herty Foundation Laboratory at Savannah, in which he invested personal funds, Dr. Herty impressed upon his people and upon the paper industry the significance of the southern supply of pulpwood—a supply that can be perpetuated readily and a supply which, through research, he made technically available for most grades of paper.

Dr. Charles H. Herty lived to see his dreams come true, lived to see those things which he had visualized for the South become a reality, but the perpetuation of his purposes must be assured and that assurance can be made possible through the foundation and establishment of the Herty Forest Institute and that institute's educational program.

### What We Earn—What We Owe

#### EXTENSION OF REMARKS

OF

#### HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. STEARNS of New Hampshire. Mr. Speaker, one of the hardest things, in dealing with the manifold problems that confront our Nation, is to get the facts. Hardly a day passes in this House, for instance, without someone reminding its Members of the millions of unemployed who are still with us, despite 6 years of spending for recovery. It is right that we should be reminded of them; but when it comes down to figures, the number of millions differs according to the speaker's source of information, and in all these years we have been unable to get any official census of unemployment that should tell us exactly where we stand.

Similarly, the ever-growing tax burden is too real to be laughed off, even by the most starry-eyed utopian. But here again it has been hard to get at the real facts which would reveal to the man on the street just how great that burden is, or how much of it falls on his own shoulders. Too many of our people still believe that, whatever the fate of the "male-factors of great wealth," they themselves belong to some particular group which is going to get something for nothing. Any attempt to break down our National, State, and local expenditures into a form which will show their actual impact on the individual citizen is a step back toward national sanity.

It was with this purpose in mind that Gov. Francis P. Murphy, of New Hampshire, in his annual message of 1937, asked for the appointment of a commission for the promotion of the wealth and income of the people of New Hampshire, which he proposed should undertake, for the first time in any State, to reduce the finances of the State, private as well as public, to a bookkeeping statement which should show the real economic status of her people. This commission was financed by private subscriptions without cost to the State, and indeed was only given official status to facilitate the obtaining of information from official sources. Of this commission I had the honor to be one of the original members.

In entering on so new and unprecedented an investigation many difficulties were encountered. Federal and State officials were generally cooperative, but some private citizens were more reluctant to provide the desired information, and some of the data which it was hoped to get proved impossible of attainment with the means at the commission's disposal. After 2 years of study, however, Mr. Samuel Crowther, well known as a writer on the economics of government, who has been the chairman of the executive committee, has presented to the commission a report which was made public last month and has already attracted widespread attention.

Although the author would be the first to acknowledge how far short the result attained in this initial report falls of the vision that the commission had before it, yet in the significance that it holds for the future it may be as important as the first feeble lift of the Wright brothers' plane on the beach at Kitty Hawk.

I cannot better indicate that significance than by quoting an editorial comment on the report which appeared in the New York Daily Mirror for December 6, 1939:

President Roosevelt thundered this warning in 1932: "Any government, like any family, can for a year spend a little more than it earns. But you and I know that a continuation of that habit means the poorhouse."

So far as we know, the first State that has attempted to measure its progress toward the poorhouse is New Hampshire.

The results are startling; by applying the same system of bookkeeping to the State that is used by any business or any prudent individual, Samuel Crowther has compiled startling and disturbing facts.

#### PROBABLY TRUE OF WHOLE UNITED STATES

These facts are significant because what is true of one State is equally true of the entire Nation—due to the manner in which the 48 States have learned to lean on the Federal Government:

Killing jobs: Unemployment is being generated by the very measures taken to cure it.

Debt kills savings: The people of the State—and undoubtedly the people of the Nation—have no net savings, for individual savings are being smothered by governmental debt. New Hampshire's share of the Federal debt is nearly three times its demand bank deposits and more than one-half of its savings deposits.

Running in the red: "The State's business and agriculture are being conducted at a loss, which means that they are existing in part by drawing on funds which should be used to repair wear and tear on tools, machinery, and buildings—which explains the lack of demand in the trades making or using durable goods."

Taxes take their toll: "Indirect taxes amount to at least 10.8 cents in every dollar spent by consumers and direct taxes of 7.1 cents, or a total of 17.9 cents."

Debts must be paid: "The application of double-entry bookkeeping to the whole economy shows the patent absurdity of 'creating purchasing power' through spending, Townsend plans, or other schemes. Every credit advanced to promote purchase appears as a mortgage debt in the capital account. Debts must eventually be paid by production or repudiated—and in the meantime, interest must be paid."

Down, down, down: "Through taxation, incomes are being distributed downward—both the lower and higher brackets are decreasing \* \* \* standards of living are falling—poverty is being spread."

By cold figures, Mr. Crowther demonstrates how the fallacious extravagance of Federal "spending for recovery," has so stagnated normal production and consumption, that the people of New Hampshire in 1936, the year studied, actually "did not earn their living."

"The entire business of the State \* \* \* was conducted at a loss of \$6,925,000. Banking was conducted at a gain of \$812,000.

"Government—Federal, State, and local—spent \$11,637,000 more than it received in taxes.

"The people, as individuals, saved \$13,761,000. But the people, considered as a whole, were thus poorer by \$3,989,000 as a result of the year's operations."

## PROGRESS TOWARD POORHOUSE

Thus by simple arithmetic and the kind of bookkeeping that pays your wages every week, it is demonstrated in the State of New Hampshire that the effort to "spend our way back to recovery" has merely pushed us nearer the poorhouse—exactly as Mr. Roosevelt warned it would in 1932.

The cure? Again we quote Mr. Roosevelt of 1932: "I regard reduction of Federal spending as \* \* \* the most direct and effective contribution that government can make to business."

It is my intention to send a copy of this report to every Member of both Houses of the Congress, and I believe that it merits their careful study.

## Civil Service and Your Sons

### EXTENSION OF REMARKS

OF  
HON. T. V. SMITH  
OF ILLINOIS  
IN THE HOUSE OF REPRESENTATIVES  
Tuesday, January 23, 1940

RADIO ADDRESS BY HON. T. V. SMITH, OF ILLINOIS

Mr. SMITH of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include hereunder a speech given last night over the Mutual Broadcasting System, addressed to the fathers and mothers of America and entitled, "Civil Service and Your Sons":

Fathers and mothers of America, there is a thing I want to say to you about governmental jobs in connection with your sons and daughters. But first a complaint. I think—don't you?—that every patriot might well be allowed one major complaint. If so, I nominate as my chief disappointment with our people the low esteem in which skill is held among us. Whether the instinct of workmanship has declined from former generations, I do not know; for I was not here save by proxy in previous generations. There are of course no adequate statistics upon so delicate a comparison. But of the present generation I can speak with some personal knowledge and with not a little patriotic regret. I go up and down our land constantly, and I report to you that pride in work, even of those who have work, is at too low an ebb. I report that joy in the job, even among those who have jobs, is not what it should be.

#### WHY HAS INSTINCT OF WORKMANSHIP DECLINED?

Why? Is it because most people work for somebody else? Is it because of the monotonous nature of much of our industrial work? Is it because workmen are insecure in their jobs and cut off the job's nose to spite the boss's face? Is it that workmen are poorly trained in general or are poorly placed in particular?

I do not know for certain whether any or all of these reasons hit the causes; but of the effects I am dishearteningly aware. We are not as a people living up to the reputation we have in the world as the most efficient nation, the reputation of a people that sings at its work. This is a fact and it distresses me no little.

You will perceive that I am referring now to private business: to the inattentive clerk, to the listless ticket agent, to the careless mechanic, to the abstracted waitress, to the absent-minded teacher, to the offhand doctor. No one of these dissatisfied types loves his job and embraces it as his chance to have a happy life. And yet the clerk is more often than not retailing beauty, the ticket agent is an easy accomplice of adventure, the waitress is lady-in-waiting to queenly and popular vitamins, the mechanic is minister of munitions in the processes of peace, the teacher is Muse of the awakening mind, and the doctor is guardian of health, minister plenipotentiary to man, that paragon of animals. What more would any one of these ask to awaken the instinct of workmanship, to quicken his pulse of action, to stir his imagination, and to guarantee to him mankind's most lasting and useful satisfaction—plain and simple joy in the job at hand?

#### WHO IS THE POLITICIAN TO COMPLAIN?

But do I hear somebody murmuring, "Who are you, a politician, to say all these things, and to say them complainingly?" But I am a politician who enjoys his job, I'd have you know, and therefore wants everybody else to have the same happiness. It makes me a privileged character, you see. That's my reason for ruffling your calm. No; don't get me wrong. I'm not about to promise jobs of guaranteed joy to every mother's son of you. That's the wrong way to go about the remedy. Such promising is done only by the scribes and Pharisees of politics—men who do not yet know what their own job as a politician is. I enjoy my own job too much to help other people get jobs for which they're not fitted. I know that's one sure way to fall of joy in the job—to get a job for which you are not trained. So I'm not going to offer you a political job—

not even if you promise to reelect me as Congressman at Large. I'm going to do a better thing—to commend to your sons and daughters now in school the provisions we politicians have made to cause public jobs to be more satisfactory than these private jobs at which I have complained. These provisions are chiefly lodged in a single institution—it is the civil service. It is properly called "service" because it keeps the wheels of government, our common business, moving ahead. It is justly called "civil" because it provides the service in terms of merit all the time rather than of political "pull" at election time and of uncivil "push" when the election is lost.

You are surprised, you say, that politicians provide a service that is civil? You thought, you say, that the politicians were the ones that got any kind of jobs for any kind of person who would help them get reelected? Oh, you've surely got us—most of us politicians—wrong. You must be thinking of what used to be. Bring yourself up to date. I'm sure you're talking of the spoilsman—not of the pedigreed politician. There was a time, perhaps, once upon a time, when such pretenders to power usurped the noble name of politician, and there may be some spots left in America where is still practiced such spoilage of all that's noble and necessary about politics.

But here at Washington we long ago set up the civil service as a means of making merit prevail in Federal jobs and efficiency result from Federal appointment. That was long ago. We celebrated last week the fifty-seventh anniversary of that beginning triumph of merit and efficiency.

#### WE HAVE ACHIEVED MUCH AND WILL ACHIEVE MORE

I don't mean that the principle of merit triumphed all at once in the Federal service, or that it has yet triumphed completely. There were spoilsmen in the early days, in both parties, who hooted at merit and made it hot for honest efficiency. They filled offices on grounds of patronage, and oftentimes promoted people on grounds of pulchritude, if they were women. In a phrase as ugly as the nasty business, they practiced civic turpitude of political partisanship in affairs administrative.

Why, in Abraham Lincoln's day in the White House, before the civil service was born, that great man was driven to say this about the messy business: "This human struggle and scramble for office, to live without working, will finally test the strength of our institutions." Well, it did test our strength; it so tried the endurance of honest men in and out of office that we began 57 years ago to meet the test through the civil service. There are indeed still a few sleepwalkers about who mumble against merit, ignorant that inefficiency in government is now out of style. But they are a lessening number, with weakening voice. An awakened people will not be ruled by those who walk in their sleep. Rip Van Winkles are now rarities in our national life.

Why we have a bill very shortly to be before the House of Representatives that empowers the President in the name of Congress to put under civil service practically all the jobs now remaining as prey to patronage hunters and as spoils to patronage dispensers. If you are interested in this great cause, you might tell your Congressman—or tell me—how you feel about this bill. It is the Ramspeck bill, H. R. 960. Eventually it will pass; so why not now?

Of course, such a bill will pass eventually, as it has in every country that has come of age. It will pass, because the so-called "honest graft" of political job holding is too expensive for a Government that wishes soon to balance its Budget and presently to reduce its taxes. It will pass, because parents will tire of the indignity of having their sons and daughters made private errand runners for bogus politicians on the pretense of appointment to public office. It will pass, because we politicians ourselves are becoming enlightened enough to admit (1) that we aren't entitled to more private assistants than we dare publicly vote ourselves; (2) that we aren't specialists in getting the right man for a given job; (3) that the Civil Service Commission is fitted to do that special job; (4) that our job as politicians in trying times is simply too important for us to waste our time doing what we aren't any good at; and, finally, (5) that it isn't good sportsmanship for men in power to swell through the public purse their advantage at election time over those who run against them.

It is a queer thing that some so-called politicians have to be made aware of this civil thing through the criminal approach now made to it in the Hatch law.

#### THE POLITICIAN WIELDS A GLORIOUS SKILL

The work of the politician, when properly understood, is the most important of all. But his is not the business of job-brokerage. It is, rather, the business of legislation. Our politician needs to meet all sorts of people, to study economic problems, to fit himself to stand between warring groups, and to enable himself to offer the solvent compromise at the fruitful moment. Politicians are moral midwives of our common welfare. There is a job in itself. It requires skill, general skill: Skill in meeting men, skill in arguing, skill in pouring oil on troubled waters. It's a full-time job of the most far-reaching importance. Proper pride in this magnificent skill carries with it pride in turning over to another skilled group, such as the Civil Service Commission, the task of filling all jobs requiring special skills—and to do this for the good of the State.

These hundreds of thousands of jobs which the Civil Service Commission handles require another kind of skill than the politician's splendid gift of gab. They require special skills. To fill them with people who have merely the politician's skill in talk and

compromise, is to outrage both kinds of skill. It is to belittle politics and is to ruin the public service.

As a proud politician, of course, I know how much of the work of the world is done with the human mouth. But as an honest citizen, I know, too, how much work remains to be done when the loudest mouth has done its durnedest. Laryngeal liquidity, however mellifluous, will not even run a typewriter with accuracy and rapidity. It will not keep books with precision and promptness. It will not chart the weather, nor conserve the soil, nor build bridges, nor safeguard the public health, nor administer our far-flung social-security enterprise. Absolutely necessary as is speechifying in its place, it will do none of these things.

These services, imperative for the modern state, require servants who know each his own special job. It is colossal responsibility to find the right men for jobs like these. For their range is the length of science and the breadth of art. We must have men like the civil-service experts, working all the while to do the best we know up to date. But since we do not yet know it all about personnel work, we must have men, like our civil-service Commissioners, working all the while to find out more than we now know. Mistakes will be made, and are made, in spite of the best such men know and do. But the mistakes must be remedied by more knowledge and better efforts, not by any return to innocence or ignorance or poor sportsmanship, as spoilsmen would have us do. Whatever honest mistakes are made in civil service, the politician is estopped from criticizing civil service as such, if what he has to offer is return to the Dark Ages, from which the civil service has in part released us. Generally speaking, there are but two ways for us to go—to practice merit in the scientific filling of all administrative jobs, or to return to the civic turpitude of political partisanship in affairs administrative.

#### CIVIL SERVICE, THEN, FOR ALL OUR SONS

As a parent myself I feel certain that you as parents and voters do not want to return to that. You do not want to return to that in these war-threatening times, as our House Appropriations Committee has just suggested in raising the Civil Service Commission \$750,000 over the last year. But, regardless of defense program or fear of sabotage among poorly picked workmen, you do not want to return to the waste of spoils. There is a sabotage of integrity as well as of loyalty, and patronage is often such sabotage. Efficiency and honesty are great virtues for peace. We need them all the time. You not only do not want to go back to spoils; you want to go forward to a complete merit system in regard to all public jobs, in State and city as well as in Federal administration.

If this is what you want for your sons, then let me give you this advice. Encourage us politicians to pass the Ramspeck bill, H. R. 960, when it comes up shortly. Then you work with might and main to get genuine civil service extended in your city and in your State. More remains to be done there than in the Federal Government. Your ablest sons and daughters can then get public jobs with honesty and can fill them with pride. Your other children can have the clean satisfaction of knowing at last that both success and failure, in getting governmental jobs are equally on the square. That's a great thing for honest citizens to know and feel. To doubt that, as all do when jobs are had by pull, is to poison success and to embitter failure. To be assured in advance that all is on the square is to give your children incentive to become as skilled as possible while yet there's time. That is the best preparation for public or for private jobs. It is also the best possible guarantee for an independent and happy life.

### Investigation of Un-American Activities

#### EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. CURTIS. Mr. Speaker, I believe the Dies Committee for Investigating Un-American Activities should be continued. There has been some criticism of the work of that committee. Perhaps some of it is justified; on the other hand, a great deal of it is not justified. Any committee that is going to undertake such a task will make mistakes. The members of that committee are like all the rest of us, they are human.

We live in a time when the average person is convinced that we should set our own house in order. We should not tolerate known enemies within our country. It is a great privilege to be an American. We should preserve that right for our children and their children.

In a Government such as ours the people rule. I believe that the people as well as this Congress should know the facts. I, therefore, shall support this investigation.

### Pot of Gold Radio Program

#### EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

#### LETTERS FROM MOTION PICTURE THEATER REPRESENTATIVES

Mr. TENEROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letters addressed to me by representatives of motion-picture theater owner of Michigan. Already the practice referred to—the conduct over a national radio hook-up of what amounts to gambling—has been brought to the attention of the Federal Communications Commission. A group of theaters in Detroit, known as Cooperative Theaters of Michigan, through their representative, Mr. Thomas McGuire, have undertaken single-handed to stop this weekly diversion of revenues from the little-theater owners of the Nation. They have sponsored the complaint but it is my understanding that because of legal loopholes, the Commission may not be able to take any action.

These letters assert that incalculable losses in revenue are being suffered by this legitimate group of taxpayers every Tuesday night when this particular program takes to the air. To me it is a palpably unethical intrusion and a matter that deserves immediate "policing" by the Commission. The following letters are, I believe, self-explanatory:

COOPERATIVE THEATRES OF MICHIGAN, INC.,  
Detroit, Mich., January 17, 1940.

Hon. R. G. TENEROWICZ,

House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: First, let me identify this organization. It is a cooperative group of 100 independent Michigan theaters and their owners.

They pay local, State, and Federal taxes. They play a very important part in their community. They cooperate with every worth-while civic and charitable movement. They employ local people. They themselves are local people and every cent they spend they spend locally. This background is important because of what follows.

There is a radio program on the air on Tuesday nights from 8:30 to 9 p. m., eastern standard time, called Tums' Pot of Gold. They award \$1,000 to some "lucky" telephone subscriber each week if someone answers the "lucky" telephone. This number is selected by a lottery wheel which first selects the city; next, the page of the phone book, and finally, the lucky subscriber. If no one answers the winner's phone, he or she is sent \$100 and the remaining \$900 is added to the following Tuesday's \$1,000. More than once in the 17 weeks this program has been on the air the award has been as high as \$2,800.

Our point of complaint is that people stay home listening to this program and stay away from the theaters. They are staying away to the extent, at modest estimates, of over \$1,000,000 a week.

Under the Communications Act of 1934 all programs are to be for "public convenience and necessity." Section 316 of the act further forbids gambling and lotteries. This section reads as follows:

"No person shall broadcast by means of any radio station for which a license is required by any law of the United States, and no person operating any such station shall knowingly permit the broadcasting of any advertisement or of information concerning any lottery, gift enterprise, or similar scheme, offering prizes dependent in whole or in part upon lot or chance, or any list of the prizes drawn or awarded by means of any such lottery, gift enterprise, or scheme, whether said list contains any part or all of such prizes. Any person violating any provision of this section shall, upon conviction thereof, be fined not more than \$1,000 or imprisoned not more than 1 year, or both, for each and every day during which such offense occurs."

On December 22 I filed a formal protest with the Commission, pointing out this lack of "public convenience and necessity" as well as the lottery features, and asking that the program be banned. This matter is still pending before the Commission.

Your constituent theater owners join me in asking you to use all your influence to see that the Communications Commission does the fair and proper thing in disposing of our petition by ordering this pernicious program off the airways.

I have been advised by members of the F. C. C. staff that nothing prohibits 15 or 100 other advertisers from joining in this "radio

gambling," so that if the other hours of the other days of the week are so filled the entire retail field of the whole Nation is jeopardized.

Radio was never intended to be abused under the act of 1934. This program is gambling. It does not serve "public convenience and necessity." It is unfair; it is illegal.

Will you help us?

Sincerely,

COOPERATIVE THEATRES OF MICHIGAN,  
THOS. MCGUIRE, Public Relations Director.

ALHAMBRA THEATRE,  
Detroit, Mich., January 17, 1940.

Hon. R. G. TENEROWICZ,  
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: Reference is made to a radio program called Tums' Pot of Gold over the air each Tuesday evening, N. B. C. network, through radio station WWJ, Detroit, at 8:30 to 9 p. m.

These Tuesday-evening programs we find to be very detrimental to motion-picture-theater business.

The inducement for people to stay at home and listen to this program is the gambling phase involved in that one of the million or more listeners may be the party whose name is drawn by the wheel of chance. The lucky winner must be at home to win the thousand dollars or more given to the one whose name is picked from a telephone directory.

This program has received tremendous publicity, and it is an established fact that it is making serious inroads into Tuesday-night-theater grosses.

While this form of giving money away may be legal, it must be construed as a form of gambling and, if adopted by other advertisers, over other networks, will prove to be a definite menace to the motion-picture industry, particularly to the small fellow who is unable to buck such opposition.

A group of theaters in Detroit, known as Cooperative Theatres of Michigan, Inc., through their representative, Tom McGuire, have filed with the Federal Communications Commission a petition protesting against the program. We understand that the Commission may act unfavorably on this petition. This letter is written for the purpose of requesting you to look into the merits of this protest, the unfairness of this kind of competition, the gambling element involved in this radio program, the possibility of a widespread use of same, the fact that Pot of Gold is now hurting the small fellow in the motion-picture-theater business, and that the spread of the program will result in serious financial difficulties for many.

This is my first letter to any Congressman or Senator in connection with legislative or any other matters, and is only written because I sincerely feel that this Pot of Gold program is unfair and its continuance is not in the best interest of either radio or any other business. I bespeak your cooperation.

With kindest personal regards,

Yours very truly,

BARNEY KILBRIDE.

### Registration of Aliens

#### EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

LETTER TO THE GENERAL FEDERATION OF WOMEN'S CLUBS,  
WASHINGTON, D. C.

Mrs. O'DAY. Mr. Speaker, it is unfortunate that the rising tide of discrimination against aliens now sweeping our country is affecting those who are here legally, conforming to our laws and requirements.

A bill to fingerprint all aliens has been introduced in Congress and has called forth the following letter, signed by 42 prominent women, and addressed to the General Federation of Women's Clubs:

To the General Federation of Women's Clubs, Washington, D. C.:

The registration of aliens in this country can serve only to add another evil to the many problems confronting the American people. This proposal, if enacted, would serve to spread suspicion and antagonism, confusing and dividing the people at a time when a healthy public atmosphere and unity are essential in any effort to protect the interests of the American people.

The registration of aliens would mean regimentation of the entire population, native as well as foreign-born. If noncitizens will be ordered to carry identification cards, American citizens will have to carry proof of birth or citizenship at all times. It would, in effect, introduce the European domestic-passport system into our American methods of government. The Honorable Frances Perkins, United States Secretary of Labor, has said:

"In considering the adoption of any system of registration, the issue must be squarely faced that it involves a radical departure from the American system and a return to the European, and particularly police control of the individual. It would constitute a tremendous step toward the regimentation of citizens."

We are seriously concerned that in this present period this proposal may be seized upon by those who seek to whip up a hysteria against the alien similar to the one that prevailed during the last war and resulted in the un-American Palmer raids, which deprived citizens as well as noncitizens of their democratic and constitutional rights.

We sincerely hope that organizations of American women will not allow themselves to become a partner to any such scheme which, in essence, threatens the very foundations of our democratic form of government.

The proposal to register the alien is contrary to the American traditions of hospitality and equality to the immigrant. Not repression, not discrimination, but understanding and friendliness must serve as the basis of any approach we may wish to this problem.

It is our duty as American women, and it is to the ultimate benefit of American society, that we extend help and understanding to our future citizens and that we exercise vigilance to defeat all attacks upon the rights of noncitizens, since such measures threaten as well the entire framework of our social order.

We feel sincerely—and we urge upon all women's organizations—that every effort should be made to enable all noncitizens to become naturalized citizens of the United States.

We can and should work in an American way, through understanding and cooperation, to help the future citizens in our midst make possible their naturalization, and thereby enhance the value of American citizenship and the soundness of our American institutions.

### Morality in Government

#### EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. STYLES BRIDGES, of New Hampshire, before a reception sponsored by the Missouri Republican State Central Committee at St. Louis, Mo., January 17, 1940:

We of today live in a world in which not only have governments fallen, giving way to ruthless dictatorships, but one in which moral and spiritual values are challenged and in many cases have disappeared. Today, as throughout history, many have fallen because

of moral and spiritual decay. If democratic government is to endure, democratic morality must first prevail. And so I should like to talk tonight about morality in government.

The expressions "a public office is a public trust" and that the holder of such an office is a "public servant" are more than old and overworked platitudes brushed up by politicians during their campaigns for election. They are the keystone of representative government, for without the ideal of service, without the confidence of the people in those they elect to office, the entire structure of democratic government loses its justification.

Morality in government must be based on the value of the word, of public officials, upon unimpeachable motives, upon the placing of public office above political or personal considerations, upon intellectual honesty with the people, and upon justice and tolerance in the administration of office, and upon responsibility to the duties of office and to the people whom an official is elected to serve.

These have been the ideals of public service in America. Yet the last 7 years have left a wake of broken pledges, of manipulation of relief for political advantage, of public office flouted for personal gain, of cruel deception such as the arguments that we can spend our way to prosperity and that an internal debt is not a debt at all since we owe it to ourselves, of arrogance and irresponsibility in administration, of assiduous efforts on the part of the executive branch to outwit Congress, the representative of the people, of hatred and intolerance aroused against entire groups of our people.

The President of the United States, by virtue of his high office, sets the keynote of any administration. Those who serve under any Chief Executive will take their cue from him. They are unlikely to prove more conscientious in office than their chief. Thus the attitude of a President is generally reflected in his appointees to the Cabinet and lesser Federal posts, in the administrators of Government agencies, and in his followers in Congress.

The tragedy of the New Deal is that, at a time of international crisis, when the trust and confidence of a united American people is needed so desperately, it has forfeited the right to their faith. What would have made the annual Presidential promises of economy in government and a balanced Budget next year a joke save that the steadily mounting deficits have been charged to the American people? What do the following recall to your mind: "Mandate," "Supreme Court reorganization," "purge," "economic royalist," "tory," and "Lord Macaulays"—white slips of paper which the President obligingly signed, he knew not why, but which found their way into the Democratic campaign book, sold at \$200 apiece to pay off the Democratic campaign deficit? And why did some corporations find it necessary to buy not one, but up to as many as six copies of this book? What of a President who blandly tells newspaper correspondents that the 1941 Budget provides for an increase in the relief rolls during next September and October—on the eve of an election? Is it not a sad commentary in itself upon the President that his most ardent admirers generally refer to him as the "smartest" or " slickest politician" in the country? Is it not a commentary that his admirers gleefully described the Budget which he recently submitted as "politically clever"? Why is it that the Congress views every administration move with suspicion?

There are millions of Americans who cannot forget this background as they measure the events of today.

Recently when I heard the gracious voice of the President declaring in his annual message to Congress that there was nothing unconstitutional in the surrender by Congress to the State Department of its power to make treaties, I could not help recalling a former plea to pass legislation "despite any doubt of constitutionality, however reasonable," and thinking that it mattered little to Franklin D. Roosevelt whether the present system of negotiating treaties was constitutional or not. When he declared that this method provided a "temporary flexibility" in "time of emergency" which "should be kept alive . . . during the existing wars," I could think only of other powers, granted under the plea of emergency, which the President refuses to relinquish. But there was no international emergency when Congress ceded to the State Department the right to negotiate these treaties. What is there to indicate that the President would be willing to return this power to the Senate even if peace should be declared tomorrow?

I am not arguing here the merits or demerits of these trade agreements. But I insist that the power to make such treaties should be returned to the Senate of the United States Congress, where it belongs under the Constitution.

Toward the end of his speech, the President eloquently declared, "Doctrines which set group against group, faith against faith, race against race, class against class, fanning the fires of hatred . . . were used as rabble-rousing slogans on which dictators could rise to power. . . . We cannot afford to face the future as a disunited people." I could think only of a former speech on the state of the Union, in which the same President devoted to passionate denunciation of the "entrenched greed" of "our resplendent economic autocracy" and "enslavement for the public." I could only marvel at these words now spoken by the head of an administration which has done more to sow the seeds of class and sectional hatred and to divide our people than any administration in the history of our country.

This ability to attribute his own shortcomings to his critics with a straight face is also applauded by his admirers. But is it fair to play with the American people? Let me digress here to say that the next few months will be the most deceptive. All is to be harmony between Congress and the President—I understand. The skulduggery will take place in the vast bureaucracy which has been built up.

When the President came to that portion of his speech devoted to the denunciation of alien "isms," I could think only of the opposition of the administration to the Dies committee investigating un-American activities, and the abuses which have been heaped upon its members by new dealers.

Several weeks ago, a prominent Washington commentator reported in his radio broadcast that Mr. Roosevelt had sent for Majority Leader RAYBURN of the House and told him that the Dies committee was to be killed, either directly or through a refusal to grant it funds. Representative RAYBURN was said to have replied that he would be unable to gratify the President's request, since the Dies committee was so popular with the people that Congress would not dare to destroy it. That story has never been denied. Why?

A few weeks ago an administration influence went out of the way to defend the American Youth Congress, including the American Student Union, when its officers were questioned by the committee. This influence declared that the organization was not dominated by communists. Yet, at its convention on December 27, the American Student Union refused, by the overwhelming vote of 322 to 29, to denounce the Russian invasion of Finland.

It is true that the Dies committee, in response to the demands of new dealers on it, failed to mention specifically any Federal employee known to be a communist or fellow traveler. Yet in this connection, two observations come to mind. There have been no attacks by the administration upon the Dies committee for its investigation of Nazi forces at work in this country. Yet a furor has been raised by new dealers whenever the committee turned to the far greater menace of communism and its "united front" organizations. If no Federal employee is known to be a Communist, why the great sensitivity upon this point? Can it be that the administration would not dare offend the radical vote? Then, too, why the pained and grieved surprise of new dealers at the brutal and ruthless attack of Soviet Russia against little Finland? Did they cherish any illusions that communism was better than nazi-ism? Few of the rest of us were so deceived.

My friends, we owe Finland a lot not only for debunking the myth of Russian military might but for putting our own parlor pinks to rout.

The attempt to purge the Dies committee out of existence, added to the attempted purge of Democratic Members of Congress which failed, is a further indication that the administration brooks no opposition. Considering the numerous powers which new dealers have obtained in the name of "emergency" and their obvious attempts to perpetuate themselves in power, is it any wonder that many fear a third term for the President and a continuation of the New Deal?

And isn't the feeling that the President is a candidate fully justified by the action of members of his official family? Would Secretary Ickes, Secretary Wallace, and the new Solicitor General, Mr. Jackson, be beating the tom-toms of a third term without the President's approval?

I say to you that this audacious bid to break our time-worn two-term tradition is in itself an example of the decline of morality in government.

But there is one thing I would like to see. That is the convention of liberals which Mr. Ickes says he may be forced to call—a convention I assume can be accommodated in one room.

Besides Mr. Ickes, Tommy Corcoran, Benny Cohen, Jerome Frank, and Bob Jackson there will be present: Boss Kelly, of Chicago; Boss Frank Hague, of Jersey City; Boss Ed Crump, of Memphis, Tenn.; and Boss Prendergast, of Kansas City, will undoubtedly be present if he gets out of jail in time.

Mr. Ickes is looked upon as the official hatchet man of the Cabinet. He is foremost among new dealers who have blasted against fascism and nazi-ism with a view, I am convinced, of covering up the communistic fellow travelers of the New Deal. He has also led the New Deal crusade against those newspapers which dare to oppose the administration, in an attempt to convince the American people that a press which opposes the New Deal cannot possibly be free, but must be in the pay of some prince of privilege.

Does this make for morality in government?

What of the spectacle of a Member of the United States House of Representatives writing to a constituent that he would be glad to do what he could to get him on the Works Progress Administration, provided that he obtained a letter of recommendation from the Democratic chairman of his ward?

With such examples set by those in the highest positions of government, what can be expected of lesser officials who administer the numerous agencies established by the New Deal? With this in view, are the stories of coercion, corruption, and political discrimination in the administration of relief surprising? Is it any wonder that the bureaucrats have conceived it to be their duty to browbeat business? Is it any wonder that the Young Democrats, at their convention, went on record as opposed to the passage of the Hatch bill?

Then there are the numerous incidents already brought to light by the House committee investigating the National Labor Relations Board. In one case an investigator wrote to the secretary of the Board, "We have a weak case against the Aranson Co. and are trying to break them down without going to court."

Mr. James Miller, former regional director, of Cleveland, Ohio, related a conversation with Mr. Fred Krivinos, special examiner for the Board who inquired, "What's your position here? Does industry fear you and the Board?"

"I told him, 'No; they respect us,'" continued Mr. Miller. "He told me that was the wrong attitude, and said, 'You should make them fear you and the Board.'"

An incident in Kentucky was revealed when Mr. Phillip G. Phillips, regional director for that State, admitted that, having investigated a certain case, he acted as prosecutor during the trial and succeeded in having evidence, which the company tried to present, suppressed by issuing instructions to the examiner who heard the case—a procedure which Mr. Phillips himself confessed he did not consider exactly ethical.

Similar stories coming from Seattle, Los Angeles, and Detroit indicate that these examples are not isolated. Together they present a picture of arbitrary administration by fear, coercion, and suppression. They are evidence of procedure which, in the words of the New York regional director, "one might expect from the OGPU, but not from \* \* \* an agency of the American Government."

But are these incidents not a reflection of the views of the Board Chairman, J. Warren Madden, who once declared that "the employer is almost always wrong," and must be crushed at all costs? Is the demand for the revision of the Wagner Act by capital and labor alike surprising in view of the fact that the law—a one-sided measure as written—has been administered by men who use their office and the vast powers bestowed upon them to conduct a class war?

The Wagner Act was a vital measure, long overdue. Its strength, which lies in the rights it seeks to guarantee the worker, must be preserved. Its weakness, which lies largely in the fact that similar rights are not guaranteed to every employer and employee alike, must be amended if our system of private economy is to succeed. The vast powers now vested in the administrators of the law, by permitting unfair discrimination, have served to increase the bitterness of industrial strife. Only through amendment of the law to secure equal justice to all, only through its administration by men seeking to cement the partnership of capital and labor, can industrial peace be achieved and recovery made possible.

Then there is the administration of social security. The members of the Securities and Exchange Commission have been insisting for some time that investment brokers should separate the funds of their clients from their own. They are right. But what example does the Federal Government set when social-security funds are collected from the worker, only to be lumped in with the general Treasury funds, and spent as fast as they are received?

And what sort of administrators are those majority members of the Commission who recently went outside the law in an effort to force their theory of financing upon an industry?

Another interesting phase of the New Deal is its system of reward for those who follow its lowered morality. The first Roosevelt Supreme Court appointment went to Hugo Black, former Senator and conductor of the infamous inquisition of the holding companies, characterized by the systematic and ruthless seizure of private correspondence and the files of telegraph companies. The most recent appointment to the Court, Frank Murphy, having been condemned at the polls by the people of his own State of Michigan for his handling of the sit-down strikes, was raised to the post of Attorney General, and now goes to the highest Court in the land. Harry Hopkins was elevated to the post of Secretary of Commerce to forestall a congressional investigation of his administration of the W. P. A. Now that Congress is breaking into the conning of the N. L. R. B., Chairman Madden of the National Labor Relations Board is to receive an appointment to the Federal judiciary—a reward for a man who should be retired from our public life.

None of these observations are partisan. They have been echoed by Jeffersonian Democrats as well as by Republicans. Indeed, some of the most damning criticism and much of the most determined opposition to the New Deal has come from members of its own party.

Who has been a greater critic of "spending by deception" than Senator BYRD, of Virginia? Were not many Democrats, among them CLARK of Missouri and WHEELER, of Montana, among the leaders against the President's plan to pack the Supreme Court? Was it not the late Senator Logan of Kentucky who introduced at the last regular session of Congress a bill to regulate the vast arbitrary powers of New Deal bureaucrats in the fifty-odd agencies created in the last 7 years?

What more damaging indictments have been brought against New Deal administration and practices than the evidence brought to light by congressional committees a majority of whose members are Democrats? The administration has not only exerted every pressure to throttle these committees, but has conducted campaigns to smear its members. But the revelations of corruption in elections by the Sheppard committee and of radicalism and maladministration in the administration of relief by the Woodrum committee remain. Today the story is being repeated by the committee headed by Representative SMITH, now investigating the National Labor Relations Board.

When five of a party's most distinguished leaders, including a former candidate for the Presidency and an ex-Secretary of State, formally announce that they cannot support that party for reelection; when a host of others, notably in the Treasury Department, resign voluntarily or are forced out because they cannot bring themselves to agree with administration practices; when the Secretary of the Interior ousts the head of the Bureau of Mines because he is too much under the "domination" of civil service and not sufficiently under the "domination" of Harold Ickes, there is something rotten in the state of the New Deal.

Is it any wonder that, in such an atmosphere, there has been a lack of confidence? Is it surprising that the administration, which has so actively and consistently demonstrated its antagonism toward entire groups of our people, has been met in return with sus-

picion and distrust? Is it any wonder that business, so often lashed with harangues, blocked by punitive measures, discriminated against by Government bureaucrats, has been afraid to go ahead? How could anyone have expected recovery under such conditions? Is it not significant that a revival of business did begin last summer when Congress, by its rejection of the "spending program," the adoption of the Hatch bill, and the vote to investigate the National Labor Relations Board, demonstrated its independence of the administration?

A sound and durable recovery must be based upon confidence inspired in the hearts of the people by the reestablishment of morality in government. But first we must seek the prerequisites of morality. Faith must be restored in the word of those who administer the affairs of government. They must demonstrate their intellectual honesty with the people in all things, and most certainly in the conduct of the financial affairs of the Nation. They must prove by their acts that they are guided not by personal or partisan considerations but solely by the public interest in the administration of laws. Relief must be made as nonpartisan as human need itself. They must demonstrate by impartial justice and tolerance that they trust the American people before they can expect the people to have confidence in them. And last, but not least, this high standard of morality in government must be set by the Chief Executive if it is to be followed by his subordinates.

If faith is to be restored in the morality of government, we must return to the spirit of responsible government by law which our forefathers established rather than irresponsible administration by personal power. The President should have no "clubs in the closet" to be pulled out and used at his discretion. Congress must recapture the powers entrusted to it by the Constitution which it has surrendered. Bureaus and boards, commissions, and agencies must be made responsible to the people through their responsibility to the representatives in Congress. The head of no agency should be able to declare, as once did Chairman Madden of the N. L. R. B., "This Board is subservient to no one—not even the President of the United States. We have our own rules to go by and we intend to continue our policy." If such arrogant and arbitrary rules are to be abolished, the citizen must be assured of fair and impartial treatment by establishing set rules of procedure for all such agencies.

The Republican Party can dedicate itself to no higher task than the reestablishment of morality and responsibility in government. In this way only can Americans be assured the opportunity to go forward under laws that make men free, administered by officials dedicated to the ideal of service. The revival of such a spirit is essential to recovery, not only in its material meaning, but in the spiritual sense of the word. It is the road of progress toward the democratic ideal.

### Our New Neutrality

#### EXTENSION OF REMARKS

OF

#### HON. LUTHER PATRICK

OF ALABAMA

#### IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

ADDRESS BY HON. JOSEPH C. HUTCHESON

Mr. PATRICK. Mr. Speaker and fellow Members, I got permission to extend my remarks for the purpose of placing this speech of the Honorable Joseph C. Hutcheson in the Record. It was delivered recently to the lawyers of Alabama at an annual bar association meeting in Birmingham and is one of the best discussions I have met on the subject of neutrality.

The judge presides in the United States circuit known as the fifth Texas circuit, is a widely known, much-quoted, and highly respected liberal residing in Houston, in the congressional district of the distinguished Representative from the Eighth Congressional District, the Honorable ALBERT THOMAS.

Here it is:

To many devotees of international law, and there still are many, the World War first, with its tremendous departures from, innovations on, and complete breaches of, international law, with the following break-up and dissolution of states, and the general unsettled conditions of the 1920's, brought disillusionment and dismay. With many of these, when, following all of this, came the rise in Europe of the totalitarian idea with its accompanying shocking and brutal contempt for and disdain of, not only solemn agreements, but the ordinary common decencies of national conduct, dismay became despair. Especially was the shock most severe, the disillusionment most complete, the despair deepest, with those who, forgetting or abandoning the basic conception of international law, as dealing with rules of conduct prescribed

by and for equals, and therefore, rules which derived their authority, not from positive sanctions, but from a decent respect for the opinion of mankind, had put their faith in the notion of a league of nations, which should enforce its rules and mandates by positive sanctions extending even to war.

I would not, however, be understood as saying that it is only the League of Nations' men who have become skeptical and even cynical, as to the present and future of international law. For while the route is most complete among them—for their great corpus, the League, as an instrument of force, seems now a corpse—there are many of my ilk, crying, "Ichabod! Ichabod! the glory of international law has departed." Indeed, international law is no more.

I do not at all agree with these, and it is because I do not that I have come here tonight to speak for a little while on our new neutrality, and, proclaiming the vigorous faith that is in me in this international law, to reassure all the doubting Thomases that before them there was a yesterday, after them there will be a tomorrow. To their crying out, nations in the fullness of their brute strength, with complete impunity, are violating every provision, every limitation, every decency prescribed by international law, how can it be said that such law still exists? I make reply, that it might as well be said, because ruffians, acting ruffianly, refuse to obey the social code of decent kindly manners, that decent kindly manners are no more. I think the trouble with some of these who bewail the passing of international law is that they do not truly realize just what international law is, what it purports to do, and what it does.

In its essence it is not, it never has been, the law of force. It is the law of behavior among nations, regulating by social sanctions, more powerful with decent-minded peoples than any sanctions of positive law could be, what they may and may not, what they should and should not do, as among themselves. No really civilized individual conducts his social intercourse and relations under the fear of positive sanctions, for there are none, except a more or less vigorous sending to Coventry; and yet there are many of us who would much prefer to break some positive law than to be found guilty in the eyes of our fellows of the breach of some compelling social convention. Thus it is that, panoplied in decent behavior, the weakest and humblest of us may conduct social converse and relations with the strongest and highest, secure through the protection of social customs against slight or harm; and the fact that some, acting ruffianly, may at times forget their manners in no sense detracts from or defeats this social custom. Thus it is, too, that between civilized nations a decent respect for the opinion of mankind, which is the spring and support as well of international law as of manners, can be securely counted on in the long run, though often, as now, only after much suffering and travail, to furnish sufficient sanctions. Therefore the smallest and weakest in the family of nations has a right in its intercourse and relations with the largest and most powerful to take international law as a guide to and support of its dealings with them, and the fact that some bully nation refuses to obey these canons in no wise changes the law or at all mitigates its breach. But by that law the bully stands branded an aggressor, an outlaw, in the family of law-abiding nations; and no nation, no matter how insolent and lost in fact to common decencies it is, likes to stand so branded.

In support of these views, I call *Little Norway* and *City of Flint* incident to witness. I call too, Germany and Russia, and their persistent, if contemptible efforts to excuse their recent acts of unpardonable savagery, as justified by international law. I call to witness, too, the fact that the conventions against the bombing of civilized nations, are helping to hold a lethal and brutal air war in suspense and may continue to do so.

But, more to the point I came here to speak on, I call to witness the United States, which in the last few weeks, in the great name of international law, has entered upon a new neutral policy, a policy fraught with the greatest consequences, I think, to the world and to ourselves. For, not only is the United States a very great nation in the family of nations, but by the justness and fairness of its aims and the resoluteness and singlemindedness of its conduct, it has done, as much as—perhaps more than—any other nation to make international law come true. Especially has it done this in the field of neutral rights and duties. For, except for its one trip in 1917-18, on Europe's merry-go-round of war, it has followed Washington's counsel to stay out of Europe, and to avoid entangling alliances, and has stayed out and avoided them. Following Jefferson's counsel and insisting, as a great seafaring neutral, on the freedom of the seas under international law, it has stood out as the champion of a decent conception of international law, and especially as a champion of the rights of neutrals.

But, though this is so, it would be a mistake to look on the role of the United States in the making of international law, as confined to the assertion and maintenance of neutral rights. As a member of the family of nations, the United States from its beginning as a Nation, has made most signal contributions, both to the spirit and to the body of international law, and the names of six of our Presidents have been, and I venture to assert of a seventh, will be associated greatly with this law. First, Washington, whose firm and clear stand for speedy and amicable settlement of all questions between the United States and other nations, and his great pronouncement, "Friendly relations with all, entangling alliances with none," has given permanent character and color to our foreign relations. Then Jefferson, with his tremendous contribution, not only to the spirit of both international and

municipal law, that equal and exact justice should apply between nations and between men, but also to the body of international law with his insistence upon the freedom of the seas and the rights thereon of neutral sea-going commerce.

Next Monroe, with his insistence that "our policy in regard to Europe should be to cultivate friendly relations with it, and to preserve those relations by a frank, firm, and manly policy, meeting in all instances the just claims of every power, submitting to injuries from none"; and his "In the wars of the European powers in matters relating to themselves, we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are of necessity more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. \* \* \* We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered, and shall not interfere, but with the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States."

Then Lincoln, with his resolute, uncompromising, and forthright attitude on international relations in the War between the States, taking up the challenge both of the British merchants and of the British Government, thwarting the use of neutral ports as a blind by the one, by maintaining the right of seizure under the doctrine of continuous voyage and holding the other accountable for unneutral service.

Then Grover Cleveland, with his conception that the "strong should protect the weak, who cannot undo a wrong"; that to take the opposite course is a repudiation of international law; that in right doing lies the true glory of nations; and his repudiation of the treaty, involving the annexation of Hawaii, as not merely improper but immoral, saying: "The law of nations is founded upon reason and justice, and the rules of conduct governing individual relations between citizens or subjects of a civilized state are equally applicable as between enlightened nations."

While Woodrow Wilson not only maintained while we were neutrals in the World War, with vigor and forthrightness, the freedom of the seas and the right under international law of neutral ships to be free from piratical attacks upon them, but also dreamed greatly of and tried to bring to fruition the noble if impractical ideal of a parliament of the world. Mistaken, perhaps, in some of its postulates, particularly I think that of the use of force, and frustrated through human and national jealousies and meannesses, the position he took was yet in keeping with the character of America as a peace-loving, justice-desiring, ideal-holding member of the family of nations, and childlike though it was in its simple faith in peace on earth and good will to men, it represents perhaps the high point in American idealism.

Finally, the American people, under the guidance of another great President, have recently deliberately recanvassed, reconsidered, and redetermined, whether in these times of world stress, we should again, asserting and maintaining our undoubted right under international law to trade in troubled waters and to protect our nationals from acts of belligerents in violation of that law, once again abandon our national policy of keeping out of European wars. Or whether there is not a greater and wiser course under which, by refraining from the active assertion of some of our rights, we will at once give positive testimony to our faith that war is no solution, while at the same time, sticking to our own knitting, as our policy is, we will avoid for ourselves and others, the horrors and destruction inherent in a world-wide war. But I must, before the night is done, speak to my subject, "Our New Neutrality," and since time does not permit a discussion of the origins of the notion of neutrality, nor a tracing of its growth, I must dispose of all these matters briefly by saying, that beginning in the 17th century, almost it seemed, sprung full-created from the brain of Grotius, the notion that the seas were free and that nations not at war, had rights which belligerents must respect, took form and life (*Mare liberum; De jure belli et pacis*).

But it was only when and because Sweden, Russia, and other seafaring nations, formed the armed neutrality, and gave neutrality the sanctions of force it needed in that day of arbitrary power and the rule of force, that it began to function effectively. Following this, it was the spirited and determined resistance of the United States and other nations, in the name of the freedom of the seas under international law, against Great Britain's asserted dominance which through the many prize cases, arbitrations, treaties, and conventions, had brought the law of neutrality to the point it had attained in 1914, when the outbreak of the World War and the following years seemed to give it a body blow. For in that war, not only was every formerly known international right challenged or breached in the name of reprisal and retaliation, but the United States, the great neutral, and the one best in a position to challenge these violations, became itself a belligerent, and, itself in the maelstrom of the war, all lesser questions were swallowed up and disappeared.

I think it cannot too often be stated in any survey of international law that Great Britain and the United States are the great seafaring nations of the world, that it is in connection with seafaring that most of the law of neutrality has been made, and that it is greatly fortunate for the world that these two nations, where a decent respect for the opinion of mankind is most deeply seated, have had most to do with shaping international law as it pertains to the rights and duties of belligerents and neutrals. Great Britain, being more often engaged in war, and when she has not been engaged, having practical control of commerce through the great sea throat of Europe, has been more concerned with precedents on the belligerent side than has the United States. But our country, as a belligerent in the War between the States, not only taught England a few lessons in the ability of belligerents to take care of themselves within international law, against both the unneutral acts of a neutral nation and the schemes and wiles of its nationals by shipment to and transshipment from neutral ports, but gave her a book, from which she could and did take a leaf to read, when, in the years before we entered the World War, we were making violent protests against British action in regard to our shipping. But, significant as our contribution as a belligerent has been in making our firm protest against unneutral service by the British Government stand up, as in the case of the *Alabama*, and in protecting ourselves against the wiles of British nationals by establishing the doctrine of continuous voyage, as in the *Peterhof* and other cases (*The Bermuda Claimants v. United States*, 3 Wallace 514, L. E. 200; *The Schooner Stephen Hart*, 3 Wallace 559, 18 L. E. 220; *The Bark Springbok*, 5 Wallace 1, 18 L. E. 430; *The Steamer Peterhof*, 5 Wallace 28, 18 L. E. 564), the great role of the United States in international law has been that of the great neutral with wideflung commerce and shipping and a firm and resolute conduct in the assertion of neutral rights and of the freedom of the seas as to them.

Now, in broadest outline, what is neutrality, what does it mean, and what does it require?

"A neutral state is a state which during the existence of a war is not a belligerent in that war. A belligerent is a state or politically organized group at war with a state or with a politically organized group." "A neutral state in the exercise of its neutral rights and in the performance of its neutral duties, shall be impartial and shall refrain from discriminating between belligerents," and if during war it undertakes to change its rules or laws in matters affecting the belligerents, "the task confronting the neutral state is to make certain to itself and clear to other states that the motive inducing the adoption of a new rule or regulation during the course of war is the product of its concern to act strictly in accordance with the laws of neutrality and not the result of a desire to aid one or the other of the belligerents."

Of comparatively recent origin, as the history of nations goes, the notion of neutrality as a relation, with all of the obligations and privileges it entails, had come, at least, until the World War came, with the subsequent break-up of Europe, to represent a great part of international law in time of war. For, while there was an international law governing the conduct of belligerents toward each other, this was usually so complicated by charges and countercharges of violations by the belligerents, with following reprisal and counterreprisal, and it was so wrapped up in and so dependent on the termination of the war that it did not lend itself much to the general interest of international lawyers. On the other hand, questions of neutrality, which having to do with the manners of neutral states to belligerents and of belligerent states to neutrals, were treated of in arbitrations and in the prize decisions, particularly of the United States and Great Britain, assumed the highest importance. Having to do largely with questions arising out of seaborne travel beginning first in rules put out, prayerfully and with no force behind them, given great strength and force by the armed neutrality, and by the stanch and vigorous position of the United States on the freedom of the seas, it attained to a code of practice, the dominant note of which was the distinction between the state and those composing the state, the nation and its nationals. The result of this distinction was to require the nation itself to assume and maintain a really neutral attitude while permitting its nationals to carry contraband to and generally to trade with belligerents at their own risk.

Under rules and regulations which, while not justifying trading in contraband, protected neutral traders generally, and made it a battle of wits between the contraband runners and the belligerents, a highly technical but a fairly satisfactory and workable code of conduct and behavior on the part of belligerents and neutrals was worked out. This code supplemented from time to time by declarations and conventions such as those of Paris, 1856, London, 1909, of The Hague, 1907, put neutrality on a pretty definite basis, and made it possible for neutral nations to guide themselves by it and for ships of neutrals to conduct a trade in contraband under settled rules and penalties. The World War, however, changed all this and, with the opening of the Pandora's Box of contraband by adding nearly everything to the list, the institution of the long-range blockade, and submarine warfare, nearly if not quite, upset the whole apparatus. For, based on the theory of retaliation and reprisal, but really grounded on the deeper law of self-defense, the practice of submarine warfare, on the part of the Germans and of bringing ships into port for search on the part of England, together with planting mines all over the open sea, coupled with the great fact that nearly every nation, especially every great seafaring nation, finally joined in the war practically put an end to neutrality. It is since the war that there has come along, with the deploring and bemoaning of the destruction of international law, a careful

and thorough investigation of new ways to reconcile conflicting claims of belligerents and neutrals, new measures to bring about a real and true neutrality.

It is out of these views that conventions of various countries, for instance, that of all the Scandinavian countries in 1938, have been held and rules have been formulated for the conduct of their neutrality. Because of them, States like the United States have enacted statutes governing their neutrality; the statute embargoing the shipment of munitions; the statutes establishing the new neutrality under which we are now operating. What is interesting and important in all of this for us, is to realize that the international law of neutrality, dependent as it is on treaties and conventions, as well as practices, is conditioned by the dominant character and quality of the trading world at a particular time, and particularly latterly, is conditioned on and characterized by the rise of the new nationalism, including particularly the rising new collectivism, which in many states, is the new totalitarianism. It is this attitude of totalitarianism, of the state ruling and controlling everything, of total government, of total war, which was the excuse in the World War, for the departure from international law. It is this identification of the interest of the people with that of the state, in regard to wars and rumors of wars, even where there is no totality, which I think largely accounts for the almost complete change of front of the American Government, from its 150 years of insistence on the freedom of the seas to its voluntary refraining from insisting now, on that freedom.

Thus, as everybody knows, international law, as it is enforced in a state, is colored and, indeed, controlled, when the state desires it, by municipal law. Thus it is that the international law of neutrality is being, and may be still further, greatly changed by new conceptions of the duties and functions of the state. But, notwithstanding these changes in outlook, the fact remains that except where states, by their statutes or by their conventions with each other, change the rules of international law, and except where practices long continued and supported by considerations of justice have operated to change it, international law has a real existence, and the rights of neutrals and belligerents as it outlines them are in general and with a fair definiteness to be determined by it. And I, for one, believe and predict that instead of international law disappearing, the present increasing focus of attention on it will make it in the long run stronger, greater, and more compelling. Especially will this be so if we abandon the idea of force through a central League of Nations, which was itself a complete abandonment of and departure from the international law of neutrality. For bound with each other to fight together against aggressor nations, this agreement prevented anyone from being a neutral. All were belligerents. It is only, I think, as the League of Nations, as an instrument of force, became impotent that, in its sense of the force of public opinion, international law commenced to revive. For force is not force unless it is really potent. The threat of its exercise where there is impotence merely arouses tempers and incites to wars.

For myself, I think we are better off where such international assemblages as we have are organized so as merely to register and not to enforce public opinion. I think the real trouble in international law comes, not so much out of its lack of positive sanctions, as out of the fact, first, that the machinery for obtaining public opinion in public cases has fallen into disuse, and because the really serious problems in it arise when nations are engaged in life-and-death struggles and new weapons of offense and defense appear; then those who, because of a lack of legislative or judicial authority to make the law change to fit new conditions are concerned to change it unilaterally, appear at first to be aggressors, but afterward, when time shows the wisdom and justice of and gives sanction to what they have done, though they were regarded initially as aggressors, they are now regarded as contributors to the law. Innumerable instances might be cited. One of these is the doctrine of continuous voyage; another the practice of navicerts; another the practice of so-called long-range blockade; and numerous others.

International law, then, like our municipal law, grows in three ways. International law grows (1) by treaties and conventions, (2) by decisions of prize courts and of arbitrators of international disputes, and (3) by usage. The three ways in which municipal law grows are: statutes, court decisions, and common usage. Between the two, then, there is only this difference: International law, being between equals, depends for its enforcement always upon consent; municipal law, imposed by a superior, the sovereign, upon subjects, rests upon the authority of the state. But, after all, public opinion in the long run is the support of both kinds of law, and I think it quite clear that we should not let our minds be troubled, then, as persons of little faith, about the state of international law. Let us, rather, rejoice that the recognition of its sanction is so almost universal that the very ones whose actions indicate, that they condemn, despise, and defy it, are daily acknowledging its binding force by their frantic efforts to excuse and justify their conduct in its name. Let those of us, then, who belong to and would dwell in the house of international law be not of troubled hearts and minds. Let us, rather, rejoice that the decent respect for the opinion of mankind is still the dominant sanction in bringing about decent and fair conduct in the intercourse and relations of civilized nations, as well as of civilized men. And let us particularly rejoice that in our case, when this present war came to Europe, we had leadership wise and strong enough to point us to, and the character to make, the great renunciation embodied in our present neutral policy, in order to testify to the

faith that is in us, that war is never a real solution, and that our professions of good neighborliness are more than professions. I sincerely believe that a milestone was set up and a turning point was made in world history, when, instead of taking sides as a nation or putting ourselves in a position where we must eventually take sides as a nation in the war in Europe, we determined to keep our seafaring nationals out of the sea war zone and thus remain neutral. I believe, too, that the American position as embodied in the recent neutrality legislation and proclamation was the result of leadership and statesmanship of the highest order. And I further believe that when history comes in the fullness of time to appraise the place of President Roosevelt among our Presidents, whatever that verdict may be as to his domestic policies, on which there is now some division, his part, and it was and will be a great one, in shaping into law and action our new neutrality, will be reckoned as a contribution both to Americanism and to world peace worthy to stand beside the greatest contributions of his predecessors. For it will mark him not only as a great and worthy successor to them, but as, in his own right, a great American.

### Independent Offices Appropriation Bill

#### EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. WIGGLESWORTH. Mr. Speaker, I take this opportunity to express my appreciation to the majority members of the committee in charge of this bill, and particularly to the able and distinguished chairman of the committee, the gentleman from Virginia [Mr. WOODRUM], for their consideration of the minority members in connection with the hearings of this bill. I also desire to express my thanks to the clerk of the committee, Mr. Duvall, who has rendered invaluable service to the committee.

The bill under consideration, Mr. Speaker, carries a total of \$1,100,212,307 in addition to permanent and indefinite appropriations amounting to \$279,027,166. As received from the Budget, the regular items exceeded comparable items for the present fiscal year by nearly \$79,000,000. As recommended by your committee, they reflect a decrease amounting to over \$16,000,000 or a reduction over Budget estimates approaching \$95,000,000.

Reduction is reflected for the most part in the sums recommended for a few of the larger agencies. Twenty-two of the forty-one agencies in the bill will receive the same or greater appropriation than that for the current fiscal year.

Increases will be found in the sums recommended for the following agencies:

- Executive Mansion and Grounds.
- Bureau of the Budget.
- Civil Aeronautics Authority.
- Civil Service Commission.
- Council for Personnel Administration.
- District of Columbia Alley Dwelling Authority.
- Federal Communications Commission.
- Electric Home and Farm Authority of the Federal Loan Administration.
- Export-Import Bank of the Federal Loan Administration.
- United States Housing Authority of the Federal Works Administration.
- Interstate Commerce Commission.
- National Advisory Committee for Aeronautics.
- National Archives.
- Tennessee Valley Authority.
- United States Maritime Commission.
- Veterans' Administration.

Permanent and indefinite appropriations reflect an increase of \$12,169,591.

The following 12 items recommended by the Budget for inclusion in this bill did not appear, for one reason or another, in the bill for the current fiscal year:

- Bureau of the Budget.
- National Resources Planning Board.

- Office of Government Reports (formerly National Emergency Council).

- Council for Personnel Administration.

- Federal Communications Commission.

- Federal Loan Administrator and staff.

- Electric Home and Farm Authority, Export-Import Bank (Federal Loan Agency).

- Federal Works Administrator and staff.

- Public Buildings Administration, Public Roads Administration, United States Housing Authority (Federal Works Agency).

The following eight items included in the bill for the current fiscal year have been transferred for consideration in connection with other appropriation bills:

- Civilian Conservation Corps.

- Employees' Compensation Commission.

- National Labor Relations Board.

- National Mediation Board.

- Railroad Retirement Board.

- Social Security Board.

- Mount Rushmore National Memorial Commission.

- Rural Electrification Administration.

The result is a net increase of 4 agencies or a total of 41 agencies included in the present bill.

#### THE BUDGET AND GOVERNMENT CORPORATIONS

January, Mr. Speaker, is always the season, under the New Deal, for optimistic Budget estimates from the White House. What is a possible error in estimate of \$2,000,000,000 or so months in advance of the facts?

The recent Budget message in obligingly painting a deficit for the fiscal year 1941 reduced to \$1,716,000,000 is at least encouraging as indicating a realization by the President of the growing and insistent demand that extravagance and waste be ended and that the fiscal policies of the Federal Government be restored to a sane and rational basis. Nevertheless we should be blind to realities if we did not take note of the very convenient assumptions adopted by the President in arriving at the reduced figure.

The President assumes a reduction in expenditure of \$675,000,000. He assumes an increase in receipts of \$332,000,000. He assumes the imposition of new taxes in an election year to the tune of \$460,000,000. He assumes the existence of trust funds sufficient to take care of insurance benefits to the aged and unemployed. None of these, of course, will be expended for other purposes. He assumes also the recapture from Government corporations of capital funds to the extent of \$700,000,000, a recapture which he assumes to be "feasible without in any way impeding operations." He does not specify the corporations or the amount to be recaptured from any corporation.

I think it is interesting to note in the latter connection the conditions confronting the Home Owners' Loan Corporation, one of the larger Government corporations. The record indicates that the H. O. L. C. has a deficit of \$64,000,000 over and above reserves against losses of \$76,000,000, a deficit increasing at a rate of a million and a half dollars a month. It also indicates defaults in respect to principal and interest payments amounting to about \$91,000,000. What is more it indicates that the H. O. L. C. owns some 81,000 properties which it carries at a book value of \$480,000,000, which in reality have an estimated market value of only \$360,000,000. The figures give some idea of the enormous loss which is possible as a result of H. O. L. C. operations.

I think it would be interesting to consider the condition of the other Government corporations referred to and their so-called recoverable assets.

I think the entire picture presented by these corporations calls for thoroughgoing analysis with particular emphasis on the existing authority to issue obligations guaranteed by the Federal Government. It has been recently stated that the authority of these corporations to issue guaranteed obligations amounts to some \$17,000,000,000. Obviously proper control over Government expenditure and Government debt as a

whole cannot be achieved if the financial operations of these corporations are not closely scrutinized.

#### REORGANIZATION

This bill presents the first opportunity to consider the results, if any, of reorganization by the President under the authority accorded by Congress. The purpose of reorganization, as we know, was, among other things, to reduce expenditure and to reduce the number of Government agencies. An estimate of a saving of \$20,000,000 annually was made by the President.

There is little or no evidence, insofar as this bill is concerned, of any reduction in expenditure or reduction in the number of Government agencies as a result of the steps which the President has taken. On the contrary, it may be urged that the number of agencies, insofar as this bill is concerned, has been increased. Moreover, while it is true that a reduction in expenditure for personnel is reflected in the liquidation of H. O. L. C. and reduced emergency public-works programs, it is also true that figures for the Government as a whole show an increase in expenditure for personnel rather than a decrease.

Figures furnished by the Civil Service Committee give the following totals for civil employees of the Federal Government:

Dec. 31, 1932	568,345
Apr. 30, 1939	886,000
June 30, 1939	925,260
Oct. 30, 1939	937,357

In other words, they show an increase of 12,000 as compared with June 30 last, an increase of 51,000 as compared with April 30 last, and an increase of 370,000 as compared with December 31, 1932, the totals being in addition to those on the legislative, judicial, Army, Navy, District of Columbia, and C. C. C. rolls.

It is not only clear that reorganization has failed to date to reduce total expenditure for personnel or to reduce the number of agencies insofar as this bill is concerned. It is equally clear that provision has been recommended by the President in this bill for several agencies for which no authority has been given by Congress either under the terms of the Reorganization Act or any other existing law. Appropriations are, of course, not in order for these agencies.

#### PERSONNEL ADMINISTRATION

On June 24, 1938, Mr. Speaker, an Executive order was issued proposing the creation of a widespread organization of personnel supervision and management in the departments and agencies as well as a council for personnel administration advisory to the President and the Civil Service Commission in this connection. Various agencies were said to be opposed to the proposal. I quote from the testimony on behalf of one of these agencies appearing before your committee at the time:

We have asked to be relieved of setting up an organization of this kind because we do not think it is necessary. \* \* \* We think our present plan is adequate. \* \* \* We have an organization which is far less expensive and which we think is handling the work satisfactorily.

The original plan as presented to the Budget last year called for an annual expenditure of about \$1,000,000. As it reached the Congress from the Budget it called for an annual expenditure of half that sum. The matter was carefully considered by your committee and by the Congress as a whole, both Houses declining to make available the funds necessary for the proposal.

Subsequently, on August 7, 1939, a memorandum was apparently sent on behalf of the chairman of the Council for Personnel Administration to the various directors of personnel recommending, and I quote—

At the request of the President and with his approval, that departments and agencies maintain directors of personnel and proceed to carry out such activities contemplated in the order of June 24, 1938, as can be financed through regular appropriations.

Whether with or without authority I am advised that various departments or agencies have acted accordingly and

today Congress is again confronted by a request for an annual expenditure for this purpose amounting at the outset to a half or three-quarters of a million dollars and ultimately, no doubt, to a figure far in excess of that amount.

Your committee has recommended in this bill an appropriation of \$25,040 for staff and expenses for the Council for Personnel Administration.

I am personally opposed to this recommendation at this time. I am opposed to it because I believe that any essential work can be done by periodic meetings of those in charge of personnel with the aid of a small staff detailed as in the past from their respective organizations. I see no adequate reason for a permanent staff with funds for consultants for travel, and so on, reflected, for example, in the attendance by some 17 representatives, if I am correctly informed, at a civil-service meeting in San Francisco last summer.

I am also opposed to the recommendation of additional funds to the departments and agencies concerned at this time. Whatever the merit of the general proposal, it has not, in my judgment, been shown to be sufficiently compelling to justify the annual expenditure involved under present budgetary conditions.

#### PROPAGANDA

For several years I have endeavored to stress in connection with this bill the enormous expenditure for propaganda purposes by the departments and agencies of the Federal Government. That expenditure continues and, in my judgment, constitutes in many instances an inexcusable waste of the people's money. I am told, for example, that the Department of Agriculture has requested a sum approaching \$2,000,000 for so-called informational purposes in 1941. Examples of heavy expenditure in this connection will also be found in this bill.

Attention is called to the testimony of the Federal Housing Administration beginning at page 1094 of the hearings. The sum requested for the fiscal year 1941 for the work of its Public Relations Division, the work of its Division of Education, and the work of its Field Public Relations appears to amount to \$228,400. If you will turn to page 1140 of the hearings, you will note the character of this work during the past fiscal year. It included almost 49,000 broadcasts of one kind or another. It included some 4,600 moving-picture showings. It included some 17,000 exhibits of one kind or another in addition to press releases, magazine articles, and other publications.

The United States Housing Authority requests some \$145,000 for this purpose. Its Information or Publicity Division is broken up into six subdivisions and is reflected also in radio, moving pictures, exhibits, press releases, magazine articles, and so forth.

The Tennessee Valley Authority requests for this purpose the sum of \$165,000, a decrease of only \$2,000, as compared with the current fiscal year.

These are but examples.

An attempt was made by Congress last June, under the so-called O'Mahoney amendment, to check the enormous outflow of publicity and propaganda under the official frank, limiting it largely to bona fide responses to specific requests. What happened? The degree of cooperation received from the departments and agencies is reflected in the following letters—one from the Tennessee Valley Authority, one from the United States Housing Authority, one from the National Youth Administration—presumably typical of other letters from other departments and agencies, which I insert in the RECORD at this point.

## 349

No recommendation is available as to the imposition of a license tax upon those making tremendous earnings out of

free Government franchises; in the matter of exclusive control of the time of affiliates; in the matter of nonresident control of stations; in the matter of newspaper ownership; in other important matters.

We are still confronted by the threat of censorship. A year ago complaint was made against the regulation imposed upon licensees for international broadcasting limiting broadcasts to those "reflecting the culture of the country and promoting international good will, understanding, and cooperation." That regulation was withdrawn under pressure of public opinion. Today, however, we are confronted by the code of the National Association of Broadcasters, apparently having the implied blessing of the Commission, as a result of which it is impossible to discuss any controversial issue on the air in time purchased for the purpose. Discussion is possible only on free time and the use of free time is of course in the absolute control and discretion of the broadcasting station. The danger of abuse of this discretion, in the hands of broadcasting stations, is self-evident.

No further protection is suggested for the investor. In the light of alleged financial condition and operations of certain radio licenses it would seem, either through F. C. C. or S. E. C., that better protection should be afforded the public relying on Federal authorization to operate and issue securities.

The Commission still adheres to its action of a year ago whereby its Board of Examiners was abolished, petitioners being denied the right to a finding by an impartial civil-service examiner and being turned over to the tender mercies of the General Counsel's office acting in the role of prosecutor, jury, and judge.

Attention is invited to the discussion of the action of the Commission in respect to the granting of licenses to the Greater New York Broadcasting Corporation and to the Cumberland Broadcasting Co. I anticipate that both of these matters will call for further comment at a later date.

#### PUBLIC WORKS ADMINISTRATION—FEDERAL WORKS AGENCY

The testimony of the Public Works Administration will be found at page 1412 of the hearings. The amount recommended from 1938 unexpended funds, \$3,610,000, compares with a similar appropriation for the current fiscal year of \$20,000,000. The amount recommended is simply to complete the existing program in the fiscal year 1941, 43 Federal projects and 310 non-Federal projects being as yet uncompleted. No further program has been authorized by the Congress.

Attention is called to page 1423 of the hearings to what purports to be a "statement of defaults," indicating that of bonds having a total par value of \$557,237,000 purchased by P. W. A. as part of its loan and grant program, not including railroad bonds, some 325 issues having a total par value of \$42,849,000 are now in default. This, according to P. W. A., amounts to about 10 percent of the total number of loans, 7.69 percent of their total par value.

The record includes a statement for each of the issues in default including the amount of the issue, the amount now held by P. W. A. or R. F. C., the date of maturity, the amount of principal and interest in default and an explanation of the default. The statement, about 30 pages in length, beginning at page 1442 of the hearings, contains no totals or summary. As a matter of fact, however, it appears that the total par value of bonds in default should read \$51,029,068, not \$42,849,500. It also appears that the number of issues in default should read 349, not 325.

The following analysis of these issues may be of interest. The issues have been divided into several groups according to the official explanation of existing defaults.

Group I includes 83 issues, with a total par value of almost \$13,000,000. All but 12 issues, totaling a million dollars, or thereabouts, have been unloaded on R. F. C. Despite the millions of dollars spent to assure proper engineering work for P. W. A., it would appear that all these defaults can fairly be charged to poor engineering. P. W. A. offers the following explanations:

Failure of reservoir; abandoned due to inability to obtain water; unsatisfactory water supply; faulty construction; operating difficulties; delay in completion; poor quality of water; abnormal repair

expense; extraordinary repairs; flood damage after completion; extraordinary repairs due to flood; delay in completion and subsequent flood damage.

Group II includes 41 issues, with a total par value approaching \$2,000,000. Default in this class can apparently be explained by lack of efficient management. All but one issue, having a par value of \$97,000, have been unloaded on R. F. C. P. W. A. offers the following explanations:

City refuses to accept project; failure of officials to cooperate; poor management; part of revenues used for extension; difficulty in enforcing connections and collections; dissatisfaction with sewer rental charges; delay in completion and failure to improve connecting roads; apparently has neglected to make remittance; temporary delay in transmittal of funds; failure to enforce sanitary regulations; no effort on part of borrower to meet obligation; no reason given.

Group III includes 140 issues with a total par value of more than \$9,000,000. These appear to be in default as a result of poor collection of taxes and other income. Why the possibilities of revenue could not have been more accurately estimated is not apparent. All but two of these issues, of a par value of \$2,000,000, or thereabouts, have been unloaded on R. F. C. P. W. A. offers the following explanations:

Insufficient revenues; system in receivership; slow tax collections; high operating expenses; failure to collect assessments; failure to levy taxes; tax collections diverted to pay overrun in construction cost; inability to collect accounts partly due to drought conditions.

Group IV includes 46 issues, with a total par value of some \$20,000,000. All but 4 issues have been unloaded on R. F. C. It has apparently been impossible to unload 4 big issues, of a par value of about \$18,000,000, for projects unable to meet their operating expenses. P. W. A. offers the following explanations:

Slow development; bonds matured before earnings developed; project in development stage; system too costly for town of this size; decline in community since loan was made; slow development due to litigation.

P. W. A. might well have added: "These loans, or some of them, were made in spite of adverse engineer's reports, with a view to advancing the political interests of the New Deal and its favored beneficiaries."

Group V includes about 20 issues, with a total par value of about \$800,000. The issues consist for the most part of loans to municipal gas plants and public markets. Proper advance survey of available markets should have served, it would seem, to eliminate these defaults.

Group VI includes some 19 issues, of a total par value of \$6,000,000, or thereabouts, in respect to which existing defaults could probably not have been eliminated by good management.

Two hundred and twenty-three of the three hundred and forty-nine defaults are apparently in respect to issues covering local waterworks systems.

Defaults in respect to other projects appear for issues having a total par value of about \$22,000,000. Outstanding in this classification are the four famous projects in Nebraska having bond issues with a total par value of some \$19,000,000, projects apparently without sufficient demand for the power which they hope to develop, projects apparently without sufficient water to generate that power, projects which we have discussed in detail in the past and which continue in the category of P. W. A. failures.

It has been understood that the Nebraska Democratic National Committeeman, acting as counsel, obtained the loans and grants for these projects. It has also been understood that P. W. A.'s own engineers turned them down in the first instance. Pressure from a member of another body is supposed to have induced P. W. A. to sponsor these projects as well as a fifth project, probably costing as much as the other four put together, soon to enter the competitive market by their side. The Nebraska picture seems to afford a striking example of inefficiency and waste for political purposes.

#### SECURITIES AND EXCHANGE COMMISSION

The testimony of the Commission will be found on page 384 of the hearings. The amount recommended of \$5,400,000

is a decrease of \$70,000 as compared with this year's appropriation despite a substantial increase in work.

The record emphasizes the continued stagnation of capital under present conditions. New financing in 1938 amounted to about \$1,800,000,000; new financing in 1928 and 1929 amounted to about \$8,000,000,000. Fifty-seven and four-tenths percent of all issues in the fiscal year 1939 are shown to have been for the purpose of refunding existing indebtedness.

Attention is also invited to the statement by the Chairman of the Commission indicating that the Commission has at last begun to realize the enormous burden in time and money imposed on those subject to its jurisdiction, particularly on small concerns under requirements of the Commission heretofore in force, and that it is taking steps in the direction of simplification and the elimination of duplication.

The recent action attributed by the press to the Commission of denying the issue of bonds by the Consumers Power Co., on the ground that a stock issue would be preferable, would seem to indicate the assumption of authority by the Commission never contemplated by Congress.

#### TARIFF COMMISSION

The testimony of the Commission will be found on page 447 of the hearings. The amount recommended, \$920,000, reflects a decrease of \$7,000 as compared with the appropriation for the current fiscal year. The Commission also expects to be denied a transfer of \$28,000 received from the State Department in the present fiscal year.

The work of the Commission as outlined in the record raises again the question of the value of its services under present conditions.

The work of the Commission is supposed to include that under five sections of the Tariff Act. During the past year there has been no Commission action under section 336—flexible clause—of the act. There has been no Commission action under section 337—unfair practices—of the act. There has been no Commission action under section 338—discrimination—of the act.

The Commission is unable to allocate its appropriations or requested appropriations for 1939, 1940, or 1941 as between the five sections of the act.

Attention is called to the statement on page 481 of the hearings concerning exchange restrictions, trade by clearing, quota systems, export bounties, and subsidies. I quote from this statement as follows:

There are at present only five European countries which do not have exchange restrictions.

Every European country (and others specified) have clearing or payment agreements or combinations of the two.

Many countries referred to have quota systems.

Most countries undoubtedly give aid, directly or indirectly, to production or exportation of many products. It is difficult to state how far aids to production are to be considered export bounties. \* \* \* It would take considerable time to compile a reasonably accurate list.

Under our present trade-agreement policy provision is made for revision of trade agreements in the event of restrictions on the entry of American-made goods or substantial reduction in the world value of the currency of other nations. No recommendation for revision has been made despite the statements referred to.

A list of trade agreements in force as of December 15 last, with the methods of termination, will be found at page 484 of the hearings. Tables appearing at pages 499, 500, and 503 indicate that no less than 985 rates have been slashed as a result of existing trade agreements, that 59 rates have been bound against increase, and that of the 985 rate slashes, 397 were from 41 to 50 percent and 241 were from 31 to 40 percent.

The Commission is unable to estimate the reduction in importations which would result if American wage and hour standards were used as a base.

#### TENNESSEE VALLEY AUTHORITY

The testimony of T. V. A. will be found at page 1607 of the hearings. The amount recommended includes an appropriation of \$40,000,000, together with bond proceeds to the extent of \$3,300,000, as compared with an appropriation of

\$39,300,000 and the proceeds of bond issues to the extent of \$61,000,000 for the current fiscal year. Of the latter figure, some fifty-two and a half million dollars was attributable to the provision for the acquisition of private utility companies operating in the Tennessee Valley area.

The amount requested covers the present program of 10 principal dams and 5 smaller ones acquired by purchase, the program of substations and transmission lines, the fertilizer program, a national-defense item, and programs of so-called related property operations and related development activities.

Leaving aside for the moment the purchase of the private utility companies, a comparison between amounts requested for the fiscal year 1941 with those made available for the current fiscal year would appear to be substantially as follows:

	1941	1940	Difference
Dams, etc.....	\$36,669,000	\$31,018,000	+\$5,600,000
Transmission lines, etc.....	4,300,000	6,900,000	-2,600,000
Fertilizer.....	3,707,000	3,474,000	+233,000
National defense.....	65,000	71,000	-6,000
Related property operations.....	1,049,000	897,000	+152,000
Related development activities.....	1,395,000	1,421,000	-26,000

Or a total increase of about \$3,350,000.

The item requested for dams, and so forth, amounting to \$36,669,000 may be broken down roughly as follows:

Kentucky Dam (formerly Gilbertsville Dam).....	\$15,400,000
Watts Bar Dam.....	14,400,000
Coulter Shoals Dam (initial payment).....	1,000,000
Other dams.....	5,000,000

I am opposed to the allowance of this item. I believe that it should be materially reduced. I call attention particularly in this connection to the following items of expenditure contemplated in the pending request:

Coulter Shoals Dam (initial payment).....	\$1,000,000
Miscellaneous items:	
A possible court award at Hiwassee Dam.....	200,000
River-transportation studies.....	73,000
Job training (total, \$578,955).....	69,866
Related property operations:	
Unassigned to specific areas.....	101,000
Recreational facilities (total, \$206,432).....	38,000
Fish and game readjustment investigations.....	65,000
Related development activities:	
Mapping in cooperation with Geological Survey.....	273,000
Tree planting and erosion control on private lands.....	127,000
Tree and tree crop research.....	37,000
Development of mineral resources.....	70,000
Study and development of processing and marketing cooperatives.....	20,000
Research on processing methods and equipment.....	90,000
Rural-electrification developments.....	45,000
Development of farm equipment.....	41,000
General activities for development of valley.....	130,000

Giving a total of about \$2,400,000.

Attention is also called to the break-down of the final item for general activities for development of the valley appearing on pages 60 and 61 of the Authority's justifications. From this break-down it appears that the sum is requested, among other things—

First—

To determine the part which different operations play in supporting the people.

Second—

To record changes in the supporting capacity or relative importance of different income sources.

Third—

To disclose instances of weakness or unbalance in the regional economy.

Fourth—

To indicate economic fields which appear to warrant special study.

Fifth—

To indicate localities in which new livelihood sources are needed to balance the local economy.

Sixth—

To complete a study of problems of urban communities which may assist in devising means of directing new urban growth along desirable lines.

### Seventh. To conduct—

A survey of the organization and administration of local governments in the Tennessee Valley region—

### Including—

General reports on existing governmental practices \* \* \* reports on problems of county government and administration—

### And—

A report on the use of contracts as an administrative device to cover joint activities of different governmental units.

Incidentally, the record shows that the General Accounting Office has failed to date to allow some 6,786 items of expenditure of T. V. A. amounting to well over \$6,000,000.

I am opposed to the item of \$1,000,000 for starting the construction of the Coulter Shoals Dam, because it involves a commitment of \$28,500,000 and because there seems to me no compelling reason under existing conditions for assuming that commitment now, either from a navigation, flood-control, or power standpoint. Total traffic on the river is only about a million and a half tons. The dam is said to be very expensive from both flood-control and power standpoints. Available power now and for several years to come exceeds estimated demand.

The record indicates in this connection a production capacity under present conditions of some 453,000,000 kilowatt-hours per month, as compared with sales of about 350,000,000. It also indicates an estimated firm and secondary demand as late as 1944 of only 800,000 kilowatts, as compared with an estimated dependable capacity at the same time of 890,000 kilowatts.

I am opposed in large measure to other items listed above. If T. V. A. has not exceeded its authority in embarking upon them, they certainly exceed, in my judgment, any reasonable definition of T. V. A. activities.

The general characteristics of T. V. A. are well known to us all. It is unnecessary to repeat them here. It has called for a tremendous expenditure of money amounting as of June 30, 1941, if all sources be included, to \$413,741,878—amounting ultimately to something less than \$550,000,000. It has wasted millions of dollars, in my judgment. It has wiped out hundreds of thousands of acres of valuable land. It has eliminated millions of dollars of taxation—Federal, State, and local. It has forced private industry in the T. V. A. area to the wall. It has constituted a threat to private industry generally lest its activities be extended to other parts of the country. Camouflaged as a navigation and flood-control project dealing only in incidental power, we find today an allocation of cost for projects completed in 1939 of 14 percent to flood control, 24 percent to navigation, and 62 percent to power. Power has become the principal function—navigation and flood control incidental. Over and above hydraulic power, we see the entry of T. V. A. into the production of power by steam. Just how this type of power is to be held by the courts to be incidental to navigation and flood control remains to be seen.

The acquisition of the entire distribution market of Tennessee, northern Alabama, northern Mississippi, together with the ownership of dams, steam plants, and transportation systems of private companies formerly serving the area has, of course, completely changed the entire financial picture. If ever T. V. A. was in a position to operate on a self-supporting basis, even from the standpoint of power production alone, it would seem to be now. What does the record show?

Well, T. V. A. goes so far as to claim a net revenue for 1941 amounting to \$7,593,000. How is the figure arrived at? I call your attention to the testimony commencing at page 1820 of the hearings in this connection. What does this show? It indicates clearly that in computing the so-called net revenue no deduction is made for depreciation. No deduction is made for interest on money received from the Federal Treasury. No deduction is made for general taxation. No deduction is made for a fair share of what are listed as common operating expenses. All of these deductions would, of course, be made by any private company before any profit could be shown. Deductions comparable to those which would be made by any

private company under the circumstances would appear to convert the alleged profit of \$7,593,000 into an actual loss of millions of dollars.

As a matter of fact, the record indicates that T. V. A., through the acquisition of private operating companies and the purchase of hundreds of thousands of acres of land, has served to deprive the Federal Treasury of an annual tax income to the extent of about \$1,200,000. It has also served to deprive the treasuries of States, counties, and municipalities in the area to the extent of over three and one-half million dollars. The situation in this respect has become so acute that many counties, school districts, and other bodies are said to be facing default on their bonds at the beginning of the next fiscal year. The cry has been sent up that the Federal Government must reimburse the areas affected in whole or in part for the taxes lost. Legislation is actually pending with this end in view, an eloquent commentary on the total cost and annual operating expenses of T. V. A.

One further table is of interest in respect to the use of T. V. A. power. It shows the class of user, the amount of power used, the rate charged, and the amount received by T. V. A. for the year 1938, apparently the latest available figures:

	Kilowatt-hours	Rate (mills)	Amount
Interdepartmental sales.....	168,350,000	2.9	\$490,699
Industrial users.....	358,675,000	2.6	918,565
Private utilities.....	62,357,000	3.2	196,767
Municipalities and cooperatives.....	97,939,000	5.6	545,600
Rural retail consumers.....	12,661,000	12.2	154,154

Attention is called to the rate charged rural retail consumers as compared for example with the rate charged industrial users or private utilities.

I conclude, Mr. Speaker, with a few brief comments in respect to other agencies provided for in this bill.

#### CIVIL AERONAUTICS AUTHORITY

The testimony of the C. A. A. appears at page 760 of the hearings. The amount recommended, \$27,900,693, reflects an increase compared with the current fiscal year of about \$2,400,000. The principal items of increase are \$2,500,000 for maintenance and operation of air navigation facilities and a million dollars for civilian pilot training. The Authority reports an increase in traffic of 38 percent and a safety record fully three times better than that in the rest of the world—one passenger fatality per 78,369,715 passenger-miles during last 18 months.

Twenty-nine thousand miles of airways are expected to be in operation as of June 30, 1940.

#### CIVIL SERVICE COMMISSION

The testimony of the Commission appears at page 650 of the hearings. The amount requested for salaries and expenses—\$5,295,896—was an increase as compared with expenditure in the current year of about \$1,500,000. It called for an increase in personnel in the department of 33 percent, 465; in the field of 75 percent, 283. It called for \$195,000 for activities in connection with the personnel management program already referred to, and for other large items of increase. The Commission has had a steady increase in its appropriation from \$1,028,000 in 1934 to its present level. It is believed that the cut recommended by your committee is fully justified.

#### FEDERAL HOUSING ADMINISTRATION (FEDERAL LOAN AGENCY)

The testimony of the F. H. A. appears at page 1084 of the hearings. The amount recommended of \$13,300,000 is \$500,000 less than that for the current fiscal year. While there has been a loss to date under title 1 of somewhere between \$3,000,000 and \$11,000,000, depending on prices to be obtained for properties taken over, while there is the possibility of very substantial loss in the future from insurance of mortgages to the extent of 90 percent of the appraised value of the property, F. H. A. believes that its activities in the next fiscal year in all three fields (title 1; title 2, sec. 203; and title 2, sec. 207) will be on a self-supporting basis as a result of premiums paid. Title 1, of course, refers to the repair

or construction of individual homes, in respect to which F. H. A. still permits the bank making the loan to charge a true rate of interest to the extent of 9.72 percent. Title 2, section 203, refers to the work in the field of mortgages on one- to four-family dwellings. Title 2, section 207, refers to work in the field of mortgages on large-scale rental projects.

## FEDERAL POWER COMMISSION

The testimony of the Commission appears at page 117 of the hearings. The amount recommended, \$2,480,500, is a decrease of \$234,500 as compared with the present fiscal year. The amount recommended, however, is \$160,000 in excess of funds available in the fiscal year 1939. It is believed that the action of the Budget in recommending the reduction is fully justified by the record under existing conditions.

Attention is called to the tremendous delay in original cost-determination work, one case, the Conowingo project, having been pending in one form or another for over 14 years.

## NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS

The testimony of the committee will be found on page 310 of the hearings. The amount recommended—\$8,000,000—is an increase of \$3,820,000 as compared with the present fiscal year. It includes new construction at Langley and Moffett Fields and an increase for personnel amounting to about \$400,000. Some 4,600 new planes for the Army and Navy are expected to be put into commission under the present program in the next 2 years.

## NATIONAL ARCHIVES

The testimony of this agency will be found on page 345 of the hearings. The amount recommended, \$920,200, reflects an increase of about \$56,000 over the appropriation of the current fiscal year. Of this amount the sum of \$15,700 is for the initial personnel and other obligations for the administration of the new Memorial Library at Hyde Park, referred to in such glowing terms by the gentleman from Missouri [Mr. SHORT] at the time of its authorization.

## RECONSTRUCTION FINANCE CORPORATION (FEDERAL LOAN AGENCY)

The testimony of the R. F. C. will be found on page 1228 of the hearings. The amount recommended, \$9,250,000, reflects a decrease of \$250,000 as compared with appropriations for the current fiscal year. The Corporation gives the following statement:

Total authorizations (all classes).....	\$10,656,894,293
Disbursed.....	7,663,790,082
Repaid.....	5,774,406,164
Outstanding.....	1,889,383,918

Attention is invited to the statement of Mr. Jones, Federal Loan Administrator, at page 1263 of the hearings in reference to the authority of the R. F. C. to extend loans or credits for the benefit of foreign nations.

Attention is also invited to his explanation of R. F. C. activities in connection with the construction of the new building at Fifteenth and Eye Streets NW., in which, according to Mr. Jones, the R. F. C. "played most of the instruments in the orchestra." However desirable for rental from an R. F. C. standpoint, the transaction, if properly understood, would appear to have assured the present owners of the land of a building worth between five and six million dollars without any substantial cash contribution, together with a guaranteed rental from the RFC Mortgage Co. sufficient to cover interest, amortization, taxes, depreciation, and \$25,000 a year, as well as any other rentals that may be available through lease, for example, of other office or store space in the building.

## SMITHSONIAN INSTITUTION

The testimony of this agency will be found on page 429 of the hearings. Attention is called to the sum carried for the new National Gallery of Art—\$300,000. One hundred million dollars is reflected in the Gallery, \$15,000,000 for construction, \$80,000,000 for paintings, \$5,000,000 for endowment. The Gallery is fortunate in having not only the great collection of former Secretary Mellon, filling some 28 rooms, but, in addition, the Kress collection, recently acquired, which will occupy some 62 rooms. The building will be ready about August 1. The amount recommended for administration pur-

poses compares favorably with expenditures at similar institutions elsewhere.

## UNITED STATES HOUSING AUTHORITY (FEDERAL WORKS AGENCY)

The testimony of the U. S. H. A. will be found on page 1480 of the hearings. The amount recommended for salaries and expenses, \$4,550,000, is an increase of \$50,000 as compared with the current fiscal year. The amount recommended for annual contributions, \$10,000,000, is an increase of \$5,000,000 over the current year.

While F. H. A. hopes to prove self-supporting and functions on the principle of stimulating through insurance both private financing and private construction, U. S. H. A. accomplishes neither result.

Set up ostensibly as an agency to make loans to the extent of 90 percent of large-scale construction projects, it operates in fact so as to place practically the entire burden of the cost of construction of large-scale projects on the Federal Treasury. Under the guise of an annual rent contribution, it in fact provides funds more than sufficient to cover interest and amortization of 90 percent, if not 100 percent, of the total original so-called loan for construction purposes. Uncle Sam makes a loan from one pocket and then provides from the other pocket the money to repay himself at a profit.

Aside from its deceptive financial aspects the record again raises the question if those who need better housing most are in fact being reached by this activity. A classification of tenants by income would seem to indicate that the projects are occupied in large measure by those who are not most in need.

The record also indicates that no return is being received by the Government from 52 P. W. A. projects turned over some time ago to U. S. H. A.

Present operations under U. S. H. A. are not encouraging from the standpoint of those who desire to bring about better housing conditions for those who need them on a sound basis.

## UNITED STATES MARITIME COMMISSION

The testimony of the Commission will be found on page 507 of the hearings. The amount recommended, \$125,000,000, is an increase of \$25,000,000 over the amount provided for the current fiscal year. The present program of merchant-ship construction calls for 500 ships over a period of 10 years at a cost of about a billion and a quarter dollars. The increase provided will permit some acceleration in this program, though not to the extent recommended by the Commission. Acceleration is suggested by the need of additional auxiliary ships in the event that this country becomes involved in war; by the possibility of additional opportunities for merchant-marine routes as a result of the destruction or withdrawal for war purposes of the merchant shipping of other countries, in the event that we do not become involved in war; and by the possibility that construction costs will be higher in the near future than at present. The action of the committee does not, of course, affect the completion of the construction program as a whole. It contemplates completion of the entire program in somewhat less than the 10-year period originally provided.

The record indicates that about 80 ships have been laid up as a result of the neutrality law. Of these about 30 have been placed upon new routes.

Attention is called to the fact that in the 13 months ending November 30, 1939, the Commission approved for transfer to foreign ownership and registry no less than 117 vessels, representing a total of about 390,000 gross tons. A large number of these transfers were approved after the outbreak of war in Europe. The much-discussed transfer of ships of the United States Lines is not included in the list because Admiral Land informs us "the order was never approved with finality."

## VETERANS' ADMINISTRATION

The testimony of the Veterans' Administration will be found on page 492 of the hearings. The amount recommended, \$580,180,544, is an apparent increase of \$19,087,544 as compared with the current fiscal year. In reality it is an

increase ex-new construction of \$5,428,240 by reason of a deficiency item of \$13,659,304 for pensions during the current year, or \$3,578,240 if new construction be included.

With few exceptions, the entire increase is due to increased hospitalization and domiciliary beds, to placing personnel on an 8-hour-day basis, and to increased compensation under five acts recently enacted by Congress.

The record indicates an increase in hospital and domiciliary beds from 71,000 to 83,000 by June 30, 1941. It also indicates that State soldiers' homes will receive as from July 1, 1940, \$240 a year for both domiciliary care and hospitalization, provided that figure is not more than half of the cost of maintaining veterans in the home.

The record also indicates that placement committees in cooperation with the service organizations of the Nation have succeeded in finding employment for some 60,000 veterans.

Detailed statements of all payments for the care and benefit of all veterans of all wars will be found in the tables submitted by General Hines and embodied in the hearings.

### Ohio Society of New York

#### EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

ADDRESS BY HON. JOHN W. BRICKER

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. John W. Bricker, Governor of Ohio, before the Ohio Society of New York, New York City, December 16, 1939:

I doubly appreciate this opportunity to meet with you tonight, because it affords me the high privilege of assuring you all that Ohio is still there.

We have not been taken over by the White House or the Department of the Interior.

It will be my official duty, in the course of these brief remarks tonight, to correct these critics of Ohio with facts from the official records of Ohio.

The end of the first year of my administration as Governor approaches. I am glad to report to you on the achievements of the year and conditions as they exist in Ohio today.

The Ohio Society of New York is proud of Ohio, and I am justly proud of the State, its people, and its government. As long as I am Governor I shall fight any maligners and those who, by falsehood, innuendo, and propaganda, would detract from her fine name.

When I took office last January there was a deficit of over \$40,000,000. I know that is petty cash as deficits go in Washington, but it is the biggest one Ohio ever had.

Faced with that financial picture, and bound by platform pledges to provide adequate relief, balance the budget, and impose no new taxes, the legislature met and the new administration was inaugurated. I consider platform pledges and campaign promises binding obligations, and those promises and pledges are being kept.

During this year, Ohio will meet the increased needs of an expanded educational, health, and welfare program to the extent of over \$8,000,000 more than was spent last year, and at the same time will reduce the deficit by more than \$8,000,000. Every obligation of the State incurred this year has been paid promptly when due. We have changed Ohio from a deficit State to a pay-as-you-go State.

The tax department of the State has been completely reorganized, and taxes are being efficiently collected. This has meant increased revenues to the State, but the increased income, estimated and actually received, alone has not been sufficient to take care of the expanded needs. To balance the State's budget, to make a substantial payment on our inherited deficit, to meet increased welfare needs, and to keep the State's fiscal position sound, we have cut the operating costs of the State departments.

Out of an annual budget of a little over \$150,000,000, 60 percent is distributed to the local subdivisions of government such as cities, counties, townships, and school districts. Only 40 percent is used to operate the State departments. Forty-eight and one-half million dollars annually goes to the local public school systems in the State; \$12,000,000 annually is paid to the local subdivisions of government for local needs; \$10,000,000 a year is appropriated for direct relief to be spent locally. Out of the total appropriation, exclusive of specially earmarked revenues, the State has for the

operating costs of the State departments through the general revenue fund approximately \$39,000,000 annually.

This year the State pay roll and office maintenance costs of all State departments will be nearly \$10,000,000 less than last year. Through these savings Ohio has met all the requirements of government, has been able to make increased contributions for education, relief, and old-age pensions—and that without one cent of new taxes or any increase of existing taxes.

I come now to the subject of relief. Because of propaganda, false statements, and political interference from the outside, a great deal of attention has been directed to Ohio relief in the past few weeks. At the beginning of this year we improved the system of administering relief in Ohio and provided for the distribution of funds granted by the State upon a basis of need rather than geography. Many counties in Ohio have practically no relief problem. Under the preceding administration they had been receiving relief grants from the State to the detriment of those communities that did need the funds. A complete investigation was made by the legislature, extensive hearings were held, and based upon past experiences and anticipated needs, the legislature appropriated \$10,000,000 for each year of the biennium to be distributed directly to local governments for relief.

As a part of Ohio's relief program, the legislature reduced the quota required this year on relief levies in cities from 65 percent to 50 percent. It also authorized the use of 25 percent of the local government's auto-license tax fund for the purpose of relief. It also eliminated restrictions on the use of certain local revenues and thus made them available for relief purposes. Thus the legislature greatly enlarged the potential resources of local communities available for relief.

Let it be understood by all that the responsibility for work relief has been assumed and is now controlled by the Federal Government, operating largely through W. P. A. Even in that program, controlled and administered by the Federal Government, local communities are required to contribute. During the past year W. P. A. employment in Ohio has been cut by Washington 53.6 percent, while the average reduction for the whole United States for the same period was only 43.9 percent. That discrepancy is not justified by any consideration of relief needs. That picture would indicate that Ohio is being punished. Why? Is it because Ohio voted Republican last year?

That, however, is not the most sordid aspect of the political manipulation of W. P. A. by Washington. In Cleveland in October of 1938, a congressional election year, during the month immediately preceding election day, there were 74,225 on W. P. A. A year later there were less than 30,000 on W. P. A. in Cleveland, a cut of over 60 percent. The biggest cut in Ohio W. P. A. employment was in Cleveland, the very place where relief needs are greatest. The State has recognized this fact and has distributed this year 35 percent of the State's total relief appropriation to Cleveland's county, although that county contains only about 18 percent of Ohio's population.

Throughout all these months, by resolution and by visits of the mayor of Cleveland to the national administration, requests were made, demands were sent, that this discrimination by W. P. A. against Cleveland must cease. As this process of punishing Cleveland continued after the election last year, the State relief rolls in Cleveland steadily increased. They increased from 15,744 cases in October 1938 to 28,060 cases in October 1939. Keep ever in mind that W. P. A. is the Federal program and direct relief is carried at the cost of the State and local communities.

In addition to this discrimination against Ohio, and particularly Cleveland, there was another unfair and, I think, premeditated action on the part of the Federal Work Projects Administration. In Cleveland and elsewhere in Ohio others than employable relief clients were placed on the W. P. A. rolls, although the Federal law requires that preference shall be determined on a basis of relative need.

You have probably all read the President's statement at his press conference last week in which he said that substantially all of Cleveland's employables who were willing to work were being taken care of under W. P. A. programs.

Here are the facts: Out of a total of 25,000 persons employed by W. P. A. the first 10 months of this year in Cleveland, only 9,454 persons were employed from the active relief rolls—only a little over one-third.

In October alone this year, out of 28,000 on the direct relief rolls in Cleveland, there were 6,800 employable persons certified for W. P. A., but not employed by W. P. A. These are the figures, and these are the bald facts of the employment on W. P. A. of those not in need of relief, while thousands of employables are on relief and must remain on relief.

When the State welfare director initiated a program to remedy this situation in W. P. A. at Cleveland and insisted that employable relief cases should be given preference in W. P. A. employment—and that political patronage must cease—the promise was made that these things would be done.

I hope those promises will be kept.

Upon the insistent demands of the State administration, upon the revelation of discriminatory treatment which Cleveland and Ohio have received, the Federal Government seemed suddenly to realize the vulnerability of its position. So after the State has made available in cash approximately \$450,000 additional for Cleveland, and after the city had its proceedings under way for the issuance of over a million dollars of relief bonds, as suggested by

the State administration, then, with a flourish of sensationalism, in rushed the Federal Government with carloads of food and allotments of W. P. A. funds, which should have been available months ago.

Ohio this year has increased her appropriation for general welfare and public assistance out of State and local funds. Ohio and Cleveland have taken care of their people, but the Federal Government has failed miserably in Ohio. There are only two answers to be given for this discrimination. It was either a deliberate attempt to cut the W. P. A. employment in Ohio unfairly as a punishment for not voting right last year, or as an embarrassment to a republican administration. Possibly it was for the purpose of creating such a situation that the Federal administration, with a demagogic gesture of rushing to the rescue, could take credit where blame was due.

The people of America must awaken to a realization of how far this Federal administration will go in playing politics with human misery and relief—how far it will go in its attempt to smear the good name of a State or an administration which dares to do a good job financially as well as in social service.

The issue is clear cut: Shall relief, including work relief, W. P. A., or whatever it may be called, be administered honestly, fairly, with due regard to the needs of the people, or shall it be administered as a political racket—padding the W. P. A. rolls in election years and forgetting the needs in nonelection years, carrying the burden so the Federal Government can take credit when a national election is on, and passing the buck back to the States and local communities in the other years? This is a question which the American people must answer, and in it is involved a fundamental question of public morals. Let me quote from a great President, Woodrow Wilson. In his work on constitutional government he said:

"Nothing in a system like ours can be constitutional which is immoral or which touches the good faith of those who have sworn to obey the fundamental law. The reprobation of all good men will always overwhelm such influences with shame and failure."

That quotation, friends of Ohio, is from the last Democratic President of the United States.

There have been attacks made on Ohio and on me personally. Most new dealers have contempt for any Government authority or public official who does balance a budget, who does administer relief honestly, who does save public money, or who shows any interest whatever in the taxpayer. No; it is the political discrimination of the national administration against Ohio—obviously for the purpose of discrediting a State administration—that caused the trouble.

This is the story of Federal relief for 7 years. First it was C. W. A., next it was F. E. R. A., then it was P. W. A., and finally it was W. P. A. At every change the States were supposed to alter their programs to conform to the most recent experiment out of Washington. In those transitions the needy suffered unnecessarily.

The Nation is confronted, therefore, with a demand for a constructive and stable national program of public assistance. The system of Federal control and domination in each relief area of the United States should be reformed. Work-relief programs in the various States should be administered locally, and financed by local, State, and Federal participation, with the assistance of Federal grants in the same manner as prevails in all other public-assistance programs.

This principle has the endorsement of the Committee on Mobilization for Human Needs, the National Association of Community Chests, and a great majority of the welfare administrators in the various States. The President has rejected this program for work relief, although the same principle of Federal grants is applied to the other forms of public assistance, such as aid for the aged, aid to dependent children, and aid to the blind. It seems significant to me that the program which involves the largest expenditure of Federal moneys and which directly applies to the largest number of voters is operated under a system and on a principle entirely contrary to the other Federal programs.

The spiritual heritage of Ohio is rich, and the moral precepts of our people are sound. I shall always defend that heritage from attack from within or from without. I do not propose to be clubbed into a position of fear or silence in the conduct of affairs in the State of Ohio, when the very foundations of public morality, political decency, simple honesty, and fundamental human integrity are being eaten away by the unblushing political immorality of the New Deal in its relations to human needs and relief.

As Governor of Ohio I do not propose to condone with official silence a scheme of political manipulation which threatens the very integrity of the ballot, simply because that scheme has been bundled up in the glittering trappings of official demagoguery and offered to the Nation in the name of relief.

It is not in my heart to flinch before a public crack-down from the White House simply because I have refused steadfastly to permit the administration of public assistance in the State of Ohio to become the football of disgraceful partisan politics in Washington, New York, and the Department of the Interior.

I am not alone in my position, nor is my party alone in it. Let me quote from the Honorable BURTON K. WHEELER, Democratic Senator from Montana. After a survey of the relief situation throughout the country, Senator WHEELER said:

"The workers on W. P. A. are dissatisfied, because they see so many politicians being appointed to 'white collar' jobs, and they see W. P. A. used as a political racket. . . . In some places the W. P. A. organization is not only being used for political purposes—it is little less than a racketeering organization. Everyone

wants to see those in need, and who want jobs, taken care of. But to use the people's money to build up a political machine and to play politics with destitution is morally wrong and will not be long tolerated by the American people."

As Governor of Ohio I have made it my business to know the relief situation throughout the State. We have been meeting and will continue to meet our relief responsibilities in an honest, straightforward fashion. I have also an interest in the relief of overburdened taxpayers, in the farmer who works from sunup until sundown, and who often receives too small a part of the Nation's income. I have an interest in the home owner who is now burdened with heavy taxes. I have an interest in the relief of the man who has a job but who for every 4 days' work done gives one to the Government in taxes. I am interested in the stability and preservation of our American constitutional system.

I do not seek the approbation of those officeholders who revel in their accomplishments as financial hitchhikers. But I do seek the honest, man-to-man respect of the great body of our citizenry who are striving earnestly to restore this country to the pay-as-you-go program of solid American prosperity. I do seek the cooperation of those groups who are endeavoring in the spirit of sincerity, patience, and good will to work out a lasting solution of our social and economic problems. The people of this mighty Nation can solve those problems. In Ohio we are doing our part. For 7 years promises, experiments, pump priming, and political manipulation have failed to bring satisfaction to the hopes of the people of the United States. Nor can our social and economic problems be solved by name calling "crack-down" and purge. Their solution requires integrity, intelligence, and tolerance.

The political "pork barrel" never can become the wheel of American progress. America wants to get off relief. America wants to go to work.

This, friends of Ohio, is the record in brief of the first year. It is an honest report of a situation as it stands today. I am proud of the State. I cherish the privilege of serving the people of Ohio.

## Agricultural and Industrial Stability and United States Foreign Trade in Munitions and Aircraft

### EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks in the Record, I will discuss recent developments in our foreign trade in munitions and aircraft and refer back to predictions made in my speeches on the floor of the House on November 1 and November 3, 1939, on this subject.

News headlines of this week reveal that the British are shopping for a billion-dollar purchase of airplanes and other essential military supplies, and that Secretary Morgenthau has been endeavoring to find some means of facilitating the expansion of airplane-engine factories to enable them to fill the British orders and also take care of the large orders for about 6,500 planes which the French have already placed in our country. The effect of these huge purchases on our foreign trade is already manifest. United States farm groups are dismayed by the loss of British markets for export tobacco, fruits, corn, wheat, beef, pork, and so forth, and by a recent British order restricting cotton shipments in order to conserve shipping space on British vessels. England has announced that she will give preference to any imports she requires to her colonies, and England has turned to Argentina for large purchases of wheat and meat products.

We are now witnessing a tremendous lopsided expansion of the aircraft industry based upon the most volatile and least dependable trade-stabilizing factors imaginable. Although this situation was very easily anticipated during the course of the debate on the arms embargo in the special session, the volume of British and French orders and the emphasis of speed in expansion of the industry have exceeded even my own expectations, which were set out in my speeches during the special session and which were based upon our World War experiences, together with recent development in the aviation industry.

We now find ourselves plunged into this unstable and unneutral trade up to our necks and we are, at least, sowing

the seed for a large industry to hope and pray for the continuation of the European war in order not to be left high and dry on the suspension of hostilities. Since presenting my discussion in the House in the special session, I have had an opportunity to travel with a joint committee of the House and Senate to each of the aircraft factories along the Pacific coast and in every factory we visited I made a special point of asking officials and guides just how they were preparing to face the eventuality of cessation of orders for British and French aircraft. Most of them assured me that they had definite plans for writing off their entire capital investment for the abnormal expansion of their plant facilities in the early orders placed with them and that, "if the war just lasted long enough," they would have their additional capital investment entirely written off. I then asked them the following question, which they did not seem able to answer: "Assuming that your desires are fulfilled to the extent that the war lasts long enough to permit you to charge off your capital investment, have you, even then, made any provision whatsoever for the laborers in your plants so that they may be assured of any degree of protection against such a sudden termination of the demand for your product?"

It seems to me that we are playing with fire not only in diverting our foreign trade into so unstable a channel at the expense of the sales volume of agricultural products but also that we are courting disaster in building up a condition that will cause many to selfishly hope for continuation of hostilities and also in aggravating and perhaps precipitating the collapse at the end of hostilities when war orders vanish overnight.

I am inserting a news article taken from the New York Times of Monday, January 22, and I am placing in the RECORD some extracts from my speeches of November 1 and November 3 which were made during the debate of the arms-embargo measure in the special session, and in which speeches I anticipated the development that has now so clearly revealed itself.

We do not know the full extent of this violent shift in our trade away from agriculture to war materials, but we do know the inevitable consequences. So long as our high governmental officials extend themselves to encourage this dangerous trend in our trade and industry, the extent of this development and the dangers accompanying such abnormal development may lead to disaster beyond our present comprehension.

There is also involved the very vital factor of possible future retaliation against such extensive active participation of our Nation in the very unneutral business of supplying aircraft and munitions to France and Britain; but our policy regarding that factor was settled to the smug satisfaction of the present national administration in the special session of Congress. If the policy the national administration there adopted and is now pursuing leads us into war or into post-war recession and disaster, I hope the American public will place the responsibility squarely where it belongs.

I will not attempt to discuss at this point the very serious problem of bringing our own defense up to date during this very temporary and abnormal trade expansion in munitions and aircraft.

[From the New York Times of January 22, 1940]

BRITAIN SEEKS DOLLARS FOR BILLION IN PLANES AND ARMS HERE—SHIFTS FARM PURCHASES—AMERICAN TOBACCO GROWERS LOSE MARKET TO TURKEY—WHEAT AND COTTON HIT

(By Frank L. Kluckhohn)

WASHINGTON, January 21.—Britain is preparing to spend about \$1,000,000,000 for the purchase of airplanes and other military supplies in the United States and is seeking to get dollar exchange to make this possible, it was learned tonight in official circles.

Secretary of the Treasury Henry Morgenthau has been trying to find some means of facilitating the expansion of airplane engine factories to permit them to fill British orders.

Mr. Morgenthau visited the Martin plant at Baltimore last week and he announced at a press conference on Thursday that he would visit others. After his visit in Baltimore he conferred at the White House with President Roosevelt and chiefs of the Army Air Corps.

It was remarked in some quarters that such British purchases might tend to offset the loss of American trade in other products resulting from Britain's war-economy practices and the Allied blockade against Germany.

#### CONCERN ON TOBACCO EXPORTS

In the field of tobacco exports to Great Britain, which is a matter of particular concern at present, the British had agreed to take 40,000,000 pounds of Government-held tobacco in addition to open-market purchases. Now it is reported that the British are buying their tobacco outside the United States.

British import restrictions have virtually eliminated takings of American tobacco at London, and, as a result, according to Members of Congress who have discussed the matter with Secretary of State Cordell Hull, tobacco planters are planning a production of only 500,000,000 pounds this year, as compared with 1,100,000,000 pounds last year. Officials are fearful that the British failure to buy our tobacco may create a surplus on domestic markets that will force down domestic prices.

According to some officials the United States also is being forced out of what was in 1938 its leading Latin American market, Argentina, because Britain is buying up Argentine wheat and meat products and forcing Argentina to buy in Britain commodities that she requires. To a modified extent, it is said, the same thing is happening with regard to Brazil.

#### EXPORT TRADE CUT SHARPLY

United States shipments to Europe, which account for about a third of this country's total export business, have been drastically reduced, not only because of direct belligerent activities but by the British blockade, both in the North Sea area and the Mediterranean, against neutral nations that might transship to Germany.

Britain had about \$1,250,000,000 in easily negotiable securities in this country at the outbreak of the war which could be liquidated to provide dollar exchange for purchases.

Some fear exists in official quarters here that if the British finance a vast expansion of airplane plants in this country a situation easily might arise wherein the United States might be left "holding the bag."

Expansion of plants is necessary if British orders are to be filled, because the French already have placed orders for about 6,500 planes, which will utilize almost all of the surplus production capacity of American airplane factories.

#### NEUTRALITY, FOREIGN TRADE IN MUNITIONS AND AIRCRAFT, AND OUR NATIONAL DEFENSE—SPEECHES OF HON. THOMAS E. MARTIN, OF IOWA, IN THE HOUSE OF REPRESENTATIVES

November 1, 1939

Mr. Speaker, a study of the history of our exports of munitions, aircraft, and certain materials is necessary in order to better meet our problem of providing for our own adequate defense and guarding against too rapid and unstable expansion of the munitions and aircraft industries. Let us hope that we can secure adequate defense preparation and at the same time avoid disturbing our economic balance. We may thereby avoid a violent recession and collapse when foreign orders suddenly cease at the end of hostilities.

I am very much opposed to the sale of arms and ammunition to our detriment, that is, to the detriment of our own national defense. I think we should stay home and mind our own business and build up our own defenses, and use them for defense purposes only. [Applause.] The biggest problem we have facing us in preparing adequately for defense is to do so without precipitating a recession and collapse following the emergency, and every dollar's worth of supplies that you send abroad will emphasize and aggravate that situation.

I am told that it will cost us approximately \$1,000,000,000 in 2 years to provide adequate equipment for a force of 1,000,000 men. That will be the bill for equipment only. Our total exports of munitions since 1920 equal only about \$200,000,000 and our total exports of aircraft for that period equal about \$340,000,000, the bulk of the exports of aircraft coming in the last 2 years.

The history of our export trade in munitions and aircraft shows conclusively that it will take twice as much in new munitions and aircraft to supply a force of 1,000,000 men as we have sold abroad during the entire period since 1920.

In closing, I would like to appeal to you to consider our problem one of building up an adequate defense on such a plan as to avoid, insofar as possible, the post-war recession and collapse of our economic structure that we experienced in the years following the World War. We have on one hand the duty to conserve our munitions and aircraft for our own defense and we have the obligation to make our defenses adequate in the least possible time that we can build them and not risk a post-war recession. A sudden increase of our exports of munitions to foreign nations as we experienced in the World War years to nearly \$1,000,000,000 per year will not only rob us of our own defense but will aggravate the post-war problem and we are not in condition as a Nation to absorb a post-war crash. Let us avoid another recession from over-expansion and yet build adequate armament for our own use without an unsafe increase in our manufactures of munitions and aircraft. It seems to me that every dollar's worth of munitions and aircraft that we export to foreign countries at this time serves to increase our problem both as to our own national defense and as to our own actual economic stability after hostilities have ceased. Let us plan our production of armament carefully, conserve our supplies, mind our own business,

and preserve our own independent defense. Keeping the embargo while we have it is the safest path to that end.

To my way of thinking that is the only method that will avoid dependence on other nations for defense followed by impoverishment and loss of liberty in the economic chaos of recession following war. Let us guard well that our war boom will not prove to be a war bomb. [Applause.]

November 3, 1939

Mr. Speaker, the parade of war orders is already under way and no one knows yet the volume they may attain nor the effect of the rapid expansion that will be needed to fill these orders and at the same time bring our own defenses up to date, nor has much thought been given to the final day of reckoning when these orders come abruptly to a halt following hostilities. Some of us have not yet forgotten the expansion of the World War days and the recession and collapse following soon thereafter.

The daily papers of Friday morning, November 3, announced that a flood of European war orders which administration headquarters expect will total a billion dollars in the next few weeks will be released by the repeal of the arms embargo.

The United Press makes an announcement from London dated November 2 that should be of great interest to the farmers of America at this particular time in view of the record corn crop now being harvested, and I quote herewith an article appearing in the Washington Post for Friday, November 3:

"OTHER EXPORTS TO SUFFER

"LONDON, November 2.—Revision of the United States arms embargo, while opening the way for large British arms and munitions purchases, was expected tonight to lead to a drastic curtailment of British imports from the United States, such as industrial and agricultural products.

"One authoritative source estimated that British imports of certain American industrial products and foodstuffs may fall off as much as \$150,000,000 a year.

"Importers of American products said Britain's anticipated heavy purchases of war supplies from the United States would be offset 'to a substantial degree' by curtailing imports of nonessential industrial and agricultural products, to protect exchange and permit purchase of arms and munitions.

"The transportation of many American commodities, including tobacco, automobiles, women's apparel, shoes, hosiery, dried fruits, and barley already has been reduced drastically since the outbreak of the war."

## Trade Agreements and the Farmer

### EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

#### EDITORIAL COMMENT FROM THE PACIFIC RURAL PRESS

Mr. GEARHART. Mr. Speaker, because of the kindness of Mr. Frank Long, chairman of the Dunlap-Squaw Valley (Calif.) Farm Center, who was kind enough to have called it to my attention, I am able to hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD, the unanimous consent of the membership of this legislative body having been this day given, a most interesting and highly informative editorial from the columns of the Pacific Rural Press of January 13, 1940, an editorial from the capable pen of Mr. John Pickett, one of the best-informed writers on agricultural subjects in western United States.

Mr. Pickett's editorial, which he has entitled "The Tariff Bloodhounds and the Mouse," follows:

[From the Pacific Rural Press]

#### THE TARIFF BLOODHOUNDS AND THE MOUSE

The tariff issue is no more political than Aunt Martha's fat and lazy cat.

It is as factual—and as furtive—as the mouse which furnishes most of the excitement in her cat's life.

But politicians of all parties insist on calling out the bloodhounds and baying the scents for the voters' amusement and confusion.

Just now we are going into another of these tariff hunts, with much tonguing by the political bloodhounds. The Reciprocal Tariff Act is expiring and a new election is being born. Hence the din. The result will probably again be like the fabled mountain which labored and brought forth a mouse.

Before the political uproar gets too loud, let's face a few facts.

The other day in a meeting at St. Paul, Secretary Wallace said: "The Smoot-Hawley tariff of 1930, piled on top of the Fordney-McCumber tariff of 1922, not only failed completely to help our own farmers but also caused the other countries of the world to retaliate by erecting sky-high trade barriers of their own."

The first half of his statement is true. Those tariffs were made to help industrialists rather than farmers.

No political party has ever given the farmer a square deal in tariffs.

But Secretary Wallace conveniently forgets his history when he repeats the often-voiced statement that these tariff acts caused the world to retaliate with sky-high trade barriers of their own.

World tariff rates, with the principal exception of Great Britain, were already "sky high" compared with our own tariff rates, and foreign countries merely proceeded to make them "sky higher."

The Great War was the cause. Italy first, and then Germany, set out to make themselves as near self-sustaining as possible so they might not be starved out in the next war. To encourage home production they made already high tariff rates higher.

Freeman Tilden, who made a trip to Europe for us after the war, brought back these facts, which were nationally published.

So it was a military race which set the tempo of increased tariffs, and not the United States.

Great Britain joined the race, setting up a protective empire policy and leaving the United States as the one important free-trade country of the world.

So the world did not "retaliate" against our tariffs.

And we would be better off if we dropped this political pretense and got down to actual facts.

Wallace is obviously trying to aid Secretary Hull in defending the Reciprocal Tariff Act.

They are both on the spot, because every important farm group in the United States has made complaints about the deal the farmer has had under the reciprocal-trade program.

The farmers' complaint is not, or should not be, political. It vests in the fact that the farmer, under the reciprocal-trade treaties, is getting the short end of the deal. He wants a better deal.

Below are the facts—the official facts.

We glean them from the latest report of the United States Bureau of Foreign and Domestic Commerce.

In the first 9 months of 1939 the United States exported \$581,594,176 worth of agricultural products and took back from foreign countries \$1,048,082,160 worth of agricultural imports.

The balance of foreign trade was nearly 2 to 1 against the American farmer in his own home market.

Meanwhile the industrialists of this country, as usual, were faring much better than the farmer. They shipped abroad \$1,574,827,812 worth of products, and took back in imports into this country only \$573,863,399 worth.

Thus the balance of trade was approximately 3 to 1 in favor of the American industrialist in his own home market.

Farmers, if they are wise, will not complain because American industrialists have a good deal in their own American market. That is the way it should be in this, the finest market in the world.

But farmers have a right to complain because they do not have an equal deal in this best-of-all markets.

And they are complaining.

They complain because our imported farm surpluses are burdensome. They complain because this policy causes unemployment. They complain because this policy forces the farmer to ask for public subsidies to keep going and plunges the Nation further into debt.

Here is the official record, graphically compared, on which they may base their factual nonpolitical complaint:

A comparison of United States exports and imports for the first 9 months of 1939

Agricultural products:	
Exports.....	\$581,594,176
Imports.....	1,048,082,160
Industrial products:	
Exports.....	1,574,827,812
Imports.....	573,863,399

## Roosevelt's Action Is Sheer Political Vindictiveness

### EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

Mr. BENDER. Mr. Speaker, President Roosevelt has vetoed the effort of Congress to keep its faith with the people of Ohio. His action is completely unjustifiable. In 1938, after the Democratic Governor of Ohio, Martin L. Davey, had been repudiated at the primaries of his own party, the Social Security Board found occasion to withhold payment of the Federal Government's share of Ohio's old-age pensions

for October. The situation was corrected as soon as it was revealed, and it has never recurred. Under the present Republican administration of Gov. John W. Bricker, of Ohio, there is no possibility of its recurrence.

The President's action is sheer political vindictiveness. He has accused Ohio of failing to bear its proper share of the problems confronting its needy. By his own act, the New Deal stands convicted of his own charge.

Ohio citizens will understand the motives behind the President's veto. I am certain that they will not quickly forget or forgive.

### A Lincoln Memorial

#### EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

EDITORIAL FROM THE WASHINGTON POST OF JANUARY 24, 1940

Mr. BLOOM. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein an editorial which appeared in this morning's issue of the Washington Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 24, 1940]

#### A LINCOLN MEMORIAL

When it came to a show-down between the world premiere and the film itself, the movie of Abe Lincoln in Illinois won hands down. That is a point on which even the critics were unanimously agreed. Neither searchlights nor celebrities could successfully distract attention from the highly realistic portrayal of the formative years of one of America's most beloved heroes.

The historical narrative must rely for effect as much on the associations it conveys as on the plot itself. Without knowledge of the sequel the drama of Lincoln's early life would have little meaning. But at a time when current problems seem at least as complex as those of the Civil War period, a faithful presentation of even part of the Lincoln saga carries an enormous impact.

Many will agree with Mrs. Roosevelt, who noted in her column that she was especially impressed by the use of Lincoln's own words. Certainly two of the most moving and best acted scenes are Lincoln's two speeches, the "House Divided" debate and the farewell to his neighbors in Springfield, both using the simple and eternal sentences as this great orator really spoke them.

This general fidelity to detail, however, made more of an anticlimax the glaring anachronism which has the Battle Hymn of the Republic sung several weeks before the outbreak of the Civil War and months before the fighting which inspired its composition by Julia Ward Howe.

### No Third Term

#### EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

Mr. PLUMLEY. Mr. Speaker, answering a recent inquiry made of me, "Should any President serve a third term?" I made the following reply:

The words of Thomas Jefferson written to the Legislature of Vermont after it had urged him to reconsider his decision to retire, having served two terms as President of the United States, afford in my judgment, a perfect answer to your query: "Should any President serve a third term?"

Jefferson wrote:

That I should lay down my charge at a proper period is as much a duty as to have borne it faithfully. If some termination to the services of the Chief Magistrate be not fixed by the Constitution,

or supplied by practice, his office, nominally 4 years, will in fact become for life and history shows how easily that degenerates into an inheritance. Believing that representative government, responsible at short periods of election, is that which produces the greatest sum of happiness to mankind, I feel it a duty to do no act which shall essentially impair that principle, and I should unwillingly be the person who, disregarding the sound precedent set by an illustrious predecessor, should furnish the first example of prolongation beyond a second term of office.

He tells us in his autobiography that his deep-seated convictions were based on—

The importance of the office, on the fierce contentions it might excite among ourselves if continuable for life, and the dangers of interference either with money or arms by foreign nations to whom the choice of an American President might become interesting.

The tradition established by Washington, followed by Jefferson, Jackson, Johnson, Grant, and others, should be emulated.

### Borah Might Have Said It

#### EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

EXCERPT FROM CYRANO DE BERGERAC

Mr. WELCH. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from Brian Hooker's translation of Edmond Rostand's *Cyrano de Bergerac*, as printed in the San Francisco News under the title "Borah Might Have Said it":

CYRANO: What would you have me do?

Seek for the patronage of some great man,  
And like a creeping vine on a tall tree  
Crawl upward, where I cannot stand alone?

No; thank you \* \* \*

To sing, to laugh, to dream.

To walk in my own way and be alone,

Free, with an eye to see things as they are \* \* \*

At a word, a yes, a no,

To fight—or write. To travel any road

Under the sun, under the stars, nor doubt

If fame or fortune lie beyond the bourne—

Never to make a line I have not heard

In my own heart; yet, with all modesty

To say: "My soul, be satisfied with flowers,

With fruit, with weeds even; to gather them

In the one garden you may call your own."

So, when I win some triumph, by some chance,

Render no share to Caesar—in a word.

I am too proud to be a parasite

And if my nature wants the germ that grows

Towering to heaven like the mountain pine,

Or like the oak, sheltering multitudes—

I stand, not high it may be—but alone!

### Irrigation of Great Plains Region

#### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

CORRESPONDENCE BETWEEN HON. CARL HAYDEN, OF ARIZONA, AND THE SECRETARY OF THE INTERIOR

Mr. NORRIS. Mr. President, recently there has taken place between the Senator from Arizona [Mr. HAYDEN] and the Secretary of the Interior, Mr. Ickes, some correspondence

on the subject of the irrigation of portions of the part of the country known as the Great Plains. I think this correspondence can be read with much profit by every Member of the Senate, especially those from the West. I ask unanimous consent that the correspondence, together with a memorandum attached to the letter of the Secretary of the Interior, be printed in the RECORD.

There being no objection, the correspondence and memorandum were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,  
COMMITTEE ON APPROPRIATIONS,  
December 18, 1939.

The Honorable the SECRETARY OF THE INTERIOR,  
Washington, D. C.

MY DEAR MR. SECRETARY: According to the United States Weather Bureau the Great Plains and Dust Bowl areas of the West are now experiencing the most severe autumn drought in recorded history.

The Department of Agriculture estimates that in the last 9 years more than 100,000 farm families have been forced by drought to leave the Great Plains area. Most of these have moved westward, seeking irrigated land, where they would have an assured water supply, but the irrigated land available has been inadequate to settle more than probably 5 percent of those who desire to reestablish themselves. The remainder have largely become migratory farm laborers, eking out a bare existence, or have become dependent upon relief. In either case, they are the chief cause of a growing relief problem and of the social unrest throughout the Pacific Coast States.

It now appears that this Great Plains drought, which many have thought each year might soon be broken by a return of normal precipitation, instead is becoming more acute.

I understand that hearings on the Department of the Interior appropriation bill for the fiscal year 1941 are scheduled to be begun by the House Committee on Appropriations early in January. This bill, as you know, must provide appropriations for the regular western reclamation program under the Reclamation Act, and because the Bureau of Reclamation has played a leading part in connection with the Great Plains water-conservation projects, I assume that appropriations for continuing that program under the Case-Wheeler Act should also logically be included therein.

Before these hearings begin, I should like to have prepared by your Department a broad program of reclamation and water-conservation projects for the arid, semiarid, and Great Plains States which you and your advisers believe to be a reasonable and practicable approach to a permanent solution of these problems within the limits of your Department—not just a palliative, but a start on a permanent cure—to the end, if possible, that the construction of water-conservation projects including many small reservoirs be immediately undertaken and pursued on an adequate scale to check any further migration of farm or city population from that area by making sufficient irrigation and stock water available at least to maintain the present population on a self-supporting basis.

I should appreciate it if your outline would also include what you and your Department would consider a reasonable program of procedure for carrying forward promptly the regular reclamation projects which are normally financed from the Reclamation Fund and from the General Treasury, so that at least a substantial percentage of the former Great Plains farmers, who have already migrated westward and are qualified or could qualify for irrigation farming, could have an opportunity as soon as possible to reestablish themselves and their families and again to become self-supporting—ultimately home owners and taxpayers.

It might also be desirable to indicate the amount which would be required to make the necessary investigations and water inventories for the program which you outline.

It is significant to note that the Work Projects Administration expenditures alone for the fiscal year 1939 in the 17 arid, semiarid, and Great Plains States affected by this drought problem, exceeded \$359,000,000. It occurs to me that if larger expenditures in this area were made during the next few years on the type of program which I am requesting you to prepare, it would not be long before the existing heavy relief load could be materially curtailed, if not almost eliminated.

Assuring you of my appreciation for your prompt attention to this matter, I am,

Yours very sincerely,

CARL HAYDEN,  
United States Senator.

THE SECRETARY OF THE INTERIOR,  
Washington, January 18, 1940.

HON. CARL HAYDEN,  
United States Senate.

MY DEAR SENATOR HAYDEN: Your letter dated December 18, 1939, discusses the long-continued drought in the Western States which has created a human problem of great magnitude. It also suggests that steps toward a solution of this problem are possible by a comprehensive program of water conservation and irrigation, and by extending the usual operations of the Bureau of Reclamation.

There are two distinct phases of the human problem caused by the extended drought: First, that of anchoring insofar as possible the remaining population in the drought area, and this can be accomplished in part through irrigation developments; and second, that of providing opportunities for the rooting in new soil of the people who have drifted to the far Western States from other areas, and this can be achieved in part by the completion of irrigation projects to utilize the water resources as yet unconsumed in those States.

For a full decade now the drought has continued. While the area most critically affected has shifted from year to year, the general focus has been on the Great Plains area. In 1934 and again in 1936 severe drought was general in the West. While each new season has brought renewed hopes for general relief, the last 4 months of 1939 were drier over wider regions than any others in the decade. There are several reasons to fear that the worst has not as yet been experienced. Depletion of underground water and soil moisture has been so great that even normal rainfall in 1 or 2 years may not bring full relief.

That the migration westward of homeless people is keyed largely to the drought, although not all the migrants are from critical drought areas, has been widely assumed. The migration was reduced in 1937 and again in 1938, but it picked up sharply and coincidentally with the pinch of the severe 1939 drought.

Reliable estimates place at 75,000 families the number which has left the Great Plains drought area alone during the decade. More may have to go unless succored. Reliable information indicates that during the 10-year period 110,000 families migrated to California, 18,000 to Washington, 18,000 to Oregon, and 7,000 to Idaho. These were homeless people. Not all, however, were made homeless by drought. Some were cut loose from their moorings in other areas in other ways. It matters little to the victim or to the Nation, once the migrant has joined the hopeless army, what forced his enlistment.

The squads from this army which have been able to relocate themselves make up, according to the best estimate, only a very small percentage of the total number.

For the most part the migrants are worthy people. They are victims of circumstances beyond their control. They place a responsibility upon their Government. This responsibility largely has been met so far by expedient and temporary measures.

Both in the critical drought area in the Great Plains and in the far Western States disproportionately high relief expenditures have resulted. As you suggest in your letter, the time probably is overdue when we look to such corrective work as can be undertaken.

Last year a start along this line was authorized with the appropriation of the Interior Department Appropriation Act of 1940 of \$5,000,000 to develop a few irrigation projects in the Great Plains and other arid and semiarid regions on which this appropriated and some relief funds might be used. Several of these projects are now under way in Montana, North Dakota, and South Dakota. They must of necessity born of the meager water supplies available near usable lands be small, and they must because of relatively high per acre cost be separated from the usual Federal reclamation projects, since they cannot be expected to return directly in dollars to the Treasury the full amount of their construction costs. In savings in future relief expenditures and in the prevention of human misery, however, they will make up the deficit uncounted times.

A program involving approximately \$5,000,000 a year on a reimbursable basis for projects of this type and relief and nonreimbursable expenditures of \$5,000,000 to \$7,000,000 a year seems indicated. I am furnishing, as you suggested, an outline of a 5-year program proposed by the Bureau of Reclamation of this size, which could be carried forward efficiently.

Many of the projects proposed are far removed from the centers of relief load, and camp housing frequently will be necessary. This suggests the possibility that C. C. C. camps might advantageously be used where relief laborers are deficient in number. Such construction provides excellent training and educational advantages for the young men of the Civilian Conservation Corps.

There can be no doubt that irrigation can and must occupy a prominent place in the plans for the stabilization of the Great Plains.

Now, turning to the other phase of the problem—that of providing new opportunities for the migrants—the new reclamation projects in the West provide the logical answer. Such great developments as Grand Coulee Dam, and others only smaller in size, will offer many new homes. At least \$50,000,000 to \$60,000,000 each year for several years to come could well be used by the Bureau of Reclamation in the construction of projects of this type which are wholly reimbursable.

An attempt was made by the Congress at its last session to give the penniless but worthy drought victims an equal opportunity to obtain such homesteads on irrigation projects as might be made available this year. The operation of another statute which expires in February 1940, however, through the granting of a 90-day preference to veterans, has made the new statute virtually inoperative. The homesteads were taken by veterans. Such matters as these should be taken care of in order to insure the most sensible use of the new lands to the greatest public good.

Sincerely yours,

HAROLD L. ICKES,  
Secretary of the Interior.

## Small water conservation projects for construction in part by relief forces

## PROJECTS PROPOSED IN SECRETARY IKES' LETTER

Project	Description	Area (acres)	Estimated cost, non-relief funds
<b>Arizona:</b>			
Holbrook	Chevalon Reservoir, canals	6,000	\$400,000
St. John	Indian Hill Reservoir	10,000	200,000
Silver Creek	Reservoir	10,000	200,000

## Regulation of the Over-the-Counter Security Markets

## EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

ADDRESS BY HON. FRANCIS T. MALONEY, OF CONNECTICUT

Mr. MALONEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address on the subject Regulation of the Over-the-Counter Security Markets, which I delivered at a meeting of the California Security Dealers Association, the Investment Bankers Association, and the National Association of Securities Dealers, at San Francisco, Calif., on August 22, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Opportunities to make an address which is neither a congressional debate nor a political speech are fairly rare in the life of a Senator. I am, therefore, particularly pleased to take advantage of the opportunity which you are affording me today to discuss a subject which, in the ordinary sense of the word, is completely nonpolitical. I refer to the 1938 amendment to the Securities Exchange Act of 1934.

As you all know, the first national securities dealers' association to be formed under that amendment has just been registered by the Securities and Exchange Commission. It, therefore, seems appropriate at this time that I, as the individual who must accept responsibility for the introduction of the measure, should review before an audience of this character something of the historical background of what is sometimes called the Maloney Act and the promise which it holds for the future. It is not my purpose and it would not be appropriate for me to discuss the mechanics or the administration of the act. Those are matters within the jurisdiction of the Securities and Exchange Commission, which I know constitute the subject matter of numerous round-table conferences between the representatives of the securities business and those of the Commission. It is rather my intention to take advantage of this occasion, so soon after the registration of the National Association of Securities Dealers, to discuss the philosophy underlying the act and its connotations for the future.

I have said that this subject is nonpolitical. That statement is true. No individual or small group of individuals may justly claim the complete authorship of this measure. It represents a joint enterprise and a protracted effort by the Government and the investment bankers and security dealers of the country to accomplish a result earnestly sought after by each. The statute as finally enacted, while perhaps perfect in the eyes of no one, since perfection is at best rare, undoubtedly represents a far greater degree of unanimity of opinion on the parts of both Government and business than does any other law regulating the securities business which has ever been enacted. That such is the case is the result of the spirit of close cooperation and of compromise which characterized the representatives of the Securities and Exchange Commission and of the securities business in their negotiations and in their appearances before the committees of Congress. No one achieved everything that he desired, but the net result has received the blessing of all parties concerned. This fact alone would make the 1938

amendment a landmark in the relations between the brokers and dealers of the country and the Government.

But perhaps of even greater significance is the underlying purpose of the act itself. For this legislation represents what is actually a two-way street in the field of cooperation between Government and business. In the vast and highly ramified business in securities transacted otherwise than on exchanges, this act is designed to effectuate a system of regulation the need for which is recognized on all sides, in which the members of the industry will themselves exercise as large a measure of authority as their natural genius will permit.

And here let me say that no one is more familiar than I with the very high quality of intelligence and character of the men engaged in your business. My native State of Connecticut was one of the early cradles of banking and finance in this country. The finest traditions of public responsibility and honor are deeply embedded in our financial community. So far as I am qualified to judge, and I think I am fairly well qualified, what I say of the bankers and securities dealers of Connecticut is generally true throughout the country. First as a member of the Committee on Interstate and Foreign Commerce of the House of Representatives and then as a member of the Banking and Currency Committee of the Senate, it has been my privilege to meet personally a very large cross section of your profession from all parts of the United States and to discuss with them the legislative problems which have been our common concern. Though, unfortunately, I cannot lay claim to the same intimate acquaintanceships and years of experience in California which have been mine in New England, I have good reason to know that the same high standards of financial integrity maintain among you as do in my native State. Furthermore, the importance of your profession in all parts of the country is unquestioned. Without it, the economy of this country could never have been built up as it has been.

Unfortunately, however, there can be no large group of people engaged in any industry or enterprise which enjoys potentialities for profit which does not attract the careless or the greedy few who bring discredit upon the entire group unless prevented by regulation from so doing. It is with this problem of imposing proper standards of business conduct upon that small minority who are unable to function properly without external restraints that we have all been wrestling for years. The machinery of your business is delicate. It can be dislocated either by corruption from within or by unwise and burdensome regulation from without. Our task is to prevent the former without risk of the latter. The statute we are discussing today provides a formula designed to accomplish this result. This formula is predicated upon the principle that corruption from within, so far as possible, should be prevented from within, and that external restraints should be rendered unnecessary as a result of the exercise of self-restraint.

It was the purpose of Congress to provide the broadest practicable opportunity for the knowledge and experience of the members of this highly technical calling to be employed in the elimination of undesirable practices and in the promotion of truly professional standards of character and competence. Subject only to such governmental controls as are believed to be necessary to safeguard minorities and individuals and to prevent the growth of monopolistic or similar abuses, Congress has undertaken to provide a mechanism whereby the securities business of the country may deal with all problems of technical regulation, leaving to the Securities and Exchange Commission what it is hoped will be the residual position of policing the submarginal fringe which recognizes no sanctions save those of the criminal law and of dealing with those problems of regulation with which the industry, as organized under the act, finds itself unsuited or unable to deal.

That this legislation will be administered in the light of this congressional intention seems amply clear from the statements which have been made by the Commissioners and officials of the S. E. C. These gentlemen have stated repeatedly that, insofar as the business can and will take the initiative under the act, the Commission will be more than happy to play the residual role which I have described. Sight must not be lost, however, of the fact that the Commission, under the various acts which it administers, is charged with a congressional mandate with respect to the securities markets of the country. This mandate must be carried out, and it is hoped that it will be, so far as possible, by the voluntary action of the brokers and dealers themselves. The Commission, however, still retains jurisdiction to supplement such voluntary action by direct regulation where such is found to be necessary. Thus there has been established the program for what I think has quite properly been called truly cooperative regulation. So far as I know, this is a pioneering effort in the field of cooperation between business and government, though a natural development of the program for the regulation of exchanges contained in the original Securities Exchange Act of 1934. One of the best indications of the probable success of this undertaking seems to me to be furnished by the degree of cooperation achieved in the production of the legislation of 1938.

Unfortunately, your business has been passing through one of those quiet periods which from time to time occur in our economy. There are many indications, I am happy to say, that this period of dullness is drawing to a close. In my own industrial State, with the conditions of which I am most familiar, I can definitely state that business is much improved. Nevertheless, it is clear that a special effort is required in times such as these to bring to complete fruition an enterprise of the magnitude and importance of that which is now being launched within your business. It is primarily for the purpose of urging upon you, who are the leaders in this great enterprise, the exercise of an intensified energy and a mag-

nified enthusiasm that I appear before you today. I do not ask or suggest that you undertake this special effort because I want some special credit from an act which bears my name. I can assure you that I have no pride of authorship or of sponsorship of that act except so far as it or I can be a little helpful in promoting your great business and through it the general business welfare of the country. There exists no compensation for a conscientious legislator other than such satisfaction as may result from witnessing betterment of the conditions under which men must live and work as the result of wise legislation. The ultimate sound prosperity of your business is as close to my heart as it is to yours because, insofar as you prosper soundly, an important contribution is made to the entire business life of the Nation.

We are all at times critical of government and of legislative policy. It is only human to find it easier to condemn than to construct. Most of us, however, have sufficient experience and maturity to realize that little is accomplished by purely negative criticism; and in this realization can only fairly ask, in those phases of our lives which are to us most important, a fair opportunity to bend our energies in the direction of constructive effort. In your business such an opportunity is afforded you in the 1938 amendment to the Exchange Act. Here is provided your chance as an industry to take the initiative and make an important and permanent contribution to good government. As Americans we all naturally abhor regulation. Both you and I would like, so far as possible, to live without rules of conduct being imposed upon us. We are, however, old enough to know that, in a civilization as complicated as ours, it is essential to the public welfare that there be a very large amount of regulation. When traffic lights first made their appearance among us, I dare say we all grumbled about what today we recognize as a public necessity. We all can multiply this simple illustration manifold. However, a mere recognition of the need does not necessarily make the process of regulation more palatable. We all desire to confine it to its essential minimum. Nevertheless, we all recognize that it must not be permitted to fall below that minimum lest the healthy flow of commerce be rendered as chaotic as undirected traffic on the streets of a great city.

The form of regulation, however, may well be as important as its substance. The regulation within a highly professionalized business such as yours should not only be very much more acceptable but also more effective than the imposition of legal sanctions. The very form of rules and the procedure for their adoption and enforcement with an association organized under the act, can be infinitely more simple, exact, comprehensive, and understandable than those of a public administrative body required to act under rigid legal formula. Moreover, while it is possible for public authority to undertake to stamp out abuses and to eradicate demonstrated evils, there is little of an idealistic nature which can be accomplished by criminal law and administrative rule making. An important part of our problem, it seems to me, is the promotion of the vitality and well-being of your great business. How much more competent you are to play the dominant role in this undertaking than can be any group of public officials, no matter how wise or how devoted. That the forward-looking brokers and dealers throughout the country are well aware of these considerations is demonstrated by the fact that the challenge has been accepted. A national securities dealers' association has been formed and registered with the Commission, but the important work lies ahead. Let us all hope that the energy and enthusiasm which has brought this association into being will carry it forward to a future of accomplishment as brilliant as its opportunities are challenging. Is it visionary to suggest that we may be attending the preview of a drama in which not only the securities business, but all branches of American industry, may some day play a part?

As I have already indicated, it is almost necessarily the case in cooperative enterprise that no one is able to effectuate all of his views. Differences of opinion are, of course, inevitable when engaged in pioneering. Even when there is substantial agreement as to objectives, reasonable and honest men can differ very widely on questions of method. It is therefore not surprising, as I read the opinion of the Securities and Exchange Commission granting registration to the National Association of Securities Dealers, that there should be a few reservations in the mind of the Commission with respect to some of the provisions of the constitution and rules of the association. Experience and a common will to make this effort a success should in due time correct such mistakes as may be found to have been made. In any event, a very substantial beginning has been made, and I find it a source of gratification that it has been found possible substantially to reconcile the views of the many elements in the over-the-counter securities business throughout the country and to coordinate the efforts, not only of the established groups within the business such as the Investment Bankers' Conference, the Investment Bankers' Association, the California Security Dealers' Association, and the others, but also of a vast number of individual houses, both large and small.

The precise form of the organization and rules of the new association which has just become registered in all probability are not entirely to the satisfaction of anyone. Many of us had hoped and continue to hope that it would be able to assume an even larger measure of responsibility over the business than is provided for in the present rules. Nevertheless, the program has always been recognized as essentially evolutionary and a long step forward already has been taken. Here, in a most important field, active cooperation between government and business is at last a reality. In what has heretofore been a heterogeneous and almost entirely unorganized group of firms dealing in securities over the counter, there has come into being a mechanism whereby the Government, through the S. E. C., and the brokers and dealers throughout the country can

combine their energies for the protection of the public and of the securities business against the depredations of the few. Clearly such protection is the first and most important element in securing the confidence of the public, without which there can never be a healthy and prosperous securities business. Now, as in the case of a properly organized and administered securities exchange, there is a medium within the business itself through which the investing public can undertake to obtain redress where there has been unfair dealing and preventive measures to eliminate improper practices without being forced to invoke the necessarily somewhat cumbersome processes of law. All of this I conceive to be a great achievement, not in the field of politics as the word is often used, but in that of democratic government.

I am exceedingly grateful to you for inviting me to meet with you and to speak to you briefly on a subject of such importance to you and to all of us. The future of your business is in your hands. I think the prospects are brightened and your business immeasurably strengthened because you now are members of a partnership with government. This partnership is in a sense unique in the field of American business. It affords brilliant possibilities in the achievement of which your fraternity should be immeasurably assisted because there has been made available to it the talents, experience, noble purposes, and energy of that skillful body of men in Washington who compose the Securities and Exchange Commission and its staff. Their task is at least as difficult as yours, and believe me when I tell you that they can have no real reward without your success in achieving the major objectives. Because I know the men of that Commission and because I am well aware that your fraternity is composed of people of patriotism, courage, vision, and firm faith, I look forward with confidence to the future of this partnership which has been formed between government and business. Benefits which should flow to the public from such an alliance are incalculable and, likewise, the upward and forward movement of your business and of business generally should be definitely stimulated.

### Investigation of Life Insurance

#### EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

LETTER FROM THE COMMISSIONER OF INSURANCE OF COLORADO

Mr. JOHNSON of Colorado. Mr. President, I am in receipt of a most excellent and timely letter from the Commissioner of Insurance of Colorado, Mr. Luke J. Kavanaugh, on the general subject of the investigation of life insurance now in progress by the Temporary National Economic Committee. This good letter pointedly states the attitude of many of the life-insurance policyholders of my State. I desire, therefore, to make it available to the Temporary National Economic Committee and the Congress.

I join Mr. Kavanaugh in favoring any fairly conducted fact-finding investigation of the life-insurance business which is not made for the purpose of providing a basis and groundwork for Federal bureaucratic supervision and control of this important industry.

During recent years our Government has taken an active interest in providing badly needed security for our people with Federal and private funds. This burden is very great, and doubtless will require much planning and an immense outlay of resources before it can be made fully effective.

In the circumstances it occurs to me that our Government should lend every possible assistance to private agencies struggling to provide security for our citizens. Should the life-insurance companies be harassed until their present service is impaired, the policyholders will be the direct losers and the whole people of our country, as well as the Federal Government, will be the indirect losers.

Dual supervision of life insurance by State governments and the Federal Government, in my opinion, would be disastrous to the life-insurance companies. Since under our system of government there is no escape from State supervision, we should be content not to force the confusion which

must inevitably follow by imposing upon this necessary and important private service Federal supervision. Also policyholders positively do not need both supervisions, and that means that it is imperative that the Federal Government keep out of this field.

I ask unanimous consent to insert Mr. Kavanaugh's good letter in the RECORD as a part of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF COLORADO, INSURANCE DEPARTMENT,  
Denver, January 5, 1940.

Hon. Ed. C. JOHNSON,  
Senate Office Building, Washington, D. C.

My DEAR SENATOR: I was greatly disappointed not to see you while you were in Colorado recently. However, that pleasure must wait.

This matter of the T. N. E. C. investigation of life insurance should, I think, be scrutinized closely.

The congressional committee, headed by Senator O'MAHONEY as chairman, and Representative SUMNERS of Texas as vice chairman, is trying to be entirely fair and to keep the inquiry on an objective basis. But some sinister influence seems to be at work.

The result, it seems to me, is that instead of a hearing it has all developed into a prosecution in which no defense is admissible. It may be that I am unduly alarmed, but I am tired of this ever-increasing projection of Government into private business.

After all, there must be something good about an industry that despite wars, panics, and depressions has accumulated assets in excess of \$25,000,000,000. Of course there are weaknesses and abuses to be remedied. But this work should be done in a constructive way and by the States. For instance, we have a claims department that handles in excess of a thousand complaints made by dissatisfied policyholders every year. If the decision in these matters, instead of being made by the commissioner of Colorado, should be dependent upon the whims of some department in Washington, it is easy to see the innumerable delays and red tape that would ensue.

One of the principal attacks has been made upon the agency system. There are 12,000 licensed insurance agents in Colorado, the great majority being honest, industrious men and women. Should they all be annihilated?

The shining argument for the agency system is war-risk insurance, with which I am somewhat familiar. Of approximately 4,200,000 policies in effect in the World War only 600,000 are in existence today. I have always believed that this unparalleled lapsation was due mainly to the lack of a Government agency system. After all, the insurance agent's work does not end with the sale of a policy—it just begins. From then he is the friend and valued insurance adviser of the policyholder.

Various suggestions have been heard to the effect that Federal regulation may be superimposed upon the present supervision of life insurance companies by States, that the Securities and Exchange Commission may be given control over company investments, that this Commission, or some other Federal agency, will take charge of elections of directors of mutual insurance companies, and that a limitation may be placed upon the size of companies.

Senator BURKE, of Nebraska, made an outstanding speech upon the entire matter in Omaha recently. Speaking of the contemplated plans, he said, "If any or all of these proposals are made effective, it will mean that new impetus will be given to the movement toward socialization of business and industry, that the Federal Government will encroach further upon the sovereignty of the States, that the burdens and problems of the insurance companies will be vastly increased, that a Federal bureaucracy will create new maladjustments in the economic structure through its attempts to apply untried social and economic theories, and that citizens in their capacity as taxpayers will suffer from the new costs of regulation and in their capacity as policyholders will feel the adverse effects of unwarranted interference with private management."

It seems to me, from reading as much of the record as has been obtainable, together with innumerable articles on the subject, conversations with witnesses, etc., that the departmental representatives who have been most conspicuous in hearings have a strong bias against big business. They seem to believe that a concentration of power in the Federal Government is necessary to break up a concentration of power in private industry.

They see monopoly in every large aggregation of capital and are prone to overlook such benefits as are derived by the masses of our population from the great institution of insurance. This all looks to me more like a Socialist and Fascist state than it does like an American system of free enterprise.

It is significant that thus far the report made does not contain a criticism as to the use made by insurance companies of their funds. Nothing has been said about insolvent companies, which as compared to the grand total, are insignificant. Nor has this department received any suggestions as to betterment of insurance as a result of the extended inquiry.

The report states that as of December 1, 1938, the 49 largest legal reserve life insurance companies owned 11 percent of the direct and guaranteed debt of the United States Government, 9.9 percent of all State, city, municipal, and political subdivisional debt, 22.9 percent of all railroad bonds, 22 percent of the entire public utility debt,

15 percent of the industrial debt, 11 percent of all farm mortgages, and 14 percent of all city mortgages.

The inference is intended to be critical, but I think it must be admitted that these figures offer impressive evidence that the insurance companies have played a tremendously helpful part in the financial structure of the country, and have also made it possible for our governmental bodies to operate on a deficit basis without disaster.

In its preliminary report the committee does not offer a remedy. However, it seems obvious that in the final report some sort of a plan or plans will be presented for greater governmental control of business and industry.

Another important aspect of the insurance situation which has not been emphasized is the adverse effect of present Government policies upon the companies and on policyholders. In this connection there is possible Federal competition. According to newspaper reports, Senator WAGNER, who has a proposed bill for annuities, states that this would not be competition with insurance companies because the average annuity in his bill would not exceed \$100 per month. Figures show the average annuity today pays between \$29 and \$30 per month.

This letter is perhaps entirely too long; but this is a vast subject, and one in which I have taken a decided stand publicly and privately against Federal supervision of insurance. Much good might have resulted from this investigation. My opinion is that the opposite has been the result. Federal regulation would place a new burden on insurance companies. They already pay heavy taxes, both to the States and Federal Government. Any further extension of Federal authority would mean more special taxes. Policyholders would lose more than they could possibly gain from Federal supervision.

With kindest regards.

Yours very truly,

LUKE J. KAVANAUGH,  
Commissioner.

## Nonpartisanship in Foreign and Domestic Policy

### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Ohio [Mr. TAFT] at Milwaukee, Wis., on January 19, 1940, entitled "Nonpartisanship in Foreign and Domestic Policy."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Citizens of Wisconsin, we have been treated recently, in the President's Jackson Day speech, to a lecture on the dangers of partisanship. We can all agree that partisanship is a bad thing, but particularly in a Presidential year it is essential that we know what we mean by partisanship. It is defined as meaning blind adherence to a party or faction. One of its most obvious manifestations is that of attributing devious and wicked motives to all those who disagree with your party or faction. But the President implies that because war exists in Europe, any criticism of the Executive is partisan, and tries to tag every opponent as partisan, even if his only crime consists in declining to attend a \$100-a-plate dinner and listen to a Democratic Jackson Day speech.

It is certainly not partisan to differ with the President's policies on grounds of principle, or to criticize ineffective administration, even if that administration relates to foreign affairs. The very essence of democracy is the right to discuss political questions freely, and criticize in proper terms the powers that be.

There should be no difference because a war exists in Europe. Certainly partisanship should not enter into foreign affairs any more than it should enter into domestic affairs. But if there is a fundamental difference of policy, I see no reason why it should not be publicly discussed, and I do not believe that politics in the broader sense should stop at the water's edge. Nothing concerns the people of this country, for instance, as much as the possibility of becoming involved in war. If the President pursues a policy likely to lead us into war, it is the duty of every American who disagrees with that policy to say so frankly and in as loud a voice as possible. But the discussion of foreign policy should certainly take place without rancor or personal recriminations. In that spirit I wish to discuss the position of this country in the world today.

Outside of North and South America today, we see a world at war. Implements of destruction predominate in Europe and in Asia. Cities and helpless civilians are bombed. Ships of belligerents and neutrals alike are sent to the bottom, often without warning, by mines, submarines, and bombs. It is inevitable that our people are intensely interested in these contests, and intensely interested in the question of the extent to which they may affect their daily lives and the future of their children. There is real danger that the entire civilization of Europe, built up through thousands of years, with its historical landmarks and all its tremendous humanitarian accomplishments, may be utterly obliterated.

At the special session of Congress, we considered only questions of foreign policy. According to the peculiar rules of the Senate, debate was prolonged for 6 weeks on the amendments to the Neutrality Act, although everything that could be said was probably said in the first 2 weeks. But the delay served one great purpose—it encouraged and developed an intense debate throughout the Nation on the question of American policy abroad. Serious differences of opinion developed as to the proper course which might tend to keep the United States out of the European war. Hardly two Senators took exactly the same viewpoint on all the amendments. But before the session ended, it became apparent that the American people, above everything, were determined to keep out of war, and differed only as to the best methods. There was a serious difference on the question whether the repeal of the arms embargo would involve us in war, but a fairly general agreement in favor of the cash-and-carry principle. On the whole, I think the decision made has been justified. No American ships have been sunk, and no incidents have arisen likely to lead toward war, whereas other neutral nations have lost their ships. There seems to be no immediate threat of our becoming involved.

It is not unfair to point out that public opinion in behalf of peace seems to have changed the President's own attitude toward involvement in Europe. On November 16, 1937, in Chicago, he declared his belief that we should "quarantine" the aggressor nations. In his message to Congress on January 4, 1939, he said: "The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one we must now make up our minds to save all. \* \* \* We have learned that God-fearing democracies of the world which observe the sanctity of treaties and good faith in their dealings with other nations cannot safely be indifferent to international lawlessness anywhere. They cannot forever let pass, without effective protest, acts of aggression against sister nations. \* \* \* The mere fact we rightly decline to intervene with arms to prevent acts of aggression does not mean that we must act as if there were no aggression at all. \* \* \* There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people." It is somewhat difficult to see how we can defend religion, democracy, and good faith in other nations by any policy of mere defense of the United States. It is difficult to see how we can protest against international lawlessness effectively by mere defense of the United States. The President can only have intended to propose that this country employ economic sanctions or embargoes against a nation that it does not like, while at the same time assisting those that it does like by loans and other material assistance.

The President has done nothing up to this time to return to his earlier policy, but it is somewhat disturbing that in his address to Congress on January 3 of this year, he said nothing with regard to maintaining neutrality, and emphasized the fact that he was opposed only to becoming involved in military participation in the war. He implies that we still have some duty to interfere abroad when he says: "Of course the peoples of other nations have the right to choose their own form of government. But we in this Nation still believe that such choice should be predicated on certain freedoms which we think are essential everywhere. We know that we ourselves will never be wholly safe at home unless other governments recognize such freedoms." This language seems to imply a right and duty to interfere in foreign wars because of the character of government adopted by some of the belligerents.

I do not feel, therefore, that the President has wholeheartedly accepted the declared view of the people of this country that we must stay out of war except in defense of our own land. It is right, therefore, to discuss the reasons which lie behind our present determination to stay at peace. I believe those reasons are not based on sentiment or on any ostrich isolationism. They are based on precedent and sound logic.

War is so horrible today that the reasons against it, unless forced by direct national interest, are obvious to all. The glamour and romance of an earlier day, always largely imaginary, have been completely destroyed by the modern methods developed in the World War and since. No man wants to spend months or years himself in the trenches. All parents dread the day when their sons might sail away to war.

But it is said that we cannot stay out, and many people still seem to feel that because we chose to participate in the World War, we must inevitably be drawn into this war. Certainly we can stay out if we are determined and remain determined to do so. We have stayed out of many European wars. If we admit that we cannot stay out, we will be perpetually involved in war, for Europe's quarrels are everlasting. There is a welter of races there so confused that boundaries cannot be drawn without leaving minorities which are a perpetual source of friction. National animosities are traditional and bitter. Only in this country have they been laid

aside, and have the different races learned to live together in peace. In George Washington's Farewell Address there is one statement which is as true today as it was then. He said: "Europe has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns."

It is difficult for us to know what is really going on in Europe, or the reasons which underlie the decisions of European governments. I have little sympathy with those who assume to judge all European statesmen, to criticize so-called power politics in Europe, who say in fact: "A plague on both your houses." There is just as much right and wrong in European quarrels as in any other quarrels, but it is difficult for us to be certain which nation is right and which nation is wrong. When I see the freedom of independent nations like Czechoslovakia and Poland destroyed, my sympathies are naturally aroused in their behalf. It is contrary to human nature to have no sympathies between contending European nations, but because we sympathize with one side is no reason why we should run onto the field and try to play quarterback.

Of course we can stay out if we wish to do so. Holland and Switzerland stayed out of the World War, although they were in the very midst of it. We have an isolated position, and it is still isolated in spite of all the improvements on sea and in the air. In fact, developments in this war seem to show that effective aerial attack cannot be made over any considerable distance. I find that many people who say that we cannot stay out, at the bottom of their hearts do not wish to stay out. Certainly this argument presents no reason for not trying to stay out.

Secondly, it has been widely argued that we should enter the war to defend democracies against dictatorships. The President's own expressions even this year have indicated a leaning to this belief. No one can sympathize more than I do with the success of democratic governments against dictatorships. No one desires more strongly than I the end of communism and nazi-ism, but I question whether war is the effective method of destroying them. Our experience in the World War did not indicate that we could interfere in European quarrels and work out any permanent or satisfactory solution. The World War did not even save democracy, but resulted in the creation of more dictatorships than the world had seen for many years. Nothing is so destructive of forms of government, particularly forms of democratic government, as war. We may go in to save England and France and find that when the war ends their governments are Communist or Fascist.

Our going to war would be more likely to destroy American democracy than to destroy German or Russian dictatorship. There are pending in Congress measures designed to have the Government take over all business and property, fix prices and wages, and regulate every detail of private employment and commercial life. The President already has statutory power to take over the railroads and manufacturing plants in case of war, and the radios and public utilities in case of threatened war. I have little doubt that he would exercise most of these powers. Mr. Edison, the Secretary of the Navy, demands that additional arbitrary powers be granted at once, and we have been warned by Mr. Johnson, the Assistant Secretary of War, that private business would be regulated in every detail by the Government. In the World War we granted extensive powers, but actually accomplished results largely through cooperation of industry. The so-called mobilization of wealth, however, carried out in a New Deal spirit, might well result in the complete socialization of all property, and I doubt whether we would ever see again real operation of private enterprise or real local self-government in the United States. We might retain the forms of democracy, but we would be likely to find ourselves with an absolutely arbitrary government in Washington, and a plebiscite every 4 years to determine who should control it. A government by plebiscite will not long remain a democratic form of government.

I believe we will do the cause of democracy much more good if we maintain our neutrality and show that a great nation can get through a crisis of this kind without abandoning democratic principles. There is only one way to spread democracy throughout the world—that is by showing the people that under democratic government they are more likely to have peace and happiness than under any other form. Democracy spread through the world in the nineteenth century from our example, and it can do so again.

The third argument that we should enter the war is based on the theory that if France and England are defeated we will be overwhelmed by Germany and Russia. This view is widely held, and it will be more strongly held if England and France should appear to be losing the war. It seems to me to be an illusion. Hitler is most unlikely to win, whether or not he can be defeated; but under any circumstances he would hardly be free to attack the United States. No dictator has ever dominated Europe for long, and he is inevitably involved in countless difficulties on that continent. France and England won the World War, but Germany has been a thorn in their side for 20 years. The problem of dealing with the other peoples of Europe, even though they are defeated, is one which will absorb the energy of any victor. Furthermore, no one wins a modern war. The victor is only a shade less exhausted than the vanquished. There seems to be no reason why Hitler or any other European dictator should pick a quarrel with the most powerful nation in the world when he has nothing to gain by such a course. I can see no reason why he should not rather encourage trade than limit it.

But, above all, the best military authorities tell us that we can defend North America and the Caribbean Sea south of us if we maintain an adequate Army and Navy and Air Force. The maintenance of a stronger Navy than any navy or combined navies that might attack us is well within our power. In short, the horrors of a modern war are so great, its futility is so evident, its effect on prosperity and happiness, and democratic government itself, so destructive, that any alternative seems to be preferable except the subjection of this country to physical attack or the loss of its freedom.

The people's determination to stay out of war is so strong that I have little fear of any involvement before the election of 1940, and therefore I hope that there will be no major issue of foreign policy in that election. But if it becomes apparent that the President has reverted to his former views, and moves to involve us in any European quarrels, and if the nominee of the Democratic Party sympathizes with that policy, then foreign policy will be an issue in the 1940 election. I feel confident that the Republican Party will not sympathize with any drift toward war and that the nominee of the Republican Party, if elected, will keep us out of war during the next 4 years if it is humanly possible to do so. The Republican Party is a peace party; the Democratic Party may or may not be a peace party.

Partisan consideration should not enter into foreign policy, but neither should partisan considerations enter into domestic policy. There is too much indication in the Jackson Day speech that the President regards all Republicans as necessarily partisan. Fortunately, we have not yet reached the time when it must be considered partisan to disagree with the President of the United States.

It is not partisan to advocate a return to sound financial policies and the balancing of the Budget, for which every past President, Republican or Democrat, has felt a moral responsibility, simply because the present Government has tried to spend itself into prosperity.

It is not partisan to criticize economic planning, and the Federal regulation of industry, commerce, and agriculture, simply because the present government has chosen to depart from the American system which brought prosperity to this country for a hundred and fifty years.

The President has recommended a tremendous increase in appropriations for the Army and Navy, and implies that any opposition to those recommendations is necessarily partisan. But certainly it is not partisan to demand that these appropriations, like every other, be submitted to the most critical examination with regard to their real necessity. We are all for adequate defense, no one more so than the Republican Members of Congress, but it must be remembered that the appropriation for Army and Navy was only \$520,000,000 in 1934, whereas this year we will spend \$1,300,000,000—more than has ever been spent before in peacetime in the history of the United States. Now we are asked to appropriate \$1,775,000,000 for 1941, or more than three times what was thought necessary 5 years ago. No doubt there are deficiencies in some branches of the service which should be strengthened. On the other hand, perhaps some branches are obsolete and could be cut down.

It is not partisan when we are asked for defense appropriations to inquire just what it is we are defending. Do we wish a navy large enough to defend all of South America? Is the increase being proposed in order to carry out the ridiculous and dangerous policy recently adopted by the Government of trying to exclude the warships of all belligerent nations from a zone 300 miles off our coasts?

We were told in 1938 and 1939 that the increased Army and Navy then provided were adequate for defense, and I have not yet seen anything which has changed the situation materially since then. Foreign navies are likely to be smaller rather than larger at the end of the present war. Developments of naval and aviation technique may make obsolete many of our present plans. Certainly we would like to be certain that we are not preparing a navy for use in European waters.

The very appeal for nonpartisanship in the Jackson Day speech was itself partisan, for it attempts to put the Republicans in the position of being partisans whenever they criticize the administration's policies. The speech itself was a partisan speech. One of the most obvious manifestations of partisanship is to attribute evil motives to your enemies. The Jackson Day speech implies that all those who preceded the New Deal were selfish and greedy; that they made the farmer an economic outcast; that the most honored element in America under their administration was made up of gamblers and speculators. No one that I know of before has questioned the sincerity of the men of both parties who have governed this country in the interest of labor and farmer and investor alike.

Forgetting all that has been done for the conservation of natural resources from the days of Theodore Roosevelt, the Jackson Day speech is partisan because it implies that we are only now beginning to conserve the natural resources of our soil, our rivers, and our trees.

Nothing is much more partisan than to paint a picture of yourself and eliminate all of the imperfections. The Jackson Day speech claims that the New Deal has kept millions of people out of the headlines, but it makes no mention of the fact that 9,000,000 people

are still out of work and dependent on Government bounty. It refers to prosperity without mentioning the fact that our national income is \$68,000,000,000, whereas for 5 years under Republican administration, it averaged \$80,000,000,000, and there were 10,000,000 fewer people among whom to divide it. Certainly it would be slightly less partisan to paint present conditions as they are.

It hardly lies in the mouth of any New Dealer to discuss the subject of partisanship. There has never been such a partisan administration as the present one. True it has not been a Democratic partisan administration. In fact, it has entirely disregarded the Democratic Party. But New Deal partisanship is more partisan than Democratic or Republican partisanship has ever been before.

Even before the President took office it is generally admitted that the "smear Hoover" campaign was one of the ablest partisan publicity stunts which this country has ever seen. The refusal of the President to cooperate before he took office on March 4, 1933, succeeded in reducing the country's economic condition to a low point on that date, which has served as the basis of a partisan argument in every New Deal speech.

From the beginning, the policy of appointments to public office has been completely partisan. Under Hoover more than 80 percent of Federal employees were under civil service. By 1936, 4 years later, it had dropped to 60.5 percent. It is said that this was necessary because of the emergency, but even in the World War under Woodrow Wilson, when office forces were developed overnight, there was no decrease in civil-service percentage. Today the percentage is increased again to 67.6 percent, but some of this increase was obtained by taking the employees appointed under the Democratic patronage system and giving them a civil-service status, often without competitive examination. It is certainly partisan to use the civil-service system to make political appointments permanent.

Could there be anything more partisan than the treatment of the Supreme Court of the United States? In the past Republican Presidents have appointed Democrats to office; Democrats have appointed Republicans; but appointments under this administration have been dictated solely by a desire that the views of the appointee on constitutional law go along with those of the President. Five New Dealers have been chosen.

Every weapon of partisanship was used to drum into line those Senators who opposed the effort to destroy the independence of the Supreme Court. Every weapon of partisanship was used to purge the Democratic Senators who opposed the New Deal policies. Every once in a while the President boasts of his nonpartisanship in appointments, but every boast is based on the disregard of the Democratic Party by the appointment of a Republican or a Socialist who is a member of the New Deal party.

It is certainly partisan to array class against class, and make political capital out of an appeal to class feeling. At the very time that the President was proclaiming his nonpartisanship, and criticizing three Republican leaders because they would not listen to this self-praise, Robert Jackson, whom he has appointed Attorney General, was saying in Cleveland: "We are holding lines for democracy today as truly as Jackson held them a century and a quarter ago." In other words, his opponents are all trying to destroy democracy. He said of them: "They have the artillery of the press, the machine-guns of the big interests, and the best commissary that money will buy. . . . They fight from training and interest . . ."

The essence of partisanship is to refuse to recognize the good faith and the honesty of our opponents. It is not partisan necessarily for the New Deal to be opposed to the system of individual initiative and private enterprise, and determined that business and commerce and agriculture must be regulated by Government bureaus; their partisanship consists in their attributing to every man who believes in the American system some selfish motive or class interest.

The Jackson Day appeal for nonpartisanship is insincere because it is made for partisan purposes by a partisan administration. Largely because of partisanship in the Supreme Court fight, because of partisanship in the National Labor Relations Board's support of one faction of labor against another, in its partisan use of public money to maintain its power, the huge Roosevelt majority of 1936 melted away by 1938. In that year there were more votes cast for Republican Congressmen than for Democratic Congressmen. In that year, based on the Congressional votes, the people would have elected a Republican President as they will do this year. Largely because of the partisan policies of the New Deal administration, the Republican majorities in States which had elections in 1939 were in all but one case larger than they were in 1938. Some Republican leaders may express doubt as to the national result, but I have yet to see a Republican leader in any normal Republican State who is not confident of Republican success in his own State in 1940.

The Republican leaders can well accept the challenge to non-partisanship. The arguments which they have to present are arguments which can stand on their own merits. They need no personalities or false logic. The more the people discuss the issues of the campaign, the more certain they are to support the Republican nominee.

Let us present our arguments in no partisan vein. The motives of our opponents are immaterial. The policies of our party are policies based on the very principles on which this Nation has been built: Sincere neutrality in European affairs; limited Government expenditures and the end of Government deficits; the encouragement and growth of private enterprise, which has increased employ-

ment in the past, and can alone restore employment and prosperity in the future. We have only to promote a discussion of the issues before the country on the basis of logic and sound reason and American precedent. The Republican Party will return to power in 1941, not because it has any peculiar party strength or weapons of partisanship, but because it represents today the faith and the ideals of millions of Americans.

## Tribute to the Late Senator Borah

### EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

EDITORIAL FROM THE STATE, OF COLUMBIA, S. C.

Mr. BYRNES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Our Tallest Watchman," published in the State, of Columbia, S. C., in its issue of Monday, January 22, 1940. The editorial pays deserved tribute to our lamented colleague the late Senator BORAH.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the State, Columbia, S. C., January 22, 1940]

#### OUR TALLEST WATCHMAN

The Senators of the United States will miss the Lion of Idaho, and so will the citizens of the United States. He was, perhaps, our most distinguished Senator; a statement that is not based on the accidental fact that he was dean of the Senate. Long service does not necessarily result in fame. But long service plus great intellectual ability, plus high character, plus devotion to country and to the job he held, plus remarkable oratorical ability, does necessarily and justly result in fame.

WILLIAM E. BORAH was a "natural" in the United States Senate, which sometimes is described as the finest deliberative and debating organization in all government. He liked deliberation; he loved debate. In his capacity for deliberation he had few equals in the United States Government; in his skill as a debater he had no superiors.

People often have wondered about BORAH. Why was he never nominated for higher office? In part, the answer is this: He never was and never could be a political regular. In this he and Senator NORRIS resemble one another. Borah was too much the scholar, too much the philosopher to believe that right is to be found exclusively on one side. He called himself a Republican, but the organization Republicans never could claim him for their own. They knew that he would join the Democrats in any fight if he thought the Democrats nearer the right. They also knew that he had no sympathy for old guard Republicanism.

Intellect, character, personality, and education all made BORAH an independent liberal. He could not have been anything else. Therefore, he never was even close to a Republican presidential nomination; and the Democrats, of course, would not consider a nominal Republican even though he was, frequently, a supporter of the Democratic Party's program. Political organizations do not often nominate men who, intuitively and intellectually, dislike party discipline.

But such men are needed in this country and in this country's Senate. They are, when sincere, admirable and useful, even though they are not politically constructive. They serve as the public's watchmen and as the public's public criers. Theirs is a noble function; nobler, if judged by ethical and intellectual standards only, than is the function of the conformer, though he also is needed and is useful.

It is likely that BORAH's wide knowledge and profound comprehension were hindrances to his political career—if one would consider that career as having been hindered. He knew so much that he knew what could not be done. He knew, or he seemed to know, that no swift solutions are to be found for deep social and economic problems. But he did strive mightily to guide social and economic trends. His faith was in principles, rather than in details or in specific acts. His passionate devotion was for American democracy, which he defined broadly and compassionately—but not internationally. BORAH was, of all his group, the most splendid isolationist; for isolationism could not be attributed to stingy nationalism. He was too much the domestic liberal, too much the spender, too much the understander of the sufferings of the obscure, ever to be charged with speaking for the privileged class.

## Distinguished Service Award of 1939

## EXTENSION OF REMARKS

OF

## HON. STYLES BRIDGES

OF NEW HAMPSHIRE

## IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

ADDRESSES BY HON. HAROLD E. STASSEN AND PERRY PIPKIN

Mr. BRIDGES. Mr. President, the United States Junior Chamber of Commerce, recently, at St. Paul, Minn., awarded its annual distinguished service medal to Gov. Harold E. Stassen, of Minnesota. Governor Stassen was chosen for this award from among all the young men in the country because of the distinguished service he has rendered to his State, and therefore to the Nation.

I should like to point out that the United States Junior Chamber of Commerce, which was organized on January 23, 1920, has grown from 225 local organizations in 1935 to 750 this year; and that growth was achieved without the aid of any paid organizers. This organization is the fastest growing organization in the United States today.

Also worthy of note is the fact that, to my knowledge, this is the only youth organization that determines its entire policies and furnishes its own financing with no direction or guidance from older people. The age limits of 21 to 35 are strictly adhered to.

Junior Chambers of Commerce are now organized in every State in the Union, in the District of Columbia, Alaska, and Hawaii, as well as others in 16 foreign countries.

It is interesting to compare the young men of the United States, joining together freely in the true democratic spirit in order to contribute constructively to the welfare of the community, and the young men of Europe, who are forced to march in line to be trained to destroy.

Mr. President, I ask unanimous consent that the remarks of Governor Stassen, in accepting this honor, and those of Mr. Perry Pipkin, president of the organization, in presenting the award, be inserted in the Record.

There being no objection, the addresses were ordered to be printed in the Record, as follows:

ADDRESS BY PERRY PIPKIN, PRESIDENT, THE UNITED STATES JUNIOR CHAMBER OF COMMERCE

Tonight the Nation pays tribute to its younger business and professional men—from coast to coast in every city—assembled audiences at junior chamber of commerce meetings, and individuals in thousands of homes, are participating by radio reception in this tribute.

During the past 20 years under the banner of the United States Junior Chamber of Commerce there has grown a vast organization of over 120,000 young men—in all 48 States, in Alaska, in Hawaii—in every major city and town in our country, earnest, irrepressible, kindly, generous young men dedicated to the civic development, growth, and progress of their community, State, and Nation.

Up until a few years ago young men had never associated themselves together as young men except in times of war. January 22, 1920, saw the formation of an organization of young men composed of Jews, Gentiles, Catholics, Protestants, rich, poor, that is today the United States Junior Chamber of Commerce.

The good which is being accomplished today through the voluntary association together of young men is definitely proof that young men—with their energy, ideals, enthusiasm, and visions for the future—properly organized, can accomplish much.

Each year in the month of January the United States Junior Chamber of Commerce, in cooperation with its affiliated local organizations, celebrates Junior Chamber of Commerce Week and awards distinguished service award keys to the outstanding young businessman between the ages of 21 and 35 in each community who has contributed most to the civic development, growth, and progress of his particular city during the previous year.

Tonight in many cities in our country young men whose contributions locally merit recognition during 1939 will receive distinguished service award keys. To those young men I extend congratulations on their past accomplishments, and urge their continued work in the future, realizing that we never attain perfection.

Young men are more and more playing an important part in our national affairs—in business, industry, science, and government.

The United States Junior Chamber of Commerce tonight has selected a young man to whom it will give its national distinguished-service award in recognition of outstanding constructive accomplishments.

A committee of prominent Americans serving as the award committee includes: Dr. Rock Sleyter, president, American Medical Association; Dr. John Steelman, Director of Conciliation, United States Department of Labor; Mr. A. N. Marquis, editor, Who's Who in America; Mr. Durwood Howes, editor, America's Young Men; Mr. Julius H. Barnes, of New York City; and the publisher of three of our most prominent magazines.

These men have had the opportunity to review the records of such outstanding young men of 1939 as Philo T. Farnsworth, generally recognized as the man who conceived the basic principle of television; John J. Corson, III, Director, Old Age Insurance Bureau, Social Security Board, Washington, D. C.; Joseph Labino, writer of Weekly News Analysis, considered probably the reading public's greatest single source of world news; William McChesney Martin, president, New York Stock Exchange; Henry Bamford Parkes, instructor in history, New York University, also author of *Marxism and Autopsy*.

Only one, however, could be selected from this imposing group of outstanding young men, and to the great State of Minnesota goes the honor and distinction of having this young man as one of its citizens.

In 1938 he was inaugurated as Governor of the State of Minnesota. He is the youngest Governor of any State, now in office; under his capable leadership great progress has been made.

Born only 32 years ago on a Dakota County farm, he has climbed rapidly to the commanding position of Chief Executive of a great State.

In 1923 he was elected to the position of county attorney for Dakota County and gained recognition through his successfully settling a large strike, avoiding violence. He was successful in prosecuting through the Supreme Court a tax case that might have been a serious tax loss to the State. He has the distinction of having received the largest plurality of votes ever accorded a candidate for Governor in Minnesota.

And so, year after year, young men are piling up records of achievement which serve to inspire each new generation.

Therefore, to you, Governor Stassen, from 120,000 young men in the United States Junior Chamber of Commerce, we present this diamond-studded key—emblematic of your past record—and we hope, by calling attention to that record, that we can stimulate continued accomplishments from our Nation's young men.

ADDRESS BY HON. HAROLD E. STASSEN, GOVERNOR OF MINNESOTA, IN RESPONSE

President Pipkin, fellow members and friends of the Junior Chamber of Commerce, I deeply appreciate this honor that you have bestowed upon me. In accepting it, I trust you will permit me to do so, not so much in a personal sense, but rather, as an award to the young men of Minnesota. The accomplishments of 1939 in our State, which gave rise to this award, were the results of the cooperative efforts of a great number of our people.

Young men were in the front rank to an unusual degree. Members of the Junior Chamber of Commerce took a very important part. Many of them are here tonight, including a real representation of my home Hook Em Cow Chamber of South St. Paul, but it should be emphasized that the young men were not alone. They asked and received advice, counsel, and assistance of their elders. Neither should we overlook the helping hand and inspiration of the women of the State. The leadership which it has been my opportunity and responsibility to contribute has been a real privilege.

The fact that today is the anniversary date of the founding of the Junior Chamber of Commerce lends an added note to this occasion. The Junior Chamber has made a very significant contribution, not only during 1939, but throughout the years of its existence. It has aided very definitely in turning the thoughts of young men to the broader considerations of community and public welfare and progress, and to the relationship and interdependence of their own chosen field to the entire social and economic structure. Further, it has provided organized effort in support of the constructive ideas and concepts that have been developed by the members.

Looking ahead there is an opportunity and need for increased emphasis on these activities. How vitally important it is that the young men of this Nation think through the problems of 1940. How important that they do so, not from the narrow basis of their own occupation but on the broader foundation of the general welfare of our people. How important that they do so, not from a standpoint of 1 year but with a viewpoint of decades ahead.

We must think through the basic problems of the relationship between government and our economic system. We must think through the problem of the needs of our people who are now dependent on public assistance. We must think through the problem of the financial stability of our Government. We must think through the relationship between labor and capital and the role that government should play. We must think through the problem of the balance of agriculture with other economic groups. We must think through the trends toward ever greater and more complex governmental structures, ever stronger centralized powers, ever heavier taxation and debt burdens. We must think through the mechanics of democracy and the adjustment of it to the mod-

ern means of communication and the way of life of 1940. We must think through the role that this country should plan in international affairs this year and in the years of peace and reconstruction that lie somewhere ahead, we fervently hope and pray, not too far distant.

The basic policies and concepts that arise from such an approach to our problems must be frankly interpreted to the people of every walk of life and applied to the detailed manifestations of these problems.

We in Minnesota have approached our problems on the basis of the concepts we have formed. Our attitude upon these principles is to subject them to renewed consideration as our experiences and studies develop. I comment on them this evening, not as answers but as a contribution for further experimentation and consideration.

First and foremost, our attitude is one of a fundamental faith in the future of this Nation on the basis of an economic system of individual initiative and free enterprise and a governmental system of a democracy based upon the sovereignty of the individual citizen. It is our further concept that the answers to all of our problems is not to shrug our shoulders and say, "Let the Government do it."

We feel that the role of government should be that of aiding, but not of substituting for, private enterprise and the judgment and decisions of its individual citizens. In keeping with this concept, we enacted a labor-relations law that did not give to any governmental agency the power of decision over any of the issues that arise between capital and labor. Instead we provided for a waiting or cooling-off period before either a strike or lock-out could be instituted. During that period we gave to a State labor conciliator the power and responsibility of calling conciliation conferences of the representatives of both sides. Under this law, during the single year 1939 we reduced the loss arising from conflicts between capital and labor in Minnesota to less than one-seventh of its preceding average annual toll. Since the enactment of the law we have not had a single major strike in Minnesota. Over 200 disputes, involving over 20,000 employees, have been settled peacefully around the conciliation table without the loss of a single dollar of wages or the stoppage of a single industrial machine.

It is our concept that as the functions of government become more complex, and as we reach the point where government commands \$1 out of every \$4 of our national income, it then becomes increasingly important that the mechanics of government be greatly simplified, its burden reduced, its trend toward centralized power reversed, and its financial stability improved. In keeping with this concept of government, we entered into a sweeping reorganization of our State government, consolidating and bringing together many different boards, bureaus, and agencies, establishing a State business manager, with the powers that the name implies, relied to a greater degree on local government, reduced our current expenditures, brought our budget to absolute balance, and reduced our indebtedness by \$5,000,000.

Another principle has been that no one should suffer from lack of food or shelter or clothing. We have met these needs, but we have also continuously emphasized that the real answer to their needs lies in the encouragement of private enterprise as a source of more jobs for the unemployed. We have looked upon the industrial development of the results of research, invention, and discovery as the real source of improved economic conditions. We have sought to stimulate courageous capital willing to venture into new fields.

It has been our concept that there is a great need of the emphasis of the interdependence of all of our people and the consideration by every group of the manner in which their problems and their activities affect other groups and society as a whole. We have emphasized tolerance and understanding between our people of all walks of life, of all creeds, and of all nationality backgrounds. We see this reflected in our State today in many respects in the change of the attitude of our people toward each other.

President Pipkin, in this award you have highly honored our record of 1939 in Minnesota, but we would be honored to an even greater degree if that record served to stimulate the young men of this Nation in thinking through their problems and served to give impetus to their great constructive efforts for progress in the upbuilding of these United States.

## Taxation of Rural Power Lines—Arkansas Light and Power Rates

### REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. RANKIN. Mr. Speaker, it is with extreme regret—in fact, it is with alarm—that I notice some of the States of this Union are beginning a program that is calculated to cripple,

if not destroy rural electrification, by placing a tax upon rural power lines that have been built with funds provided by the Federal Government, and that are not operated for profit.

I am particularly distressed to note that this program is being instituted in the State of Arkansas. The money for these lines has been provided by the Federal Government and loaned to the farmers who use these lines to be paid for out of the money they pay for the electricity they use. This tax is unjust and unfair.

The State of Arkansas might just as well tax the public roads of that State. They might just as well tax the streets of every city or town in Arkansas or the schoolhouses in every county.

Mr. GATHINGS. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. GATHINGS. Where did the gentleman get this information?

Mr. RANKIN. I saw it in the Commercial Appeal, and probably several other papers.

I am sure the gentleman from Arkansas [Mr. GATHINGS] does not approve such a program, for there is no man in the House who has worked harder to try to secure the benefits of rural electrification for his people than he has.

And let me say in this connection that this program of taxing these rural power lines, which is evidently inspired by the private utilities, was started in my own State of Mississippi. Before I realized it they had placed three taxes on our rural electrification projects—a privilege tax, an ad valorem tax, and a sales tax on the electricity. They were burdening some of our rural electrification associations to death. I took it up with the members of the legislature and we got all three of these taxes removed. I hope the Members from the State of Arkansas, and from every other State, who agree with me on this proposition, will take the same course—get these taxes removed where they have been imposed, and prevent their imposition in those States where such taxes have not yet been levied.

The people of Arkansas are already burdened to death with overcharges for electric lights and power without piling these taxes onto the backs of what few farmers we have been able to reach with rural electrification in that State.

In the course of these remarks I am going into the electric rates in Arkansas. I will show that the people of that State were overcharged more than \$5,680,000 for electricity in 1938. They are in the grip of the Power Trust that is literally wringing the economic lifeblood from the consumers of electric energy. They attempt to answer this argument with the appeal that they pay taxes. I will explode that argument as I go along, and show that this is a scheme launched throughout the whole country by these selfish, predatory interests to try to destroy the public power systems, including rural electrification, in order that they may continue to suck the economic lifeblood from the ultimate consumers of electric lights and power.

When a man has worked as hard as I have to secure justice for the electric light and power consumers of America, and to provide rural electrification for the farmers of the Nation, it "burns him up" to see public officials in a State like Arkansas or Mississippi, or any other State, attempt to tax out of existence the rural electric power lines which the Federal Government has made possible as a result, to a large extent at least, of my efforts here in the House. The power to tax is the power to destroy, and if the private power companies can have their way, these public power lines will be taxed out of existence.

I know it will be said by some people that this is not the business of a Member of Congress from Mississippi. But since it was largely through my efforts that the funds were provided for building these rural power lines in Mississippi, Arkansas, and every other State, I refuse to sit silently by and see them destroyed or hampered without a protest.

These public power lines that are owned by the farmers, or the people to be served, and are not operated for profit, are public highways. They are highways of energy that take

light and hope and comforts and conveniences and relief from drudgery to the people to be served, and, as I said, they should not be taxed any more than should the public streets or the public highways.

If the State of Arkansas is going to tax these public power lines that are owned by the people themselves, then they might just as well put a tollgate across every public road and every public street.

These State officials had better be trying to get relief for the overburdened power consumers of Arkansas.

From a standpoint of natural resources, the State of Arkansas is rich beyond the dreams of avarice; but the trouble is that those resources are not being used for the benefit of the people of Arkansas.

That is especially true with reference to her electric-power resources. The State is rich in water-power resources, and much of her area is underlaid with the finest of coal, gas, or oil—all of which could be used for the generation of cheap electric power.

Electricity could be produced by Arkansas water power, Arkansas gas, oil, or coal and distributed to every human being in the State, including every farm home, at the T. V. A. yardstick rates, and at the same time yield a reasonable return on legitimate investments.

But instead of that, these resources seem to be gobbled up, or controlled by outside influences that are literally wringing the economic lifeblood from the people of that State, and imposing exorbitant rates for their electric energy.

Not satisfied with that, they are now bringing this pressure to bear on the State officials to levy a tax upon these power lines that are not being operated for profit—and that are serving the already overburdened farmers of that State—in order to try to destroy these publicly owned rural power lines or prevent the further spread of public power which would bring cheap electric rates to the people of that great State.

The records show that last year the people of Arkansas were overcharged \$5,681,000 for electricity, according to the T. V. A. rates, or \$7,268,597, according to the Ontario rates. I know it will be said that the Ontario system pays no taxes, but the record also shows that in 1 year the private power companies in Arkansas paid in taxes, cash contributions, and free services, all combined, only \$1,113,298, which amount taken from the \$7,268,597 overcharges, according to the Ontario rates, would still leave a net overcharge of \$6,155,299.

The record also shows that this \$1,113,298 in taxes, cash contributions, and free services paid by the private power companies in Arkansas, was on a gross income of \$10,213,799, and amounted to only 10.9 percent of that gross income, while the public power systems in Arkansas on a gross income of \$600,936 paid in taxes, cash contributions, and free services \$231,736, or 38.6 percent of their gross incomes.

If the private power companies in Arkansas had paid the same percentage of their gross incomes in taxes, cash contributions, and free services, then instead of paying \$1,113,298 they would have paid \$3,946,643.

No wonder they are fighting so hard to keep T. V. A. power out of Arkansas, and to have these publicly owned rural lines taxed out of existence.

My home town of Tupelo, Miss., buys its power wholesale from the T. V. A. Last year it paid an average of 5.05 mills a kilowatt-hour for it, while this Arkansas Power & Light Co. paid on an average of only 2.4 mills a kilowatt-hour, as the record shows.

Tupelo distributed its power to the ultimate consumer at the T. V. A. yardstick rates, set aside the necessary amount to meet the sinking funds and interest on the outstanding debt against its distribution system, paid all its overhead charges, gave the city \$12,000 in taxes, paid 6 percent on the entire investment in the system, and then made so much money that it had to reduce rates again.

At this point I am going to set out the present rates in Tupelo and the rates charged by the Arkansas Power & Light Co., so that everyone who reads this RECORD can draw his own conclusions.

Remember, now, that the Arkansas Power & Light Co. paid only 2.4 mills a kilowatt-hour wholesale for its electricity laid down in Arkansas, while the city of Tupelo paid 5.05 mills a kilowatt-hour laid down in Tupelo.

*Residential rates*

	Kilowatt-hours					
	30	50	100	250	500	1,000
Arkansas Power & Light Co. rates	\$1.95	\$2.65	\$4.15	\$7.40	\$13.40	\$23.40
Tupelo, Miss., rates (Tennessee Valley Authority).....	.75	1.25	2.25	3.75	4.40	8.65
Difference.....	1.20	1.40	1.90	3.65	9.00	14.75

Now, here is a comparative table of the commercial rates, showing what the merchants, professional men, hotel, restaurant, garage, and filling-station operators, and other commercial consumers have to pay:

*Commercial rates*

	Kilowatt-hours					
	50	150	375	750	1,500	6,000
Arkansas Power & Light Co. rates.....	\$3.50	\$9.50	\$20.90	\$40.40	\$71.00	\$153.00
City of Tupelo, Miss., rates (Tennessee Valley Authority).....	1.25	3.75	8.25	13.25	20.75	57.75
Difference.....	2.25	5.75	12.65	27.15	50.25	95.25

They will also come back and say that T. V. A. pays no taxes. That is not true. The T. V. A. not only pays 5 percent of its gross income to the States in which the dams are located, but as a rule the municipalities that distribute T. V. A. power pay in lieu of taxes cash contributions and free services, a larger percentage of their gross incomes than do the private power companies, and pay more for the electricity they buy wholesale.

Last year the municipalities purchasing power from the T. V. A. paid on an average of 5.5 mills per kilowatt-hour for it wholesale; while the private power companies in Arkansas paid less than half that rate. The biggest private power company operating in Arkansas, the Arkansas Power & Light Co., bought 298,522,000 kilowatt-hours last year, which is more than half the amount used in the entire State, and had it laid down in the State of Arkansas at 2.4 mills a kilowatt-hour; but when this power reached the people of Arkansas, they were charged about twice what it was worth, or approximately twice what they would have paid for it under the T. V. A. yardstick rates. For instance, the light and power consumers of Arkansas used 472,128,000 kilowatt-hours in 1938, for which they paid \$11,868,951. Under the T. V. A. rates the cost would have been \$6,187,408, or \$5,681,543 less.

That company could have distributed this power at the T. V. A. yardstick rates, paid more taxes than it did pay, and made a reasonable return on its legitimate investments.

As pointed out by the gentleman from Arkansas [Mr. GATHINGS] some time ago, what we need to do is to extend T. V. A. power lines across into the State of Arkansas, and provide T. V. A. rates to the people of that State, until we can develop the great hydroelectric projects now lying dormant on the White River and other streams in that area, as advocated by his colleague from Arkansas [Mr. ELLIS] and give those people permanent relief from the exorbitant burdens of overcharges under which they are now staggering.

Electricity can be delivered to every home, including every farm home, and to every business establishment in the State of Arkansas at the T. V. A. yardstick rates, or less. That would save the people of Arkansas, at the very minimum, \$5,680,000 a year on their present bills, and would double the consumption of electricity, as well as the use of those electrical appliances necessary in modern homes and modern business establishments.

If every man and every woman in that State understood this situation, there would be a State-wide revolt against the exorbitant rates they now have to pay, and the attempts to tax the public power lines to the farm homes in Arkansas would come to an abrupt end. Not only that, but they would not stop until they forced these rates down to the T. V. A. levels, lifted from the power consumers of Arkansas this enormous burden of more than \$5,600,000 a year, and electrified every farm home in the State at the T. V. A. rates. Then the people of Arkansas would begin to enjoy the benefits of their own natural resources.

### Tribute to the Late Senator Borah

#### EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

POEM BY HORACE C. CARLISLE

Mr. BANKHEAD. Mr. President, Mr. Horace C. Carlisle, a distinguished poet and scholar of Alabama, has written a splendid sentiment in the form of an acrostic about our beloved departed friend, WILLIAM E. BORAH. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

SENATOR BORAH

S-tatesmanship sits, yea, in sackcloth and ashes,  
E-loquence silences her still small voice,  
N-obleness wipes the hot tears from her lashes,  
A-s Justice prays for the faith to rejoice  
T-hat the Great Father of mercies above us  
O-verrules all, and continues to love us,  
R-oyally, when we do His will, from choice.

W-ILLIAM E. BORAH made conscience his master—  
E-ver alert to its purposed demands,

B-oldly he battled approaching disaster,  
O-ften with trembling but courageous hands.  
R-ight gave him hope, and hope gave him power,  
A-s he fought, fearlessly, hour by hour,  
H-onored at home and in neighboring lands.

O-nly the Infinite can, with assurance,  
Fathom the depths of this dutiful life.

I-n him the grace of unyielding endurance  
D-eftly dispersed the distractions of strife—  
A-nd, when defeat appeared on his horizon,  
H-e looked beyond it, and fastened his eyes on  
O-bjects above, where things never run rife.

HORACE C. CARLISLE.

### Investigation of Un-American Activities

#### EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. JENNINGS. Mr. Speaker, I shall vote for the continuation of the work of the Dies committee, as provided in House Resolution 321. I give my support to this resolution for the following reasons:

The investigations heretofore conducted by this committee have more than justified the wisdom and patriotism of the House of Representatives in creating it and clothing

it with power to investigate the activities of the foreign and subversive agencies and forces who, for years past, have been sapping the foundations of this Nation. The revelations made by the committee amply justify every dollar spent to further its work and demand the continuation and adequate financial support of further investigations on the part of the committee.

That there are within the gates of this Republic millions who seek its overthrow, is an established fact. Aliens, many of whom are in this country in violation of the law, and who are being coddled and protected against the consequences of their criminal entrance into this country by high officials of the Government, are leading spirits in the Nation-wide onslaught being made on American institutions. Having escaped the tyranny of the Old World, they treat the liberty of this country as a license to assail, undermine, and overthrow our form of government.

The Constitution of this country, the Bill of Rights as embodied in it, the law of the land, constitute the world's greatest charter of human liberty. The supreme purpose of American institutions is to protect each and every citizen beneath the folds of our flag in the enjoyment of his life, liberty, and property.

The Declaration of Independence was not self-executing. It carried with it no guaranties. It afforded no protection to the inalienable rights with which it declared man to be endowed by his Creator. To make effective these timeless truths enumerated by the pen of Jefferson and declared by the Continental Congress, required the arbitrament of the sword, the triumph of the Revolution. The Declaration of Independence would have been but a "scrap of paper" had its truths not been retraced upon the scroll of the battlefield and underwritten by the bayonet and the sword and sealed with the blood of patriots. Even then the fruits of victory would have turned to ashes upon the lips of the American people had their aspirations not found a living, workable expression in the framework of the Constitution. This immortal document, "the greatest instrument of government," according to Gladstone, "ever struck off at a given time by the brain and purpose of man," constitutes a solemn contract between the Government on the one hand, and each and every citizen on the other, that the combined power of all the people, through the agencies of Government, will in this country at all times stand ready to protect each and every citizen in the enjoyment of his life, his liberty, and his property. This, then, is the glory of our American institutions—that they stand watch and ward over the lives, the liberty, the property, the happiness, the well-being of our citizens. The Constitution of this country has had the power to march; to keep step and to be in sympathy with the ever forward moving, advancing, and changing needs of the American people. It has been kept warm and human by necessary amendments through the machinery provided in its own framework.

Under our form of government the American people have achieved greater progress, have attained to a higher degree of civilization, have enjoyed more of the good things of life, have been blessed with a larger measure of freedom, moral and spiritual advancement, than have been attained by any other people in the 5,000 years that preceded the founding of this Nation. The people of this country, in building America, have gone forward in ordered liberty under law. It is hard to understand why anyone should seek to destroy the house of our existence. But that there have been, and now are, in this country, among our people, those bent upon the overthrow of our institutions, has been demonstrated by the facts unearthed and brought to light by the Dies committee.

In the face of these facts, to refuse to vote for the continuation of the work of this committee would be a refusal to protect American institutions, and would constitute a failure to provide for the defense of our own people.

"Eternal vigilance is the price of liberty." It has not yet come to pass that "ignorance is bliss," or that it is "folly to be wise." Can it be said that there is greater safety in ignorance than in knowledge? If an assassin is on your trail, seeking your life, would you not want to know about it?

It is the "hit dog that howls." Who are they that yelp about the exposures made by the Dies committee? Certainly it is not the law-abiding citizen. It is not the patriotic American who believes in the preservation of our institutions. Every soldier, every civic organization, every newspaper, and every religious denomination in my district, every good citizen, is in favor of the continuation of the work of the Dies committee. Those who oppose the investigations being made by this committee illustrate the old truth that wrongdoers "love darkness rather than the light because their deeds are evil."

An outcry has been raised by fellow travelers of our Communists and our "reds" that by the fires kindled by the Dies committee the garments of some of our pinks have been scorched. Well, it is an old adage that "if you lie down with dogs, you will get up with fleas;" and that "if you play with pitch, you will be defiled." We all know that "birds of a feather flock together," and if our pious "pinks" do not wish to be hit and burned with the barrage that the Dies committee has put down upon them and their ilk, let them disassociate themselves from the "reds" who are undertaking to destroy this Nation. If they find themselves embarrassed when the floodlight of publicity is turned on them, they should remember that "evil communications corrupt good manners," and that a man is known by the company he keeps. The truth of it is our "pinks" in their association with the "reds" are "chained to a body of death," and if they are embarrassed by the putrefaction of this body of death they have no one to thank but themselves. Even though there be those in high places who look with tender solicitude upon the plight of our "Browders" and the straits in which our "Bridges" find themselves, this is of little concern to the sound-hearted, hard-headed, everyday American citizen who believes in his country and in the decencies of the American way of life.

Our "reds" and their sympathizers say to us that the Government ought to keep still, ought not to be concerned about the activities of those who seek its overthrow. They, in effect, say "We are not going to do anything except dynamite the Capitol, shoot a few Congressmen, topple the Statue of Liberty from its base, and supplant the Stars and Stripes with the emblem of Russia." They would have you believe that if we expose them in their activities and that if this exposure crystallizes public opinion to such an extent that it finds expression in effective laws for the suppression of these alien and subversive activities, and that if those charged with the enforcement of these laws should execute them for the protection of the American people, rather than for the protection of the "red" involved, that freedom itself would shriek at the inconvenience and embarrassment caused by such a manifestation of Americanism.

There is no insurance on the life of a nation except that which is written in the intelligent, vigilant, determined patriotism of its people. "A thousand years scarce serve to found a state, an hour may lay it in the dust." The first law of nature is the right of self-defense. The continuation of the work of this committee in its relentless exposure of the subversive and un-American activities of our domestic enemies, financed from abroad, is an imperative measure of self-defense, and the position of those who oppose the continuation of its work is un-American and indefensible.

The protection of our people in the enjoyment of their heritage of our free institutions is the supreme duty and high privilege of this House. That duty we propose to perform until Uncle Sam shall have been "deloused" of those who confound liberty with license and who prostitute the privileges accorded to those within our midst to the destruction of the institutions whose shelter they have sought and whose protection they are abusing.

The temper of the people of my district is such that they will not be satisfied with the exposure of "the squat creatures of the muck and mire," who go up and down the sewers and back alleys, and who organize and are seeking to organize various "fronts" under euphonious and deceptive names through which their subversive activities are carried on, but

they look forward to the day when we have a government with an arm long and strong enough to reach the collar of every enemy of our institutions and bring him to justice, regardless of his power and position. They are sick and tired of seeing tax eaters masquerading in the livery of this Government, while they serve Stalin and his "red" revolution, which he and his ilk seek to foster and establish in this country.

That the Dies committee has earned the everlasting gratitude of the people of this country and the overwhelming support of the membership of this House will be shortly demonstrated in the vote of confidence and continuation that is about to be cast in favor of this resolution.

Maury, Jackson, and Lee

## EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

ADDRESS BY HON. ESTES KEFAUVER, OF TENNESSEE

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the gentleman from Tennessee, Hon. ESTES KEFAUVER, on Maury, Jackson, and Lee, delivered at Confederate Memorial Hall, January 20, 1940, at a Confederate service sponsored by Camp No. 171, United Confederate Veterans, District of Columbia and Maryland division, Southern Confederate Veterans; District division, United Daughters of the Confederacy, and Children of the Confederacy.

A fortunate historical coincidence has enabled us to fittingly honor on this occasion not one but three heroes of the Confederacy. The sermon of "a democracy" could have no more fitting text than the lives of Matthew Fontaine Maury, Lt. Gen. Thomas Jonathan "Stonewall" Jackson, and Gen. Robert E. Lee.

January 14, 1806, Matthew Fontaine Maury was born in Spotsylvania County, a few miles to the west of historic Fredericksburg. Amazing, indeed, can be the indifference of history to such an extent obscure the exploits and accomplishments of so distinguished a person. Too many people have been one with the writer of a New York daily, who evincing great surprise a few years ago when his name was accorded liberal support for a place in the Hall of Fame, uttered in frank amazement, "I had never even heard of Maury." Yet this prophet, without too great honor in his native land, venerated by kings and emperors, was able by achievement alone to earn from a grateful world the sobriquet, "Pathfinder of the Seas." Unknown? Unheard of? The founder of the National Observatory and Signal Service, Agricultural Meteorology, and of the Naval Academy at Annapolis. His genius made possible the laying of the Atlantic cable and the commerce of the entire world was revolutionized by his charts of the winds and currents.

Raised from early childhood in Tennessee, with little liking for books other than mathematics, inured to hardships, steeped in the philosophy of mountain silence, Maury at an early age received his midshipman's warrant at the hand of Sam Houston, then a Member of Congress. There followed a progress which found him contributing to the world maritime classics; he had circumnavigated the globe; had been honored by citations of foreign rulers; and had been prominently mentioned as Secretary of the Navy. The laying of the Atlantic cable had been made possible due to Maury's beliefs which had resulted in the discovery of the "telegraphic plateau."

Such, then, was the brilliant background of the man who, when Virginia, his native State, called, turned his back upon his congenial scientific labors, upon all the plans he had organized for the good of mankind, and upon his splendid discoveries and the achievements born of his genius, developed by his original mind, children of his own creation the great Maury hearkened to the inexorable law of duty.

The exploits of rebel Commodore Maury are well known. For the first time effective torpedoing was used and to Maury is attributed the first laying of mines, through which medium, it was said, that many an enemy went to heaven by the most direct route. This service gave Maury forever to the timeless memory of the Confederacy, but we give not to the world the remembrance of a creature of war but the vision of the man of whom Attorney General Anderson, of Virginia, declared: "Maury's footsteps from childhood to the doorway of death mark a path of transcendent talents, blazed with labor and energy; glorified through pain and disappointment and leading into the hall of eternal fame."

It has been said in recent years, by first soldiers and military students of England that "within the last 200 years, the English-speaking race had produced but five soldiers of first rank—Marlborough, Wellington, Robert Lee, and Stonewall Jackson." These men further have avowed that "Jackson's campaign in the Shenandoah Valley was the finest specimen of strategy and tactics of which the world has any record; that in the series of marches and battles, there was never a blunder committed by Jackson; that his campaign in the valley was superior to that made by Napoleon in Italy. Military schools the world over have used his tactics as models, and Von Moltke, the great German strategist, declared that Jackson's Virginia campaign was without a rival in world history. Through the matchless leadership of Jackson, it has been stated "that the Army of Northern Virginia had more force and power than any other army that ever existed." Such then was the military genius of this comparatively unknown and unhonored man, save in a very small circle, down to the spring of 1861 when war between the States seemed imminent. Some of the latent power of this quiet-mannered instructor at Virginia Military Institute could have been foreseen by an incident which revealed strikingly the real man. Up to probably April 1861 the citizens of Lexington were strongly Union in sentiment, while the cadets were all ardent secessionists. This difference of opinion came near resulting in a bloody fracas, and after the cadets had returned to their barracks and quiet had been restored, a corps meeting was called to listen to addresses on the situation from the professors. After several had spoken, Major Jackson remained seated and was only aroused by continuous demands from the cadets for a speech. This was the first symptom of what was to come. Instinctively those growing youths knew that the man of war was now to have his opportunity, and turning from the mere attractive oratory of the other professors they would have nothing but a speech from the silent man, who, so many years, had afforded them much amusement. With unaffected diffidence Major Jackson slowly arose, and turning to his youthful audience, said, "Gentlemen, I am a man of few words; when the time for fighting comes, I will draw the sword, and throw away the scabbard" and sat down.

One of Jackson's scholars many years later, relating this story, said, "The thrilling effect of these words is felt by me to this day. They touched the heart of every boy who heard them and men now gray will tell of the enthusiastic cheers which drowned all further speeches. Jackson had taken his step toward immortality." The effect of his words on his students that day has been shared ever since by a world thrilled not by his words but by his exploits.

Never has heroism been at its best more than in the first battle of Bull Run, fought on July 21, 1861, when Thomas Jonathan Jackson became the immortal "Stonewall" Jackson. You know the story well. General Bee's Brigade, flanked by superior numbers had broken and was retreating in disorder. Their general had attempted in vain to stem the stampede and to retire in military alignment. At this moment General Jackson, commanding the First Brigade, appeared on the field of battle. As he moved quickly to the front, the disorganized troops of Bee dashed past him toward the rear. At this moment Bee approached General Jackson at a full gallop. In bitterness, Bee exclaimed to Jackson, "General, they are beating us back." Jackson replied, "Sir, we will give them the bayonet." It has been said that, "These words seemed to act upon Bee like a clarion." He galloped back to his men, and, pointing with his sword to Jackson, shouted, "Look, there is Jackson standing like a stone wall."

This characteristic of the man, inspired so much the battered remnants that a rout was turned into order and eventually complete victory.

Jackson combined admirably the quality of solidity of a stone wall on defense with the character of progressive action on offense.

James Power Smith said, "Outwardly, Jackson was not a stone wall for it was not in his nature to be stable and defensive, but vigorously active. He was an avalanche from an unexpected party. He was a thunderbolt from a clear sky, and yet he was more like a stone wall than any man I have known."

On the field his judgment seemed instinctive. No one of his staff ever knew him to change his mind. There was a short quick utterance like a flash of the will from an inspired intelligence, and the command was imperative and final. He was remarkable as a commander for the care of his troops, and had daily knowledge about the work of all staff departments—supply, medicine, ordnance. He knew well the art of marching and its importance. His 10 minutes' rest in the hour was like the law of the Medes and the Persians, and some of his generals were in dire trouble from the neglect of it. Of such things he was careful, until there came the hour for action, and then, no matter how many were left behind, he must reach the point of attack with as large a force as possible. He must push battle to the bitter end until he had reaped the fruits of victory. Over and over again he rode among his advancing troops, with his hands uplifted, crying, "Forward, men, forward, press forward." What an inspiring legacy to leave to posterity. The bulwark of resistance and the ability to press forward over all obstacles.

Still another characteristic marked the man. Having been shot by his own men, by mistake in the dark of night, Jackson approached the brink of eternity with the same spirit of resignation which had been the essence of a joke which had once evoked from him much laughter.

"In the early day of the Puritans, a man met one of them going out into the woods with a gun and he said: 'Where are you going?'"

"To the woods."

"What are you taking your gun with you for?"

"I might meet an Indian."

"Are you not a Calvinist?"

"I am in deed and in truth."

"You can't die then till your time comes."

"Know that."

"Then why carry a gun?"

"I might meet an Indian whose time had come."

Jackson showed a heartbroken group about him how a warrior can die and as the military spirit left his restless mind, his agitation calmed, his countenance became tranquil, and, as if leading his men, he was heard to murmur, "Let us cross over the river and rest under the shade of the trees."

Thomas Jonathan Jackson was indeed a product of the American people. His fadeless renown is truly the legacy of all America. Now that the memory of the bitterness of America's internecine strife has faded, all martial deeds and prowess exhibited in that mighty contest belong to all patriotic citizens. It has been truly and profoundly stated:

"The preservation of the wonderful annals of Stonewall Jackson's brilliant achievement is a sacred duty to the South, the Union, and to all mankind."

What does one say when asked to speak about Robert E. Lee? How could a brief speech do justice to so great a man? Indeed, one could hardly contemplate the sublime grandeur of General Lee's character, or encompass his deeds in a series of addresses or even in a complete and definitive volume.

Landon C. Beil, on a similar occasion and under much the same circumstances, said: "Moreover, General Lee held such a firm place in the affections of his countrymen, and his great fame has so overspread the world, and his career has claimed the attention of so many brilliant writers and gifted orators, and what they have written and spoken has been so assiduously studied, especially by such interested and intelligent persons as compose the membership rolls of the Sons and Daughters of the Confederacy that it is difficult to present anything new, and equally or more difficult to recount interestingly what is already known."

"What then shall we say of the matchless Lee? His gentility is everywhere admired; his sincerity is everywhere conceded; the integrity of his purpose has never been questioned; his military genius is everywhere acclaimed; and the nobility of his character is everywhere extolled as worthy of all praise and emulation."

"The ability, the endowments, the attributes of the man are so well known that no elaboration here is needed."

"And, no doubt, it would be the verdict of the aggregate of the wise and the informed that he embodied a rare, full, and adequate combination of qualities, a physical make-up, and endowments of head, heart, soul, and spirit, more nearly approaching a complete, well-rounded, and perfect man, than any other produced on this continent."

General Lee was of a lineage scarcely paralleled in the annals of America.

Descended from an ancestry studded with cavaliers and crusaders, lawyers and judges, soldiers and statesmen, poets and patriots, lords, earls, and kings, to mention but a few, is it any wonder a man of so many talents was produced?

I believe the whole world joins in conceding the purity and sincerity of General Lee in rejecting the offer of the chief command of the army of the Northern States, and casting his lot with his State where he felt his paramount allegiance was due.

On the day Virginia seceded General Lee had been offered the supreme command of the armies of the Northern States. Two days later, on April 20, 1861, he declined the offer and at the same time resigned his commission in the Army of the United States.

His high-minded integrity and his self-respect would not permit him to fight for a cause he believed unworthy, and he could not be induced to violate his conscience and stultify himself even by the highest military honor within the gift of the Government.

He would fight, if there had to be a fight, on the side of right and justice even though he realized it was an unequal, even a hopeless, struggle.

At one time he said: "I have never believed we could, against the gigantic combination for our subjugation, make good in the long run our independence unless foreign powers should, directly or indirectly, assist us. But such considerations really made with me no difference. We had, I was satisfied, sacred principles to maintain and rights to defend, for which we were in duty bound to do our best, even if we perished in the endeavor."

Leadership was a natural gift with Lee. He was the inspirational leader of an inspired army. Theodore Roosevelt rated him without exception "as the greatest of all the captains that the English-speaking peoples have brought forth."

When toward the conclusion of the conflict, a decision of superlative importance had to be made, Lee made that decision unaided and alone. Most men would have sought counsel and shared or divided responsibility. He, however, reached his own conclusion. That conclusion he himself at the time expressed in words brief, but vibrant with moral triumph: "The question is, is it right to surrender this army? If it is right, then I will take all the responsibility."

The surrender at Appomattox could have ended the career of this remarkable man. His work was done, but from the ashes of failure he plucked triumph. Lee wore defeat as a laurel crown.

From the day he affixed his signature to the terms of surrender submitted to him by Grant at Appomattox to the day he drew a dying breath at Lexington, Lee's subsequent course was consistent. In his case there was no vacillation, no regretful glances backward thrown.

The five remaining years of life and active usefulness were creditable to himself and exceptionally useful to his country. He set to Virginia an example of lofty character and simple bearing. "Uttering no complaints, entering into no controversies, he was as one in suffering all, that suffers nothing. His blood and judgment were well commingled; and so it fell out that he accepted fortune's buffets and rewards with equal thanks. His record and appearance during those final years are pleasant to dwell upon, for they reflect honor on our American manhood."

When the gates closed on the old occupation, they opened on a new, and it was an occupation through which he gave to his country, North and South, a priceless gift.

Charles Francis Adams said, "Speaking advisedly and on full reflection, I say that of all the great characters of the Civil War, and it was productive of many whose names and deeds will long bear in recollection, there was not one who passed away in the serene atmosphere and with the gracious bearing of Lee. From beginning to end those parting years of his will bear closest scrutiny. There was about them nothing venal, nothing querulous, nothing in any way sordid or disappointing. In his case there was no anticlimax, for those closing years were dignified, patient, useful; sweet in domesticity, they in all things commanded respect."

Lee was at the head of Washington College from October 1865 to October 1870, a very short time in which to accomplish any considerable work. A man of advancing years, he had every reason to feel a sense of lassitude. He showed no signs of it, and, closely studied, those years and Lee's bearing in them were the ones which did most toward stamping him with true greatness." One who knew him well has written of him:

"He had the quiet bearing of a powerful yet harmonious nature. An unruffled calm upon his countenance betokened the concentration and control of the whole being within. He was a kingly man whom all men who came into his presence expected to obey."

Col. Charles Marshall, his military secretary, said of Lee:

"There is hardly an incident in his life, great or small, that does not present an illustration of some virtue."

In troubled and restive days such as those the world now encounters, it has become almost a truism that our greatest need is hope. The lives of men like Maury, Jackson, and Lee in commemoration reassure us that indeed in mankind, its story, and its lessons one can put faith and hope.

As Gen. Robert E. Lee himself once said: "My experience of men has neither disposed me to think worse of them nor indisposed me to serve them; nor, in spite of failures, which I lament, of errors which I now see and acknowledge, or of the present aspect of affairs, do I despair of the future. The truth is this: The march of Providence is so slow, and our desires so impatient; the work of progress is so immense and our means of aiding it so feeble; the life of humanity is so long and that of the individual so brief, that we often see only the ebb of the advancing wave and are thus discouraged. It is history that teaches us to hope." Tonight have been enumerated some of the virtues, exemplified in the memory of Maury, Jackson, and Lee, whom the Sons and Daughters of the Confederacy have honored tonight.

### A Man Who Made History—William E. Borah

#### EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

Mr. BENDER. Mr. Speaker, WILLIAM EDGAR BORAH, the outstanding spokesman of the United States Senate, worthy successor to Webster, Hayne, and Stephen Douglas, has spoken his last words in the Nation he loved so well. For more than 33 years, from 1907 until his death last week, Senator BORAH served the State of Idaho and the people of the United States in the upper House of Congress with the greatest distinction.

Few men in the history of our Nation have wielded the influence or commanded the respect which were granted to Senator BORAH. In every assemblage his word carried the weight of earnest conviction and careful consideration. Senators and Representatives throughout the Nation listened

attentively to his views on any subject. The people back home came to regard him as one who spoke for them more eloquently and persuasively than any other Member of Congress. They gave him their support as he gave them the breadth and wisdom of his mind.

Seventy-four years ago, on June 29, 1865, WILLIAM BORAH was born in a small town of Illinois. The moving spirit of the generation in which he grew to manhood called him west, and in his first days as a practicing attorney he settled in Boise, Idaho. The only public position he ever occupied in his long career of service was the post of United States Senator. He was first elected in 1907 and never left the Senate, despite the shifting tides of American politics throughout the years. In 1916, Idaho went Democratic, voting for Woodrow Wilson but the senatorial contest of 1918 found Senator BORAH returned to his seat by a large margin. In 1936, President Roosevelt carried Idaho with 125,683 votes, the largest number ever gained by a Presidential candidate in Idaho. Yet, despite the 2-to-1 victory margin of the President on the Democratic ticket, Senator BORAH, on the Republican ticket, rolled up the unprecedented total of 128,723 votes, to defeat his opponent, the former Governor of Idaho, by a margin almost identical with the President's.

This amazing popularity was due entirely to the personality and integrity of WILLIAM BORAH. For many years in the early days of his public career, the activities and beliefs of the Mormon Church were a recurrent issue in Idaho politics. Senator BORAH eliminated the religious controversy as a matter of political concern. His complete belief in and acceptance of the Bill of Rights amounted to a passion with him. He once wrote a constituent, "I am a believer in the fundamental principles of religious liberty. If the time ever comes when I have to sacrifice my office for those principles, I shall unhesitatingly do so."

Senator BORAH was happy in the Senate. There he found the opportunity to reconcile his views of the growing Pacific Northwest with the development of the entire Nation. The development of cheap power, the reclamation of land, subsidies for farming, the curtailment of monopolistic practices were part and parcel of the vast new empire he saw rising about his State.

Yet his greatest fame came to him because of his stand on matters of international concern. Curiously, this distinguished Senator, representing a State landlocked on all sides, hemmed in by vast mountains, became the Nation's greatest authority on international problems. His strongly isolationist views were part of his patriotism. The United States belongs to a group apart, he told us. Our ideology, our hopes, our position in the world, do not depend for their success on anything which takes its origin in Europe. Stand clear of foreign entanglements, was Senator BORAH's solemn warning.

He did not speak for himself alone. Millions of people throughout the Nation shared—and still share—the views he advanced. At the special session of Congress which met last September six of the eight Senators from the Pacific Northwest region voted against the repeal of the arms embargo, following Senator BORAH's lead. From 1924 to 1933 Senator BORAH was chairman of the Senate Foreign Relations Committee and led innumerable battles on the floor of the upper House for his viewpoints. His last great fight was in the condemnation of the Supreme Court packing plan, a plan which he branded as a violation of the "sacred traditions of American democracy."

Here was the keynote of his entire life. In his last Senate address he told the Nation:

Before any progress can be made by totalitarian ideologies in breaking down American institutions, a way must be found to discredit the American Bill of Rights. I have said it is a sacred document. If human liberty is sacred, this document is sacred.

A great man has left the people of our Nation. He was more than the Lion of Idaho. He was a sturdy, human Rock of Gibraltar, standing steadfast against every force which he regarded as hostile to the American way of life.

His State will not speedily forget him. In his honor there will remain forever the name of Idaho's highest mountain—Borah Peak. Nor will the State of Idaho or the Nation at large easily replace him.

### Investigation of Un-American Activities

#### EXTENSION OF REMARKS

OF

HON. J. JOSEPH SMITH

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

EDITORIAL FROM THE WASHINGTON DAILY NEWS OF  
JANUARY 24, 1940

Mr. SMITH of Connecticut. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of January 24, 1940:

#### TO INSURE FAIRNESS

The overwhelming vote by which the House of Representatives has continued its Dies committee reflects an overwhelming public opinion that congressional investigation of un-American activities is essential.

We regret that, beyond listening to much criticism of the committee's methods, the House did nothing to insure that Chairman DIES and his colleagues will go ahead more fairly and so more effectively. A set of instructions to the committee, asked for by two of its members, Representatives VOORHIS of California and CASEY of Massachusetts, met objections that it would "hamstring" the investigation and was not even permitted to come to a vote.

What Messrs. CASEY and VOORHIS proposed was that the committee should be told to hold executive sessions at least once a week; to issue no statements and press releases until they had been submitted to the entire committee and approved by a majority; to attempt to call as witnesses all persons accused, in testimony by others, of un-American activity, and to bind members not to make unauthorized charges or predictions as to future revelations.

These proposals seem mild, perhaps too mild. How they could "hamstring" any proper efforts is beyond our understanding. Yet, if it had worked under some such rules from the start, the Dies committee might have avoided many blunders and spared itself many charges of violating the rights of witnesses, "smearing" innocent persons, seeking sensational publicity, and persecuting radicals and liberals while displaying less zeal for the exposure of fascist-type subversion.

In the absence of instructions from the House the committee ought to impose at least these rules on itself. The investigation of un-American activities should be conducted henceforth in an unquestionably American way. But the records of many congressional inquiries prove that the decision between fair and unfair methods cannot safely be left for individual committees to make. Congress should adopt, for all its committees, a standard code of procedure that will permit none but fair methods.

### America and Finland

#### EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

STATEMENT BY RAYMOND GRAM SWING

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief statement by Raymond Gram Swing on the Finnish situation:

#### AMERICA AND FINLAND

(By Raymond Gram Swing)

It isn't within my assignment to discuss the attitude taken in Congress and by the administration toward a loan to Finland, insofar as that is a domestic question. But it is quite within my province to discuss its effect on foreign affairs and on our foreign

influence. When a nation is as powerful as the United States, almost everything it does has some influence on the outside world. People who haven't lived abroad for some time don't realize this. As an American who has lived a great many years abroad, I want to preface what I am going to say by my testimony that the view of the United States from abroad is pretty good. Sometimes the United States seems to slip and slide, but, on the whole, if you look at it from a distance, it has kept fairly steadily on a satisfactory road; and one of the assets of the United States is the influence it has, not on every particular issue at every particular moment but in the ideas it keeps vital and real and in helping other people to hold on to their faith in human values. That has never been more true than now, when these values are at stake, and when other countries that share our beliefs are in peril. That is a political fact. It is part of the material substance of our power in the world. That is a fact whether we can do something or whether we choose not to do something. It counts. Our doing counts; our decision not to do something counts; and whatever the virtues from our own standpoint of a decision not to help Finland as it needs, the effect of such a decision on our foreign influence and foreign relations should be weighed in choosing a policy. I am not saying that, having taken the effects into consideration, the country should or should not change the decision in regard to the Finnish loan. I simply want to add to the discussion, as an intrinsic part of it, this aspect of its consequences abroad.

It is well known abroad that the United States has more sympathy for Finland than for any other victim of aggression in recent years; more sympathy than for China, than for Czechoslovakia, more than for Poland; much more than for Ethiopia and Albania. It also is known abroad that the United States, quite naturally, wants to stay out of the war. So American conduct is carefully watched, as a conflict between our sympathies and our fears. A refusal to help Finland would have certain distinct, almost measurable results. It would send down the confidence and spirit of the other Scandinavian countries like mercury falling on a cold day. It would weaken the lingering belief of many Germans in a world of freedom, for many Germans are clinging to that belief, confident that the excesses of the Nazi regime are going to pass. It would reduce the safety of Holland and Belgium in that it would lower the latent resistance to extreme policies by the Nazi regime and in that it gave the Dutch and Belgians a growing sense of being alone in the world. It would also reduce the sense of safety of the Balkan countries. It would make Rumania considerably less sure of the reality of a world secure for small nations. It would give the antidemocratic arguments heard in all Balkan lands a ring of authenticity.

In contrast to a superficial impression that the Finns are doing quite well without substantial help from abroad, the opinion in the Scandinavian countries is that the Finns are doomed unless they get large numbers of pursuit planes. The present Russian strategy is to destroy Finnish communications by persistent large-scale air attack. That is the objective of the continuous and effective air raids over all of south Finland. Antiaircraft guns are only a partial defense against such attacks, and the Finns haven't enough of these. The one real defense would be pursuit planes. Two hundred might be enough, according to one estimate. But Sweden, Norway, and Denmark couldn't supply that many pursuit planes unless they abandoned neutrality and put their entire air force at Finland's disposal. And that would mean their entry into the war. Nobody tells the true position of the help that has reached Finland. It probably isn't in good military tradition for the Finns to advertise their shortages. But the amount of British and French and other help isn't being revealed. Tonight we are told the British and French have begun shipping 150 or 200 planes. From sources which I must trust I am assured that the outside help is far short of what Finland needs. It is, of course, too late for a northern defense league to save Finland, and the talk about it must refer to the next stage of the crisis, which would follow after Finland's defeat. And that must be as terrifying to the Finns as the fate of their appeal for a loan in Washington. However, the number of foreign volunteers already in Finland was put at 20,000, three-fourths of them Swedes. That's a goodly number, 10 percent of Finland's effective army. But without the pursuit planes there is no stopping the systematic paralyzing of Finland's communications.

### Human Rights

#### EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

ADDRESS BY JUSTICE JACOB PANKEN

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

delivered recently by Judge Jacob Panken, of New York, at the Coliseum, Chicago, Ill., January 14, 1940:

This is a great meeting. It is a stirring occasion. It is the embodiment of the American spirit. It is symbolic of the entity of the human family. In these dark days meetings of this kind are the expression and at the same time the promise of the hope of mankind.

In this meeting there are those who are Catholics, and those who are Protestants, and those who profess the Jewish religion. There are those who speak or whose parents spoke Polish, Czech, Finnish, Slovakian, Russian, and Jewish. But in this land of the free where each of us is endowed with the promise of life, liberty, and the pursuit of happiness, we are Americans. And because we are Americans, we consider ourselves equal members with equal rights in the human family.

There were those who spoke as representatives of our Polish citizens, of our Czech citizens, of our Slovak brethren. I do not come to speak as a Jew. I come to speak as an American not only on behalf of the Jews but on behalf of all peoples who are oppressed, persecuted, and decimated.

The Czechs have been crucified by Hitler. The Slovaks have been demeaned. The Poles have been made the vassals of the Nazis and the Communists. The Finns are bearing the brunt of the assault of the Russians, fifty to one. But among all of these peoples, none have suffered and are suffering as much as the Jew. For 2,000 years he has been the focal point of attack for all beasts, fanatics, and brutes. Yet, I come not to speak for the Jew. I come to speak on behalf of man.

Paraphrasing a paragraph from the President's message to the Congress of the United States in which he said—

"We do not have to go to war with other nations but at least we can strive with other nations to encourage the kind of peace that will lighten the troubles of the world \* \* \*"

We do not have to go to war with other nations, but we cannot curb the sentiments which well up in us in sympathy with those who are the victims of aggression, or fail to concern ourselves with the suffering inflicted upon maimed, orphaned, and distressed fellow humans on both sides of the war.

Our hearts go out to those victimized by Stalin; our hearts go out to the Finns whether they be civilians or soldiers. We cannot help but feel deeply for the mothers whose children are being killed by bombs thrown from airplanes into peaceful civilian homes. We cannot shut our ears to the weeping wail of the child whose mother has been killed by dynamite let loose from the wings of death-dealing airplanes. And we cannot shut out from our consciousness the fact that many thousands of Russian soldiers are driven into battle by machine guns pointed at their backs and not infrequently used against them by their own officers and fellow Russians. These are caught between the valiant Finns defending their freedom, their territory, and their manhood, and the cowardly Bolshevik who is driving them at the point of a gun to battle against innocent men, innocent women, innocent children, whom the Russians consider their fellow workers, their fellow men.

The assault of Russia upon Finland was not an unpremeditated act. It was not the result of a conspiracy between Germany and Russia, though, undoubtedly, they have conspired. True, were it not for the pact between Hitler and Stalin, the invasion of that little country with its extremely brave, valiant, and free people might not have come at this time. But come it would have.

The policy of the Soviets has been and still is "bore from within."

The Russian Government, when it suits its purpose, lays at the door of the Communist International, policies which are followed in free countries by the Communists. However, there is really no Communist International, one in which groups representing other than the Russian nation have any say. The Comintern is an agency financed and controlled by Stalin.

Communists whether in France, England, or the United States, or anywhere else, owe allegiance as a matter of principle, in response to their ideology, only to the Comintern. In truth, they recognize allegiance only to the Soviets of Russia. Russia has become the fatherland for Communists throughout the world. It is the only fatherland they recognize. To the French Communist, France is nothing; to the American Communist, the United States means nothing. To both, and other Communists in other lands, Russia is everything. It is the fatherland for all Communists. Instead of the Czar batushka (the Czar, the little father), it has become Stalin, the big father.

Attacking nationalism, the Soviets preach the fatherland spirit. Charging the democracies with imperialistic appetite, Russia invades little countries who they think cannot resist, to satiate its hunger for imperialistic expansion. Stigmatizing nationalism as a vice of the democracies, Stalin inculcates the most jingoistic spirit in his adherents in Russia and throughout the world. The soldiers that freeze upon the lakes of Finland are led to believe that they are fighting for mother Russia, fatherland of the proletariat. What they are fighting for is greater power for Stalin and his aides.

In its imperialistic march, the first to be attacked and, in some instances, raped, were the little countries on the Russian border. The native Communists in these border countries are the agents of the Stalin regime. Evidently responding to orders, they agitate within those little countries dissension. They divide their own people. They cause differences to flare up and convert these differences to create warring groups. They are agents of the Soviet Government. They act as spies, betraying their own countries.

In Finland, early in the twenties, they attempted to do exactly that sort of thing, but the Finnish people, as a whole, turned deaf ears upon the Bolshevik agents. But there were some Finns who lived in Russia. Stalin and Molotov set up for Finland a "ghost government"—a government constituted of Finns who had not been in Finland for more than 20 years. A president was appointed who had abandoned Finland and lives as an emigré in Russia. He has an apartment in Moscow and no habitat in Finland. And then a treaty was made between the Soviet Government and this "ghost government" in which Molotov recognizes this government set up by the Soviets, a government which never had the consent of the governed to govern.

We, in America cannot understand that, for we believe that a government derives its just powers only by the consent of the governed.

But dictators do not reckon with the wishes of the people. The people are to be ruled and rulers are to be appointed over them, and so Russia seeks to rule Finland through its appointed Finnish traitors.

Can you for a moment imagine this situation? Let us imagine this: Let us imagine for the purpose of example and illustration that a military force of Russia crosses the Bering Strait into Alaska and occupies a strip of the frozen north of our Alaskan territory. Can you imagine that, please? Then, after this military force occupies a frozen strip of Alaska, Stalin and Molotov set up in that frozen strip a government and call it the United States Government. They appoint Earl E. Browder president, Foster secretary of state, and other equally loyal Americans as the rest of the government. And then enter into a treaty with that government which the Soviets have set up, recognize it—moreover, claim for it representation of the entire American people. Can you imagine that? Of course, you can't; but that is exactly what has happened to Finland. By force a strip of a few kilometers of Finnish territory was occupied by Russian military forces. And then, with the Finnish traitors supposedly constituted as a government, a treaty is concluded to represent the entire Finnish people.

What I have imagined, insofar as our country is concerned, is far-fetched. True, it never will happen. But I am certain that Stalin and Molotov and the Soviets would not stop at doing just that, should the occasion arise. And I am equally certain that in response to Bolshevik ideology and Communist loyalty to the fatherland, which is Russia, American Communists would not resist Russia occupying American territory or decline to act as a puppet government to be manipulated by Soviet Russia.

French Communists have by their acts given aid and succor to the common enemy of France. Monsieur Marty would not, I am sure, decline to head a puppet government in France, set up by Russia, even if it meant the loss of the war to Germany and the establishment of a dictatorship in place of the French Republic. That is the ideology of the new theory of nationalism.

There is no difference between nazi-ism and fascism, between sovietism and communism. All rest upon the theory of dictatorship. The basis for that theory is alike in all totalitarian countries. Even a cursory study of the form of government obtaining in Russia, Germany, or Italy discloses a deadly parallelism—all power to the dictator, all power to be centered in the hands of the superleader, all power in the hands of a man diety set up by himself. That is the structure of totalitarianism.

The denial of freedom of the press, freedom of speech, freedom of conscience, religious freedom, is an integral part of the ideology accepted by the Communists, Fascists, be they in Germany, Italy, France, Russia, or even in our own midst. They all emit venom, which is the venom of hatred which leads to murder and is the father of intolerance and ignorance and darkness which destroys human dignity, human right, human development.

Man, man in his proper stature would rather die on his feet than live on his knees. The Finns are doing just that.

As a concomitant of nazi-ism morality breaks down, decency goes with the wind. The other day the Germans advised their girls and their women to give themselves to the soldiers who are on march to battlefields so that children might be conceived. Love, marriage, family, all are discarded. The theory of it all is that man lives for the government as distinguished from the fact that government is instituted to serve man. Parenthetically, let me mention this fact that when bolshevism overran Russia it was said that they had nationalized their womenfolk. That was not the truth. The Germans have gone one step beyond that, they have actually nationalized their women, for they tell the women to give themselves to anybody who happens to wear a uniform.

Bolshevik ideology was not intended to be confined within its own borders. Like worms boring into healthy trees and fruit, Russia's ideology was made to bore into and within the democracies. Bolshevism is an ideology which denies the truth, mocks decency, abandons morale, and epitomizes the lie. It developed in a philosophy which spurns the culture—and culture is accumulated decades and morals of the ages—of all who refuse to accept bolshevism. The moral code, accepted by man and by which he lives, is regarded as capitalistic and, in consequence, it must be destroyed. That's bolshevism. That also is nazi-ism.

The human race has, over the centuries, stored up the results of its experience and out of experience came our concepts of right, truth, and justice. The philosophy of bolshevism is like that of nazi-ism. That of the Nazis is also the philosophy of the Bolsheviks. Destroy all that has been created, acquired, and built.

Russia penetrated into our own country through "fellow travelers," through the "party-line gentleman," through the "borer from

within." Nazi-ism has worked and bored through the American bund and its "fellow travelers." In 1931 the Nazis and the Bolsheviks in Germany joined hands to strangle the German Republic. They joined together in a plebiscite to oust the democratic government in Prussia. They failed at that time. But the betrayal by the Communists in Germany of the republic in 1931 and again in 1933 bore it fruit—Hitlerism!

I have always condemned the Munich Pact as a crime. I feel that more strongly today. Were it not for the Munich Pact, Czechoslovakia would not have been raped and destroyed, Poland would still exist, Finland would be free of invaders, and the millions of young men instead of being on the war front would be pursuing their peaceful occupations, and tens of thousands who had died would still be alive and hundred of thousands would not now be either widows, orphans, or grieving parents.

The world is on a precipice. Culture and civilization is at the abyss. Two forces are fighting—one to destroy civilization and culture and human dignity, the other defending it with might and main. It is a war between democracy and absolutism; between freedom and slavery; between high-mindedness and the racketeer spirit.

Our hearts go out to the Jews who, by the millions, are being tortured, bled, driven from pillar to post, who are spat upon, who are degraded to the lowest degree—the Jews who have given the world Christianity, for it was the Jew Christ that gave mankind the philosophy of Christianity. That is probably the reason that Hitler despises and hates Christians. He cannot, he will not accept the philosophy of Christianity given to the world by a Jew. The Jew now is regarded by the Nazis as an outcast, by Mussolini he is not wanted. The Jew has always been the scapegoat. The Poles did not realize that it is one step from the Jew to the Pole, and now the Poles suffer side by side with the Jews. The Catholics did not realize that the attack upon the Jew will not stop there and that ultimately it will be directed against them too. It is that now—churches are destroyed, priests imprisoned.

As we view existing conditions in the world with all its darkness, with all its treachery, with all its despotism, with all its brutality, our spirits have not fallen, for there, in little Finland, man stands erect and fights for the thing dearest to man—dignity, self-respect. The Finns are the symbol of man's dignity, a symbol which stirs us and stirs the rest of the world. A symbol which will lead man to fight despotism and overcome it.

In this fight between democracy and despotism, we Americans, while remaining neutral, stand with the democracies and hope for a complete victory for them. Neutral we may be in act, but we are not that in thought. We are against dictatorship. We are against Nazi-ism. We are against bolshevism. We are for Finland and against Russia. We are for France and Britain and against Germany. We certainly cannot continue neutral in act insofar as Finland is concerned. The Congress of the United States should go beyond mere wishful thinking and extend a helping hand to the Finns in their struggle.

Out of this meeting goes a respectful request, both to our great President and to the Congress of the United States; yes, a plea to them not to abandon the Finns. We do not want war, but we cannot stand by and see Finland and other small nations decimated. Give help. We cannot give military aid, but we can and should give material help.

### Silver-Purchase Program

#### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

EDITORIALS FROM THE NEW YORK TIMES AND THE WASHINGTON POST

Mr. TOWNSEND. Mr. President, I send to the desk an editorial entitled "The Silver Folly," which appeared in the New York Times of January 23, 1940, and an editorial on gold entitled "The New Yellow Peril," published in the Washington Post of January 22, 1940. I ask consent that these editorials be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of January 23, 1940]

#### THE SILVER FOLLY

The annual report of Handy & Harman, local bullion dealers, draws attention once more to one of the most inexcusable pieces of legislation ever passed:

"Once again the year-end figures proclaim the futility of attempting to meet the requirement of the Silver Purchase Act that 'one-fourth of the total monetary value of the gold and silver stocks shall be silver.' After 5½ years of operation, and after more than 2,200,000,000 ounces of silver have been bought, the goal set by the act actually is 291,000,000 ounces further away than it was when the legislation was passed in June 1934."

The reason for this is the continuing flood of gold into this country, partly as the result of our own policies, partly as the result of foreign economic policies and the outbreak of war. It may be said that Congress could not reasonably have been expected to foresee this continued inflow of gold in such amounts from the outside world. But the event nonetheless serves to illustrate how blind and irresponsible and foolish the Silver Purchase Act was and is.

If our legislation merely compelled the Treasury to buy each year's entire silver output from American mines at the fantastic price of 71 cents an ounce, as present law does, it would be a naked and indefensible hand-out to domestic silver interests, but at least it would be politically intelligible and comparatively inexpensive. But under existing legislation and Treasury practice the great bulk of entirely unneeded silver that we buy is not domestic but foreign. In 1939, for example, in addition to buying 60,600,000 ounces of silver derived from domestic ores, the Treasury bought 280,800,000 ounces of silver of foreign origin at an artificially high price created by the Treasury's own bids. The great bulk of the 2,930,000,000 ounces of silver that the Treasury has now acquired is also of foreign origin. Indeed, that huge mountain of silver, most of which was acquired since the passage of the act, is equal to more than 50 years' domestic production at the current rate.

Last June the Senate, almost as if it realized how preposterous it was for the United States Government to be subsidizing and holding the bag for foreign silver producers and speculators, voted to amend the law at least to prohibit further purchases of foreign silver, but the House, on administration insistence, voted against the Senate amendments and this one was stricken out in conference. So the useless silver mountain grows.

[From the Washington Post of January 22, 1940]

#### THE NEW YELLOW PERIL

In recent years foreigners have been able to buy much more from us than they otherwise could have bought by paying for goods with gold. In a certain sense gold has taken the place of the loans that we formerly made to enable foreigners to buy more goods from us than they sold to us.

In the twenties we acquired promises to pay, which in many cases proved to be worthless, in exchange for valuable goods. Today we are taking gold, which has a very uncertain value, and overvalued silver in exchange for valuable goods and claims to goods.

The extent to which our export trade depends upon our willingness to accept gold in unlimited quantities at an artificially high price is a matter deserving of serious thought. The subject is touched upon in a very illuminating discussion of *The Gold Problem Today*, by Dr. E. A. Goldenweiser, director of research and statistics for the Federal Reserve Board.

Dr. Goldenweiser points out that our monetary gold stocks have increased by about \$13,600,000,000 during the brief period of 6 years. Less than \$3,000,000,000 of that huge sum represents an increase due to revaluation of gold holdings. Most of the remaining increase is due to gold imports.

From the viewpoint of those concerned with foreign trade, it is especially interesting to note that about \$2,200,000,000 of our gold and silver acquisitions during the past 6 years have been payments for goods and services sold to foreign countries in excess of goods and services which we bought from them. In other words, our willingness to take unlimited quantities of gold has enabled foreigners to acquire our excess exports, to build up huge balances in this country, and to buy American securities.

What is to be done about our gold hoard, which Dr. Goldenweiser frankly says "is of little or no use to us now"? In his opinion, "an abrupt cessation of American gold purchases would create chaotic conditions in the exchange market, with repercussions on domestic business conditions and prices." No doubt his judgment on this matter is sound. But in face of a persistent gold inflow fraught with dangerous potentialities, injunctions to do nothing and hope for the best are far from reassuring.

Dr. Goldenweiser thinks that the gold we now hold, plus later acquisitions, will have few large foreign claims against it if the war is prolonged. It is also unlikely that this gold hoard will be reduced to any extent, after the war is over, by excess purchases of foreign goods and services by the United States. Rather it is more likely that heavier demands for goods and for capital will come from abroad. Hence, Dr. Goldenweiser concludes that a flight of capital from the United States, which is "hard to conceive, or investment abroad which is not likely to assume large proportions, would offer the only occasion for losing gold."

It is slightly comforting to reflect that gold acquisitions have helped to stimulate domestic business by adding to the volume of our exports. But we may pay very dearly in the future for these incidental gains. And an enormous problem of credit control is created by the great volume of gold imports.

Dr. Goldenweiser explains but does not point the way out of this dilemma. "The ultimate solution," he says, "will have to be a part of the answer to much broader problems of world stability and international trade."

## What Can We Do About Our Youth Problem?

## EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

RADIO ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. PLUMLEY. Mr. Speaker, under the permission granted, I am inserting in the RECORD a copy of the manuscript of the speech I made over WOL at a session of the Forum of the Air, held Sunday evening, December 3 last. I am inserting the entire copy, though, by reason of time limitation imposed, certain paragraphs herein included were then omitted from the broadcast.

The address is as follows:

## THE YOUTH PROBLEM

I am assuming that the National Youth Administration is primarily educational in intent and purpose, rather than for relief as such.

Apparently having done all that we can to upset the orderly processes of government and to retard the advance of civilization at least temporarily, we of this day and generation now have the nerve to come tottering to the crossroads and ask, "What can we do about the youth problem?"

Our generation occupies the incongruous and unenviable position of one which, having set fire to and burned down its neighbor's buildings, tries to sell him a policy of insurance against loss by fire.

## YOUTH IS WONDERING

Let me tell you that youth has long been wondering what it could do about the greatest problem confronting it—that is its elders. In youth's eyes, anyway, we certainly have made a mess of things.

I shall have to admit that I have no patience with those old fossils who live in the past and think that the best has been. The best is yet to be, despite the pessimistic assertions of those who live in a past gone glimmering through the dreams of things that were, of those who do not realize either that the tender grace of a day that is gone will never come back to them or that the past is dead and has no resurrection. Such people should look to the East beyond which is the sunrise and to the West beyond which is the sea.

Yet, I do not wish to be understood to say we cannot benefit from a careful scrutiny of the past.

## SOVEREIGNTY IN THE INDIVIDUAL

I am almost the forgotten man in that I subscribe to that almost obsolete doctrine that sovereignty is in the individual. It is my well considered judgment that there is no obligation on the Government's part to do anything for the individual that he can or should do for himself.

## AGAINST POLITICAL DOMINATION

Necessary Federal aid, without Federal control, abstractly speaking, is favored by everybody. Yet, political domination of the schools of this country by reason of centralized Federal control of appropriations is inherent in a policy which permits Federal control and is inimical to, and a dangerous experiment to be tried by, people pledged to popular government. Education is a State function, not a social experiment with relief the end in view. Education and politics are oil and water to each other. They will not mix. The "oil" of politics will smother the water of life in education.

Youth is the stream of the new washing against the rocks of the old. It floods in a continual current of enthusiasm, of joy of existence, of hope, of fine expectation, of headlong ambition to reap harvests that seem almost impossible. It is the idealist, the impetuous engineer knocking at the gates of thought. Youth, in itself, is progress, change, alteration, eternal striving ahead.

What can we do? We can stop telling youth there are no frontiers; that youth has no opportunities. In comparison with the accomplishments of youth in the next 50 years, those of the last one hundred will sink into innocuous desuetude.

## OPPORTUNITY FOR YOUTH

There never has been a time in the history of this country when youth has had such an opportunity or there has been a more insistent demand or greater need for its brains, ability, and courage than now.

No youth of any day or generation has ever been confronted by so great a problem as that of the mounting public debt and the continuing annual deficits piled up by us, a problem which will exhaust the vitality and test the energy of American youth in the days and years yet to come. The solution of these problems affords them their opportunity to demonstrate that they have the initiative, the independence, the self-reliance, and the courage to work

out their own salvation. The Lord knows its elders cannot do it for them; we have demonstrated our inability so to do.

## NO SURRENDER OF INHERENT RIGHTS

I favor almost anything that will really permanently promote the general welfare. I am, however, opposed to the surrender to the Government of the inherent rights of the several States, and to centralization of power, authority, and bureaucracy in the Federal Government, for the benefit of those who insidiously and peripatetically undertake to get more power, in order more fully and completely to control more people, and through education control the economic destiny of these United States. I hope I can still see a hole in a ladder.

The announced objectives of the National Youth Administration are generally commendable. In the abstract and theoretically we are all in favor of it, but what it will cost in dollars and cents is not nearly so important as what it will cost in the sacrifice of the fundamentals of Americanism. As the President has said, we can ill afford to lose the skill and energy of the unemployed young men and women who should have their chance in school, their turn as apprentices, and their opportunity for jobs. We should, however, be unalterably opposed to the assumption by the Federal Government of any large measure of control of the educational policies of the Nation. If I could be assured of Federal support without Federal control, that would be a horse of another color.

We should not forget that to say that opportunity for adequate education must be available is not to state that there must be equality of opportunity for all. The group of unemployed is made up in part of those who had been encouraged to seek a higher academic education but were listed among the casualties in their first year because of lack of ability, inadequate preparation, or general unfitness for the part they sought to play.

## NO SUBSIDIZING EDUCATION

The reason the Federal Government should not be permitted to go wildly into the business of subsidizing education in the States is found in the fact and in the practical result that Federal agencies, by reason of their control of the purse, are already directly and indirectly controlling and administering public education and educational policies within the States. Once you let the camel of Federal centralization gets its head under the tent, the tent is bound to topple. Greedy for power, the Federal Government never gives up, but continues to reach out and to grab, and eventually to choke initiative, individualism, and enthusiasm.

## CENTRALIZATION IS DESTRUCTIVE

Centralization of authority, with respect to the determination and administration of educational policies, in the hands of a Federal officer means the reaching down to the very wellsprings, and the destruction of the underlying rights of the States and of individuals to have something to say as to what shall be the educational policy that shall be followed. This centralization is not only contrary to our American theory and our traditions with respect to the educational opportunities to be afforded, but if continued, as it will be if the money is forthcoming to the extent that it is desired and suggested that it should be furnished, is bound to federalize American education and to centralize the absolute control thereof in the Federal Government, the while it eventually destroys the independence of our public-school system.

This does not take into consideration the expense involved which would be, and already is, tremendous because of the duplication by the Federal Government of the State-constituted agencies. It is a waste of money considered from that angle.

Now this problem will not be decided nor solved in a moment. There are somewhere around 4,000,000 young men and women between the ages of 16 and 25 years of age who are not in school and for whom no employment is available. It has always been my contention that the State and local authorities must accept the responsibility for the finding of jobs, for the training, and for the vocational education of those within their jurisdiction. The States should do what they can, and only after they have done what they can should the Federal Government step in to subsidize insofar as may be necessary without centralizing and without establishing bureaucratic and Federal control of the education system of the country.

Many thousands of those unemployed in the youth group are recently graduated technicians—civil, mechanical, and electrical engineers—for whom there were and are no jobs in industry. Other thousands comprise those who had a job when there were jobs.

A million and a half young people between 15 and 20 years of age, out of school, never had a job and cannot get one. Getting a job is the biggest problem facing American youth today.

## YOUTH INJURED BY POLICIES OF NEW DEAL

For youth the present depression has been a greater obstacle than it has for those of an older generation, for the primary reason that the New Deal's policies of restriction and an economy of scarcity have principally hurt young people trying to get a start in life. Its policies have acted to cut down industry and agriculture, so there are fewer jobs to go around. Older people having jobs hold on to them, and since no new jobs are being created, the youngsters go without jobs. This is true in virtually all lines of activity. For instance, in the building trades the number of apprentices permitted under the rules of organized labor have been very greatly reduced and in some crafts the training of apprentices has ceased altogether. This is done by the labor unions to protect the jobs of the older workers, but it means that a young man getting out of

high school is unable to get training as a craftsman, with the result that he passes from his twenties into his thirties as an unskilled laborer. The same thing is true of the boys who have college educations. Less business activity means a smaller opportunity for jobs in the professions, in banks, on newspapers, in brokerage houses, and in retail stores. Thus, unfortunately, those who have reached working ages in the last 6 years have indeed become a "lost generation."

#### A SOUND SOLUTION

The long-range, sound solution for this problem is not to be found through Government subsidies or programs of Government-made work. Such undertakings, while very helpful, are but panaceas—shinplasters to ease the pain rather than a permanent cure. The only really sound and lasting solution is to get the business activity of the country back to its previous level of acceleration, so that new jobs are constantly being created for the hundreds of thousands of young people who annually come out of the high schools and colleges of the country. And there we get back to the fundamental proposition that you cannot treat the youth problem as separate and distinct. It is a part of the larger problem which confronts the entire Nation, namely, economic recovery.

#### OBSTACLES TO ECONOMIC RECOVERY

Obviously, one of the obstacles to a sound and lasting economic recovery have been the policies pursued by the New Deal which have harassed business and strangled industry through punitive taxes, disturbing experiments, reckless fiscal policies which can only lead to disaster if pursued for a few more years, and other tinkering with various parts of the economic machine. When we untie this strait jacket that is holding back American business, agriculture, and commerce, and people commence to go back to work, what some of our left-wing friends now like to call "the youth problem" will be solved. The problem of youth now is and has always been and always will be to get ahead in the world and to get a start. Youth wants the opportunity to make its own way.

The best thing we can do for youth is to undertake to get back to real American thrift and economy in living—to get away from the idea that "the Government owes us" one. We must get rid of the idea that youth and its elders too prevalently have today that this is a good government to live in because it is a good one to live on and off from.

#### GIVE INDUSTRY A CHANCE

We must give industry the necessary confidence in our prudence and considered judgment as to warrant its venturing into fields of endeavor that will afford the jobs. We must show youth that there is a way to get out from under the burden with which we have saddled it. We must make jobs by restoring confidence.

I have been fearful that this country is on the broad highway to all the ills of bureaucracy and the corruption that goes with it that our forefathers and so many of our fellow citizens fled from Europe to escape.

In my opinion, the bureaucratic concept invokes a wrong theory and principle of civics and governmental policy, in that it would cause the Federal Government to do for its individual citizens that which they ought to do for themselves, or, at least, through their own voluntary and nonpolitical associations. It is paternalism—the most subtle and sinister enemy of popular government.

#### THE THREAT OF PATERNALISM

I am therefore forced to believe that, as a general proposition, the centralization tendencies in government have fastened their tentacles around the surviving representative of the most nearly perfect republican form of government ever created. The paternalistic state is cooperating to help strangle its child. The question which confronts you and me is, Shall we stand idly by as accessories, both before and after the crime?

I believe that the Government should be for and by the people, and the nearer it is kept to and of the people, the better government we will have.

The approach to political paternalism has always been paved with benevolence. For the people to retain and to maintain their natural, individual rights guaranteed to them by, and which go under the name of, liberty as formulated in their charter of freedom, the Bill of Rights, has been a problem ever since the beginning of the Republic, calling for unremitting vigilance on the part of the citizens themselves.

From the testimony before the Committee on Education and Labor in the United States Senate for the Seventy-fourth Congress one may read the statement:

"The most obvious shortcomings of the National Youth Administration are general inadequacy, the total lack of democracy in administration, and the threat to the already declining wage standards. On the first of these three headings we will allow Mr. Roosevelt and the National Youth Administration officials to speak for themselves. 'It is recognized,' the President said in June, 'that the final solution of this whole problem of unemployed youth will not be obtainable unless there is a resumption of normal business activities and opportunities for private employment on a wide scale.'"

#### ECONOMIC "PILLS" OF THE "NEW DELIRIUM"

That's the answer. No amount of homeopathic economic pills undertaken to be administered by the "New Delirium" will save the patient's life or contribute much to his permanent recovery, comfort, or well-being.

In the restoration of confidence, and the consequent resumption of normal business activities, is found the safe, sane, and permanent solution of the problem.

## Conditions in Spain

### EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, January 25 (legislative day of Tuesday, January 23), 1940

ARTICLE BY DR. JOSEPH F. THORNING

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by Dr. Joseph F. Thorning, and appearing in the magazine Spain, the title of the article being "Victorious Spain."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the magazine Spain]

#### VICTORIOUS SPAIN

(By Dr. Joseph F. Thorning)

It is an inspiring experience to secure a first-hand view of victorious Spain. First of all, there are the people, joyful in their sense of deliverance at the hands of Generalissimo Francisco Franco. Everywhere, in the metropolitan centers like Madrid and Barcelona as well as in tiny towns and hamlets, the overwhelming mass of the population gives visible expression to its sentiments of relief, satisfaction, and enthusiasm.

No one speaks unsolicited about the dark days of the leftist terror. By an almost universal tacit agreement the subject is taboo. As one villager crystallized popular feeling for me: "The attempted Marxist revolution was a painful night passed in the pit of a well; now that we have been restored to the sunlight we don't want to shiver again, even in the domain of the imagination."

One reason for the popular contentment is a perfect realization of the fact that "Spain has been given back to the Spaniards." During the bitter days of civil war, unscrupulous propagandists of the Left had done their best to create the impression that the peninsula had been inundated with Nazis and Fascists. "Resist the foreign invaders!" had been the watchword of the Marxist diehards. As soon as the legions of Generalissimo Franco completed the pacification of the country, they were revealed to be decisively Iberian in numbers and spirit.

To the immense disappointment of some Americans, the foreign auxiliaries of the Nationalist Army did not linger in the Peninsula. Spain did not become a puppet state; nor did the generalissimo act the part of a vassal, which the Leftists had created for him. In domestic and foreign policy the Spanish Nation lost no time in making clear to the world that its destiny was in the hands of Spaniards. The first of Generalissimo Franco's promises had been redeemed and the men and women who were his fellow citizens accepted his decision as a tribute to their own conscience, dignity, and self-respect.

Another factor in the stability of the present regime is the generous service which continues to be rendered by the Auxilio Social. This gigantic social-welfare organization, whose ranks are thronged with volunteer workers, did not fold up with the occupation of Barcelona and Madrid. On the contrary, every branch of its service was strengthened, expanded. The women, redoubling their activity, opened up thousands of new centers for the distribution of milk, fruits, medicines, and hot meals. Housing problems were particularly acute. Committees of the Auxilio Social made the rounds of available apartments, calling upon the Spanish spirit of hospitality to record new triumphs. In some quarters this was no easy task. Recognizing the magnitude of the problem, Generalissimo Franco and his cabinet allocated more than 600,000,000 pesetas for the construction of modern apartments and homes, particularly for manual laborers.

It is important to emphasize that even-handed justice prevailed in the apportioning of benefits in the new Spain. There has been no discrimination against former Leftist sympathizers on purely political grounds. Even criminals have been treated with magnanimity. Speaking of the liberality and fairness which characterized the development of the Auxilio Social, Mr. Howard E. Kershner, vice president and director of the American Friends Service Committee, declared the work of distribution was being done "quite impartially." He also praised the order and discipline of the Franco regime. The people realize that, if certain commodities like quality coffee and creamery butter are scarce, they are lacking to all citizens in equal measure. Nor have there been any authenticated complaints to the effect that the few are benefiting at the expense of many. Favoritism is a vanishing word in the Spanish vocabulary.

It has just been revealed that more than 360,000 of the 500,000 Spaniards who fled into France at the end of the Civil War have been repatriated and are now engaged in the general work of rehabilitation. All of these people, as M. Albert Sarraut, French Minister of the Interior, testified (the New York Times, December 9, 1939), were willing to leave the refugee camps in France and rejoin their fellow citizens across the Pyrenees. Six months ago, few suspected the task of repatriation and reassimilation could have been speeded up to the extent indicated by the above figures. The reentry into Spain has been systematic, careful. When completed, it will be found that none but criminal elements would elect to remain in exile. Spain, in turn, has become a place of refuge and safety in view of the spreading European conflict.

Those Spaniards, who refuse to return to their native land, are everywhere active in the Communist ranks, supporting the Nazi-Soviet aggressions upon small nations. For example, in Mexico, which not long ago bade fair to be the "promised land" for leftists of all stripes, there is now strong feeling, official and unofficial, against the activities of the ex-Spaniard, Col. Alfaro Siqueiros, spearhead of Marxist groups south of the Rio Grande. Of special interest in this connection is the following passage from the New York Times (December 9, 1939):

"It is asserted that Spanish refugees are especially active in Communist circles. Many of them were convinced Communists before they left Spain and brought their political convictions with them. It is pointed out that Colonel Siqueiros is himself a Spaniard."

In striking contrast to this Nazi-Soviet mentality of the self-styled "liberals," is the noble attitude manifested by Sr. Ramon Serrano Suñer, Spanish Minister of Government and brother-in-law of Generalissimo Franco. Immediately after a momentous meeting of the Cabinet on December 8, 1939, Sr. Serrano Suñer issued a statement on the foreign situation. Among other things, he said:

"Spain, which fought as another nation in the defense of western civilization against Asiatic barbarity, expresses its profound sympathy with the Finns in this difficult and heroic hour."

This is further proof that Spain, under the leadership of Generalissimo Franco follows a policy of principle, not expediency, in relations with other European nations.

Peace is indispensable for the completion of Generalissimo Franco's plan for Spain. The Generalissimo is thinking in terms of years of orderly progress, not mere weeks or months. He has projects for superhighways, irrigation works, increased port facilities, docks, warehouses, hydrographic equipment, reforestation and educational expansion. The new trans-Atlantic service between Bilbao and New York is a clue to Spain's ambition to regain her proper place in world maritime commerce. While in Madrid I was told that ships would be built or purchased for passenger and freight transport between Buenos Aires, Montevideo, Rio de Janeiro and the Spanish Mediterranean and Bay of Biscay ports. Naturally, the service between Spanish Morocco and the Peninsula will be modernized, enlarged. Finally, a number of boats have been chartered to carry commerce into the eastern Mediterranean.

Spanish iron, copper, mercury, manganese, and lead now have a ready sale in England and France. The oranges of Valencia are much favored in the British Isles. The olive oil of southern Spain is celebrated. Consequently, a wider distribution of all these products will cement political relations and simultaneously finance the \$1,000,000,000 electric power and water system envisaged for France's Spain.

The Spanish Government is aware of the deep religious sense of both urban and rural populations. During my travels in the Peninsula I was able to note that the first edifice to be repaired in practically every town was the parish church. Although the richness of the original decorations had vanished, it was offset by the spotlessness and neat propriety of each interior. Restoration of religion, obviously, has been a labor of love. Every altar and every tabernacle, glowing with candles or adorned with flowers, offers mute testimony to the devotion of the Spanish people to Christ in the Blessed Sacrament. In view of these manifestations of popular sentiment, one may dismiss as tendentious and malicious the propagandistic stories of any serious rift between the civil and ecclesiastical authorities. Differences about the application of specific measures to the national life may arise; they will not be quarrels about principle. Generalissimo Francisco Franco is more Christian in mind and heart than some rulers who gloried in the title of "Most Catholic Kings."

In conclusion, we may recall the tribute which His Holiness, Pius XII, paid to Generalissimo Franco when, earlier in the year, he greeted a group of Spanish pilgrims led by the Spanish Ambassador to the Holy See. The Pontiff, expressing his pleasure on this occasion, reminded his hearers of his wish "to participate in the victory . . . achieved under the guidance of so illustrious a leader." It was with special satisfaction, His Holiness added, that he greeted Spain's "new epoch of grandeur."

Christians throughout the world, encouraged and reanimated spiritually by the example of their friends in Spain, share the Holy Father's prayer that Generalissimo Franco may continue to show neighboring nations how to conquer both war and depression.

## To America—1939-40

### EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 24, 1940

ARTICLE BY MARGARET BROWN

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a paper by Margaret Brown, of Alhambra, Calif. Miss Brown is a young lady who has been earnestly struggling to keep our country at peace because she deeply loves and has a strong desire to protect its democratic institutions.

It is with pleasure that I submit to this body Miss Brown's paper entitled "To America—1939-40."

#### TO AMERICA—1939-40

The last few months of 1939 have been cruel to the whole human race, save America and me. They have seen a new home and the birth of two babies into happy American families. Because America and Americans have dared to be a democracy, have dared to make freedom of worship, speech, press, and assembly law, have dared to unite 48 different States into one Federal Union, have dared to organize and regularly elect a House of Representatives and a Senate and a President, have dared to organize a police force to deal with offending citizens according to courts of law—for the tiniest incorporated area to the National Guard—for these reasons, America is at peace—and thank God for peace. Perhaps it is because the citizens across a continent have dared to do this and have dared to be good neighbors to the other nations on the same continent that Americans know peace. Thank you, Americans, for the United States.

But most of the rest of the world is at war—and Americans are sick at heart because of it, perhaps feeling we have erred in international dealings—omitted doing things that were possible many years ago. A feeling of responsibility for acquiring international peace, for getting it on a just basis, has gripped America in 1939.

Now, will the infant girl of the new leap year bring more and more terrible conflict to humanity, or will the spirit of brotherhood, as James Hilton suggests, perform one of those necessary miracles that human history is so full of because there is a just God ever guiding human destiny, despite the many lives lived in misery and conditions of war? There are many organizations in human society like the church that most Americans respect and many owe allegiance to; many newspapers; all kinds of social organizations the world over; several new organizations seeking world federation on the basis of brotherhood through which this miracle of ridding the world of war can come. Will it happen in 1940?

MARGARET BROWN,  
Alhambra, Calif.

## Air Mail for Punkin Center

### EXTENSION OF REMARKS

OF

### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

ARTICLE BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by me which appeared in Popular Aviation for January 1940:

[From Popular Aviation for January 1940]

AIR MAIL FOR PUNKIN CENTER

(By Jennings Randolph)

Air mail for the backwoods communities. For the crossroads hamlets. For the little back-water villages and towns. For all the 90,000,000 persons in the United States who live away from

the main airways and whose mail service today is comparable only to that given the country in Civil War days.

Imagine a rural free delivery of the air. Air-mail service that does not pass over and ignore the little homesteads of 400 to 500 persons. That instead blankets the entire Nation with routes that will give these little towns an air-mail service just as efficient and virtually as frequent as now is rendered to the country's largest metropolises such as New York, Chicago, Kansas City, San Francisco and others.

If you can see this picture you realize that such an R. F. D. of the air promises to bring about the most far-reaching development that commercial aviation has seen since it first became a reality. And this kind of service is not a wild dream. Instead it may be put into operation by the United States Post Office within a matter of months. For the postal officials have watched the development of just such a service during the past year in Pennsylvania and West Virginia. A service that requires few airports, no large investments of public or private funds to create, yet has shown in actual demonstrations of regular, all-weather flying that it is practical and economical.

#### FIFTY-EIGHT COMMUNITIES BEING SERVED

I am referring to the air-mail contract held by All American Aviation, Inc., that now is serving 58 communities on two air-mail routes—one between Philadelphia and Pittsburgh and the other between Pittsburgh, Huntington, and Charleston, W. Va. Over these routes some 1,540 miles are flown daily and air mail and air express is brought to communities ranging from a mere 799 inhabitants to larger cities of 105,000 persons.

The major air-line operators flying large airplanes can only link up the big cities. And they can provide service only where expensive airports of large area with hard-surfaced runways, landing lights, radio-range facilities, and other costly aids to navigation are present.

But A. A. A. (All American Aviation) gets along without most of these aids. The greater majority of the communities where the Triple A brings its mail and express service possess no suitable landing fields, there are no radio range beacons over its routes and no beacon lights for night flying. There are, however, even more startling differences, to wit:

1. The major air lines that carry passengers, mail, and express plan their routes so they serve communities that are from 150 to 250 miles apart as a maximum and at times the distances are 700 miles—as between Chicago and New York. Triple A's communities average 17.5 miles apart. Between some pick-up stations the distance is as small as 5 miles.

2. The major air lines find it uneconomical to make landings more often than once each hour to hour and a half. Triple A makes its contacts with the communities at intervals of 5 to 22 minutes.

3. The major air lines say that their schedules, calling for 155 miles per hour block to block, could not be made if they served small places at frequent intervals. But A. A. A. maintains a scheduled speed of 110 miles per hour, yet never cruises its ships at air speeds faster than 140 miles per hour.

In fact, All American operates profitably and efficiently in joining towns into an airline that would be commercially worthless to any other airline operator in the world. The secret, of course, is that, while serving many of these little communities, the Triple A planes never stop. They drop incoming mail and express and pick up outgoing bags and parcels while in flight. The communities that have no airports are equipped with pick-up stations on farms, in public parks, on hilltops, and mountain peaks. There even is one station at the edge of a cemetery and another on an island. Pilots dropping mail on the latter must make each delivery with precision and care, for if the mail bags are dropped short they fall into one stream and if they overshoot they fall into another.

If landings were made they would slow the service to such a degree that its value as the fastest means of transportation would be lost. And furthermore, by using the aerial pick-up and delivery system, the Triple A includes in its routes communities where it never will be possible to land a conventional type landplane.

Now consider the picture presented by a really wide application of the Triple A pick-up air-mail system. There are 4,000 cities in the United States with populations of 5,000 or more. Today only 210 of these 4,000 cities (excluding those served now by Triple A) have direct mail service over established routes. The great air-transport companies are comparable to a railroad system that operates nothing but through service over major trunk lines.

There are 900 cities among those that do not now receive regular air-mail service with airports already constructed. And it would be only a matter of months before all the other communities that do not have airports could construct the special air-mail pick-up stations that are required for the Triple A system of pick-up. It took 20 years to give service to 210 cities but only months to spread it to the full 4,000. Indeed, it would not be necessary to restrict this service to towns of more than 5,000. Every community that cared to put up a pick-up station could have air-mail service.

#### DR. L. S. ADAMS INVENTS DEVICE

All this would not be possible were it not for a surgeon who was bitten by the aeronautical bug some 30 years ago in California

when he was flying with the late Glenn Curtiss in California. He is Dr. Lytle S. Adams. He first conceived the aerial pick-up during the period when Curtiss was flying at San Diego, but for years thereafter he was unable to make the tests that brought it to perfection.

About 1924 Dr. Adams began spending his own money on experiments. In 1927 he had his first full-sized working model which he demonstrated successfully before officials in Washington and with service between the *Leviathan* and New York City in the first ship-to-shore mail. Dr. Adams had arranged for financing and believed that his system would inaugurate the R. F. D. of the air mail at that time, but the market collapse of 1929 sank his dream.

The setback, however, was only temporary. He abandoned his highly successful practice of oral surgery to devote full time to promoting his device. He demonstrated the system for the Post Office in Washington again and also at the World's Fair in Chicago in 1933, but was unable to get any contracts for carrying the mail.

Somewhat discouraged, he came to my office in Washington in 1935, with a letter from W. P. Wilson, of Wheeling, W. Va., board chairman of the Fokker Airplane Corporation, who knew of my interest in expanding our air-mail system. Adams told me the story of his struggle and gave me another one of his demonstrations. I became interested, read his material, and suddenly the implications of the thing caught my imagination.

At that time we had less than 200 cities receiving air mail yet there are about 15,000 first-, second-, and third-class post offices in the country and 30,000 fourth-class offices. I could see no reason why most of these—in the future—might not have air mail. Many of my colleagues shared my enthusiasm, but it was not until 1933 that Congress took up the question of authorizing the Post Office Department to initiate experimental feeder service, as well as experimental autogiro service between outlying airports and centrally located post offices. In April 1938 Congress authorized the experiments.

So far so good. But these authorizations did not provide funds. I therefore introduced an amendment to the regular post office appropriations bill which authorized the expenditure of \$100,000 on these experimental services. It passed and the Department soon afterward laid out the routes and called for bids.

Let me break the continuity of the story right here to explain just how Dr. Adams' pick-up device operates. The device, fully automatic, makes it possible for an airplane pilot to drop one bag of mail as he approaches an airport and pick up another bag while continuing to fly at speeds of from 90 to 125 miles per hour. Special equipment on the ground and in the airplane is necessary.

The ground equipment is simple in construction and operation. Two steel poles each 36 feet high are set into concrete blocks 60 feet apart. A line connects the poles and the mail bag to be picked up is fastened to the center, held in a special plywood container.

Virtually any type of airplane can be used. Triple A uses five Stinson Reliants with 330-horsepower Wright engines. The only seat in these ships is the pilot's, the rest of the cabin being cleared for the mail clerk who is carried, the mail bins, and the pick-up gear. This gear consists of a steel cable with grapple at the lower or contact end, and a shock absorber attached to the cable. A winch is used for reeling in the cable after the pick-up has been made.

#### OPERATION IS SIMPLE

The flight technique for pick-up is as follows: The airplane, upon approaching the pick-up station, is put into a power glide. The clerk lowers the grapple on the cable and a hemp rope with the delivery bag also is lowered so that two lines are dangling from the ship at the same time. They are kept apart in the air by the difference in their weights. As the plane reaches the station the clerk releases the delivery bag. The pilot maneuvers his ship so that the grapple touches some part of the line between the steel poles. Automatically and virtually infallibly the grapple clutches the line which is pulled away and with it brings up the outgoing mail.

The shocks of the grappling are borne by the shock absorber on the steel cable and by a special slide fitting that attaches the mail bag to the transfer line. When the line is clutched the fitting allows the mail bag to slide out to the far end. This sliding movement also absorbs much of the shock.

Pick-ups are made at air speeds of 100 miles per hour. With the hydraulic shock absorbers now in use, loads up to 70 pounds may be picked up. By using spring shock absorbers already designed, heavier loads—as much as 125 pounds—may be picked up.

By the time Congress had appropriated funds for the mail experiments, Dr. Adams had organized Tri-State Aviation and All American Aviation, 2 companies that were carrying about 1,500 packages of express material daily from department stores in Pittsburgh and Baltimore to some 25 communities within 500 miles of the cities.

When bids were asked for the air-mail routes laid out by the Post Office Department Triple A won. Richard C. Du Pont now is president of the company and James Ray, the old autogiro expert who was test pilot with the Pitcairn Autogiro Corporation for so many years, is chief of operations for the line. Six pilots and five clerks and the Stinsons now do the job.

A glance at the map accompanying this article (not printed) shows the mail routes. Service began on May 12, 1939. On the

Philadelphia-Pittsburgh route one plane leaves Philadelphia at 9 in the morning and lands at Du Bois at 11:36 a. m., after delivering and picking up from cities along the way. Another plane leaves Pittsburgh at 10 a. m., makes pick-ups along the way, and arrives in Du Bois at 12:11. Here the loads are transferred and each plane returns to its home city. The split schedule was arranged to insure service at one or the other ends of the line even though bad weather may interfere along part of the route.

On the Pittsburgh-Huntington route the plane leaves Pittsburgh at 10 a. m., landing in Huntington shortly before 1 p. m., and makes the return flight in the afternoon. The mail clerks sort the mail from each community as it is picked up so that mail from, say, Chambersburg addressed to Altoona will be delivered on the same flight.

Between Huntington and Pittsburgh there are 29 cities receiving daily air-mail service. Of these, only 10 have airports able to accommodate even light planes. Yet, by connecting with trunk air lines at Pittsburgh and Huntington, these cities are all within 24 hours by mail of any city on any regular air line in the United States.

#### RURAL SECTIONS ARE HELPED

The small cities are finding air mail of greater value than it has proved to large cities on the major air lines. Most of the larger cities also have excellent railroad facilities, so that even without air transportation they would have good mail delivery. But this is not the case with many of the towns served by Triple A. Some of them, such as Glenville or Grantsville—both West Virginia county seats—do not even have railroads. They are turning with great enthusiasm to air mail. Glenville, with a population of only 800, has a daily dispatch of about 3 pounds. On a per capita basis, this exceeds that of the world's largest air-mail center.

In the month of September this route carried 2,881 pounds of mail. Of this amount, 1,295 originated at the two terminals. It is estimated that about 60 percent of this came in over the major air lines, and that the remainder had its actual origin in the terminal cities of Huntington and Pittsburgh themselves. Of the 1,600 pounds originating along the route, more than 50 percent came from cities with no airports.

Only about 700 pounds came from the 10 cities with flying fields. If all cities received air mail at the proportion they send it, postal revenues would have been from \$2,400 to \$4,000 less during the month had Triple A served only those cities with airports.

The mail poundage for the two routes since inception follows:

#### Pounds of mail

May .....	3, 019
June .....	5, 893
July .....	6, 804
August .....	7, 193
September .....	6, 371
October .....	6, 351

Much of this is short-haul mail—an order sent by store by afternoon mail can be delivered next day by air express. Because of the large percentage of this short-haul mail, no statistical figures are yet available on average load. The average daily total runs about 250 pounds. President Dick Du Pont estimates that his company is now handling about 25 percent of its capacity.

Aside from the big cities of Philadelphia and Pittsburgh, there are about 900,000 persons along the routes served. On the basis of direct payments made by the Post Office to domestic air-mail contractors, the gross annual cost of service will average about 21 cents per capita. The same average for the major air lines is 40 cents per capita.

Postal revenues on the pick-up routes have not yet reached a point where they cover this cost completely, but the growing volume of mail indicates that the Government soon will reach the break-even point, and that faster service will soon be a profitable item for the Post Office Department. Moreover, calculations indicate that a national network would reduce the average haul of air mail to the point where it will show as good a margin of profit as first-class mail does today, and that it will triple or quadruple the traffic now carried by the major air lines.

All the flying done to date has been contact, and there are no night schedules. All planes, however, are equipped with two-way radios and other blind-flying aids and all pilots have instrument ratings. On a few occasions weather conditions have forced the pilots to go on instruments over portions of the route and they have, therefore, missed delivery and pick-up at certain individual stations. A few complete cancellations have been made, but the average operating record has been 96 and 97 percent for all scheduled flights over the two routes.

The pilots doing the flying are Holger Hoiris, of Falkland, Del., who, in 1931, flew the first passenger across the Atlantic in an airplane (Otto Hillig from New York to Copenhagen); Camille D. Vinet, of Glenside, Pa., formerly director of aeronautics for the State of Pennsylvania; Norman Rintoul, of Morgantown, W. Va., who has been test pilot for the pick-up and delivery service for 3 years; James Piersol, of Williamsport, formerly aviation editor of the Detroit News and New York Times; and Thomas T. Kincheloe, of Sturgis, Mich.

#### FEEDER LINES ARE COMING

President Du Pont and the operations officials of Triple A already are planning extensions of their service to include passengers. Naturally it will be possible to pick up passengers only at communities where there are airports, and stops will be made only on special notice. But the mail pick-ups and deliveries will be made

even with passengers aboard the company's planes—although this has been done only on an experimental basis to date.

On October 30 Hoiris demonstrated a night pick-up on Randall Field before C. A. A. and post-office officials. The equipment used was simple. There was a red neon light outlining the flag on top of each of the steel poles, and a 12-foot horizontal bar of red neon mounted on a frame 10 feet above the ground. On November 15 regular night service was started on an experimental basis at Grove City, Butler, and Natrona, all near Pittsburgh on the Philadelphia-Pittsburgh route. Lighting at these stations included a range light on each side of the station at a distance of 175 feet from the masts. This light is sufficient to make the station visible from a distance of 6 miles. Schedules have not been changed, due to short autumn and winter days, although these cities are in darkness by the time the afternoon plane arrives on its return flight to Pittsburgh.

President Du Pont realizes the enormous field to be tapped. Recently he said, "The creation by utilization, of the air pick-up principle, of a national network of feeder lines carrying mail, express, and passengers, as an auxiliary of the present air-transportation system through the establishment of radial feeder routes from the major air terminals, is inevitable."

### Whose Market the American Market?

#### EXTENSION OF REMARKS

OF

### HON. BERTRAND W. GEARHART

OF CALIFORNIA

#### IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

STATEMENT BY LOUIS J. TABER, MASTER OF THE NATIONAL GRANGE, BEFORE THE WAYS AND MEANS COMMITTEE

Mr. GEARHART. Mr. Speaker, during this morning's session of the Ways and Means Committee, the committee which at the moment has under consideration the bill for the extension of the Reciprocal Trade Agreement Act of June 12, 1934, Mr. Louis J. Taber, master of the National Grange, appeared and presented in an unusually effective manner the views of the great organization it is his honor to represent.

Mr. Taber's discussion of this complex subject was so thorough, his arguments so convincing, his conclusions so irresistible that his statement must be regarded as a most unusual one. Because I am quite convinced that he is entitled to and should have a much wider audience, I was constrained to ask the permission of the membership of this legislative body to include his masterful address in the CONGRESSIONAL RECORD of this day's proceedings.

Mr. Speaker, in accordance with the unanimous consent of the Members of this body, expressed but a moment ago, I hand the text of Mr. Taber's statement to the Public Printer for the purpose I have just heretofore indicated.

Mr. Taber's statement follows:

My name is L. J. Taber, and I am the master of the National Grange. I live at Columbus, Ohio, and I am the owner of a dairy farm in Belmont County, Ohio, on which I spent most of my life.

The Grange is the oldest general farm organization of the country. It was established in 1867, and it is organized on a State basis in 36 States. We have about 8,000 local or subordinate granges, with a total membership of approximately 800,000. The legislative policies of the National Grange are developed and agreed upon at our annual conventions by the voting delegates in attendance. The membership of the Grange extends from the Atlantic to the Pacific and from the Canadian border to the Gulf. Our people are engaged in all types of agriculture. From the beginning, the Grange has been a nonpartisan organization.

The Grange opposed the proposed reciprocity treaty between the United States and Canada during the Taft administration, because we were convinced that the terms of the treaty would be detrimental to American agriculture.

In 1934, when the Reciprocal Tariff Act was introduced in Congress, we opposed it, because we feared that if it were placed in operation it would work out to the disadvantage of American producers. We likewise registered opposition to the renewal of the act in 1937.

At all of its recent conventions the National Grange has gone unanimously on record in favor of giving the American market to the American farmer to the limit of his capacity to supply it.

My purpose in making these detailed references is to show that the Grange attitude on the question under consideration is not of recent origin.

At the last annual meeting of the National Grange, held at Peoria, Ill., November 15-23, 1939, our organization went on record as being opposed to the extension of the Reciprocal Tariff Act, which expires by its own limitations on June 12 of this year, besides urging Congress to terminate the trade agreements now in force, in accordance with the provisions of the Act.

#### ESTABLISHMENT OF TARIFF COMMISSION

More than a quarter of a century ago the Grange joined with others in advocating the establishment of a bi-partisan, fact-finding tariff commission as an aid to Congress in legislating on this complicated and important subject. We then believed, and we still believe, that so far as is humanly possible the political aspects of the tariff should be subordinated, and that it should be approached as a business or economic question, affecting for good or ill the lives and fortunes of all the people of the United States. The Tariff Commission was established in the year 1916.

The Grange likewise supported the principle embodied in the Fordney-McCumber Act of 1922 and which was retained in the Tariff Act of 1930, known as the flexible proviso. This was designed to keep rates adjusted to changing conditions and to obviate the necessity of more frequent general revisions of the tariff, with their unsettling effects upon business.

The theory has been that our tariff rates should be based on the difference in the cost of production as between this and other countries. Ascertaining the essential facts in such cases is not a small problem; it requires a trained and technical staff such as the United States Tariff Commission is supposed to have. With this plan functioning as was originally intended, Congress should be able to legislate intelligently on the tariff question.

It must be admitted that the plan for dealing with the tariff question laid down in the Reciprocal Tariff Act of 1934, which the resolution before this committee would extend for another period of 3 years, constitutes a marked departure from our traditional tariff policy, and deprives the Tariff Commission of virtually all of the vital functions with which it was formerly vested.

When the reciprocal-tariff bill was presented in 1934, it was offered as an emergency measure intended to meet a temporary situation, with the understanding that it should be terminated at the expiration of 3 years. But today, after the lapse of 6 years, the advocates of this new system of tariff making have grown much bolder. They either intimate or frankly and boldly declare that Congress is not competent to legislate on the tariff, and that this vital and important function of the legislative branch of the Government should be transferred to a small coterie of so-called experts, who have not been directly chosen by the people and who are not directly responsible to them.

#### OUR NEW TRADE POLICY

In a revealing statement contained in a magazine article a few years ago on what he called Our New Trade Policy, Dr. Henry F. Grady, now an Assistant Secretary of State, declared:

"Our objective is the general amelioration of the world situation. We have already lowered many rates, which have been generalized to other countries. When we shall have gone the rounds of most of the important countries of the world, reducing in each case the duties on commodities of which it is the principal or important source, we shall have lowered our tariff on a great many items where the case for lowering is justified. As a result of extending these reductions to virtually all countries, we will obtain, it would seem, what the proponents of unilateral tariff reduction desire; but we will do it more carefully and scientifically than is possible by legislative action."

The word "unilateral," as used in this connection, is one that grates on my ear. Unilateral means one-sided, and a bargain that is one-sided or lopsided cannot properly be called a bargain at all.

We may well ask how anyone could expect American interests to be protected by pursuing the kind of policy outlined by Dr. Grady in the amazing paragraph I have quoted.

As is well known, the surplus problem has been the most difficult with which the American farmer has been faced since the close of the World War. In our efforts to solve this question, Congress passed the Agricultural Marketing Act of 1929, the Agricultural Adjustment Act of 1933, the Soil Conservation Act of 1936, and the Triple A of 1938. This question cannot be solved by importing foreign surpluses of competitive agricultural commodities and piling them on top of the American surplus.

In considering the workings of the reciprocal-trade agreements from the standpoint of the farm population it is proper to recall that on October 25, 1932, Mr. Roosevelt made an address in Baltimore, during the course of which he said:

"I know of no effective excessively high tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it and will not be deceived."

Notwithstanding this pledge, however, the tariff has been reduced on more than 200 items coming under the agricultural schedule. In numerous instances rates have been reduced to the extent of 50 percent, the limit allowed by law.

Referring specifically to some of these commodities, we reduced the duty on cattle, swine, pork, bacon, grains, and cereal products, milk, cream, cheese, eggs, potatoes, and a long list of fresh vegetables, canned or preserved vegetables, fruits, nuts, and other competitive agricultural products.

#### PURCHASES BY SURPLUS COMMODITIES CORPORATION

I assert without fear of successful contradiction that it would be impossible to reduce the tariff on all these competitive agricultural commodities without price-depressing effects gravely injurious to the farmers of the United States. How this policy works out in practice instead of theory may readily be gleaned by consulting the records of the Federal Surplus Commodities Corporation. While the State Department is busily engaged in lowering our tariffs on farm products, the Surplus Commodities Corporation is spending huge sums of the taxpayers' money in buying up not only our own surpluses but the foreign surpluses that have been dumped upon our shores as a result of this misguided policy.

In the Canadian agreement we reduced the duty on eggs from 10 to 5 cents per dozen and then generalized this concession to the rest of the world. In the meantime the cumulative purchases of eggs by the Surplus Commodities Corporation up to June 30, 1939, amounted to 30,289,020 dozens.

In the Canadian agreement we reduced the duty on apples from 25 to 15 cents per bushel. The Surplus Commodities Corporation has purchased 9,050,828 bushels in the effort to get rid of our surplus and to stabilize the price.

In the agreement with the Netherlands the tariff on cabbage in its natural state was reduced from 2 to 1½ cents per pound. Cabbage purchases by the Surplus Commodities Corporation up to June 30, 1939, totaled 207,039,584 pounds.

In the Netherlands agreement we reduced the duty on peas, prepared or preserved in any manner, and purchases of canned peas by the Surplus Commodities Corporation have totaled 864,992 cases.

In the agreement with Turkey we cut the duty on figs from 5 to 3 cents a pound, of which commodity the Surplus Commodities Corporation has purchased and distributed more than 800,000 pounds. The duty on raisins was likewise reduced in the Turkish agreement. Raisin purchases by the Surplus Commodities Corporation up to June 30, 1939, amounted to 50,199,000 pounds.

All this makes no mention of the food-stamp program, which has been in operation for some time and which is intended partly to get rid of domestic surpluses by other methods than direct purchase by the Surplus Commodities Corporation.

It would be tedious to enumerate the entire list, so with the permission of the chairman, I should like to merely direct the attention of the committee to the cumulative purchases by the Federal Surplus Commodities Corporation in surplus removal operations to June 30, 1939, as they appear on page 580, table 717, of the Department of Agriculture publication, Agriculture Statistics of 1939.

According to its annual report for the fiscal year ending June 30, 1939, the Surplus Commodities Corporation purchased and distributed farm commodities valued at \$66,567,863 during that year. The figure given includes transportation, processing and other handling costs. Many of the commodities listed in this report refer to items upon which tariff reductions have been granted.

#### BULK OF IMPORTS ON FREE LIST

It goes without saying that we want all the foreign trade we can get under proper conditions, and we are sensible of the fact that trade is a matter of give and take. In any discussion on this subject, it is tremendously important to keep in mind that the United States has the biggest free list of any country in the world. During the calendar years of 1938 and 1939, 61 percent of all our imports were on the free list.

The total revenues we collect from import duties are small when compared to those of the United Kingdom, which was once regarded as the world's greatest free-trade empire. Going back to 1936, English imports, free and dutiable, were valued at \$4,244,000,000. Customs duties collected (not including excise taxes) amounted to slightly over \$1,000,000,000. Great Britain, therefore, collected an average of about 26 percent on her combined imports, including articles free and dutiable. Our imports the same year were valued at \$2,241,000,000, and the duties collected amounted to \$400,558,000, giving us an average rate of duty on all imports, free and dutiable, of only 16.5 percent.

In our dealings with other nations, we should take from them the commodities we need and do not produce domestically. Most emphatically, we should not take products of which we already have a surplus, as we are doing in so many instances under the workings of the Reciprocal Tariff Act.

It does not make sense to pay hundreds of millions of dollars annually to American farmers to reduce acreage and production and then enter into trade agreements with other nations making it easier for them to swamp and glut our markets with competitive commodities.

#### NEGOTIATIONS WITH SOUTH AMERICAN COUNTRIES

Announcement has recently been made by the State Department that the negotiations looking to trade agreements with the Argentine and Uruguay have been dropped. But what assurance do we have, if the Reciprocal Tariff Act is extended, that negotiations with these South American nations will not be reopened, perhaps before the close of the year? An Associated Press despatch in this connection, emanating from Buenos Aires under date of January 6, makes interesting reading. It is as follows:

"President Roberto M. Ortiz declared today that negotiations for an Argentine-United States trade treaty have come to an end, because of 'insufficient information and complete understanding.' He said he felt President Roosevelt would favor resumption of the

negotiations in the near future and added, that "for my part I fully desire it."

The difficulty with which we are confronted in attempting to negotiate trade agreements with certain South American countries, including the Argentine, is that they have large surpluses of the very commodities that fall into the surplus class domestically.

To cite a few illustrations, before negotiations with the Argentine were suspended, the United States had signified its willingness to reduce the duty on casein. The present duty on this commodity is 5½ cents per pound. When the present Tariff Act was being framed 10 years ago, the farm and dairy groups made a special effort to secure a reasonable duty on this commodity. Domestic production of casein has increased rapidly during recent years. According to the United States Department of Commerce, there were 316 factories in the country manufacturing this product in 1931. By 1937 the number of factories had increased to 664. These plants are situated in 24 different States. Under the present rate of duty, domestic manufacturers have demonstrated their ability to supply the home market. Notwithstanding, our imports of this product during the first 10 months of 1939 amounted to 6,875,000 pounds.

Statisticians of the dairy industry tell us that in round figures there are 53,000,000,000 pounds of skim milk produced annually in the United States. We have enough skim milk to make annually more than 20 times as much casein as is consumed today. The fact is that there are millions of gallons of skim milk for which we have not yet found a profitable market. Nevertheless the State Department wants to reduce the duty on casein.

#### CORN SLATED FOR TARIFF REDUCTION

The proposed agreement with the Argentine also called for a reduction of the duty on corn. As is well known, corn is the principal crop of the United States. We produce approximately 60 percent of the world's supply. We have had three bumper crops in succession, and hundreds of millions of bushels of surplus corn is sealed in the cribs of the Corn Belt, upon which the Government advanced loans of 57 cents per bushel.

The water rate on corn from Buenos Aires to San Francisco is \$7.75 a ton, which is equal to 19.6 cents a bushel. This is a rate that the railroads cannot match. Under the soil-conservation program the Government is paying our farmers to reduce acreage and production; nevertheless, the State Department wants to reduce the duty on corn.

Another item listed for tariff reduction in the Argentine agreement was turkeys, which are dutiable at 10 cents per pound. A few years ago we had the largest turkey crop on record in the United States, numbering 28,000,000 birds. Commercial hatchings in 1939 were 52 percent above the previous year, and the number of turkeys grown was placed at 32,000,000. During the recent holiday season No. 1 turkeys sold in Texas for as low as 10 and 11 cents a pound, which is less than half the cost of production. Nevertheless, the State Department wanted to reduce the duty on turkeys.

In the proposed agreement with Chile, dried beans are listed for a reduction in duty. According to the Department of Agriculture, our annual consumption of dried beans amounts to about 13,000,000 bags of 100 pounds each. We have the biggest surplus of beans on record, amounting to about 3,500,000 bags. The bean growers of New York, Michigan, Colorado, Idaho, California, and various other States are in deep financial distress. The average price received for beans at local markets throughout the country during the past two seasons was \$2.58 per 100 pounds. There are plenty of people in this country who would not put the beans in the bags and haul them to market for such an absurdly low price. Nevertheless, the State Department wants to reduce the present duty on beans.

One of the reasons why the Grange is opposed to the renewal of the Reciprocal Tariff Act relates to the question of constitutionality. To all practical intents and purposes, the 22 trade agreements we have negotiated with other nations are treaties, and the Constitution provides that treaties must be ratified by a two-thirds vote of the Senate before they become effective. In 16 of the countries with which we have dealt, these treaties were subject to parliamentary ratification. But here in the United States, the greatest Republic in the world, in violation of our fundamental law, no such ratification was required.

#### A COMPLETE CHANGE OF FRONT

In 1930, when the present tariff act was pending, certain Members of Congress registered strenuous and emphatic objections to the flexible proviso conferring upon the President much more limited powers than those embodied in the Reciprocal Tariff Act.

The distinguished Secretary of State, Hon. Cordell Hull, who was then a member of the Ways and Means Committee of the House, said:

"The proposed enlargement and broad expansion of the provisions and functions of the flexible tariff clause is astonishing. It is undoubtedly unconstitutional, and is violative of the functions of the American Congress. Not since the Commons wrenched from an English King the power and authority to control taxation has there been a transfer of the taxing power back to the head of a government on a basis so broad and unlimited as is proposed in the pending bill. As was said on a former occasion, 'This is too much power for a bad man to have, or for a good man to want.'"

The able and highly esteemed chairman of this committee, Mr. Doughton, declared:

"In my opinion we have gone a long way too far already in the centralization of power in the executive head of the Government. \* \* \* And if this bill is enacted into law, he will have the

power of life and death over industry, of manufacturing enterprises, and complete autocratic power affecting agriculture. My friends, this is too dangerous and alarming to contemplate. With all this power vested in the President of the United States, he becomes a colossus. It is too much power and authority to lodge in any man who ever has been, is now, or ever will be President of the United States. In fact, with all this unrestricted and unlimited power, he would be in a better position to overthrow our form of government and proclaim himself king than was the first consul of France, the great Napoleon, when he overthrew the French Government and proclaimed himself Emperor."

If such strong and emphatic language was justified in protesting against the flexible provisions of the Tariff Act of 1930, what words can be employed by any supporter of our democratic institutions of government in characterizing the vastly greater delegation of legislative power to the Executive that is contained in the Reciprocal Tariff Act of 1934, which it is now proposed to renew and extend for the second time?

Under section 336 of the Tariff Act of 1930, which contains the flexible proviso, the President was given authority to raise or lower rates to the extent of 50 percent, in the case of any article on the dutiable list, but only after an investigation and report by the Tariff Commission, setting forth the need or the reason for such a change. In writing the Tariff Act of 1930, Congress clearly stated that such changes in rates should be made to equalize differences in the cost of production of domestic articles and comparable or similar articles manufactured or produced abroad.

#### FACT FINDING NO LONGER NECESSARY

But it is very important to note that in the Reciprocal Tariff Act of 1934 it is expressly provided that "the provisions of section 336 of the Tariff Act of 1930 shall not apply to any article with respect to the importation of which into the United States a foreign-trade agreement has been concluded pursuant to this act, or to any provisions of any such agreement." In plain language this means that under the Reciprocal Tariff Act it is not necessary to make any investigation to establish differences in the cost of production, as between the United States and foreign countries before changing a rate, or any number of rates, if you please. As a matter of fact, the dutiable schedules of the tariff act have been largely rewritten since 1934 without the formality of investigations by the Tariff Commission and without consulting Congress.

While those who are charged with the responsibility of negotiating these so-called reciprocal-trade agreements have repeatedly assured Congress and the country that they approach their task with great care and discrimination, there is no record available to the public to prove the truth of these assertions. Rates are changed without making public the reasons therefor, as was formerly done in recommendations and reports of the Tariff Commission. These changes in rates are made arbitrarily and often in the face of what appear to be convincing reasons presented by producers against the lowering of rates.

#### APPEAL TO COURTS IS BARRED

There has been much dissatisfaction and complaint throughout the country on the ground that the Reciprocal Tariff Act of 1934 renders it virtually impossible for American producers to make any appeal or protest to the courts when they consider themselves aggrieved. It is expressly provided that section 516-B of the Tariff Act of 1930 shall not apply in matters relating to reciprocal-trade agreements. This amounts to a denial of the fundamental right of every citizen to have his day in court when conditions warrant it. Various individuals and groups have endeavored to institute proceedings to test the constitutionality of the Reciprocal Tariff Act, but so far without success.

The proponents of the reciprocal-trade program have asserted at hearings before the Ways and Means Committee and have proclaimed to the whole country that the methods employed in negotiating these agreements are democratic in every sense of the word. It has been stated by the supporters of the plan that all parties who have an interest at stake are given a full opportunity to be heard before the agreements are consummated.

However, any witness appearing before the Trade Agreements Committee in the interest of a domestic industry cannot but feel that Demosthenes of old, with a mouthful of pebbles, shouting against the roar of the surf on the Grecian coast, had much the best of it, not only as to the interest shown by his audience, but as to his effectiveness in winning conviction as well. Demosthenes at least had the satisfaction of improving his oratory; but so far as can be ascertained, no representative of a domestic industry has yet made any headway in forestalling the sacrifice of his tariff protection on the altar of a mythical foreign-trade policy.

One of the features of the trade-agreements program that has caused much dissatisfaction among domestic producers is the policy of the State Department which withdraws items from the jurisdiction of the Tariff Commission and even from the jurisdiction of the courts, when certain rates of duty are bound, although not actually reduced. The State Department may return to these items and reduce the duties at a later date. In the meantime, Congress and the whole country is bound in these treaties, which often bind items now on the free list even against the imposition of excise taxes.

#### IMPORTS OF ASIATIC STARCHES

To give an illustration, when the trade agreement with the Netherlands was pending, domestic producers of corn and potato starch personally appealed to Secretary Wallace and to Secretary Hull, asking that tapioca flour should not be bound on the free

list. The potato growers of Maine said that they had a 2-year supply of potato starch on hand for which they could not find a market, and it was made known to Secretaries Hull and Wallace that an effort would be made to secure the enactment of an excise tax to equalize the difference in the cost of production at home and abroad.

But when the Netherlands agreement was proclaimed, tapioca flour, which competes with domestically produced corn and potato starch, had been bound on the free list.

During 1937, 466,000,000 pounds of tapioca flour was imported by us free of duty. To produce an equal amount of starch would require 555,000 acres of corn. Our imports of tapioca flour during the past year amounted to nearly 400,000,000 pounds.

Tapioca comes principally from the Dutch East Indies and is produced by workers who receive from 18 to 25 cents for a day of 12 hours. We have made America a dumping ground for these Asiatic starches. It is worthy of note that Holland imposes a duty on imports of these starches from her island possessions for the protection of her own potato growers.

#### UNCONDITIONAL MOST-FAVORED-NATION POLICY

Considerable dissatisfaction has resulted from the unconditional most-favored-nation policy that is being pursued in the making of reciprocal-trade agreements. Until 1922 the United States pursued a policy of conditional most-favored-nation treatment in commercial treaties. In other words, we extended to other countries policies adopted by us in negotiating with most-favored nations conditionally—that is, if such countries extended to us the same treatment which they might agree to extend to other nations, we gave them this most-favored-nation treatment conditionally. After 1922 we adopted the unconditional most-favored-nation policy, and in 1922 commercial treaties agreed unconditionally to extend as favorable treatment as we received.

But this applied only to such matters as were covered in commercial treaties, like passports, travel privileges, use of docks and wharves, ownership of property in foreign countries, taxing of foreign citizens, and similar subjects. This policy did not apply to tariff duties. Previously, whenever reciprocal-trade agreements were discussed, or provided for by legislation, in every case it was made clear that they would be bilateral in nature and subject to Senate approval.

Furthermore, it must be borne in mind that when the unconditional most-favored-nation policy was adopted with relation to commercial treaties, sections 316 and 317 of the Tariff Act of 1922 made provision for a means of escape in cases of unfair competitive methods on the part of foreign countries. Similar provisions were incorporated in sections 347 and 348 of the Tariff Act of 1930.

#### FOREIGN CURRENCY DEPRECIATION

Let me briefly refer to the question of foreign currency depreciation as affecting reciprocal-trade agreements. When any foreign country, whether voluntarily or under economic pressure, abandons the established ratio between its currency or monetary unit and those of other countries, the purpose almost universally is to protect its foreign exchange. By depreciating its currency, such a country discourages imports and encourages exports. It will be seen that if the pound sterling should fall from the long-established ratio with the dollar from \$4.86, let us say, to \$3, our people would be discouraged from exporting, because when we sold an article for a pound sterling, we would get a piece of money worth only \$3, when formerly it was worth \$4.86. On the other hand, our people would be encouraged to buy from England if now they could purchase an article for \$3 for which they formerly had to pay \$4.86.

The effect of this method of currency depreciation is the equivalent of raising the British tariff rate to a prohibitive level and at the same time making our tariff rate partly or completely ineffective.

On September 23, 1931, the above is exactly what happened, and then later, in 1933, we devalued our currency to the British level; so again the ratio between the pound and the dollar was reestablished at \$4.86. But with the outbreak of the new European war, the British pound was again devalued. Today it is out of line with the dollar to the extent of about 20 percent.

Different countries have attempted to remedy this by providing for an automatic increase or decrease of regular tariff duties to apply against countries which manipulate currency values. As an illustration, France did that against England in September 1931.

So far as my knowledge goes, under the reciprocal trade agreements program we have done nothing to protect ourselves against currency depreciation on the part of the countries with which these agreements have been made.

Since the outbreak of the European war, agriculture in particular has been placed at a further disadvantage because of the many controls and restrictions that have been placed in effect. To put it briefly, while Great Britain and France are using their liquid cash to buy war materials from us, they have placed a virtual embargo against our farm products. In a special report to the Agricultural Advisory Council, issued by Secretary of Agriculture Wallace under date of December 27, 1939, he sets forth in detail the disadvantages under which we labor. In the meantime Great Britain, France, and all other countries with which we have negotiated agreements are at perfect liberty to send goods to us without restriction.

#### PURSuing CONTRADICTORY POLICIES

An impartial survey of the whole situation must convince any intelligent and unprejudiced person that under present conditions our Government is pursuing diametrically opposite and contradictory policies at one and the same time.

Under the Wagner Labor Relations Act, the Wage-Hour Act, the Walsh-Healey Act, the Social Security Act, and similar legislation, we have adopted a policy that calls for economic nationalism. In considering the subject under discussion the question is not whether these measures are desirable or undesirable, sound or unsound. The inescapable point is, however, that the artificialities and restrictions which have been imposed upon American industry and business in the development of this policy operate to increase our costs of production and of doing business.

Under the reciprocal-tariff policy we are pursuing what is sometimes called a good-neighbor policy, or a policy of international altruism. It must be manifest that we cannot successfully pursue both of these policies at one and the same time.

So far as the American farmer is concerned, neither direct benefit payments from the Treasury, the extension of credit, nor any other help that the Government can give will compensate him for the loss of the American market and the price-depressing effects of competitive imports.

It has long been the policy of the Government of the United States to protect American workers and producers so far as possible against competition from foreign countries where substandard labor conditions prevail. But under the workings of the reciprocal-tariff program this long-established policy is to a large extent being nullified. For example, when the trade agreement with Turkey was being formulated, the raisin growers of California called attention to the fact that the minimum wage paid to vineyard workers in that State was 35 cents an hour, compared to \$1.10 a day received by vineyard workers in Turkey. If comparison were made between wages paid to industrial workers in the United States and the wages received by industrial workers in many foreign countries, the difference would be still more striking.

The proponents of the trade-treaties program attempt to make it appear that we have not been injured as a result of imports caused by lowering tariff duties. Perhaps one reason why imports have not been heavier is because so large a proportion of the workers in European and Asiatic countries during the past few years have been engaged in making war materials. But with the return of peace, which for the good of humanity and civilization we trust may be hastened, the situation will be altered.

#### POURING MILK INTO A FULL BUCKET

It is important to bear in mind the fact that even comparatively small surpluses, whether due to imports or to overproduction at home, infallibly operate to demoralize market prices.

As a boy on the farm I early learned that one could not safely carry a bucket brimful of milk without spilling a little on the barn floor. Pour out a quart or two and the difficulty is removed. Pour in an extra pint and nothing can stop the overflow. The same thing holds true of market conditions. I have seen a single shipment of butter arriving in New York affect the price as far west as Chicago and cost the producers possibly millions of dollars. Yet the people of New York could probably have eaten the entire shipment of butter within 24 hours if it had been equitably distributed among them. Even the mere threat of imports in the face of market gluts at home cannot fail to have price-depressing effects.

Reference has already been made to the many ways in which the European war has defeated the workings of existing trade agreements. We maintain that with all the world a tinderbox and the future shrouded in uncertainty this is not the time to enter into any more reciprocal-trade agreements that are to run for a period of 3 years.

#### OFFICIAL STATISTICS REFUTE CLAIMS

Labored efforts have been made by the supporters of the reciprocal-tariff program to persuade the farmers of this country that they have been benefited by it. However, it can be proved by official statistics of the Government that such is not the case.

During the fiscal year ending June 30, 1934, the last full year before the reciprocal-tariff program went into effect, our exports of farm commodities totaled \$787,343,000. Our farm exports for the fiscal year ending June 30, 1939, amounted to \$682,962,000. This shows a loss of farm exports of \$104,381,000.

During the fiscal year ending June 30, 1934, our imports of farm commodities totaled \$838,952,000. For the fiscal year ending June 30, 1939, farm imports amounted to \$998,616,000. This shows an increase in imports of \$159,664,000.

Speaking only of competitive imports, there was an increase of \$67,625,000 in 1939, as compared with 1934.

There is more involved in the question under discussion than tariff duties and imports and exports, along with the effects that our policies relating to foreign trade may have upon the American people. It is a question that goes to the very roots of our system of representative government.

If Congress, by extending the Trade Agreements Act for another period of 3 years, should sanction the theory that it is not competent to legislate on the tariff, is it not reasonable to suppose that the idea may progressively gain currency that it is not to be trusted to legislate on any matter whatsoever? Certainly, if this delegation of legislative power is to be renewed, the bill should be amended so as to provide for congressional approval of all trade treaties that in the future may be negotiated. Since, under the Constitution, all revenue legislation must originate in the House, it should have the right to pass on such treaties as well as the Senate. We must be fair to all sections of the country and to every group of our people. While we believe in a spirit of amity and good will among nations, our first duty is to the people of the United States.

Whose market is this? Who has the first claim to the purchasing power of America? Who is it that must pay the taxes? Upon whose back rests the pay rolls and the relief rolls of the Republic? Who is it that must defend the flag? It is the people of the United States. Let us be just to them before we seek to be generous to the rest of the world.

## Relations of the United States to Present World Conflict

### EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ADDRESS BY JUDGE ALBERT W. JOHNSON

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable Albert W. Johnson, United States district judge, middle district of Pennsylvania, to the Lions Club, Scranton, Pa., January 23, 1940, entitled "The Duties and Responsibility of the United States in the Present World Conflict."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A heavy responsibility rests at this time on any person who addresses so intelligent, influential, and representative a body of men, whose organization extends throughout and beyond our entire country with such opportunity to influence the public opinion of our people. This responsibility requires a speaker not only to select a vital subject but also to think correctly and to speak specifically and not in platitudes and generalities.

With much of the world now at war threatening the entire world, it is necessary that public opinion in our own country—the greatest Nation on earth—be patriotically and intelligently formed so that our position in this great conflict may be right.

I have, therefore, decided to address you on the subject, "The Duties and Responsibility of the United States in the Present World Conflict."

What is and shall be our duty in relation to this conflict depends upon the issues involved, the progress of the struggle, and the results upon civilization. If this war involved a mere local issue and struggle, not affecting the nations generally, our obligation would be different from our duty if justice, liberty, religion, and civilization were involved. It, therefore, becomes necessary to determine the issues and the probable and possible results of the conflict to determine our obligations to ourselves and to the civilizations of the world.

The main issues of the war now appear definitely defined. On the one side we see arbitrary, dictatorial, and tyrannical governments, with no regard for the rights of innocent and independent nations, attacking and conquering without cause, by force and violence and with no respect for agreements, treaties, and international laws, spurning justice, liberty, religion, and the principles of democracy and free government.

On the other side we see democracies and free government which respect agreements, treaties, moral codes, international law, justice, liberty, religion, and the rights and freedom of independent states.

It is then arbitrary governments and tyranny against democracy, justice, and liberty; conquest by force and violence against settlement by justice and law; atheism and brute force against liberty and religion. In such a struggle with such issues involved, affecting all nations of the world and civilizations for all time to come, a great people like the United States cannot keep their light under a bushel; they cannot cry peace, peace, when there is no peace; they cannot cringe and say it is none of our concern; they must take their stand on the side of right or fail in their mission in the world; they must serve themselves and mankind, or go the way of parting nations that fail in times of trial.

We have heard and read much since the war began urging us to do our duty in general terms but little or no advice or definition of what are our duties.

Our duties and obligations lie first on the home front, and secondly on the foreign front. On the home front we must first put our national house in order, if we are to be strong and live. In the language of the Constitution, we must "establish justice, insure domestic tranquillity, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity"; and, secondly, we must provide for the common defense by maintaining an adequate army and an invincible navy.

In 1919, more than 20 years ago, at the request of some friends, I prepared a plan of legislation to put our national house in order,

which was then discussed in four separate articles in the Philadelphia Public Ledger. This plan was sent to the President, his Cabinet, and all the Members of the National Congress; to the Governor of Pennsylvania, his cabinet, and to all members of the Pennsylvania Legislature. This program, necessary then and necessary now, included legislation to restrict immigration so as to maintain a high and patriotic standard of citizenship; to secure the birth of normal children by preventing parenthood of all who are mentally, morally, and physically defective; and by teaching the parents principles of health; to provide that children shall be reared under healthful conditions by proper and efficient medical inspection and treatment and by making their environments sanitary; to provide for the establishing of the best possible system of education covering the physical and moral development of the pupil as well as the mental; to provide for the securing to all citizens the fullest justice possible and the economic and social square deal.

The economic and social square deal includes the right of private property and individual initiative; a reasonably large income tax on large incomes and a reasonably large inheritance tax on large estates; a more just and equitable administration of wealth through such means as a shorter week and a shorter day for labor, workmen's compensation, unemployment insurance, adequate old-age and widows' pensions; efficient management and control of public-service companies and the maintenance of fair rates either by efficient and thorough Government regulations or municipal ownership and control; through Government regulation of banks, both State and Federal; the regulation of all corporations and the issuance and sale of their stocks with sufficient Government control that the incomes will not be squandered but used for the benefit of the owners of stocks.

Through the above plan and program of legislation and administration this Nation will present to the world not only the best form of government but the most successful in its service to all people.

On our home front, secondly, it is necessary to establish and maintain an adequate Regular Army of the highest efficiency, with a strong National Guard in every State; an air force second to none; also, a Navy strong enough to defend our country against all navies or combination of navies that might attack us. This development and condition of the home front will not only make our own people prosperous, happy, and patriotic, but will secure the respect of all peoples of the world and make us a most powerful nation, able to demand and secure our rights everywhere with a voice and influence of overwhelming power for good in times of peace as well as in times of war.

On the foreign front it is our duty, first, to support the right side by unequivocal statements and resolutions; secondly, by extending assistance of all necessary materials to the nations fighting for justice, liberty, and independence, and withholding the same from the aggressor nations denying justice and destroying liberty and independent nations by force and violence; and thirdly, if necessary to protect the world, including ourselves, from being overcome by force and violence, actually to assist the right side with all our power on land, sea, and air.

First, then, on the foreign front, we must encourage the right and denounce the wrong. Our approval of the things that are right in this great struggle and our condemnation of the wrong will give tremendous help to the side struggling for justice, liberty, and self-government, and it will be a tremendous weight against the nations attempting by force and violence to destroy these principles of civilization. There is a moral order in this world and when moral and spiritual influences are exerted they may be decisive. These moral and spiritual influences are the invisible and invincible powers of God working in favor of right. It is our duty in this war not to be neutral in thought nor word, but to speak out for the right and against the wrong and not to waiver but to do it now from every quarter. If we are to respect ourselves as individuals and as a nation in the face of wrong, we cannot and dare not be quiet; if we are to do our duty, we must make our voice heard in no uncertain terms.

In the second place, on the foreign front, we must do more than talk; we must encourage the right and condemn the wrong; we must extend all possible aid, short of war, under the principles and rules of international law; we must supply medicine, clothing, equipment, and every possible assistance, and withhold the same from the aggressors and wrongdoers. Our moral support extended and our material aid thus fully given, as necessary, to the right side, and our withholding and withdrawing aid from the wrong side may be sufficient to overcome the aggressor nations and to bring victory to the nations fighting for right and to bring peace to the world.

If this help to the right side is not sufficient and we discover that notwithstanding all this support, the aggressor nations are likely by force and violence to overcome the democracies and free countries of the world and to destroy justice, liberty, religion, international law, and civilization, and are determined to extend their sway over the world, then it will be necessary for us actually to engage with all our power in the war on the side of right and actively with all our power to defend civilization for ourselves and the world.

I do not overlook the seriousness of war, the cost in blood and treasure. I have associated from childhood with soldiers of the Civil War on both sides. I followed closely the Boer War in South Africa, the Spanish-American War, the Russian-Japanese War, and the Great World War.

My father was a member of the Union Army at the age of 17. Two of my sons were in the World War in France, one at the age of 16, one in the Battle of Argonne; my son-in-law, Carl A. Schug, one of the finest young men I have ever known, was a first lieutenant in the Seventy-seventh American Division, one of the first on the battlefields of France; twice seriously wounded in action, who, after a short but brilliant career as district attorney and lawyer, died as a result of these wounds. Of my 11 children, 8 are boys—all fit mentally, morally, and physically. Six are now of sufficient age for military service and the other 2 will be old enough if the war lasts a few years.

Peace must not be purchased at the price of slavery. The greatest teacher of the world did not bring such peace, but the peace that comes from duty well done, the establishment of liberty and righteousness and the destruction of injustice and sin. He said: "Think not that I come to send peace on earth; I come not to send peace, but a sword."

The Christian life He introduced gave battle at once to evil and slavery, and was destined, finally, to overcome sin and slavery, and to establish in their place righteousness throughout the earth. Real peace for individuals and nations is not the peace of freedom from struggle and conflict but the peace which comes from duty courageously performed.

Nathan Hale, a young student at Yale, captured and about to die in the American Revolution, regretted that he had but one life to give for his country. Patrick Henry, in the Virginia Assembly in 1775, in the most famous of all his orations, said: "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God, I know not what course others may take, but as for me, give me liberty or give me death."

During the war of independence, the town of Woodstock, in the Shenandoah Valley, a region settled by Germans, was the scene of an act of inspiring patriotism. Rev. Peter Muhlenberg, a German Lutheran minister, who in his youth had served with the dragoons in Germany, addressing his congregation, said that there was a time to pray and to preach, but also one to fight. This time had come. "Therefore, whoever loves freedom and his new fatherland, let him follow me." Then taking off his ministerial robe, under which he wore the uniform of an officer, he buckled a sword about his waist, and amidst indescribable enthusiasm, while drums were beating in front of his church, he enlisted 162 men in the Revolutionary Army. Rev. and Gen. Peter Muhlenberg left a brilliant military record and gained the intimate friendship of George Washington and Patrick Henry.

Joan of Arc, the Maid of Orleans, a peasant girl, a mere child, a devout Christian, and a lover of peace, led the armies of France to victory. Creasy, in his *Fifteen Decisive Battles of the World*, calls her "the truest heroine the world has ever seen."

Creasy speaking of the siege of Orleans and the deliverance of France from her enemies by Joan of Arc, stated "Seldom has the extinction of a nation's independence appeared more inevitable than was the case in France, when the English invaders completed their lines around Orleans 423 years ago. A series of dreadful defeats had thinned the chivalry of France, and daunted the spirits of her soldiers."

"Joan's heart was sorely troubled at the thought of the fate of Orleans, and her voices now ordered her to leave her home, and warned her that she was the instrument chosen by Heaven for driving away the English from that city and for taking the Dauphin to be anointed King at Rheims."

Leading the troops of France to battle and victory, Joan of Arc describes how she led them: "I used to say to them, 'go boldly in among the English and then I used to go boldly in myself.'"

After she had saved her country, she was captured by the enemies of her country, and cruelly and wickedly burned at the stake. She lost her physical and earthly life in serving a great cause, but she maintained her spiritual life, and is now and forever shall be, one of the saints.

What then is the peace we seek? It is not the peace that comes from freedom from toil and struggle, but the peace of honor; the peace of righteousness; the peace which comes to individuals and nations in the service of a good cause, facing danger and even death for the things that are right and the things that are just—in national affairs, for justice and liberty. Such peace came to Nathan Hale, Patrick Henry, Peter Muhlenberg, and the Maid of Orleans.

But it is said this is not our war and we cannot be affected by the result. But it is our war, a war affecting Europe, Asia, Africa, and the islands of the sea in which the powers of darkness are battling with the powers of light; in which wickedness and despotism are destroying by violence justice, liberty, and Christianity; our war just as much as the war of those actually and directly now engaged.

The history of the world clearly shows that the results of the decisive battles influenced the history of the whole world.

Creasy, in his *Fifteen Decisive Battles of the World*, opens his description of the Battle of Marathon in the following words: "Two thousand three hundred and forty years ago a council of Athenian officers was summoned on the slope of one of the mountains that overlook the plains of Marathon, on the eastern coast of Attica. The immediate subject of their meeting was to consider whether they should give battle to any enemy that lay encamped on the shore beneath them; but on the result of their deliberations depended not merely the fate of two armies but the whole future progress of human civilization."

Ten thousand Athenians and 1,000 Plataeans attacked 100,000 Medes and Persians and by their skill and courage won the Battle

of Marathon. The Athenians, instead of being led into slavery, achieved their liberty and independence and preserved and extended a superior civilization for the whole human race.

There were other such battles—the Battle of Tours, in which Charles Martel rescued our ancestors from the civil and religious yoke of the Mohammedans; the Battles of Saratoga and Yorktown, which secured after 8 long years of war the liberty and independence of America; the Battles of Gettysburg and Vicksburg, which preserved "government of the people, by the people, and for the people."

But it is said we went into the World War and gained nothing. This statement is frequently heard and is most fallacious. Had the Prussian military despotism conquered the democracies of the Old World, she would have destroyed France and England, and enriched herself from the wealth of the British and French Empires, and built up such an army and navy as would have overcome all of the Old World and placed the New World in constant peril.

It is said we must have peace, but peace cannot be secured by compromise with evil. Justice cannot be compromised with injustice; liberty and tyranny cannot be compromised; atheism and Christianity cannot be compromised; independence and slavery cannot be compromised; civilization and barbarism cannot be compromised. The aggressor nations will not listen to reason and yield and thus this war must go on and be fought out to a conclusion which must end right when justice and liberty prevail. Just settlements must and will then be effected, and many, if not all, of the causes of war must and will be removed, and peace will be established and a better world created. Our Nation must help to make and maintain this righteous peace and the better world.

It is said such a war will be too costly for us. Let us here recall a statement of the great Prime Minister of England, David Lloyd George, in one of his great orations during the World War: "It is not what a nation gains but what a nation gives that makes it great"; and let us recall what the greatest of all teachers said: "It is written, man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."

Property and money and things material are temporary and pass away, but justice and things spiritual are eternal, for which individuals and nations should struggle and sacrifice. It was the courage and sacrifice of Nathan Hale, Patrick Henry, Peter Muhlenberg, George Washington, and their comrades that gave us our liberty and independence and self-government.

In the great Battle of Trafalgar, in which the life of the British Empire was at stake, Admiral Nelson placed on his flagship this motto for all British sailors and soldiers: "England expects every man to do his duty." When Nelson had received a mortal wound and the battle was over and the victory won for England, he called Captain Hardy to his side, placed a kiss on his brow, and said, "I die happy, because I have done my duty."

May it never be said of us that we cried, Peace! Peace! to escape cost and danger and death, but that we have always served justice, liberty, and civilization. Our country will then deserve to live, and "government of the people, by the people, and for the people shall not perish from this earth."

## Dinner in Honor of National President of American Federation of Hosiery Workers

### EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ADDRESS BY HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the *RECORD* an address delivered by the eminent Senator from Pennsylvania [Mr. GUFFEY] at a dinner given by the Philadelphia hosiery workers in honor of Alexander McKeown, recently elected national president of the American Federation of Hosiery Workers, at Philadelphia, Pa., January 27, 1940.

There being no objection, the address was ordered to be printed in the *RECORD*, as follows:

It gives me great pleasure to join with you in honoring Alexander McKeown, recently elected national president of the American Federation of Hosiery Workers. Most of you know Mr. McKeown much better than do I, but I can join with you in paying tribute to him because I know that when the labor movement offers homage to an individual they are not so much honoring the individual as the principles for which he has fought.

And, in the labor movement, the principles for which Alexander McKeown has fought for the past 30 years are principles which today stand out as the foundation stone upon which a greater labor movement is being built.

It is not unusual to find union leaders who have served the membership for 30 years, but to find that during that time they have been able to continue in an aggressive fight for political and economic principles which are for the first time being accepted is outstanding. Mr. McKeown comes within the latter classification.

As a leader of the hosiery workers of Philadelphia, of this State, and now of the Nation, Mr. McKeown has represented those progressive principles. It is perhaps only natural that I should speak more of political events than those concerned with collective bargaining, as I am more at home with them, and I know that unlike many other trade unionists who close their eyes to what was happening in the political field, Mr. McKeown always made political activities an important part of his labor activities.

The Philadelphia Local of the Hosiery Workers Union, under his leadership, was in the forefront of every battle for progressive political action, both in the State of Pennsylvania and the city of Philadelphia. During these times, this organization, perhaps the largest single local union in the State, was well represented in Harrisburg whenever any question affecting labor came before the legislature. And it carried its interest in labor political action to the ballot boxes where it belonged. The members of the local had heard their president stressing the importance of political action if the union was to get for its members all that they deserved.

The very wise policies inaugurated and carried out by Mr. McKeown have been continued and even expanded by the organization through its present leadership.

Today it is commonplace to talk of political action by labor, but it is only commonplace because of trade-unionists like Alexander McKeown, who started to talk about it 30 years ago.

I am deeply moved and touched, Mr. Leader, by your personal expression of confidence and your willingness to support my candidacy for the Senate this year. I shall endeavor to prove worthy of your loyalty and pledge my unswerving support of all measures designed to improve the conditions under which men and women work and to bring labor a larger share of the wealth it creates.

Much more impressive than this promise of assistance in my campaign is the recent action of your union urging our great President, Franklin Delano Roosevelt, to yield to the demands of at least two-thirds of the Nation and allow his name to be placed on the ballot next November.

It is entirely right and proper that working men and women take the lead in this growing demand that President Roosevelt again stand for reelection. Never in the history of our own or any other country has the lot of the working people been so rapidly and so tremendously improved as here in America since March 1933.

No President, not even Jackson or Lincoln, has been more devoted to the interest and welfare of the men and women who work with their hands. No one who remembers that bitter winter of 1932-33 and regards conditions in our Nation today will wonder that labor, almost to a man, wants President Roosevelt to run again.

His opponents, standing disconsolate, with the spears and lances they have hurled against him lying shattered at their feet, cannot understand the hold Mr. Roosevelt has on the hearts of America. That lack of understanding of the human heart, its aims and aspirations, its hopes and fears, its faith and doubt, its courage and its despair, is responsible for the sterile, lifeless, cynical political creed they profess.

Their whole philosophy of government is negative. Their outlook upon life gloomy. Their counsels are those of despair.

They are motivated by the doctrine of *laissez faire* or, in plain English, the theory of let things alone. It was considered by advocates of this doctrine profanation of the temple of government to interfere while businessmen used labor as helpless pawns in their cutthroat competition.

They proclaimed it un-American for government to interfere with the "inalienable right" to sell the public worthless stocks and bonds. They considered it a violation of the spirit of 1776 for government to insure bank deposits. Incidentally, a large bank has just closed in your city, yet no depositor lost a penny. I'm inclined to think that Philadelphians prefer the Roosevelt style of closing a bank to the Coolidge-Hoover system of letting the banks hew to any line they wanted while the depositors fell by the way.

When I endeavored through the Guffey Coal Act to bring an end to chaos in that vital industry, to provide a basic foundation for coal prices, hours of labor, and wages in this nationally important business, the Tory courts, the reactionary employers, the whole organized force of corporate wealth and privilege fell on that act with all the power they could bring to bear.

That act averted a Nation-wide soft-coal strike. It brought new hope to a paralyzed industry. It pointed the way toward an intelligent and comprehensive management of vast national resources. No matter. It was stricken down.

We have tried again with a modified act. And if the obdurate few who now oppose it will give it wholehearted support it can be made a new charter of liberty for coal.

My experience with the Guffey Coal Act has given me a startling demonstration of the warped and twisted mentalities that oppose needed reform to America. It is all right, according to these men, for corporations to fix prices, to control wages and hours, to disregard national interests for the benefit of a few security owners.

But let Government intervene to provide a fair opportunity for the independent coal operator, the man who deep underground daily risks life and limb to get the coal out, and his wife who struggles to raise her family in the bleak, slate-gray country of the coal regions, and the people who must buy coal to warm their

homes or operate their factories, and such action becomes unconstitutional, oppressive, illegal, un-American, and other things not mentioned in polite society.

If I may digress for a moment, I would call your attention to the fact that it was my pleasure only a few days ago, as chairman of the Committee on Mines and Mining of the Senate, to help considerably in bringing about the passage of Senate bill 2420. This bill gives the Secretary of the Interior the right to inspect all coal mines, an authority which has not previously been had by the Federal Government and which if it had been in effect, very likely would have prevented the loss of some 90 lives in a West Virginia coal mine just a short time ago.

Labor knows full well where its interests lie. Actions, not words, are the test which the workingman applies to the claims for support which are now becoming so vociferous as election time draws near.

Glance through any collection of quotations and take the subject "Labor." You will find a host of beautiful and flowery tributes to the man who toils, numerous expressions regarding the "nobility of labor" and the gratitude we all owe to those who make the goods we wear, the cars in which we ride, the stockings which adorn our womenfolk.

But you will search almost in vain for emphasis upon the statement the greatest worker that ever lived gave to the world. Here is the pronouncement of the Carpenter of Nazareth, the Son of God who knew what it meant to work long hours at the bench, "The workman is worthy of his hire."

There is the whole philosophy of life. "The workman is worthy of his hire." That includes the whole conception of the dignity and value of labor, couched in a simple phrase that needs no Supreme Court to interpret it. And I venture to say that the President in his attitude toward labor and its problems has kept that statement always in his mind as the standard with which all legislative and executive action must be compared.

The New Deal is largely an attempt to write into our national laws and into our national thinking this immortal phrase, "The workman is worthy of his hire"; or, in modern parlance, "Labor deserves decent wages, protection against unconscionably long working days, proper conditions under which to work, a reasonable security against the hazards of unemployment, industrial accident, unproductive old age."

"The workman is worthy of his hire." Being worthy of his hire, the workman deserves to be treated on an equal basis in negotiations by his employer, and the New Deal has seen to it that such equality is a fact and not a legal fiction.

And so, under the leadership of our great President, this doctrine of the worth of labor has been translated into concrete achievement through the Wagner Labor Relations Act, the Social Security Act, the Guffey Coal Act, the Wage and Hour Act, and allied legislation.

May I point out that legislative recognition of these basic rights of labor carried with it the justifiable expectation that labor will assume the corresponding responsibilities that accompany rights.

The Nation, having written a new charter of freedom for labor, looks to union leaders for wisdom, discretion, and a just regard for interest of others in enforcing these rights.

Never before have such responsibilities rested upon the shoulders of the union leaders, the elected representatives of the men and women who work in shops and mines and mills. The Nation is gratified whenever labor rises to its new responsibilities and demonstrates qualities of true statesmanship. And the Nation is gravely disturbed when labor leaders appear to act in arbitrary and capricious manner.

And as labor becomes more accustomed to the exercise of its newly won rights, its leadership will be able to demonstrate that capacity for statesmanlike action which those of us who have fought for labor know it possesses.

These legislative acts—the Wagner Labor Relations Act, the Social Security Act, the Wage and Hour Act, the Coal Act—fitted such obvious needs that they have almost overnight become part and parcel of our national thinking.

You here in Philadelphia have had 50 years of experience with Republican administrative genius and I note that your funded debt takes 45 cents out of each tax dollar, that you are going to have to borrow about \$60,000,000 more to save your water system from collapse, that your streets are in disrepair, and that your police and fire forces are undermanned and underpaid.

The papers have also carried news of the latest fruit of Republican administrative genius—the 1½-percent wage tax. Every pay day you are being reminded of the governmental ability, the wise forethought, and the tender sentiments of the Republican Party for those who work.

The Republican Party hates and despises the equitable principle of taxation based on ability to pay, because such taxes are levied on those able to meet them. They welcome the opportunity to make, as they say, everybody tax-conscious by slapping such costs on the humble and poorly paid for the benefit of the men and women in the upper income brackets.

And now the Republicans are going to nominate for the Senate the father of the wage tax, the partner in the firm that made \$50,000 out of the gas-lease sale, that able and talented spokesman for wealth and privilege, Jay Cooke. He is a worthy successor to the henchmen of plutocracy who have so often represented Pennsylvania at Washington—Quay, Penrose, and Vore.

Perhaps he will run on a platform calling for a national wage tax for America to bring to the Nation the doubtful benefits your

city now enjoys under the rule of the wise and wealthy out-of-town residents who dominate and direct Philadelphia's affairs.

Last year a politically minded member of the judiciary was elected Governor of Pennsylvania. Recall his platform for a minute. He said that just as soon as he turned the little New Deal out of Harrisburg prosperity would return in increasing measure to Pennsylvania. Labor's fortunes would improve, taxes would be decreased, those on relief would get fair treatment, and everything would be perfect "in this best of all possible worlds."

What happened? Pennsylvania lags behind the rest of the Nation in the recovery produced by the national administration. Labor has lost the charter of liberty the Earle administration provided in the 1937 State Labor Relations Act and the standards of workmen's compensation, raised to decent levels under the Democrats, were lowered by a new act written by counsel for the compensation-insurance companies.

Not a tax has been repealed nor a levy lowered. When the Governor calls his special session new taxes will have to be imposed to meet the relief load. Already the Governor has opened the way, he thinks, by blaming the W. P. A. for the State's difficulties.

The men and women on relief have been reduced to the level of chattel slaves by being compelled at the whim of a politically appointed county relief board to work on various projects to "earn" their miserably small relief check each week.

The last decision of this arbitrary and cruel chief executive is to deprive men, losing their jobs, of relief during the period they are waiting for unemployment compensation to begin. "Workmen should save their money," the Governor and his supporters declare.

I wonder how much the Governor would save on an income of \$16 a week with a wife and 5 children to clothe, house, and feed? Not enough to carry such a family 4 more weeks with no income at all.

This marvelous feat of administrative engineering saved \$20,000 for the State. That \$20,000 means life or death to living men and women.

The Governor prates of loss of W. P. A. funds. The attitude of Philadelphia is largely the answer. The Republican geniuses who direct your city are so fearful that a Democrat may get work that they refused to make available the small sums the Federal Government requires from sponsors of projects. And so, although there are hundreds of thousands of dollars available for W. P. A. here, your city fathers decline to use them and, naturally, the quota of jobs for the State is lowered.

Our Republican Governor has given us, I say, a perfect picture of what we may expect should the Democratic administration not be returned to office. We shall see elimination of the Wagner Labor Relations Act, the destruction of the Wage and Hour Act, restriction of the Social Security Act, nullification, if not repeal, of the legislation governing the securities exchanges, and perhaps most important of all, appointment of men to judicial posts whose philosophy is that of many corporation lawyers and big business generally.

Our Republican Governor is not the only shining example of what we may expect if the Republicans win this year.

Look across our western border to neighboring Ohio. Are you gratified by the picture of a Governor sitting on a \$6,000,000 State surplus, willing that men and women should starve in Cleveland and Toledo rather than destroy his hard-won niche as a budget balancer?

The Governor of Ohio and his cohorts cannot see that President Roosevelt has been fighting as cruel and as desperate an opponent as any nation has ever faced—starvation, disease, despair, loss of hope, loss of faith in democracy. He has spent whatever may be necessary to make the American people strong, to restore their faith in their Government, and their hope for fuller and richer lives.

Under his wise and courageous leadership a defeated, discouraged, despondent people has been reinvigorated. So notable has been the recovery that the titans of business and finance who crept to Washington in the dark days of 1933 to beg his help now feel strong enough to growl and snap at the man who saved them.

Democracies, they say, are ungrateful. But the steady and strong hold the President has on the hearts of our countrymen gives the lie to this platitude. The recent poll of national opinion which showed more votes for Roosevelt than for all the other leading Republican and Democratic candidates combined is startling proof of this deep-rooted affection.

Such faith, staid in the face of unrelenting editorial attack, unceasing criticism, perpetual sniping at his program, underhanded efforts to smear and destroy his administration, are proof positive of the wisdom of his course.

You men and women in Philadelphia who remember how recently this city was an open-shop town and know the tremendous progress toward unionization of business and industry here do not have to be told that the New Deal works.

Newspaper men and women in Philadelphia who recall the wage scale of reporters, rewrite men, photographers, copy readers, and that mainstay of the paper, the district men, know full well that it was the impetus of the New Deal which made the guild possible and won for them the standards of pay they now enjoy.

Philadelphia was once a great textile city. It lost many of its mills to the low-pay rates of other communities. Not foreign competition, but American depressed wage levels spelled ruin for this great industry here. The administration's efforts to raise income levels in those other sections of our Nation has been of immeasurable value to this industry in your great city.

The benefits of the New Deal come in strange ways. A spokesman for the anthracite industry told a friend of mine how the New Deal dollar devaluation had helped his company's business by making it possible for his company to sell coal abroad for the first time since 1919.

"I hate to admit it," he said, "but Roosevelt did more to help our business than any President we have had for years."

America loves President Roosevelt for a very simple and understandable reason. Our people know that day and night, week in and week out, from month to month, and year to year, the President is working for the interest of all the people.

Do you remember the story of Solomon who was told he could have anything he wanted? He prayed for "an understanding heart."

The Lord has bestowed on our President such a heart, such a love for mankind, for the poor and lowly as well as the wise and exalted. His great sympathies extend beyond all limitations of race, color, or creed.

And that great heart beats in tune with the heart of America. He knows and understands the aspirations and hopes of our people. He sees clearly their needs and their desires. He has ever sought to use his great power for the betterment of mankind.

How simply and yet how beautifully the President summed up his political creed in his message last week to the White House Conference on Children in a Democracy.

"I believe with you," he said, "that if anywhere in the country any child lacks opportunity for home life, health protection, education, or moral and spiritual development, the strength of the Nation and its ability to cherish and advance the principles of democracy is weakened. \* \* \* May the security and happiness of every boy and girl in our land be our concern, our personal concern, from now on."

There you have it. The President believes that none of us has the right to rest, to withdraw from the political fray, to retire while any one of our citizens is denied the blessings our democracy is capable of bringing to him.

And so I think we can, with due propriety, go to the President and say with full respect but deep conviction:

"Mr. President, we earnestly ask you to continue to furnish the leadership we have found so stimulating and valuable in our fight for a better life for our people. We ask you to lay aside your natural desire for well-earned rest and to continue your life of service to America and the world."

"We feel that we are on the threshold of a great, new adventure for America, an adventure in making democracy continue to work. None but you can give the country the sense of confidence it needs as it embarks on this new course."

"Mr. President, America wants you. America needs you. You simply must permit us to reelect you for 4 more productive and happy years."

## The Gold and Silver Problem

### EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ADDRESS BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the address delivered by the Senator from Delaware [Mr. TOWNSEND], at Wilmington, Del., on January 27, 1940, to the Del-Mar-Va Press Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Del-Mar-Va Press Association, ladies, and gentlemen, the newspapermen I meet in Washington are always looking for something to write home about, and I presume that you, too, are on the watch for matters of public concern. Therefore, I am going to take the lid off a pretty kettle of fish which we all put on the stove a few years ago and then complacently forgot about.

I refer to our gold-and-silver problem, which is pushing us down a one-way street.

Our bullion policy contains a threat to the value of every dollar of this Nation's bank deposits, and imperils the purchasing power of every cent of currency held by the public. It is therefore a matter of real and very direct significance to every man, woman, and child in the land.

This problem is so large and it has so many facets that all I can hope to do in a few minutes this afternoon is to indicate its dimensions.

All of us here know that this country during recent years has received vast amounts of foreign bullion, for which foreigners have received billions of dollars in exchange. This situation, without question, has constituted a tremendous boon to the outside world. During these recent years every foreign country possessing or mining gold or silver has been enabled by our policy to sell those metals to us with no limit as to quantity, and sell them, moreover, for a greater real return than it could obtain anywhere else.

These benefits have gone to sellers of gold and silver quite indiscriminately. There is absolutely no favoritism about our policy. It shows dollars abroad entirely without reference to nationality, color, politics, or reciprocity. Mexican gold and Mexican silver are given as warm a welcome as Canadian or Australian. By our policy we help Japan as well as China, Russia as well as Great Britain, Germany as well as Italy.

Certainly there is a queer inconsistency between our ardent desire to give embattled Finland every possible assistance and our continuous purchase of any or all gold mined in Russia, which is now the world's second largest gold-producing country. Since Russia mines about \$175,000,000 of gold a year, our policy helps Russia many times as much as we have been able to help Finland. Surely our purchasing of gold and silver from Japan is not harmonious with our \$25,000,000 loan to China or with our Japanese policy. Something is definitely screwy about such careless philanthropy.

Listen to what the commercial counselor of the British Embassy in Washington reported to his Government in 1936. He said: "It is impossible to estimate the indirect profits and stimulation to trade and industry which the United States gold policy has brought to other countries. The high price placed on gold and unlimited purchases by the United States of America are largely responsible for the remarkable prosperity of the Union of South Africa."

That is the end of the quotation.

Picture the situation in South Africa, the world's foremost gold-producing region: Over 350,000 persons, kafirs and whites, busily ransacking the bowels of the earth for the yellow metal which we so conveniently purchase. In South Africa it costs \$20.29 on the average to produce gold—and it would cost much less if they would be willing to work their high-grade ores—while we buy it for \$35 an ounce.

The wide spread between production costs and selling price has been a tremendous legislated incentive to gold mining everywhere since we raised the price of gold 6 years ago. In 1933 the world mined 25,400,000 ounces of gold. In 1938 it mined an estimated 39,300,000 ounces, which means an increase since 1933 of 54 percent. Since inflation of the price structure has not followed, mining costs remain low and the high rate of mine production promises to hold up indefinitely.

Not only do our policies in effect put all the world's gold mining and practically all the world's silver mining on our pay roll. In buying up not only current production but also the gold and silver accumulations of past centuries, we make our mining dole to the world retroactive.

Do not for a moment suppose that because a gold coin never actually gets into your pocket you are not helping pay the cost of this national policy. When America pays for gold and silver, you and I help pay—the farmer in the field, the factory hand, the housewife, the motorman, the newsboy, the reporter, and the editor—all together pay for this great boon to the outside world.

It is the policy of our Government to permit gold to be exported freely to any country which similarly allows gold to be sent here. On that we insist. But in paying \$35 an ounce for all foreign gold without limit, we do not insist that the selling country similarly engage to accept gold from us.

No strings are tied to our gold purchases. What goes into that hole at Fort Knox, where we store most of our gold, goes there for keeps.

The Treasury's present demand for foreign silver, of course, dates only from the Silver Purchase Act of 1934. But the unlimited market here for gold has been continuous throughout our history.

Until 1933 we were always ready to pay \$20.67 an ounce for any gold offered to the Government. Since 1934 we have been paying \$35.

The point is, that we have always stood ready to buy gold. In other words, our adherence to traditional habits as well as our increase in the price of gold have underlain the phenomenal migration of the metals which is still under way.

I hope you will not be bored if I cite just a few comparative statistics.

In 1929, that booming year of speculation, the Nation's entire activity was conducted on a gold base of about \$4,000,000,000. During the depression there was much mistaken talk about a shortage of gold. So, in 1934, it was decided to call \$20 worth of gold \$35. Thereby the value of our gold stock was jumped by 69 percent, to more than \$7,000,000,000. But that was only the beginning.

Since devaluation of the dollar we have added to our national bullion hoard more gold, by actual weight, than was produced by the United States during the 146 years from 1793 to 1939. In those 6 years we have acquired over twice as much gold as all the world's mines produced from 1493 to 1850.

Today we have \$17,800,000,000 of gold. Think of it! This is \$13,600,000,000 more than we had at the beginning of 1934. If \$4,000,000,000 of gold could carry the bloated credit structure of 1929, you can imagine what the \$17,800,000,000 of gold today could carry, to say nothing of silver, which the law also counts as reserve money. Since 1934 we have increased our monetary stock of silver from 690,000,000 ounces to 2,900,000,000 ounces.

And, because of the terms of the indefensible Silver Purchase Act of 1934, the more gold foreigners send us, the more silver the Treasury has to go out and buy. Actually more silver must still be bought under that treadmill law than when the act was passed in 1934.

Last year alone we paid foreigners \$3,110,000,000 for gold and silver we did not need. Since January 1934 we have paid foreigners \$11,025,000,000 for foreign silver and gold, not an ounce of which we had any use for.

The \$3,110,000,000 we paid out in 1939 for foreign bullion was \$810,000,000 greater than our entire merchandise imports.

Imports like rubber, tin, coffee, and silk are goods we can use; but under existing conditions the bullion is a perfect white elephant to us.

In 1939 we sent abroad \$3,100,000,000 worth of merchandise. It required more than 32,000 vessels and 1,615,000 freight cars to carry it away. If all this mountain of merchandise had been used to pay for bullion imports, it would not have paid for all the bullion we bought from foreigners during the 12 months of 1939. The difference had to be made up in the form of American services, American securities, and American bank deposits.

Just picture it—more than 32,000 ships and 1,600,000 freight cars could not carry away enough American wealth to pay for the useless gold and silver this country last year alone bought and paid for without a whimper. While the outside world prefers our goods to its gold, we evidently prefer its unwanted gold and silver to our own consumable goods. But we do not use the bullion we have. A large part of it is unneeded and idle.

We now have enough bullion to pay out \$2.37 in gold for every dollar of currency held by the public; only we do not redeem our citizens' currency any longer.

It is difficult to decide whether the internal or the external aspects of this bullion bubble will involve the greater ultimate loss. In the one case the loss is still in the future, whereas in the other the loss has been real, although camouflaged. Let me spell out what I mean.

First, the internal loss. When gold and silver are exchanged at the Treasury for gold and silver certificates there is thereby created money legally acceptable by the Federal Reserve System as security against member-bank credit. The Reserve System must accept them. Those certificates are "reserve material." Against them bankers may create credit by making loans, if they wish. They alone are the judges. Bank credit may be pyramided against them as the bankers see fit. Their self-restraint is the only practical control.

I am not trying to be an alarmist trying to predict the nature or timing of mass behavior when I point out to you the tremendous inflationary possibilities of the more than \$5,500,000,000 of excess reserves which our bullion policies have piled up. With no change in our present reserve requirements in the price of gold or silver, or in the amount of certificates issued, the \$5,500,000,000 of excess reserves would support the virtual doubling of our present bank deposits, check-book money, the chief constituent of our money supply.

Should there develop an increase in the volume of check-book money without a corresponding increase in the supply of goods and services offered, the domestic value of our dollar would undergo a shrinkage, damaging to the holders of savings deposits and life insurance, to wage earners and annuitants, and to the economic life of the entire land. If on top of this the public became apprehensive, if a flight from the dollar into goods occurred, the value of our money would tend to melt away.

How this reserve situation has become progressively more serious is evidenced by three simple figures:

In 1929 the member banks had \$2,355,000,000 of reserves, while they owed the Federal Reserve System about \$73,000,000. There were no excess reserves.

In 1932, reserves were \$2,500,000,000, and of this, due to the depression, about one-fifth was in excess of legal requirements.

At the end of 1939, after 6 years of gold and silver buying, reserves totaled more than \$11,600,000,000; and \$5,200,000,000, or almost half, was in excess of legal requirements. On top of this \$5,200,000,000 (which since December has grown to more than \$5,500,000,000) the Treasury holds "sterilized," but ready for use at a moment's notice, more than \$2,100,000,000 of gold and more than \$1,500,000,000 monetary value of silver. This is explosive stuff.

Yet we are adding to it every day from the billions still held in foreign banks or being mined and cheerfully sold to us.

The Federal Reserve Board has publicly proclaimed its helplessness to control this potentially destructive situation.

The internal losses and suffering which a destructive monetary and credit expansion would entail need no elaboration here. Suffice it to note that we firmly adhere to gold- and silver-buying policies whose effect is to build up ever higher our unprecedented pile of monetary kindling wood. The law, moreover, makes possible further revaluation upward of both the gold and the silver which we already have. The destructive internal potentialities are staggering.

Externally, as I have said, the present gold and silver policies involve actual loss. That loss is disguised, yet it is real.

When foreign bullion comes here and the foreign sellers get dollars for it, those dollars may be used in three ways: To build up foreign bank deposits here; to be invested in securities or factories here, or to buy American goods, pay for American services, and

the like. In fact, the billions of dollars of proceeds of the foreign metal sent here in recent years have been used in all three ways.

It is true that the use of such foreign-owned dollars to buy our motortrucks, our cotton, or our airplanes makes jobs for Americans. It makes export business. But it is also true that those American exports of goods constitute simply a means by which we pay for the foreign gold and silver. The gold and the exports are closely connected. According to the State Department, "for 1938 and 1939 the relation of our commodity balance to our gold imports appears particularly close."

If buying gold with our exports makes jobs for Americans now, will not the future sale of the gold unmake jobs here? Under our present policy are we just piling up depression for our children? Are we just postponing a problem that clamors for consideration now?

During the 6 years 1934-39, as I stated a few moments ago, this country paid foreigners more than \$11,000,000,000 (as much as the war debts) for gold and silver for which it has had absolutely no need or use. (The gold has been purchased at \$35 an ounce; the silver at various artificial prices, always above what others would pay.) If we tried to sell this accumulation of bullion from our Fort Knox and West Point vaults within the next 6 years, or any other 6 years, we would be unable to dispose of it except at a tremendous loss. The salable value of our gold and silver stocks, therefore, is grossly exaggerated on the Treasury's books. (I wish to make clear that the monetary values of gold and silver are established by Congress, not the Treasury.) Concerning the gold, the Federal Reserve Bulletin states: " \* \* \* it is of little value now and \* \* \* its value in the future is unpredictable." The virtual worthlessness of the silver has been even more definitely attested by Chairman Marriner S. Eccles during the hearings on my bill (S. 785).

If the situation were not so grave, it would be laughable. I am reminded of Gilbert and Sullivan's famous song in their comic opera *The Gondoliers*. I regret I cannot sing it for you, but here is how it goes:

"The end is easily foretold,  
When every blessed thing you hold  
Is made of silver or of gold,  
You long for simple pewter.

"When you have nothing else to wear  
But cloth of gold or satin rare,  
For cloth of gold you cease to care,  
Up goes the price of shoddy."

Advocates of doing nothing about our statutory gold- and silver-buying policies express the fear that to cease buying the metals or to lower the price we pay for them will mean a serious loss in the value of our existing stocks of bullion.

I make the point that the loss occurs at the time we give up wealth for those metals and not whenever the market prices of them decline. It is a fiction to value our immense silver stock at \$1.29 an ounce when we could not sell it, even in relatively small quantities, at more than 20 cents an ounce.

Likewise, it is only fooling ourselves to think that because we give up \$35 worth of goods for each ounce of gold our stock of the metal is worth \$35 an ounce, or \$17,800,000,000. At \$35 an ounce we could not sell even 1 percent of our unprecedented gold hoard this year or during any year without the market entirely disappearing. Nor is this a situation of wartime only. The Federal Reserve Bulletin predicts that the problem will be with us indefinitely.

If the value of gold is to melt away whenever we stop paying \$35 an ounce for the metal, it seems fair to conclude that it is our purchases, and our purchases alone, which give gold the appearance of being worth \$35 an ounce throughout the world. Does it seem logical to protect our present stake in Fort Knox gold only by purchasing more of the metal? Thereby we shall only be increasing our stake.

Imagine protecting the Government's stake in cotton by buying still more cotton.

There is 60 percent more gold in the world's monetary reserves today than in 1929, and the monetary value placed on it is about 170 percent greater than it was in 1929.

Although the world's stock of gold has increased 60 percent since 1929, the increase in the United States' share of the world's stock has been much more rapid. Only 6 years ago we held 30 percent of the world's centralized gold. Today we hold more than twice as much, or 64 percent.

Other countries are learning to get along without gold. No foreign currency other than Belgium's is on the gold standard today. Gold no longer circulates here or abroad. Even in jewelry the use of gold has declined. The mint reports that in the 7 years through 1938, in this country, old gold returned from the arts and manufactures exceeded new industrial demand for gold by \$106,000,000.

If countries no longer base the domestic value of their currencies on bullion, how long will it be before they will decide to permanently discontinue accepting gold in settlement of international debts? And then what will become of the value of our colossal gold hoard?

I know that many Americans feel we should not look into this problem now because our gold buying is helping the Allies. My interest in this problem, however, antedates the European war. It is not connected with the war. Almost a year ago I called for

a congressional study of this question. And I have called attention to the silver fiasco repeatedly.

If we want to help the Allies, that is a separate matter, and it should be fully understood and decided on its merits openly. A forthright way to help the Allies would be to repeal the Johnson Act. In calling attention to this fact, however, I wish to make it clear that I am expressing no opinion on the desirability or undesirability of repeal of the Johnson Act. Whether or not the country desires to retain the Johnson Act has nothing to do with the question of examining those bullion policies which are so costly to us all.

In these brief remarks I have been able only to suggest the nature and magnitude of our present gold and silver problems. While I realize that any solution of the problem will be difficult, I do not think we Americans should sit supinely and wait for the gold to move out or for silver to stop coming in. It is idle to hope that luck or some good fairy will solve this problem for us. No other country would do so. We should not.

What I recommend is that Congress and all of us study the subject now, before we find ourselves with all the world's gold in our lap. I shall be glad to lend what help I can to such an inquiry.

## Jackson Day Address

### EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ADDRESS BY HON. A. B. CHANDLER, OF KENTUCKY

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a most able and eloquent address delivered by the Senator from Kentucky [Mr. CHANDLER] at the Jackson Day banquet held at Richmond, Va., on January 15, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am deeply grateful to the Democrats of Virginia for the invitation to visit again with them. I am not a stranger in Virginia, because some of the most pleasant memories of my whole life center in and around the Old Dominion State. It was here that I came before I ever embarked upon a career of politics to choose my life partner. Mrs. Chandler and I were married in the Ashcamp Baptist Church in Charlotte County, Va. Mr. Chernside, the genial clerk, furnished me the license, which must have been an excellent one, because it is still in full force and effect. My four children have the rich heritage which rightfully belongs to all descendants of Virginia. Their grandfather in Charlotte County, a strong Democrat, bore the name of Lee Watkins, and bore it with honor and distinction.

I come tonight to speak of the life of Andrew Jackson particularly, the seventh President of the United States, and the Democrat who perhaps in all the years of the illustrious history of our country has made the greatest contribution not only to his party but to his country as well. In speaking to the Democrats of North Carolina a year ago, mindful of the desire of the people of North Carolina to claim, as they justly have a right to do, a share in the birthplace of this illustrious son of Democracy, I said that Andrew Jackson, the third son of Elizabeth Jackson, was born on the 15th of March in the year 1767 in the Waxhaw country of North Carolina or "thereabouts." The "thereabouts" was used to cover the possibility of his having been born in South Carolina. Born in misery, poverty, and obscurity, with fantastic courage, lightning nerve, and the will capable of astounding exploits that stimulated his followers and captivated a world of men, he was a true knight of the frontier. He was a pioneer American who literally broke his way through a virgin wilderness and helped establish a new order for the people of America. He represented during his whole lifetime the plain people, and he represented the qualities of which they were most proud. He served two terms as President, and there isn't a single historian who will dispute the fact that he was the choice of the majority of the people in 1824, the year that John Quincy Adams was declared elected in his stead. In the elections of 1824 there were four candidates before the people—Andrew Jackson, of Tennessee; John Quincy Adams, of Massachusetts; William H. Crawford, of Georgia; and Henry Clay, of Kentucky. In the votes of the States Jackson had 99, Adams 84, Crawford 41, and Clay 37. Because no choice had been made by the people, although a majority of them had voted for Jackson, the election devolved upon the House of Representatives. Henry Clay, of Kentucky, who later became Secretary of State, threw his votes in the House of Representatives to Adams and accomplished the defeat of Andrew Jackson. A great deal of furor was created because of the fact that

in the States of Kentucky, Missouri, and Ohio, where Clay was the leading candidate, most people who had not voted for Clay were practically unanimous in their support of Jackson. Jackson retired to Tennessee and made no complaint with respect to the results of the election. In the next succeeding election he defeated John Quincy Adams by an overwhelming majority. Even his bitter enemies said of him at the conclusion of his second term, "He can be President for life if he chooses."

Andrew Jackson had many perplexing problems of Government during his day, just as we have today. During most of his administration his fights were concerned with organized money, but Jackson, during his whole lifetime, entertained the firm belief that public and private debts should not be entered into or agreed to beyond the ability of individuals and governments to pay. He bore up under the attacks of his enemies which were kept up during all of his public career. He was called a spoliator, but the record shows that he insisted upon those who occupied public office being fit for the jobs they held.

The Democrats of the Nation are indebted to Andrew Jackson for the record of public service which he has left as our heritage. He represented not so much from the standpoint of education, because the historians have undertaken to make of him an uneducated man. It is true that nothing survives to indicate the progress Andrew Jackson made in the classics. The oldest document found among his personal papers bears the date of March 22, 1679, and gives some insight into the extra curricular activities of a classical student enrolled in the Francis Cummings School. The memorandum was entitled "How to Feed a Cock Before You Make Him Fight—Take and Give Him Some Pickled Beef Cut Fine." While it is said of him that he experimented with Latin declensions of which he remembered nothing, he became an authority on cock fighting.

He represents today as he did in his own time the rugged character and determination which helped to conquer a wild country during its early days. He represents the old South, not as a man of polish and educational attainments, but as a firm, rugged character, determined in his desire to pursue the right course for the benefit of his countrymen.

Today, with much of the world at war, with the leaders of the United States trying as best they can to avoid America's involvement in the conflict, it is good again to see coming into prominence in the affairs of our country the men of the South. The Jackson Day speeches this year have all tended to avoid a discussion of the problems of the people and to avoid a taking of sides in any of the controversial issues of our day.

I am glad, upon this occasion, to be able to name some of the men of the South who are being prominently mentioned as men capable of leading the destinies of the country in the years ahead. I speak with pride and affection of Harry Byrd of Virginia, Cordell Hull of Tennessee, and John Garner of Texas. The problems of the country today are not new. They are much the same as they have always been. We are still endeavoring, as were our forefathers when they framed the Constitution of the United States, to promote the common defense, to contribute to the general welfare, and to as nearly as possible insure the domestic tranquillity of the country.

On this Jackson Day we should be grateful to Almighty God that the troubles that beset the world at large and which are causing so many social and economic upheavals, have been at least partially solved here without resort to dictatorship and without our having become involved in war. It is natural that this country of ours should be affected adversely by troubles in the world at large. I think the Democratic Party should insist that we unite to solve the problems of 130,000,000 Americans, and then take up the question of aiding and assisting, in some way short of war, our friends and neighbors in other lands. The people of the United States do not want to go to war, and I am reasonably certain that no representative of the people would be justified in plunging America into war except in defense of our country and our freedom.

I believe that the Democratic Party should be big enough in the future to include in it men who hold opposite views on important public questions of the day. I believe sincerely that there are many men in the country who are denied the right to contribute sound views and opinions with respect to governmental policies because they may be considered to be on one side or the other.

During my membership in the Senate of the United States I have found many earnest men who hold opposite views on important public questions. I think it highly important that sincere and honest opinions should not only be permitted but welcomed, in the interest of finding the best way to solve the problems of our people. The Democratic Party, if it is to remain a representative party and to be effective in America in the future, must be prepared to give to the people honest and decent government. A few days ago I joined with other Members of the Senate in approving a resolution, sponsored by Senator Harrison, which called for a joint congressional study of the Budget. I believe that an honest and sincere effort should be made as speedily as possible to anticipate the time when Congress can come more nearly making income and receipts balance. The interest charge on the public debt at the present time is \$1,100,000,000 a year. That is a tremendous drain on the public revenues.

In 1926 there went to the Governor's office of Virginia a vigorous, active, young Governor. He reorganized the affairs of

the government of Virginia, made the State live within its income, and got the government of Virginia in position to face the depression years without having to force additional taxes upon a people not able to pay.

As a youngster on a courting trip to your Commonwealth, it was my good fortune to meet this young executive. His name was HARRY BYRD, and I expressed the hope then that some day I could be the Governor of my own State and help to inaugurate similar reforms in the Commonwealth of Kentucky. Such progress as Kentucky has made during the last 4 years is almost directly attributable to a vision established by the then Governor of Virginia.

It is an old-fashioned custom, one of good sense and sound judgment and a practice I believe we perhaps have delayed as a Federal Government longer than we should have, to work very hard to make revenues and expenditures balance. I believe the policy of not permitting a citizen of the United States to go hungry is a permanent policy and one that the people are determined shall not be abandoned. I believe that the Democratic Party, through its leadership, should cooperate with the local governments in every way to establish the proposition that there should be, as far as is humanly possible, a job for every citizen of the United States and a decent wage.

Much progress has been made in improving the lives and opportunities of the people of America under the leadership of President Roosevelt, and I sincerely believe that there has not been a time during all the years he has occupied the White House that he has not had sincerely for him a majority of the people of America. The banking reforms, the housing program, favorable labor legislation, and the social-security bills are all of great and lasting importance to our people.

I am glad to note that in this year 1940 there seems to be a better disposition on the part of the Democrats of America to tolerate each other. I hope that this truce does not end with the 1940 election. If we follow the suggestion of the President in his message of January 3, I think we can determine in the future such constructive policies that will definitely insure—

- (1) Keeping America out of war.
- (2) Establishing some sort of trade cooperation that is reasonably agreeable to the people of the country and with the other nations of the earth.
- (3) Establishing a better financial position for the whole Government, because it is perfectly obvious to every citizen of America that the country cannot keep going in debt year after year, and that we must sooner or later either arrange to balance our affairs or be faced with inflation or repudiation.
- (4) Arranging for an adequate defense of our country and its possessions without foolishly wasting the money of the people on vast armaments which we do not need.

During the last few years we have conquered fear. It was conquered with action and not with words. Courage was required and the Democratic Party met the emergency with characteristic courage. We should consolidate our gains. We should try as best we can to establish a national unity and a general era of good feeling among the people of America. We should banish fear from our hearts. The Government should not fight the people and neither should the people fight the Government. In order to keep ablaze in our hearts the spirit of liberty, we should keep our own people united, determined with God's help to solve our own problems. We should be careful to guard against alien influences, and it might be well to ask each citizen who was born in another country and who now enjoys the privileges of America to make up his mind. We should say to him in all frankness and sincerity that there are a few simple rules that we in America like to observe: We like to be free, we like to have freedom of the press, we like to have free speech, we like to worship God according to the dictates of our conscience—do you believe in these things? If you do and are willing to contribute to the United States of America the energies of a zealous citizen, we are willing to keep you here, but if you are not able or for any reason you are unwilling to agree to these simple rules, may we not suggest that you go back to the place from which you came.

We are passing laws that will permit us to forcibly eject all of those who commit sabotage or acts of aggression against the liberties of the people of the United States of America. As the President said in his speech: "The long history of the country has demonstrated that angry controversy surely wins less than calm discussion."

I implore the Democrats of the country to use greater tolerance, greater calmness greater wisdom and more calm discussion in the consideration of the problems of the future.

The Democratic Party to the people of the South is something more than a party. In the years that we have lived it has been a sort of religion. The people of the Nation have at times forgotten the democratic faith and at times its philosophy has been obscured by brighter flashes but only temporarily. It is my earnest hope that when our devices have led us into devious ways that our recourse shall not be taken from us and that the Democratic Party shall stand in the future as it has in the past the guardians of the liberties of the average man and woman. When our people really understand an issue, they always reach a right and just conclusion. I hope that the leaders of our party always remember this fact.

May God in His wisdom continue to throw the light of his countenance upon the people of America that they may in turn select with wisdom honest and courageous leaders who will keep faith with them.

To the Democrats of Virginia, with a legislature now in session, I extend my best wishes. With these good wishes go the sincere hope that the Democrats will continue to represent in government the best interests of all the people.

### Nebraska Drought

#### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ARTICLE BY RAYMOND CLAPPER

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Mr. Raymond Clapper, appearing in the Washington Daily News of January 26, and entitled "Nebraska Drought."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of January 26, 1940]

NEBRASKA DROUGHT

(By Raymond Clapper)

LINCOLN, NEBR., January 26.—We were gathered around the fire in a banker's home here, several businessmen and an editor, arguing about the war and politics. Finally the editor's wife broke into the conversation.

"We don't care about the war," she said. "We don't care about politics. What matters to us is moisture. We want snow and rain. We must have water or we are ruined. Moisture is all that is important to Nebraska now."

Everyone present agreed. It is the same cry up and down the plains, from Nebraska, through western Kansas and Oklahoma, down into the Texas Panhandle. The water table has fallen everywhere. Seven dry years have wrought vast damage, shaken the security of thousands of farmers, and set loose brooding fears for the future of the plains country. Land values in some sections of Nebraska are lower than they were in the 1880's.

There is no lack of spirit among the people. They are carrying on. What worries them is whether nature is going to run out on them and leave them high and dry, literally dry. Nobody knows whether the desert is coming back.

Secretary Wallace recently advised farmers in western Nebraska to get out of corn. Many farmers already are doing so, driven to it by 7 years of drought. Agricultural experts are advising farmers throughout western Nebraska to shift into more drought-resistant crops, such as grain sorghums. Wallace says any effort to stimulate larger corn acreage in western Nebraska would be a grave mistake.

Average annual rainfall in Nebraska for 60 years has been 27.09 inches. In 1939 the actual rainfall was only 19.73 inches. In 1938 it was barely above average, and in 1936 only half of average. Year after year Nebraska has been short-changed in rain. In the last 20 years rainfall has exceeded 30 inches only once, whereas in the previous 20 years annual rainfall went over 30 inches 10 times. The figures show that the last 20 years have been decidedly drier than the previous 20, and farmers are paying the price. It is happening all over the western plains.

So when Lincoln woke up one morning recently in a terrific blizzard of heavy snow, there was no complaining about the weather but city-wide rejoicing. Merchants whose customers were kept indoors by the cold gathered at luncheon and told me how this would mean good business for them in the fall—if only there would come more snow and still more snow and rain. Everyone prays for bad weather here. The spirits of communities in this area go up and down with the fall of rain and snow. Weather reports are read as avidly as the New Yorker reads his stock ticker.

The countryside through Nebraska and Kansas is, it must be said in all frankness, run down at the heel. Farms are run down. You ride for miles by train without seeing a trim, well-painted, prosperous-looking farm such as are scattered through, say, Montgomery County, Md. A wholesale hardware man told me that most farmers cannot afford paint.

"The few who can," he said, "are afraid to paint their places because the neighbors would think the farms had been lost to the insurance-company mortgageholders. Only the insurance companies have the money to spend on repainting farm buildings. If this country ever does come back, all I would ask for is the paint concession."

Enormous activity is going on to combat the prolonged drought conditions. Throughout all of this western plains country, the Federal Government is throwing its resources of money and sci-

tific skill. Some partial victories have been achieved. The Dust Bowl has been driven back 50 or 60 miles from Amarillo, Tex. Shelterbelts in western Kansas and Nebraska are not laughed at as they were when President Roosevelt first proposed them.

If nature gives this country an even break, the men will win. If nature continues to let them down as it has in recent dry years, not even the combination of scientific skill and their indomitable will can save them.

Politicians who sit in Washington and bellyache about spending can grow sentimental about Finland, but the farmers out in western Nebraska, western Kansas, and the Panhandle country are putting up a heroic battle which also deserves a hand.

### Propaganda and the War Debts

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ARTICLE BY JOHN T. FLYNN

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an article by the pen of Mr. John T. Flynn, under the heading "Plain Economics," in which he very able deals with the question of war debts in connection with propaganda.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, January 11.—When the war started, and many Americans were fearful lest we be drawn in, we were assured by English spokesmen that we were unjustifiably disturbed.

Neither England nor France, they said, wished any American manpower. France and England had all the men needed. What was more, they had all the funds needed to finance their purchases here. They had no expectation or wish to see American troops in Europe, and no expectation or need of seeing American dollars drafted by means of loans as in the last war.

But now we begin to see some propaganda—and from every influential source—for American credit. America, we are told, should cancel the old war debts. And several long and artfully molded arguments have been offered to us by Englishmen to prove the injury that is done to America herself by the continuance of the old war debts.

For one, it has seemed to me plain that neither England nor France could ever pay us what they owe us. It is simply impossible. That being so, what is to be gained by not recognizing the fact like an intelligent creditor and canceling those debts so that we may go ahead and do further business with them?

But there is nothing to prevent us from doing business with England and France. The only kind of business with these countries which is of any importance to us is trade—commercial, industrial exchanges with private industries in England and France. There is nothing to prevent that and nothing to prevent the use of whatever credits are necessary to do that.

What is forbidden our bankers is the lending of money to the Governments of England and France and other countries which owe us money and repudiate it. This is forbidden by the Johnson law. And even if there were no Johnson law it would be folly to lend these countries now, steeped in financial difficulties as they are.

All this is preparation designed to get America, in her present state of friendliness to the Allied cause, to cancel the old debts. If that were done, there would be no legal barrier to our making new advances. And this is precisely the object of the present propaganda movement which is now only beginning to show its head. It will grow bigger and harder as the months go by. And as sentimental and emotional alliance with England and France grows and deepens under the leadership of a government which wants to aid them in every possible way, no one can be too sure that a powerful movement for cancellation may not make headway here.

It will be so easy to support it. After all, we will be told, the debts are hopeless anyhow. In refusing to cancel them we are stubbornly refusing to look a fact in the face. And then the arguments will flow to show us all the benefits that will come to us while at the same time we will be making a generous gesture to a friendly nation that is in difficulty—"fighting our battle."

**The La Mont Boiler**  
**EXTENSION OF REMARKS**  
 OF  
**HON. JOSEPH F. GUFFEY**  
 OF PENNSYLVANIA  
 IN THE SENATE OF THE UNITED STATES  
*Monday, January 29, 1940*

ARTICLES BY JAY FRANKLIN

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD several articles by Jay Franklin with reference to the La Mont boiler.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WE, THE PEOPLE—LA MONT BOILER, INVENTION OF OFFICER OF UNITED STATES NAVY, EXPLOITED ABROAD  
 (By Jay Franklin)

This is a story about boilers. \* \* \*

This is a story about high-pressure steam, high-pressure intrigue of foreign agents in the United States, and high-pressure bureaucratic stupidity of the American Navy.

This is a story about why there are only five ships in the combined British and French fleets able to cope, single-handed, with a German pocket battleship.

This is a story about why American naval vessels are out of date even before they are launched.

This is a story about why the American Navy refused to adopt the invention of an American naval officer and why the German Navy is now almost entirely equipped with that invention.

This is a story about what many military and engineering experts believe is the new weapon which, Hitler has boasted, will change the entire aspect of the European war when it appears next spring.

But this is, essentially, a story about boilers.

The story properly opens 22 years ago, in 1918, when Lt. Comdr. Walter Douglas La Mont (Annapolis, 1910) began serious experimentation in an entirely new engineering field—high-pressure steam generation. During the previous 8 years he had had wide engineering experience on every type of naval vessel in the service, from submarines and torpedo boats to battleships, had been an instructor in steam engineering at the Naval Academy, repair officer of the submarine division of the Atlantic fleet, and a Navy aviator.

EXPLOSION SPEEDS EFFORT

His interest in this field and his determination to do something constructive had been intensified by an explosion of one of the old "header" type boilers, with which all American battleships were then equipped. That and his keen interest in aviation started him working on a new and radical system of high-pressure steam generation with the hope of developing a unit light enough for airplane use.

In 1918 La Mont developed just such a boiler. Tests at the naval experimental station in Annapolis were eminently successful, and he offered the invention to the Navy. The offer was turned down. Instead, La Mont was urged to take out patents and continue his research. He obtained the patents, but when the war ended the Navy halted all experimental work.

In 1920, on 3 months' leave, La Mont constructed a new type primary boiler for the Superheater Co. of East Chicago. Again the tests were successful, but La Mont's leave expired before the work could be completed. The Navy was still not interested in this tremendously significant development, and La Mont was sent to the Philippines and China.

In 1924, unable to make headway against the ingrown bureaucracy of the Navy Department and having been promised private financial backing for his invention, La Mont resigned from the Navy. He and his backers formed the La Mont Corporation (New York), installed the new type of steam generators in such commercial establishments as Consolidated Gas, Iowa Electric Light & Power (Cedar Rapids), and Campbell's Soup, Philadelphia.

SALARY NOT GREAT

The financial return to La Mont was not great—as president of the company he received \$8,000 a year—but tests of the new boilers were entirely successful and it was apparent that the new invention could be adapted for use not only in automobiles and merchant and naval vessels, but in airplanes as well. The steam-generation world was on the verge of a new and exciting era.

On the verge, perhaps, but at least as far as the United States was concerned, no nearer. For by 1929, 5 years later, a great change had come over the La Mont Corporation and over the outlook for the inventor. What caused that change—what foreign influences brought it about—is a story in itself.

By 1929, however, La Mont—the inventor and moving spirit—had practically no voice in the operation of the company. (Three years later he was to be eased out, first as president, then as vice president and director.) More important, exploitation of the revolutionary

La Mont system in the United States had ceased. The boilers and water walls which promised to revolutionize the steam-power industry and naval construction were no longer being manufactured and installed—in the United States.

Over the next few years the greatest new development in this entire field of engineering disappeared, to all intents, in the country of its origin.

GERMANY USES LA MONT TYPE

But not in Europe. Early in 1930 a new type La Mont "waste heater" boiler was installed in Germany. A year later another, La Mont invention, the water wall, appeared in the same country. Within another year the prize of the entire series of inventions—the La Mont high-pressure boiler—was in production there.

Today not a single La Mont boiler is in operation in the United States. Today more than 700 commercial La Mont units—more than five times all other types of forced circulation boilers in existence—are in use in Europe.

Today the American-invented La Mont boiler is in use throughout Germany—in central power plants, locomotives, ships.

Today practically the entire German Navy has adopted the La Mont boiler.

Today, in a secret Hanover testing station, the Nazi Government is developing a silent, high-powered, steam-driven airplane—using the basic La Mont unit.

This is what President Roosevelt and Secretary of the Navy Edison are up against in their effort to modernize the United States Navy in the face of almost solid opposition from the ingrown, self-perpetuating naval bureaucracy.

DIESEL ENGINES IN GERMAN NAVY GIVE WAY TO AMERICAN-INVENTED BOILER

(By Jay Franklin)

German engineers and technicians, a great number of whom have been outstanding in their profession, have for years been Diesel-conscious. And not without reason, for the internal-combustion engine invented by Rudolf Diesel has proved one of the most important modern developments in the entire engineering field.

It was significant, if unprofitable, tribute to American inventing genius, therefore, when the German Navy—circa 1935—discarded the Diesel engine as primary propelling power and equipped almost its entire fleet with the La Mont high-pressure steam boiler.

This change was virtually preordained in 1929, when the La Mont Corporation licensed rights to the La Mont patents in 13 European countries to the Gesellschaft für La Mont und Kraftwirtschaft of Berlin (German La Mont). The American parent company retained ownership of 51 percent of its German affiliate, but as later developed it was the affiliate which exploited the La Mont patents.

Since that date German La Mont extended patent rights to an English holding company—La Mont Steam Generators, Ltd.—and also to a French patent-holding firm. Through these companies, all German controlled, the basic La Mont unit was made available to countries throughout Europe and to Japan. Everywhere but in the United States the La Mont system was a tremendous success.

OTHER NAVIES ACT

By 1933 tests of the La Mont high-pressure boiler in German naval vessels proved it eminently satisfactory, and the Nazi Government began to install it in all new ships. Both the British and French Navies ordered La Mont boilers from their local patent-holding companies. By 1935 over 100 of the new units had been installed in the German Navy, and others were being supplied to both the Italian and Japanese Navies. Everybody, it seemed, was interested in the La Mont boiler.

Everybody but the United States Navy, for in 1933 Commander La Mont, after repeated efforts to interest the admirals, succeeded only in obtaining permission to test his invention at the naval boiler laboratory at Philadelphia.

This permission was extended solely through the influence and understanding of one man—Rear Admiral S. M. Robinson, then Chief of the Bureau of Engineering. Robinson told La Mont he was the first man to offer the Navy the new steam-generating system (although it had been available commercially for 9 years) and expressed belief that high-temperature, high-pressure steam was "the coming type" for naval use. (Robinson was later replaced as Chief of the Bureau by Rear Admiral Harold G. Bowen, but was restored to the post by Secretary Edison a month ago.)

FAVOR LA MONT BOILER

The experiments with the La Mont boiler at Philadelphia proved so successful that Navy engineers recommended construction of a La Mont destroyer for performance tests at sea. But again Navy bureaucracy said "No."

Although the La Mont boiler had passed with flying colors every test Navy technicians had been able to devise, Assistant Secretary Edison in 1937—apparently on the advice of the admirals—told the inventor that "the policy of the Navy Department is not to take over the development of new devices unless the interests of national defense are clearly involved."

Again, even in the face of this rejection, La Mont offered his work to the Navy. By this time he had evolved an entirely new and even more efficient unit, far superior to the La Mont boilers being used in Europe. His proposition to the Navy was this:

"I will build you a destroyer boiler 50 percent of the weight of any existing naval boiler, using any pressure you suggest, with no payment to me whatsoever unless my boiler passes all Navy tests."

Instead, the Navy went right ahead installing boilers produced by an old-line firm, Babcock & Wilcox, of New York. Babcock & Wilcox, a well-established, reputable firm, has been supplying 90 percent of American naval boilers for more than 30 years.

#### ONE MILLION DOLLARS FOR TESTS

Instead, the United States Navy authorized expenditure of \$1,000,000 for experimentation with a steam-motive unit, technically known as the once-through with spill-over type, similar to a German Babcock & Wilcox design. An even dozen of these boilers were tried by the Germany Navy as early as 1933—only to be discarded and replaced with La Mont units. Either oblivious to or unconcerned with this fact, the Navy later added \$750,000 to the original \$1,000,000 authorization. Today experiments of the utmost hush-hush variety are being conducted on destroyers at the Brooklyn Navy Yard.

As a fitting climax to this comedy of naval bureaucratic errors, it is now reported that the Navy is considering purchase of a La Mont (old type) boiler—using German-controlled patents and German design ideas.

It is perhaps anticlimax to add that details of the steam-motive circuit, basis of the \$1,500,000 experiment now going on at the Brooklyn Navy Yard, can be obtained for 10 cents at the United States Patent Office.

This is what President Roosevelt and Secretary of the Navy Edison are up against in their effort to modernize the United States Navy in the face of almost solid opposition from the ingrown, self-perpetuating naval bureaucracy.

#### LA MONT BOILER, SAVING WEIGHT, HELD AID TO SHIP'S FIGHTING POWER

(By Jay Franklin)

American naval bureaucracy regards high-pressure steam as radical and dangerous. It has, therefore, consistently opposed experimentation with, much less use of, this type of steam generation.

In 1933, when the modern German Navy was being equipped with high-pressure steam boilers using 900 pounds to 1,000 pounds, top pressure in the American Navy was 300 pounds.

In 1937, when the German Navy, that is "so superior to ours ship for ship," was adopting pressures of 1,200 and 1,500 pounds, the American Navy was experimenting with 600 pounds.

Today, when the 1,200-pound high-pressure La Mont-type boiler has been installed in at least one of Germany's pocket battle-ships, despite the Germans' predilection for Diesel, and is commonplace in other navies of the world, the American Navy's "top" pressure is 800 pounds.

In the face of this international trend toward high and still higher pressure boilers for naval use, American naval bureaucracy continues to offer these objections:

- (1) High pressure is dangerous.
- (2) High-pressure steam lines cannot be kept tight.
- (3) High pressure is unreliable and has short life.
- (4) High pressure is difficult to handle.
- (5) High-pressure steam lines would start a fire if oil fell on them.

#### SOME FACTS INESCAPABLE

While such controversial points should, admittedly, be left to the experts to argue, and while only experienced engineers are qualified to argue them, 16 years of experiment with and use of high-pressure boilers have developed some inescapable facts:

(1) High pressure is dangerous, but so is low pressure. It is the firm conviction of experts who have used high pressure that a La Mont-type forced recirculation boiler (the type offered the American Navy in 1937) is safer at as high as 2,000 pounds than the natural circulation boiler (the type now in use here) at 300 pounds.

In support of this contention engineers point to the fact that during tests of the La Mont boiler, at 1,200 pounds, two tubes "let go." The test crew was totally unaware of the accident until they noticed steam coming from the boiler stack. At the same time a Mahan natural circulation boiler, undergoing tests at 400 pounds, also "let go" a tube. The test crew barely escaped with their lives.

(2) High-pressure steam lines cannot be kept tight. This objection, according to test experts, could be completely eliminated by use of proper alloy lines welded in place. Navy bureaucracy has stubbornly refused to abandon the use of flanges, which inevitably come loose under the stress and strain of a ship at sea. Welded lines would not do this.

(3) High pressure is unreliable and has short life. The German Navy has been using it almost exclusively since 1933 and, after 7 years is even discarding Diesel.

(4) High pressure is difficult to handle. The Germans have encountered no great difficulty, perhaps because they employ automatic controls. Furthermore, the German La Mont boilers are required to go from no load to full load in 20 seconds and back to no load in 10 seconds without a trace of smoke—a performance no boiler now in the American Navy can match. Ordinary American naval boilers require about 15 minutes to start from "cold." The La Mont boiler takes 1 to 2 minutes!

(5) High-pressure steam lines would start a fire if oil fell on them. To this objection experts retort, "Nonsense!" All steam lines, high or low pressure, are insulated. Furthermore, how much more painful is a burn from 850° steam (now used) than one from the 950° steam proposed? (The admirals could easily decide

this point by placing their bare hands first on one steam line and then on the other.)

#### BIG WEIGHT SAVING

But the cardinal virtue of high-pressure boilers is their weight. Everything on a naval vessel boils down to this one factor—weight. The heavier the propelling machinery below decks, the more space it occupies—just that much less weight and space are available for armor and armament.

Even American naval bureaucracy admits that such savings are of tremendous potential advantage in a warship. During hearings on Capitol Hill on the 1938 naval appropriation bill, Admiral Harold G. Bowen, Chief of the Bureau of Engineering, admitted that adoption of high-pressure boilers (no mention was made of the fact that a La Mont boiler was being offered the Navy at the time) would save 400 tons' weight on capital ships. This figure is far below the savings estimated by La Mont experts, but Bowen admitted that even 400 tons saved below decks would permit battle-ships to be equipped with an additional 14-inch gun or the use of heavier armor. It would also, he said, appreciably increase the cruising radius of the ship, since more fuel could be carried.

That was in 1937. Today the United States Navy has been offered a boiler with 1,500 pounds pressure, 950° final temperature, 3 pounds per shaft horsepower, and 1,000,000 B. t. u. rate of heat release per cubic foot of combustion-chamber space. Its efficiency would be over 86 percent.

This technical description easily translates into a language that any American citizen should be able to understand. It means that such a boiler—

- (1) Would weigh less than half the present United States Navy boiler;
- (2) Would at the same time employ steam pressure 250 percent of that now used;
- (3) Would save about 40 percent in boiler space;
- (4) Would operate at several percent more efficiency than present boilers at full power; and
- (5) Would save about 25 percent in the amount of fuel required.

#### HEAVIER ARMAMENT POSSIBLE

Even more startling, however, is what this saving in space and weight would mean in the case of a specific American warship.

On a 1,500-ton destroyer the high-pressure boiler would save 110 tons in weight of boiler alone, another 110 tons in weight of fuel. This saving of 220 tons could be applied to armament—5-inch guns, the main battery of destroyers.

A 5-inch gun with shield weighs in the neighborhood of 25 tons. A little simple division discloses how much potential armament is gained in saving 220 tons below decks.

On a 10,000-ton cruiser the high-pressure boiler would save 220 tons in weight of boiler alone; 1,000 tons in weight of fuel. What does this mean in terms of additional armament? A triple-gun 8-inch turret—three 8-inch guns in a turret—weighs approximately 800 tons. The 1,250-ton saving below decks would permit addition of at least one such turret, leaving 400 tons for added armor or lesser armament.

Perhaps this is not important; perhaps this would mean nothing to American naval "supremacy." But the fact remains that such savings in weight—gained through the use of high-pressure boilers—could increase the firing power of American cruisers 12.5 to 18 percent and could increase the firing power of American destroyers 180 percent.

This is what President Roosevelt and Secretary of the Navy Edison are fighting for in their effort to break down our ingrown, self-perpetuating naval bureaucracy.

#### MANY QUESTIONS RAISED IN DISPUTE OVER LA MONT HIGH-PRESSURE BOILER

(By Jay Franklin)

Here is the case against the Navy bureaucrats.

In 1918 an American naval officer who was something of an inventive genius, Lt. Comdr. Walter Douglas La Mont, developed a light-weight high-pressure boiler, potentially the outstanding contribution to the field of combustion engineering in a generation. Potentially, because even the inventor himself did not foresee the enormously broad use to which his invention would be put.

He offered it then to the United States Navy. That was in 1918, with America already at war, and naval bureaucracy said "No." Two years later, with the war over and Navy technicians able to give full attention to development of the new invention, all experimental work on it was stopped.

In 1924, unable still to make headway with the self-perpetuating naval bureaucracy, which refused to "waste" further time or money on his work, La Mont resigned from the service. Backed by private capital, he began installation of the new boiler units in half a dozen factories and public utilities. All were eminently successful and the La Mont Corporation appeared to be the coming boiler manufacturer.

Gradually, however, a change began to come over the La Mont Corporation. Over the protests of the inventor, patent rights were licensed to a German affiliate for exploitation of the boiler in Europe. Over the protests of the inventor, exploitation of the boiler gradually ceased in this country and La Mont himself was eventually eased out of the American company.

## TRIES AGAIN IN 1933

La Mont was out, production of his boiler dwindled in the United States, but not abroad. The new steam-generating unit was given a thorough test by the German Navy. They found it lighter and more efficient than both the old low-pressure types and their pet Diesels; so far superior, in fact, that, beginning in 1933, they equipped almost every new warship with the La Mont invention. And primarily because of this American boiler the German Navy became, in the words of an American admiral in 1937, "Ship for ship so superior to ours we cannot fight them."

In 1933 La Mont again approached the American Navy, urging that the advantages of his boiler at least be explored. This time, thanks to the far-seeing mind of Admiral S. M. Robinson, then Chief of the Bureau of Engineering, La Mont was given an opportunity to continue his research at the Naval Boiler Laboratory in Philadelphia.

By 1937 his experiments there were completed. By that time he had so far improved upon his earlier work that he had tremendously increased all the primary advantages of the high-pressure boiler—weight, size, and efficiency. By that time, also, there were 100 of the earlier-type La Mont boilers in German warships, 1,000 more being used commercially on the Continent.

Finally, by 1937, the Germans were doing extensive research with the La Mont boiler along the line of La Mont's original experiments of 1918—airplane use. It is today the belief of combustion and steam experts that the "new weapon" promised by Adolf Hitler for next spring is a steam-driven, silent, four-propeller plane, made possible by development of the La Mont high-pressure unit.

## ANOTHER BOILER TRIED

Though the official report issued by the Navy would not say so, the La Mont boiler was subjected to and passed every test that technicians at the Naval Boiler Laboratory gave it. But still naval bureaucracy said "No."

Unable, however, to continue to ignore the trend toward higher and still higher pressure in the navies of the world, naval bureaucracy authorized the expenditure of \$1,000,000 (later increased by \$750,000) for experiments with a high-temperature, high-pressure boiler.

But rather than install the improved La Mont unit offered them, naval bureaucracy selected another boiler. A boiler of foreign design. A type of boiler which the German Navy had tried as early as 1933 and had discarded in favor of the La Mont unit.

Today, experiments with this boiler, of a type rejected by the "superior" German Navy as outmoded by and inferior to the American-invented La Mont, are being secretly conducted at the Brooklyn Navy Yard.

This, of course, is the very type of naval bureaucratic inactivity and dunderheadedness which President Roosevelt, Secretary Edison, and progressive officers like Admiral Robinson are striving to overcome. Already changes have been made, improvements noted, but the battle is far from won.

Nor is it a battle that is likely to be won without the support of public opinion. What is immediately needed is a reopening of congressional hearings on the naval-expansion program, a thorough public airing of the entire situation. For the American public is entitled to an explanation. That there is another side to this story cannot be doubted by any fair-minded citizen, but both sides must be presented and weighed in the balance of all the facts.

## QUESTIONS ARE RAISED

It is essential, for example, that such questions as these be answered:

1. Why was the manufacture of La Mont high-pressure boilers permitted to die out in this country while, at the same time, they were being exploited in Germany?
2. What precisely are the financial and patent connections between naval boiler manufacturers in this country and in Europe?
3. Why was the State Department secret service sufficiently interested in activities of persons connected directly or indirectly with the La Mont Corporation to prompt R. C. Bannerman, chief of the service, to warn La Mont of these activities?
4. Did naval intelligence investigate La Mont's charges that his work was being interfered with by foreign agents? If so, what did the investigation disclose?
5. Did the United States Navy order a German La Mont naval boiler from German General Electric and was this export order stopped by the Nazi government?
6. Would installation of a high-pressure, high-temperature boiler of German La Mont type save one-third in power weight and one-fourth in fuel weight of a cruiser?
7. Would the new La Mont boiler increase these savings to two-thirds in weight of power unit and one-third in weight of fuel?
8. Has the boiler now being installed in a destroyer at the Brooklyn Navy Yard ever passed naval tests here? What was the result of experiments with it at Annapolis?
9. What about the steam-powered airplane?

These are only a few of the questions that should be answered, for the American people who pay taxes for a navy have a right to all the answers.

## Reserve Officers' Association

## EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ADDRESS BY CAPT. ERNEST SCHECHINGER AT WILMINGTON, DEL.

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Capt. Ernest Schechinger at Wilmington, Del., on January 17, 1940, before the Reserve Officers' Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In speaking of Finland I am reminded of the fact that a quarter of a century ago Finland was little more than the name of a far-flung land, lying in the Arctic and semi-Arctic regions along the eastern shore of the Baltic. As far as the man on the street was concerned, Finland was a country that had borrowed money from the United States and was paying it back in regular installments. That was about all that was generally known and we let it go at that.

With this in mind, I feel that a little political history might not be amiss.

The Finns as a people have existed for an unknown time, but it was not until the twelfth century, when the Swedes undertook crusades into this country to establish religion and government, that it took its place as a political unit. For the next 6 centuries Finland was a contented part of Sweden, electing representatives to the Swedish Parliament and enjoying all of the privileges of the Swedes. At the end of the War of 1808-9 between Sweden and Russia, Finland separated from Sweden and accepted the Russian offer to enter the Russian Empire as an autonomous grand duchy. This signified the beginning of Finland's existence as a fully organized state, having its own laws and institutions administered by its people. In 1861 the grand duchy established its own monetary system, which has continued, with some changes, up to the present time. In 1898 the Czar inaugurated a repressive policy for the Russification of Finland. This was continued through a series of Russian military governors and other governmental officials until the World War. Following the Russian revolution, Finland proclaimed its independence and started a civil war of its own. There were sharp clashes between the Reds and Whites, but with the assistance of German troops the Reds were defeated and driven into Russia. The victorious Whites on July 17, 1919, adopted a republican form of government. When, at the end of 1919, Finland gained her independence she had to cover the increased expenditure imposed by her new position as an independent state and that incurred in the suppression of the Red Rebellion in 1918. As the taxes could not be punctually collected the Government resorted to increased borrowing. During 1919-21 the Finnish exchange declined seriously. In 1922 the Bank of Finland embarked on a policy of stabilizing the exchange in relation to the dollar and at the end of 1925 the monetary system was put on a gold basis of 192.23 Finnish marks to the pound sterling.

The improved conditions of production and trade formed a firm basis for financial reorganization. Before the war the bulk of state revenue was derived from customs duties and Government enterprise—mainly the forests and railways. The chief change in finance since the World War has been the introduction of an income and property tax. The customs duties still form the main part of the State revenue but direct taxes now yield about one-quarter of the total tax revenue. Income from state enterprise is less than before the World War. Public debt, foreign and internal, in September 1927 was estimated at a sum equivalent to \$94,100,000. The debt is balanced by revenues from State forests, railways, and other State property and has been greatly reduced during the intervening years.

The sound economic condition of Finland can be attributed to Government-owned copper mines, the great wealth of forest land and what is known as the Finnish cooperative system which manufactures, buys, and sells a great variety of products; takes care of every possible need of the cooperative farmer, exports butter which is 10 percent of its export trade, retails groceries, timber, cattle, machinery, motorcars, etc. Under the cooperative system, apartment houses have been built, electric power generated and distributed, and great social improvement accomplished. The cooperative system has worked for 40 years with marked success and has out-ridden the depression.

In 1938 there were 6,000 registered cooperatives with a membership exceeding 800,000. These handled 25 percent of the retail and 60 percent of the wholesale trade of the country.

The present Government of Finland, established under the constitution of 1919, is republican; the executive powers resting in a President elected for a term of 6 years, and a legislative body, or house of representatives, composed of 200 members by universal suffrage. There are 9 major political parties having representatives in the Government, and at this point I believe it might be of interest to explain the platforms of these parties.

The Social Democratic Party has 83 representatives who favor the constitutional socialistic program, constitute the extreme left of the Diet, and represent the working class.

The Agrarian Party, composed of 53 members, represents the agricultural interests and favors a strong national defense.

The Swedish People's Party is composed of 21 members representing the Swedish-speaking minority and is itself divided on political and social questions.

The National Coalition Party has 20 members representing a combination of elements of two former parties, in one conservative antisocialistic organization with a program emphasizing national integrity and security.

Patriotic National Movement; 14 members. This party was ordered to disband in 1938 but is still active. It is radical in its ideas, representing younger Finnish elements dissatisfied with moderate conservatism.

National Progressive Party; seven members. Favor liberal democratic programs and progressive social reform; represents largely the intellectual circles and is more influential than is generally believed.

Small Farmers; one member, and is interested in the small farmer.

Popular Party; one member, representing the distressed agriculturalists of northern Finland.

The President of Finland is elected by 300 Presidential electors nominated by the citizens; he ratifies the new laws, dissolves the Diet, orders new elections, and conducts foreign affairs. To overcome any attempt of dictatorship on the part of the President, his decisions are presented to a council of state consisting of 10 ministers, for ratification.

In concluding, I would like to mention a few economic factors vital to Russia, to which the present war conditions might be attributed:

First. If Finnish nickel were added to Russia, that country would then be free from dependence for nickel on Great Britain, and this would, no doubt, please the Soviet Union very much.

Second. The great copper deposits of Finland appeal to Russia very strongly.

Third. The Finnish merchant marine of 525,576 tons would materially aid the overburdened Russian fleet of 1,200,000 tons.

Another factor, and I believe equally important, is that the Russian Government plans and fervently hopes to establish an all-year-round northern sea route by 1942. Murmansk is ice-bound part of the year, while just across the border is Petsamo Bay which would afford an ideal harbor for Russian trade and naval ships.

## William Edgar Borah

### REMARKS

OF

## HON. U. S. GUYER

OF KANSAS

### IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

Mr. GUYER of Kansas. Mr. Speaker, the death of Senator WILLIAM E. BORAH, of Idaho, removes from public life the most colorful figure of the past 30 years. Known as the Lone Rider, Senator BORAH was the most powerful single individual in our Nation.

Senator BORAH often told me of trying one of his first big cases, the Myers murder case, before my uncle, Judge Elisha Lewis, of Silver City, Idaho. The case rested on circumstantial evidence. BORAH was defending Myers. There was fiery prejudice against Myers. BORAH said he admired Judge Lewis for his moral and physical courage in a very difficult position in ruling on the admission of certain evidence. He said he could see Judge Lewis yet as he stood up to render his decision, the only judge he ever saw who stood up to emphasize his decision which the Senator said hewed right to the line of the law. BORAH secured two juries that disagreed, and it was never tried again. Judge Lewis was a Forty-niner at 16 and all were killed in the caravan except him and a

younger boy. He was my mother's youngest brother and was born in Maryland in 1834. His son, my cousin, Elisha Lewis, Jr., has written about this case and said there was mutual admiration between the Senator and his father.

Under leave to extend my remarks I include an editorial by William Allen White, of Emporia, Kans., who was a fellow student with Senator BORAH over a half century ago at the University of Kansas.

The editorial is as follows:

[From the Emporia Weekly Gazette of January 25, 1940]

#### FRIENDSHIP'S GARLAND

I first met WILLIAM E. BORAH 54 happy years ago at Kansas University in the classes of James H. Canfield, teacher of economics, sociology, political science, and European history. (They gave college professors plenty of work in those days.) Canfield's classes sat around a U-shaped pine table covered with brown calico. He was at the head, the students along the two prongs. Canfield's teaching method was not to ask questions but to let his students discuss the topics of the day's lesson. Around that same table at the same time that BORAH sat there was a group of boys who were afterwards to be famous—the two Franklins, destined to be scientists of international fame; Vernon Kellogg, who became director of the National Research Council, the American scientific clearing house; Herbert Hadley, a Governor of Missouri, and a college president who came within a narrow squeak of being President of the United States; Fred Funston, who became a major general of the United States Army, and died ranking Pershing. Probably most notable of all because he lived well past his three score years and ten while the others died far short of it was WILLIAM E. BORAH.

To us in the classroom he was Bill. He was a thick-necked starry-eyed boy with an Irish twitch when he smiled with his loose-lipped mouth, a twitch that looked as though he was scaring away a fly with his nose and lower jaw. But it was a good smile with a twinkle at the top of his nose, and emphasized by a clear, charming voice when he spoke. That voice was one of his most precious gifts.

Another gift of the gods to BILL BORAH was made manifest and greatly developed in that wrangling classroom; it was his capacity to argue. Professor Canfield encouraged it, and we all used to like to wrangle with Bill somewhat to hear his booming voice. But he loved the debate for its own sake which the classroom brought out. Otherwise, outside of the classroom, he had no distinction. He was a member of the Beta fraternity—a lot of good boys with high scholarship, who took many college honors and wore them with sometimes rather shiny clothes and neckties that reminded you of a fire sale. BORAH was not a fraternity success, not a college leader. He got good grades, but he was not a grind. He was just a sincere and competent student who never ganged up much with his fraternity or with anyone else. I never saw him at a dance nor an interfraternity party. I was a would-be butterfly—but alas with clumsy, creaky, wooden wings!

The thing I remember about BORAH is that he never sang. But the rest of us at night used to gather mandolins, guitars, banjos, and go out serenading like hoot owls. Every fraternity had its quartet. But BORAH was not of those glamorous, romantic youths. He was older than the rest of us and seem to be in a hurry to get into life. He had no time for the gayer, more frivolous phases of college life—poker with matches, hard cider, girls, and baseball. I, who was everybody's dog like a shepherd pup, his complete antithesis as a student, could not make up with him, much—though I tried.

We used to walk down the hill from the university together at odd times when I was not carrying books for girls, with our heads in the stars and our feet tiptoeing on the board sidewalk. We talked seriously, for BORAH the student always was a serious cuss. He had little humor then. Yet he loved humor to the end of his life in others, though a bit impatiently. Life was all before us and joy around us.

But after we left Kansas University, our paths crossed early and often. When he went to Idaho, frequently I saw his name in the paper. He was a free silver Republican, who bolted McKinley in 1896 and belonged to a liberal faction. In the Mountain States, these free silverites were inflationists, believed in the free coinage of silver and set up a controlling faction in the Northwest. BORAH ran for various public offices, unsuccessfully, as an inflationist. In 1902 we met in Boise and from then on we were dear and fairly intimate friends. I suppose as the years passed I threw off a certain amount of my frivolity and Bill took it on. For he was a good companion, as gay as you would like, in those days of our young manhood. So whenever I went to the Northwest I stopped to see him. Sometimes he came to Emporia and visited our home, bringing his lovely wife, a Governor's daughter, who was his life-long friend and sweetheart—his Mary of whom he was always proud. The fly-brushing smile which twitched his mouth and nose had become a characteristic in those days, and his voice had gathered the charming resonance that was making him a powerful figure in the courts. Before a jury his smile and his voice were gestures in themselves. He became the attorney for a number of northwestern corporations, the owners of gold mines and of great forests and timber lands. He had an income of five figures before he was 40,

in a little town and a little State where \$10,000 or \$15,000 was a lot of money.

BORAH sprang into national fame in the middle of the first decade of this century when he tried to put "Big Bill" Haywood and Moyer, two union mine workers, in jail upon the confession of Harry Orchard that Orchard and they murdered Governor Steunenberg, of Idaho, for breaking a mine strike. BORAH's opponent was Clarence Darrow. It was a gladiatorial legal combat, one of the great trials of the American bar. After that, BORAH was a national figure.

He assembled his free-silver followers into a Republican faction and after a bitter, dirty fight in the legislature, BORAH was sent to the United States Senate. A few days after his election he was indicted in the Federal courts for timber frauds. He was attorney for the Barber Lumber Co., which had undoubtedly committed many irregularities. BORAH was stricken with humiliation. That was in the summer of 1907. The story of his indictment, of course, was national news.

A short time afterward he showed up at our house in Manitou, Colo., where we were spending the summer and writing *A Certain Rich Man*. BORAH was grief stricken. I have never seen another man so humiliated. He told me the story. One of his opponents was either on the Federal bench or was a Federal district attorney, I forget which, and another, either district attorney or Federal judge, was the leader of his opposition. They had him. He outlined his defense. It seemed obvious that he was guiltless.

When I asked what I could do, he said:

"Go to President Roosevelt for me. Tell him I cannot come to Washington to assume my duties as United States Senator until I have been cleared of this charge, and I must be cleared beyond question of a doubt. A hung jury or a long debate in the jury room in my case would amount to a conviction. Tell him I want this: I want the Department of Justice to bring this case to a quick trial, right now, before Congress meets in December, and under the circumstances, considering the judge and the district attorney, I want the President to ask the Attorney General to send a first-class, unbiased lawyer—anyone, I don't care whom—from the Department of Justice out to my trial, to sit beside the United States district attorney and see that he plays the game square. With an outsider at his elbow, I need have no fear either of the district attorney or the judge."

I got on the train the next day, after making a telegraphic appointment, went to Oyster Bay where President Roosevelt had summoned the Attorney General, and with Senator Spooner, of Wisconsin, general counsel for the Barber Lumber Co., to sort of give me moral support (though I did the talking), we persuaded the President and Attorney General Bonaparte to do what BORAH asked. As a United States Senator, he had a right to ask it. It was only fair that the President should grant Senator BORAH's request.

The trial came up immediately. The jury was out less than 5 minutes. When the verdict of "not guilty" was read, the courtroom burst into cheers. The mayor called out the fire department. The Governor got out the militia. The citizens had a parade, with BORAH in an open hack, the hero of the hour—all spontaneously within an hour after his acquittal. The story was spread across the United States by the newspapers, and BORAH lifted up his head and looked the world in the eye, unashamed and happy.

Perhaps on my tombstone it may be engraved: "He helped BILL BORAH when he needed a friend, and saved from shame an honest man who became a great Senator, for 30 years devoted to the service of his country."

In those early Washington days I used to run around with BORAH and GEORGE NORRIS, also a young Congressman, and Victor Murdock, an oriflammed knight of Wichita, and Albert Beveridge, a dynamite-cap of enthusiasm, and Joe Dixon, later Senator from Montana, and Governor there—all left-wing friends of Theodore Roosevelt. BORAH then was tall, say, 5 feet 9 or 10, straight as an arrow, with a large face and a shock of rather coarse black hair. He crowned himself with a white Stetson, a sort of a Rocky Mountain ducal helmet, and I was proud to be seen with him on the streets. He was too good-looking to be true in his middle thirties with exhilarating energy radiating from every inch of his handsome virile body.

BORAH's career as a Senator was unique. He was nominally a Republican, but because in his young manhood he had bolted the party with impunity, party loyalty meant just nothing to him until a few days before election. He wandered all over the political lot in the Senate, paying no attention to Republican caucuses, sometimes not even attending them. He has generally been stronger in the White House than in the Senate. He could do more with most of the seven Presidents he has served under than he could do in Senate committees or on the floor of the House. His oratory influenced few votes directly, but it made public sentiment that influenced many votes. He was strongest on man-to-man talks off the Senate floor.

The President whom he most conspicuously did not get along with was Woodrow Wilson. Woodrow Wilson loved men of soft approach, and when BORAH's bull voice roared across the table at Wilson, Wilson scorned BORAH and yet feared him and would have none of him, right or wrong. The two men were diametrical opposites, born and ordained to hate each other. Wilson was one of the few men whom I have ever heard BORAH cuss out.

Looking back over BORAH's 30 years' service, it is hard to realize that his name has never been attached to a congressional measure of major importance. He had no capacity for organization. He couldn't do teamwork. Work in senatorial committees irked him.

He was no good in a large caucus. He would sit around the conference table for a few minutes, then begin to walk up and down in the room, and finally slip out. He couldn't endure matching minds, making compromises. So his strength was on the floor of the Senate, making speeches or else talking across the table to one man. Always in the 30 years he had served in the Senate he had a group of followers. But the group changed with the year and the day, and sometimes with the hour. He was unpredictable. He did what he thought was right and never tried to be consistent. He was a great human being—honest to the core, brave and wise, and generally kind. Rarely has he ever spoken bitterly against another Senator or against any man. He had a big heart, with all his leonine external. He knew gratitude and was proud to stand by his friends. He had a decent contempt of the shifting sands of current public opinion. He never stopped to surrender to the moron mob, rich or poor. He had a lively sense of the fickleness of our American voters, and steered his ship craftily amid the treacherous shifting currents of public life for 30 years.

The last time we met for any length of time was at the Landon Republican convention in Cleveland, where I went as an emissary for the small subcommittee on resolutions writing the Republican platform to find out what BORAH wanted and to put it in the platform. In the committee we were agreed that he could have everything except inflation. Landon was for the gold standard, and so was I. But BORAH was against it. I went to his room in midday where he was in bed. He was sheltered by nurses in a darkened room back of a barricade against the army of besieging reporters. He was undressed, wearing a striped gown, but somehow it emphasized the gaunt lines of his figure. He sat on a bed, and I sat on the edge of a chair, two old gentlemen—one in the twilight of his last sixties, the other nearing the middle of his seventies. We talked about trivial things for a while, then got down to business, agreed on two or three points; and as I got up to leave he walked along beside me with his arm around my shoulder, and we stood for a moment at the doorway, and he said to me: "Well, good-bye, Will; I'm glad you came"; held my hand affectionately for a moment, and then he smiled that old quizzical smile and said something about the busy years that had passed and the ways we had walked to find ourselves there. And for a moment, clasping hands, we said nothing, and I said, "Funny, isn't it?" And he answered, "It certainly is!" Then we both sighed, and I turned and went to the committee's grind. It was all we could do and all we could say to express the meaning of the strange ways of fate that had kept us together through our long and busy lives, two old, inarticulate gentlemen, who had once walked together tiptoeing along the path of youth with our heads in the stars.

Probably, if one sentence would sum up the service of his career, it would be this: Here was a righteous man who was wise and unafraid, who followed his star, never lowered his flag, and never lost his self-respect. His greatness was purely personal. He may have no lasting fame like Webster's, though BORAH was greater as a human being. BORAH will have no heartbroken followers like Blaine, who held men through their affections, and when they died left Blaine unknown and unhonored. BORAH will live in our history as a strange and noble figure who lived most simply and by his very simplicity took on elements of grandeur. He was a statesman only so far as he was an honest man who dedicated his talents to his country's good, as selfless as ever a man had been in American public life. If that is greatness, he is entitled to don his memorial bronze and live among the immortals of his generation.

### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

### ARTICLE FROM THE ECONOMIST

Mr. TOWNSEND. Mr. President, on December 9, 1939, the *Economist*, a well-known British weekly, commented on the alacrity with which the Government of British India seized an unusual opportunity to rid itself of a large part of its remaining monetary silver. I ask consent to have printed in the *RECORD* the excerpt from the *Economist*, which I am sending to the desk.

There being no objection, the part of the article referred to was ordered to be printed in the *RECORD*, as follows:

[From the *Economist*, London, England, December 9, 1939]

#### A DANGEROUS BUBBLE

The pace of the boom is thus slackening, which is not surprising, given the swollen state of existing and prospective private stocks

of silver in Bombay. This open position now amounts to close on 50,000,000 ounces, and has been built up on anticipation of an expansion in genuine up-country demand of which there is as yet no evidence whatever. Until the past few days the up-country offtake from Bombay has amounted to between 5,000 and 10,000 ounces a day. It is now increasing beyond these very modest totals, but is running at a rate which can make no appreciable impression on the enormous stocks being built up by operators. The Indian Government has, of course, seized with alacrity the opportunity of ridding itself of some of its surplus silver, though it may be questioned whether a wiser course might not have been followed in a more direct rebuff to the ardour of speculators than has been provided by readiness to sell as much as was wanted at a price no higher than 23½d. If this silver bubble bursts it will cause some damage. One of the factors which has prevented the readiness of the Indian Government to sell from having its full subduing effect on the Bombay market has been the sluggishness with which the Bombay mint effects deliveries of the metal. These are at present limited to about 1,000,000 ounces a day, and thus recent sales have spread deliveries until the turn of the year. That factor, incidentally, provided another argument for exacting stricter assurances as to the credit standing of the buyers in Bombay than are normally demanded in cash business. Meanwhile the Bombay price of silver has fluctuated between the equivalents of 27d. and 31d. this week, and the operators who have been able to take deliveries at around 24d. have already made good profits. But the basis of the activity is precarious in the extreme.

William E. Borah

### EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

RADIO ADDRESS BY HON. JOHN A. MATTHEWS, LL. D.

Mr. VREELAND. Mr. Speaker, I believe every Member of the House and Senate has regretted the loss of the fine statesman, WILLIAM E. BORAH, of Idaho; and, while we did not agree entirely with all of his ideals, nevertheless he represented the great American spirit of independent thinking which has made this country the finest on earth. Not only have we, the Members of Congress, regretted the loss of our colleague, but also very many of the citizens in our communities. Under leave to extend my remarks in the RECORD, I include the following radio address of Hon. John A. Matthews, LL. D., on January 21, 1940, over Station WHBI:

Good evening, ladies and gentlemen of the radio audience. There were many happenings recorded in the news of the past week which challenge our attention, some of them, like the developments in the agitation about a Government loan to Finland, worthy of our careful attention and comment. Today, however, I feel that I should dedicate this half hour of radio time in large part to the inexpressibly sad news of the death of the greatest champion the cause of peace in America has ever had, our noblest, sincerest, and most courageous crusader in the fight to keep America out of war and to keep war out of America. I refer, with saddened heart, to United States Senator WILLIAM E. BORAH, of Idaho.

Eulogy, my fellow Americans, is but an ephemeral tribute to the dead. The mere recital of the great accomplishments of the Lion of Idaho during his more than 33 years of statesmanlike service in the Senate of our Nation would be but the transitory tribute of words.

That he was the constantly watchful sentinel of human liberty as guaranteed by the Bill of Rights in our Constitution, that he was the implacable foe of the cant and hypocrisy of those whom he referred to on the floor of the Senate only a week ago last Thursday as "treacherous foes who seek shelter under the laws and institutions which assure free speech, free press, and personal liberty, and then make use of this shelter to destroy the government which protects them," not only his record during his lifetime of service in the Senate discloses but the very name BORAH connotes these facts.

In the difficult legislative tasks involving the foreign policy of our country, Senator BORAH typified the spirit and spoke the language of George Washington. "No entangling alliances" was his watchword in the performance of these duties.

And though his opponents in the forum and in the press called him an isolationist, like his prototype, the Father of Our Country, he was an isolationist only in the sense, as he put it, that he would save our beloved country and the sons of American mothers from "participation in such wars as have gone on in Europe from

the Spanish Succession to the present time—"chapters," as he called these wars, "in the bloody volume of European politics."

Isolationist indeed he was in the sense that George Washington was an isolationist. But like the Father of His Country he was no pacifist.

Only last October his great patriotic American soul poured itself forth to his colleagues in the Senate during the debate on the repeal of the arms embargo in these courageous words: "I am not a pacifist. If Germany, or Great Britain, or any nation attacks this Nation, kills its people, destroys its property, and makes war, I am ready again, terrible as I know the consequences will be, to vote for a declaration of war."

And so I might go on, my fellow Americans, with this mere transitory tribute of words, this mere recital of accomplishments, this splendid record of statesmanship of one who, like Webster and Calhoun, now belongs to the ages.

But it is my desire, and I know it is yours, that our tribute to our fallen leader in our crusade to keep America out of war and to keep war out of America shall transcend the bounds of ephemeral eulogy, and that it shall take on the character of a perpetual memorial to Senator BORAH, a memorial not fashioned by our hands but a perpetual memorial built in our hearts, a memorial of love and devotion to his ideals which we will bequeath to our children and to our children's children until posterity merges with eternity. That memorial, my fellow Americans, shall have on it this simple but sacred inscription, "Keep faith with BORAH."

Senator BORAH is dead, but his spirit lives. Yea, more; he has bequeathed that spirit to America in a document from which I want to read to you this afternoon; a document that may well be called his last will and testament; a document which, like the last will and testament of George Washington—affectionately called Washington's Farewell Address—makes every American heir to the spirit of Americanism which Senator BORAH preached and practiced, and in the cause of which he died. I refer, my fellow Americans, to the speech delivered by Senator BORAH in the Senate of the United States on October 2 last against the lifting of the arms embargo.

That speech, that last will and testament, of Senator BORAH, to us, his fellow countrymen, will be this generation's bulwark, and the bulwark of generations yet unborn, against the entangling alliances of European power politics, if we but "keep faith with BORAH."

And now, before I read from that sacred last will and testament, let me picture for you, as future historians will picture for our children, the setting in which that document was given to posterity.

When Senator BORAH arose to make that momentous, epoch-making speech, there wasn't a single Senator absent from his seat, except those who, the CONGRESSIONAL RECORD for October 2, 1939, relates, were not in Washington on account of illness or other recorded reason. Eighty-five Senators, including Senator BORAH and the Vice President, were on the floor of the Senate, and the Senate galleries were crowded when the Lion of Idaho began to speak.

Listen to these words of BORAH as he launched with inexorable logic into the inquiry, Who want repeal of the embargo on arms:

"We are asked to repeal the law, and why? We are asked to repeal a law which forever prohibits the furnishing of these instrumentalities of human destruction and furnishing them for gain, and why? We are asked to again identify ourselves with the destructive power of the nations of Europe, and why?"

"We are here in extraordinary session and in apparent haste asking for repeal."

"Did the cry for repeal originate with, or does it spring from, the people of this country? Did the voice of labor initiate the agitation for repeal? Did the call for the rejection of this policy come from the farm, from the pulpit, from the pew, from the homes of America, from the families of America? Did it come from the young men now on the verge of active life, looking where they can find a profession or a calling? Did they call for it? Whence came the call? It came from the war hounds of Europe. It was originated in the situation in Europe."

My fellow Americans, let us never forget those words of Senator BORAH. They were never successfully challenged during the entire debate on the arms embargo. They portray in a sincerity and integrity and courage of utterance the incontrovertible fact that the cry for repeal came not from the people of America but, as BORAH put it, from the war hounds of Europe.

And what have the war hounds of Europe who cried for repeal and got it; what have they done since repeal?

They have violated American neutrality at every turn. They have stopped and searched our ships on the high seas and taken them into their own ports, confiscating whatever suited their use. They have blockaded our commerce with neutral nations and demanded that our cargoes to neutrals be inspected in our own ports by their consular agents.

In answer to American protests against these violations of international law they have equivalently declared that England will determine what is and what is not international law as best suits her own convenience or connivance.

In a word, my fellow Americans, the war hounds of Europe who cried for repeal of the arms embargo did it not merely to obtain arms, munitions, and implements of warfare, but, in order to put America in an unneutral position and thereby foment enmity between America and others of the belligerents, in the hope that these belligerents would act in reprisal and thereby force us into the war.

And here we may well ask ourselves the question, paraphrasing as to tense the words of Senator BORAH in his legislative last will

and testament of October 2 last, "Wherein has peace been advanced by repealing the embargo? Wherein has humanity been augmented and strengthened by our selling arms to warring nations? Can anyone say or believe that peace could ever be advanced by a neutral nation furnishing arms, munitions, and the instrumentalities of war? Could anyone contend that any principle of humanity or justice would warrant a nation in doing so?"

My fellow Americans, those words of Senator BORAH are already a prophecy come true. The cause of peace was taken from the clean hands of neutral America, when the embargo was repealed, and put into the bloodstained paws of the war hounds of Europe, there to remain—unless an awakened America demands that we "keep faith with BORAH"—until the appetites of these power politics war hounds have been satiated, or until they and their enemies have been suffocated in the surfeit of their civilization-destroying strife.

Indeed the recent news in our own press is eloquent of the fact that peace has been banished from the vocabulary of the war hounds of Europe.

To the recent plea of the great white shepherd of Christendom, His Holiness, Pope Pius XII, that belligerents should subordinate their particular interests to general interests to bring about peace, England, who in the World War, by the secret Treaty of London, of April 26, 1914, more than two years before the United States was propagandized into that war, England, who secretly agreed in that London Treaty with France and Russia to support Italy, insofar as Italy "does not permit the representatives of the Holy See to take diplomatic action with regard to the conclusion of peace," England, I say, responded to the recent appeal of the Holy Father by inquiring whether the Pope implied any criticism of publicly expressed Anglo-French war aims, in suggesting that belligerents should subordinate their particular interests to general interests to bring about peace.

Now passing for the moment the hypocrisy of England's publicly expressed "war aims" which call for war to a finish against Hitler, aggression in Poland, and Hitlerism, while they refrain from even declaring war against brutal Russian aggression in both Poland and Finland, and against communism, passing this hypocrisy for the moment, may I quote for you what the Vatican, according to the New York Times of January 17, last Wednesday, is reported to have replied to this British question about implied criticism of publicly expressed Anglo-French war aims:

"The Pope was reported to have replied that the Vatican does not take into account the political interests of any country except in the case of Russia, whose policy the Pontiff reportedly described as contrary to the interests of the church and religion. So far as belligerents are concerned the Pope was said to have told Mr. Osborne (the British Minister to the Vatican) the Vatican continues to maintain normal relations with Germany despite some points of difference."

My fellow Americans, if that report in the New York Times of the British-Vatican conference is accurate, it rather looks as though everybody except unneutral America is alive to the truth of what Senator BORAH said on October 2, last, that this war—England's war aims—bunk to the contrary notwithstanding—is "nothing more than another chapter in the bloody volume of European power politics."

And now, my fellow Americans, may I read for you some more of our heritage under Senator BORAH's legislative last will and testament of October 2 last, and while I read it, won't you repeat with me our pledge, "Keep faith with BORAH":

"For myself, and for myself only, I want to declare I look upon the present war in Europe as nothing more than another chapter in the bloody volume of European power politics, the balance of power which John Bright, the great commoner of England, once declared was the curse of any possible European peace. Yes; it is power politics."

"It is the old question of the balance of power. Was it anything more than the balance of power when the democracies and the dictators of Europe in 'blessed accord' stood over the dismembered body of Czechoslovakia, the only real republic in that portion of the world? Was the cruel and brutal and revolting creed of nazi-ism any different at Munich than it was at Warsaw? Was civilization and democracy any less under challenge when Czechoslovakia fell at the hands of the combined assassins than when Poland was threatened? Was it anything but power politics when Germany and Great Britain excluded Russia from the Munich conference, but both sought industriously to secure her aid, notwithstanding her creed, in the controversy relative to Poland? When the men at Munich reached the consummation of their awful deed, did they not turn over to the unlimited control and tender mercies thousands of a race whose presence excites the mortal wrath and vengeance of the one to whose control they assigned them? Was that humanity? Was that civilization? Was it saving democracy? Was it saving civilization? No; it was dividing territory. It was power politics. It was imperialism."

"If our boys go to Europe, they will not go to Europe to wipe out nazi-ism; they will go to Europe to adjust territory—to pass upon the question of power; and when war is over that will happen which happened after the World War—the representatives of the European nations will sit down together and, forgetting every principle for which the American boys died, they will pass solely upon the question of power politics."

"Whatever may be the philosophy of nazi-ism, however abhorrent we may write it down, it is not the issue in the conflict, and

its cure is not war. It is not an issue which will be settled by this conflict; and I venture to say that the treaty of peace, if it ever comes, will have nothing in it about the ending of nazi-ism or its teachings, or of communism or its teachings, any more than had the agreement at Munich. It will devote itself, as did the Versailles Treaty, to the unquenchable imperialistic appetites of those who sit around the table; and if the American boys take part, they will sacrifice their health and their lives that this or that nation may gratify its desires for territory and for power."

Mothers and fathers of American sons, may I interrupt the reading of this remarkable document to remind you that the words I have just read were uttered only three and a half months ago by one now silent in death, whose funeral will be held on Monday in the very Senate Chamber where he uttered these memorable words, one whom all of America mourns as an honest, fearless, upright champion of the American spirit, one whose knowledge of foreign affairs was second to none in our Nation, one who would not have said those words if he did not know and believe them to be true.

Do you wonder then that I call this great speech of Senator BORAH his last will and testament to the American people? Do you wonder that I plead with you to enshrine his words as a permanent memorial in your hearts and that you write alongside of them the inscription, "Keep faith with BORAH"?

And now, my fellow Americans, may I quote a final passage from that last will and testament of Senator BORAH, a passage which ought to be an eternal warning in the light of all that I have previously quoted, against any and all propaganda that might cause you moral indignation at anything which may happen in this war of power politics, to spoil your intelligence.

Listen, my countrymen, to these solemn and awful words of warning that fell from the lips of Senator BORAH only 3½ months ago: "A few days ago I read the following description of a scene of battle after these instrumentalities (of warfare) had done their work. I quote: 'Chunks of human flesh were quivering on the branches of the trees. \* \* \* A half dozen houses were burning. \* \* \* Mules and horses were pawing in their own entrails. \* \* \* The whitewashed church was bespattered with blood and brains. \* \* \* Men were running about howling with insanity, their eyes protruding from their sockets. \* \* \* One woman was sitting against a wall trying to push her bleeding intestines back into her abdomen. \* \* \* A man lay nearby digging his teeth and his fingers into the ground. \* \* \* A child sat on a doorstep whimpering holding up the bleeding stumps of its arms to a dead woman whose face was missing.' Looking upon a scene such as this," concluded Senator BORAH, "who would undertake to discriminate, to distinguish between the manufacturer of the instruments which could produce such a scene, the purchaser, paper title or no paper titles, and legal technicalities? Let us stay out of this war. It is not our war."

My fellow Americans, I cannot carry on further this afternoon. That awful warning of the horrors of war in the last will and testament of America's greatest apostle of peace shocked me when I first read it, and the more I read it and repeat it the more I beg Almighty God to hear the prayers of the fathers and mothers of American sons that peace, peace now, may come to the warring world.

But may I not plead with you, my radio audience, every single one of you, that you join me in a firm determination to "keep faith with BORAH," BORAH the statesman, BORAH the peacemaker, BORAH the lover of mankind, BORAH, of whom I may say as did Rufus Choate on the death of Daniel Webster, "Nothing shall hide his recorded wisdom, his great example, his assured immortality."

"Nothing can cover his fame but heaven;  
No pyramids set off his memories  
But the eternal substance of his greatness  
To which I leave him."

May a just and merciful God grant eternal rest to the soul of America's elder statesman as we stand in spirit this evening at his bier and pledge ourselves to "keep faith with BORAH."

## National Automobile Dealers' Association

### EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

RADIO ADDRESS BY HON. WRIGHT PATMAN, OF TEXAS

Mr. PATMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by me before the National Automobile

Dealers' Association at the Mayflower Hotel, Washington, D. C., January 24, 1940, over NBC hook-up:

Mr. Chairman, members of the National Automobile Dealers' Association, and ladies and gentlemen of the radio audience, I appreciate the fact that your association and the National Broadcasting Co. have made it possible for me to address you and the other 41,000 automobile dealers throughout the United States, and all automobile owners and prospective automobile owners, on a matter that is very close to my life's work.

I desire to pay my compliments to your very able and popular president, Mr. Stanley H. Horner. He is very influential in Washington, and has a high personal standing in the Capital City as well as nationally. Through his tireless efforts he has made the public, the automobile dealers, and the governmental agencies more conscious of the worthy objectives of the National Automobile Dealers' Association.

I also desire to congratulate you on securing for your legislative-contact executive a good Texan, who is very able and efficient in the capacity in which he is employed. I refer to my friend and your friend Mr. Dyke Cullum. In the investigation of the automobile industry the Federal Trade Commission had the good fortune to receive his services. He is a man with 20 years' experience as a country automobile dealer, city dealer, and owner of a finance company. He is one of a family of six brothers, whose identity with the automobile industry dates back to 1910. Mr. Cullum has devoted a considerable part of his own time in the past 10 years toward the correction of manufacturer-dealer relations, and when the Federal Trade Commission's investigation was started he extended his services gratis.

My subject is Independence of Automobile Owners and Dealers versus Monopoly and Control by the Automobile Manufacturers.

The automobile business is one of the largest and most important businesses in the United States. Briefly, let me tell you a few things about this big business. In the United States there are 26,000,000 motor-vehicle owners or an average of 1 motor vehicle for every 4 people. This compares with an average of 1 motor vehicle to every 142 people in the rest of the world. We have 6,380,000 workers employed directly and indirectly in highway transportation in these United States.

Sixty-six percent of the world automobile production is in the United States and Canada.

There are 43,000,000 motor vehicles in the entire world, and 68 percent of these are in the United States.

There is paid each year to the States and the Federal Government more than one and a half billion dollars in gasoline taxes, registration fees, and other special taxes and fees.

The motorist pays one out of every eight tax dollars.

Sixty-two percent of the passenger-car mileage is used on business.

#### FEDERAL TRADE COMMISSION REPORT ON MOTOR-VEHICLES INDUSTRY

The Federal Trade Commission here in Washington, D. C., has recently finished a congressional inquiry and filed its report with Congress on the motor-vehicles industry. This unbiased report contains astounding and shocking conclusions by this great Commission. I do not contend that the unfair and inequitable practices disclosed by the Federal Trade Commission which are perpetrated upon the automobile dealers, employees, and the public by the manufacturers are the only problems before Congress today. However, the motor-vehicles industry is the largest single manufacturing industry in the entire world. It affects more bread earners, hence more families, than any industry except agriculture; also, it is highly important because it is almost completely controlled by only three gigantic corporations. The Federal Trade Commission reported that a high degree of concentration prevails in the motor-vehicles industry, and that in 1938 there were only 11 companies producing passenger cars regularly and 3 of them had no less than 89 percent of the total unit sales of passenger cars.

From the information that I have gathered, I am convinced that if General Motors, the largest of these three, were to stop their competitors from using their patents and their parts, their competing manufacturers could not possibly make the cars they are making and delivering today—not even the Ford Motor Co. Although a business is important, and we are glad to continue to applaud the success of the automobile industry in our country, we are not willing to sit idly by and see a few people absolutely control and dominate this great American industry against the public interest.

Let me quote a few charges made by the Federal Trade Commission against the motor-car industry.

#### MANUFACTURERS CONTROL DEALERS

1. Said the Commission: "Manufacturers exercise an unusually detailed supervision over the activities of their dealers. The basis of this supervision is to be found in the manufacturer-dealer contracts required by all manufacturers of their dealers. The compulsory force effectuating the manufacturer's supervision is fear. Fear on the part of the dealer that his dealer agreement and therewith his business may be canceled by the manufacturer for non-compliance."

The present automobile dealer's contract allows the manufacturer to cancel the same without cause; therefore the dealer's security is not equal to the plantation sharecropper's contract. They can be kicked out only once a year. Our Government compels you to pay social-security taxes to give your million employees better security, and it is not unreasonable to ask this same Government to give you, the 41,000 motor-vehicle dealers in the Nation, fair and reasonable security.

To my knowledge there exists no other type of business which operates under the one-sided contractual arrangements that the manufacturers have with their dealers. They exercise dominance over them. The manufacturer creates a situation with the dealer, which permits him to regulate the dealer's method of doing business, tells him what to buy from the manufacturer and what to pay for it, but dodges the responsibility of equal risk.

As between the manufacturer and the additional taxes and different kinds of taxes, the dealer is in very much the same position as the man, back in days when such triangular relationships existed, who had two wives. At night before he retired the younger one would comb his wonderful head of hair and pull out the gray ones because she wanted him to look young like herself. The older wife was seeing him get gray with a great deal of pleasure, because, being older, she was often mistaken for his mother, so she would comb his hair in the morning, and while leaving the gray ones, she would pull out a few of the black ones each time. Finally he found himself to be entirely bald. The moral is: If you yield to all, you will soon have nothing to yield, and the 41,000 automobile dealers of this Nation are in that position.

#### DEALERS FEAR MANUFACTURERS

The Commission further said, "General Motors, Chrysler, and Ford make 90 percent of all cars. Manufacturers are in a strong bargaining position and their individual dealers are in a relatively weak position."

2. Permit me to quote to you an excerpt from the Commission's report, which shows conclusively that automobile manufacturers use their dealers as "fronts" to influence legislation. The excerpt from the report is as follows:

"It appears that the Automobile Manufacturers Association, through its legislative department, has at times been overenthusiastic in its efforts to defeat certain State legislation. A case is cited where the chairman and secretary of that department urged the veto of a measure which had been passed by both branches of the State legislature. In other cases the association conducted its activities through member manufacturers, who were requested to ask their dealers to present certain views to their State legislators. This practice of working through dealers does not appear commendable, as it leaves the impression that the dealers may have been coerced, through 'fear' of manufacturer reprisals, into taking a stand otherwise contrary to their best interests."

The Commission found the manufacturers are aware of their forcing policies. Listen to this statement made by Mr. Alfred P. Sloan, chairman of General Motors Corporation, to his fellow officers:

"I know instances where General Motors dealers have just before the close of the season been forced to take quantities of cars they couldn't possibly sell except at a loss. This loss has been sufficient in some cases to absorb their profits for the entire year."

Frankly, gentlemen, I never realized until just recently that such a practice of dictatorship by a manufacturer over the business of its dealers was allowed in this country.

#### FORCED TO BUY UNWANTED PARTS

3. The inquiry by the Federal Trade Commission developed that the dealers were not only compelled to take new cars that they could not sell, which oftentimes forced them into bankruptcy, but the "Big Three" manufacturers also used coercion on the dealers to induce them to purchase unwanted parts, accessories, tools, and equipment. The manufacturer requires the dealer to sell the manufacturers' parts, claiming that they are the only genuine parts, when the dealer can buy these same parts direct from the parts manufacturer, made at the same time by the same workmen with the same kind of material, for much less than what the dealer is charged.

For instance, a spark-plug company is a subsidiary of a manufacturer. It sells its products to a division of the manufacturer. This division of the manufacturer requires its dealers to buy that same spark plug at one-third more than they could buy it from the spark-plug company direct. This is not only harmful to the dealers, it is harmful to the public, which is caused by the factory control of its dealers. Many other similar illustrations could be given.

#### SELL USED CARS AS NEW ONES

4. The Commission further found that manufacturers' representatives drive new cars as high as 4,000 miles and then run them back through the assembly line and sell them for new cars.

#### AUTOMOBILE HEATERS FOR MIAMI

5. The Federal Trade Commission also found that manufacturers have been guilty of installing heaters on cars shipped to Florida and south Texas, where heaters were not required or wanted, thus requiring the dealers to pay for something they did not need and could not use.

In recent years while manufacturers' profits have been rising, the profits of dealers have been falling. The losses to dealers through pressure for volume has caused many dealers to fail. The excessive mortality rate among automobile dealers is of vital concern to the public, because these liquidations directly affect all members of the communities in which they occur. The extent to which these dealers were forced out of business, due to high-pressure selling tactics over which they had no control, is certainly a matter of public interest, particularly since thousands of the dealers' employees were thrown out of work.

The startling fact is that there are twice as many ex-automobile dealers in the United States today as there are established dealers. Some of them doubtless were inefficient and were not entitled to

remain in business, but a large number of them were forced out by reason of the ruthless and unfair tactics of the manufacturers.

All automobile manufacturers have approximately \$1,300,000,000 invested. The dealers of the country—the 41,000—have about \$4,000,000,000 invested, or about three times as much. The manufacturers employ 306,000 employees, whereas the dealers employ more than 3½ times as many, or 1,148,000. Although the dealers employ 3½ times as many men as the factories, and although the dealers have 3 times as much invested as the factories, the factories made \$60 per car profit last year, while the dealers only averaged a profit of \$13 per car. Approximately the same ratio prevails for preceding years.

#### EXCLUSIVE CONTRACTS REQUIRED OF DEALERS

6. Because of the manufacturers' strong bargaining position, the leaders of the industry require their dealers to handle one line exclusively. This restricts competition by making it more difficult for the smaller manufacturers to obtain adequate dealer representation, for the reason that in many markets the smaller manufacturers are unable to establish exclusive dealership with sufficient volume to operate profitably.

Upon occasions the courts of the land have deplored the one-sided nature of these agreements. From the manufacturer's strong economic position, he is able to put in his agreement certain clauses he desires to protect his interests and to keep out certain clauses which should adequately protect the dealer's interests.

It is very much like the landlord's explanation to the old Negro to convince him that he was not entitled to anything for his year's work on the farm. The landlord told him that he had worked it all out and had a full accounting in his daybook, pulled out his daybook, opened it, and read the following to the old darkey:

"A naught is a naught,  
A figger is a figger,  
All for the white man,  
Nothing for the nigger."

The manufacturer's contract is almost as unfair with his dealers as the white landlord was with the old Negro. Since the time has passed when a white person can deal with a colored person in that manner, let us hope that the time will soon be in the past when a manufacturer can so unfairly deal with his dealers.

While the courts have been disturbed by a form of contract which places the comparatively helpless dealer at the mercy of the manufacturer, it has been impossible for the courts to make contracts for parties or protect them from the provisions of contracts, which they have made for themselves. It is one of the first duties of our Government to protect the weak against the strong, and I do not know of a case where this fundamental principle of government will apply with more justice and equality than in this particular case.

#### FREIGHT CHARGES PADDED

7. The purchasers of cars are forced to pay sometimes as much as \$100 extra for transportation charges when they buy their automobiles in excess of the true transportation charges. The Federal Trade Commission in its report states:

"With the pricing of automobiles, thus confused and obscured by manufacturers' charges for transportation, accessories, and extra equipment, the way has been opened for dealers to add still other 'pads' in the pricing of automobiles to retail customers."

In plain words, that means the manufacturers are deliberately misleading the public by advertising; also, encouraging dealers to join them in "padding" or "padding" the price to the consumer.

It is estimated that the manufacturers overcharge the public at least \$40,000,000 per annum on freight on automobiles. Here is an example of how this practice is growing. In 1936 transportation on a Buick automobile to a certain Florida town was \$72.30. By 1939 transportation on the same model Buick to the same town was \$170.49—both are recommended charges by the factory. The fact is, the car is shipped from Linden, N. J., by water at a cost not to exceed \$30. This allows the manufacturer a profit of more than \$140 on that car for transportation that was not paid by the manufacturer but charged to the dealer and paid by the purchaser of the car.

Why does the factory charge extra for a driveaway? The answer is to perpetrate a freight overcharge. Does not that answer the question as to why the manufacturers prepay the freight?

#### COMPLAINTS FILED BY DEPARTMENT OF JUSTICE

The Federal Trade Commission has filed the following complaints against the automobile manufacturers:

1. For false and misleading advertising of the f. o. b. or list price of cars at factory.
2. False and misleading advertising of the finance charges by manufacturers in collusion with major finance companies, in which the interest rate was represented as 6 percent, when actually it was 12 percent.
3. For coercion, requiring dealers to handle their parts and accessories exclusively.

The Department of Justice also filed criminal complaints against General Motors, Ford Motors, Chrysler Corporation, and their individual officers, for scheming and conniving with their respective affiliated finance companies for coercing dealers to finance exclusively through their pet company. Ford and Chrysler signed a stipulation and General Motors contested the case. The Attorney General convicted General Motors Corporation and its subsidiaries. The officials barely escaped by the skin of their teeth. I doubt that the Department of Justice is through.

In the interest of the American people, these practices that have been disclosed by the Federal Trade Commission should be stopped

and stopped immediately. The only way to stop them is to pass a law which will make such practices unlawful. Such a law should have a minimum of regulation and a maximum of cooperation between the manufacturer and the dealer. Since the Federal Trade Commission filed its report, I have prepared a bill that will, if enacted into law, correct these injustices, inequalities, and harmful acts.

The automobile business is sick. It has been sick for some time. So the dealers went to their Government, just like a sick man would go to his doctor. The Federal Trade Commission was the specialist that Congress called in to find out what was the matter with the patient. Congress gave the Commission \$50,000 and a year to diagnose the case. Last June the Commission made its report. The specialist had figured out the trouble with the patient. That report was over a thousand pages long.

The big trouble they discovered was the manufacturers wouldn't let dealers run their own businesses. And they forced the dealers to do things that hurt the dealers and hurt the public. And these things that hurt the dealers and hurt the public made more money for the manufacturers.

When I got the doctor's report I did just as you'd do. I wanted treatment for the patient to make him well. That treatment is in the bill I have proposed. The cure is really very simple. Let the dealers run their own businesses, or, if the manufacturers insist on controlling the dealers' businesses, make them share some of the responsibility.

When all the legal language of the bill is boiled down, it simply means that when a manufacturer takes on a dealer he must agree to let him stay in business at least 3 years if the dealer does his part, and the dealer has to agree to sell that company's cars for at least 3 years if the manufacturer does his part. Provision is made for releasing either party on 6 months' notice if the other doesn't carry out his promises.

That's all this bill requires, unless the manufacturer desires to supervise the way the dealer is going to run his business. He can do that if he wants to and if the dealer is willing to allow him to do so. If he is going to help the dealer run his business, then he must agree to buy the dealer's stock at fair prices if he decides to quit doing business with the dealer.

Now, is there anything unfair in that?

The bill goes on to prohibit false and deceiving advertising. It prevents tampering with speedometers on new cars to misrepresent the condition of the cars. It requires that each new car buyer must be given an itemized invoice so he can see what he is paying for.

This is all for the protection of the public and is certainly reasonable in my opinion.

In concluding this part of my address, let me request that you study the bill carefully and let your wishes be known to the president of your national association and to your Congressman and Senators, as they are here in Washington trying to abide by the wishes of a majority of their constituents, and there is no doubt that the opposition will cry to high heaven; therefore, you, the dealers and the automobile owners, make yourselves heard. We must crush monopoly or monopoly will crush us. You have an example of what monopolistic practices will do in the automobile manufacturing business today.

#### MR. JUSTICE FRANK MURPHY ON INDEPENDENT BUSINESS

Attorney General Frank Murphy, who was recently sworn in as a member of the United States Supreme Court, and one of the best and ablest men in this Nation, said this about the necessity of preserving independent business:

"Trusts and monopolies in America have been fostered and promoted in the past by the Federal Government to such an extent that they virtually have wiped out the small independent businessman. We must restore this independent businessman or we will be a nation of corporation peons in another decade."

"The day is already here when a boy graduating from college can seek a career only in some monopolistic enterprise if he has any hope whatever of achieving comparative success."

"We have come to the point of making jokes about the disappearance of the corner grocer."

I again ask you to study the bill, which I have discussed, carefully and communicate your views to the national president of your association and to your Representatives and Senators in Congress.

I thank you for the courtesy of your attention.

#### Tariff Act of 1930

#### EXTENSION OF REMARKS

OF

HON. KARL M. LECOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

LETTER BY HON. LLOYD THURSTON

Mr. LECOMPTE. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD by including therein

a letter in defense of the 1930 Tariff Act, written by Hon. Lloyd Thurston, who for 14 years represented the Fifth Congressional District of Iowa in the House of Representatives. The letter was printed in the Des Moines Register of January 25, 1940, with comment by the editor.

The letter is as follows:

[From the Des Moines (Iowa) Register of January 25, 1940]

A DEFENSE OF THE 1930 TARIFF ACT—FORMER CONGRESSMAN THURSTON  
POSES QUESTIONS ON TRADE PACTS

To the Editor:

President Roosevelt and Secretary Hull and lesser Democratic officials have repeatedly condemned the 1930 Tariff Act enacted into a law by the Republican Party. In so doing they have condemned themselves of cowardice or misrepresentation in not making an effort to repeal this law.

It is well known that the Democrats have had from two and one-half to three and one-half as many Members as the Republicans in the Congress for the past 6 years, an overwhelming majority in both the Senate and House. Why have they failed or refused to repeal the last law enacted to uphold the American protective system?

Evidently, they fear to again place the American farmer and laboring man on the level with the forced labor of the rest of the world. Forced labor works long hours, minimum wages, and makes severe competition.

#### SMOKE SCREEN

Instead, the Roosevelt-Hull group has conceived what they believe to be a clever alibi or smoke screen, rather than to permit the Congress or the people through public discussion to weigh the subject on facts instead of unsupported conclusions. Hull coming from a cotton section, where they have cheap labor, the Negro, has voted against every effort of the northern or western farmer to get protection against cheap foreign farm products. In these trades, dairy products, corn, wheat, cattle and hogs have been traded off in favor of cotton.

What would our officials have to trade, or reciprocate with, if we still had the 1913 Democratic free-trade law in effect?

#### RATIFICATION WANTED

By statute, the Senate is required to confirm the appointment of many insignificant officials and ratify treaties before they are effective. Why should not this body, rather than a few so-called trade experts, spat-wearing diplomats, have the authority to pass upon foreign trade relations that are highly important to our people?

LLOYD THURSTON, Osceola, Iowa.

EDITOR'S NOTE.—We regret that we cannot reproduce in type large enough to be easily readable the two tables Mr. Thurston enclosed. So reproduced they would take from one-third to one-half the page. We are doing our best below, however, to summarize them in such a way as fairly to illustrate Mr. Thurston's point.

Table 1 (source not mentioned) compares the rates of duty on 113 agricultural products provided for by the Republican tariff acts of 1930 and 1922 with those provided for by the Democratic act of 1913. Of these 113, the table shows 65 products were admitted duty-free under the 1913 act, 2 under the 1922 act, and none under the 1930 act.

For instance, cattle weighing less than 700 pounds were on the free list under the 1913 tariff, but were given a duty of 1½ cents a pound in 1922 and a duty of 2½ cents a pound in 1930.

Bacon and hams were on the free list of 1913, but got a duty of 2 cents in 1922 and of 3½ cents in 1930.

Lard was on the free list of 1913, but was given a duty of 1 cent in 1922 and of 3 cents in 1930.

Cheese in 1913 got a 20 percent ad valorem duty, but in 1922 was shifted to a specific rate of 5 cents a pound (not less, however, than 25 percent ad valorem) and to 7 cents a pound in 1930 (not less, however, than 35 percent ad valorem).

Corn was on the 1913 free list, got a 15-cent duty per bushel in 1922 and a 25-cent duty in 1930.

Wheat was "free" under the 1913 tariff, but was given "protection" of 30 cents in 1922 and of 42 cents in 1930.

Wool of different varieties (there are many) was changed from the free list to varying degrees of tariff protection, or from relatively low rates of protection to higher rates.

#### SECOND TABLE

Table 2 (from U. S. Department of Commerce figures, clipped from the CONGRESSIONAL RECORD) lists the amount of 34 agricultural products imported into the United States during the two 10-month periods ending October 1938 and October 1939. In every instance except one the amount imported during the 10 months of 1939 exceeded the amount imported during the 10 months of 1938. Representative items from this table follow:

Cattle: 330,655 head in 1938; 664,339 in 1939.  
Meat products (total): 123,732,000 pounds in 1938; 136,552,000 in 1939.

Cheese: 44,423,000 pounds in 1938; 49,249,000 in 1939.  
Eggs (in shell): 182,844 dozen in 1938; 267,326 in 1939.

Hides and skins (total): 131,895,000 pounds in 1938; 258,889,000 in 1939.

Wheat (all): 2,433,000 bushels in 1938; 9,310,000 in 1939.

Cotton (unmanufactured): 93,107,000 pounds in 1938; 84,433,000 in 1939.

LXXXVI—App—26

## Neutrality

### EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

Mr. BRYSON. Mr. Speaker, I ask unanimous consent to have inserted in the RECORD an editorial which appeared in the January 27 issue of the Greenville News.

This editorial furnishes the reader with a splendid analysis of the effectiveness of the present Neutrality Act in keeping America out of war. The facts of the case are presented briefly and concisely and the argument is convincingly stated.

[From the Greenville (S. C.) News of January 27, 1940]

#### THE ACT IS WORKING

A report of Lloyd's Shipping Gazette, London, shows that while 19 nations lost 268 vessels due to the war up to last week, the United States is the only important shipping country that has not suffered a sea loss.

Up to the time the report was issued 101 neutral ships totaling 299,547 tons had been sunk at sea through U-boat or mine action. These neutral losses amount to nearly a third of the total amount of shipping sunk—1,003,652 tons.

The fact that American ships have not suffered any losses during nearly 5 months of war at sea must be due to the effectiveness of the Neutrality Act. Germany no doubt is disposed to respect American shipping and refrain from subjecting it to U-boat action. But the merchant ship lanes adjacent to the belligerent countries are strewn with mines. If our ships were plying those waters they could hardly miss contact, at least occasionally, and suffer just as other neutrals have.

The Neutrality Act has its penalties, to be sure, but from the standpoint of ship losses due to war action it appears to be working admirably. It is thus having the effect of keeping "incidents" arising from hostilities to a minimum.

My support at the special session of Congress of neutrality legislation which the administration recommended was based on the belief that its enactment would do much to keep America out of European war. In this connection I quote my remarks from the Appendix of the RECORD, volume 85, page 234, as follows:

One of the strongest and most salient features of the cash-and-carry plan recommended by the President is that it forbids the use of American ships in trade with the belligerents. This is a much-needed safeguard against our involvement in war. We know that what did most to draw us into the last war was the sinking of American ships and the loss of American lives on the high seas. We must remove the danger of a recurrence of incidents which might again inflame public sentiment and lead us down the road to war. Keeping public sentiment strongly against our going to war is, after all, the thing which will do most to actually keep us out of war. The American people today are unanimously opposed to our entering war, and as long as this opposition to our participation in war is maintained, we shall remain at peace. This is a certainty.

Therefore, what is most important is that we at this session of Congress lay the foundation for a firm, clear-cut international policy which will keep us from again drifting into war as we did in 1917. By amending the present Neutrality Act and establishing the cash-and-carry plan we shall lay that foundation for a sane and practical policy which will best serve to keep America out of war.

## The National Defense

### EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

RADIO ADDRESS BY HON. MELVIN J. MAAS, OF MINNESOTA,  
JANUARY 25, 1940

Mr. VINSON of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the gentleman from Minnesota, Hon.

MELVIN J. MAAS, at a Town Hall Meeting of the Air, broadcast from New York City January 25, 1940:

It seems to me that there is only one fundamental question involved in this subject. That is, Shall the United States be prepared to defend itself, or shall it turn its back upon the advice of George Washington and invite disaster by abandoning the traditional American policy of maintaining adequate defense? It is inconceivable that any considerable number of Americans are willing to sacrifice the United States by permitting inadequate defenses. In fact, everyone professes to support an adequate national defense. Then the problem resolves itself into just what is adequate defense for the United States.

There is some criticism that we have no fixed foreign policy and therefore no proper fixed chart for a naval and military program. To some extent this is true. Under our form of government it is not possible to have a rigid, unyielding, permanent foreign policy. Because of this there can be no hard and fast, since A B C formula for a fixed and permanent military establishment. Both our foreign policy and the size of our Army and Navy are dependent upon constantly changing world conditions. Our Army and Navy exist to support national policy. The fundamental factor determining the size and character of our Military Establishment in the United States is the defense of the United States. All other missions for which our Army and Navy must be prepared are essentially a part of that one objective. The Monroe Doctrine was promulgated and maintained because it was and is vital to our actual defense. The protection of our commerce is not a matter of the Army and Navy protecting the profits of some big American corporations. It is the absolutely vital necessity of maintaining uninterrupted access to essential strategic raw materials. Without these basic commodities, which are not available in the United States in commercial quantities, such as tin, rubber, tungsten, chromium, and manganese, our entire industrial machine would be forced to shut down. Unfortunately, while in general the United States is the richest Nation in the world in developed resources, we are not completely self-sufficient. All of our wealth and resources are dependent for their continued value upon certain basic commodities.

If essential imports are cut off, we would soon have a major slow-down of all industry and transportation, followed by complete collapse and almost universal unemployment—a hundred times worse than any conceivable business depression.

So equally important with the defense of our actual shores is the protection of our trade routes. Therefore we must have a navy capable of carrying out national policy, which includes protecting our commerce. A defense system merely capable of resisting actual invasion of our shores is no defense at all, for under such conditions we could be effectively blockaded and starved, economically, into surrender. The two oceans are a protection to us only so long as we can properly protect them.

There is no danger of our launching upon overseas adventures of a military character so long as our Army and Navy are merely adequate for our defense, nor can we afford, as a Nation, to have any military establishment less than one capable of being adequate for our defense. An army or navy inadequate to successfully carry out their mission of defense are little better than no army or navy at all. The second best navies of history are at the bottom of the ocean.

Assuming that we all agree that we must have adequate defenses, we can examine the present defense program in the light of adequacy. If these proposals for the improvement of the Army and Navy do not exceed the minimum requirements necessary for an adequate defense system, then the answer must be that this program is needed and should be adopted.

In answer to any question as to whether these proposals may be excessive, let me say that in the light of world conditions and the problem of defending our neutrality the present program is a very modest one. It by no means meets all of the requirements to properly carry out our national policy. It provides, in fact, the bare essentials, without which we are in actual danger.

What constitutes an adequate defense depends upon the forces with which it must cope. Therefore our Army and Navy requirements change as the armies and navies of other nations change. If we are unprepared to resist any possible, or at least probable, aggressor, then we do not have adequate defenses.

Let us examine first the pending proposals for our first line of defense—the Navy.

After the World War the best naval and diplomatic minds in the world met in Washington in 1922 and agreed upon a naval formula that was designed for the protection of each participating nation, and so limited as to prevent any one of the nations from invading any other. It was popularly known as the 5-5-3. United States and Great Britain were to have equal naval tonnage and Japan three-fifths of the size agreed upon for our Navy.

This was considered fair and safe. Our coast line is so much larger than Japan's that the difference in size of navies made them both equal in home waters for defense. If this naval formula provides safety for us, then when that ratio is changed or upset, it changes that safety into danger.

Japan saw fit to terminate that treaty and to drastically exceed it. If we are to adhere to the policy of maintaining an adequate navy, we must not let ours fall below the safety ratio. The naval expansion program before Congress now does not even provide enough new ships to fully restore the 5-3 ratio as it is; and it falls far short of maintaining parity with Great Britain.

All evidence is that our Navy is far from being capable, even when expanded, of carrying on overseas aggression, nor is it capable

of joining with Great Britain to police the world. It will, in fact, just afford us protection against only a single major power, and then in only one ocean.

There need be no fear that we are building any huge navy to implement some new overseas foreign policy. We are proposing no such navy. We are expanding only because the other navies of the world are expanding. To do otherwise is criminal folly.

We cannot ignore the fact that aggression is on the march throughout the world. Why do nations go to war? Either to take something they need and do not possess or to protect that which they have. It is foolhardy to think that we are immune. We are the richest plum in the world. We have enormous resources; we are the world's greatest market; and the United States has room to support millions and millions of the population of the overcrowded countries. We are closer to European countries than many of their present colonies, so distance alone won't save us.

Certainly, major stress is being laid upon our naval program, and with very sound reason and good sense.

An adequate navy that can prevent an aggressor from reaching our shores will make the mobilization of a great army unnecessary. It is far less costly to maintain a war-strength navy than to maintain in peacetime a war-strength army. And the present program of national defense is based upon that plain, simple, common-sense plan.

The present program provides a very small increase in the standing Army and that largely in the Air Corps. It does wisely provide for modernizing the equipment of the Army, motorizing it, and better preparing for the full equipment and the supplies necessary to properly arm the initial protective force, and some preparation for the protective mobilization force. It is dangerous and only courting disaster to longer neglect to do this.

Let me close by reminding you "that it is far better to have it and not need it than to need it and not have it."

## Resolutions on Russia-Finland and Japan-China Wars

### EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

Mr. SCHIFFLER. Mr. Speaker, I have introduced into the Congress two resolutions, one of which, if adopted, makes a congressional finding of fact of the existence of a state of war in progress between China and Japan. The other makes a finding of fact by the Congress of a state of war existing between Russia and Finland.

It is hardly necessary for me to urge the immediate adoption of both of these resolutions. I believe it the solemn duty of this Congress to consider immediately and adopt at a very early date both of them.

For nearly 3 years an undeclared war has existed between Japan and China. In view of the general knowledge of the developments in that part of the world, I consider it superfluous to attempt to review all of the outstanding occurrences. Suffice it for me to state that it is the solemn duty of every real patriotic American citizen, notwithstanding the deep sympathies that may be felt for one or the other of the belligerents, to manifest his real love for our own United States of America, and that manifestation can take just form when every conceivable act is intelligently directed toward preventing our military involvement and participation.

Likewise, for more than a month in the Baltic area, another war quite fierce and devastating has been in progress. Much sympathy has also been manifested for those involved in that war.

A third major conflict rages in Europe which has more closely touched our shores. There is also a feeling and sympathy for the belligerents in this war.

It is to be deeply deplored that men yet find it necessary to destroy each other and the products of their labor. It is lamentable that civilization has not advanced sufficiently to settle disputes amicably and without human suffering and the destruction of the products of human labor, as well as God's Nature.

Every conceivable effort should be promptly and vigorously exerted to terminate each of these terrible conflicts, and our every agency should be made available and diligently em-

ployed in aid of the solutions of the problems and contentions of the warring nations. As a friend to all and hostile to none, it is our duty as a God-loving and civilized nation to put forth every effort possible to bring peace to the world. It is equally important that we exert every effort to prevent our country from being drawn into any of these agencies of death and destruction.

It is my judgment that such can be accomplished by the sensible and practicable application of the laws of our land, and by the strict obedience to international law. Impartially and without fear or favor, all belligerents must and should be treated alike.

It is also true that the conduct of the citizens of our own country must be strictly regulated in their dealings with those of other parts of the world, and every act restrained and prohibited that experience teaches may lead us into any of these conflicts.

The immediate application of our neutrality laws to each of these wars and to all belligerents, as well as to the citizens of our own Nation, is highly desirable and imperative for the accomplishment of this.

We should make every effort to detect and destroy perfidious propaganda; strive to help exercise absolute neutrality, and we will thereby preserve and promote peace and perpetuate our own democracy as a safe and strong survivor of the present world-wide chaos.

I urge the adoption of the resolutions which I have introduced as one of the means of accomplishing this.

#### Abe Lincoln in Illinois

#### EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

Mr. BOREN. Mr. Speaker, the majority of us have just seen the screen portrayal of that great American story, Abe Lincoln in Illinois. I am glad that an Oklahoma girl was one of the stars of that production. Mary Howard and each star and artist, everyone who participated in making the picture, have contributed to making America stronger, braver, and more noble. It may come to pass that the artists in this picture will be forgotten but their work will live after them.

The authors and directors of this portrayal have depicted Lincoln as real as life. Massey has so lived the part that the living Lincoln becomes an intimate to everyone who sees the play. This great picture is destined to stir the hearts and souls of all who love America.

This learned I from a shadow of a tree,  
That to and fro did sway against a wall,  
Our shadow selves, our influence may fall,  
Where we ourselves can never be.

So the influence of the American spirit in this patriotic drama will find its way into every heart and home in the Nation and will contribute to the eternal preservation of democracy.

The very simplicity of the play is an element of its greatness. Its truths were simply brought to us, reviving the American philosophy. The self-evident truths behind the thought and character of Lincoln are positive and persistent forces in American life. From them has grown our system of impartial law and impartial liberty.

Permit me also to commend Ruth Gordon for bringing out of history a new vista for our appraisal. Dudley Parker Staniford once asked the question, "What made our forefathers great men?" and then supplied his own answer—"The women."

Mr. Speaker, I feel very deeply that the Nation should, and will, appreciate the contribution to Americanism that comes to us on the screen with Abe Lincoln in Illinois.

I remember an account of an occasion when the poet Longfellow was driving near Newcastle, England, his carriage was halted, and he was surrounded by grimy miners.

His first thought was that he was about to be robbed. But one man asked, "Is this Mr. Longfellow?"

He answered, "Yes."

Then the other went on, "Well, some of us heard that you were to pass here about this time, and we got permission to come up out of the mine to see you. We just wanted to shake your hand and say, 'God bless the man that wrote the Psalm of Life.'"

The author of this historic story has the blessing of the citizenry of America.

I sincerely believe that this picture will do a great good and will inspire a million hearts to feel the full spirit of our prayer:

God bless America  
Land that I love  
Stand beside her  
And guide her  
Through the night  
With a light  
From above.

#### Lessons from Finland

#### EXTENSION OF REMARKS

OF

HON. ANDREW EDMISTON

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

ADDRESS BY HON. LOUIS JOHNSON, ASSISTANT SECRETARY OF WAR

Mr. EDMISTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Louis Johnson, Assistant Secretary of War, before the midwinter dinner of the New York State Bankers Association, Monday, January 15, 1940:

Bankers of the great Empire State, you, who are in the banking business, as well as we who are in the Government service, have a fiduciary relationship with our clients. Each of us in his respective sphere is entrusted with the responsibility of safeguarding the rights, the property, and even the lives of those who have entrusted us with their fate.

In exercising our responsibilities, the preponderant numbers in our ranks are guided principally by the interests of those we are expected to serve. Despite our best and our most honest efforts, however, we know that we often err. Some of our most promising investments sometimes go sour. That is natural. That is human.

Of all the investments, public or private, made either by our banks or by our Government, the one that was no mistake and the one that gives Americans today the most whole-hearted satisfaction is the loan to that gallant people, that outpost of modern civilization, the Republic of Finland.

As bankers you have learned many lessons from Finland. You have admired its honesty. You have appreciated its sense of obligation. You have been impressed with its promptness to meet its promises on the due date. In a world of chicanery and subterfuge, you have found it refreshing to deal with men who talk plainly, mean what they say, and stand behind their words.

Not only bankers but citizens of all walks of life in all freedom-loving countries today are learning lessons from Finland. Again, the world beholds the proof of the age-old axiom that a freeman is worth at least a dozen serfs. Again we see the divine spark in man successfully setting off the passionate flame of his love for liberty and driving him against the forces of bigotry and oppression. Totalitarian states may boast of their mechanized weapons and their automatized men, but, because they have neglected the human soul, they must ultimately perish.

Not since our own forefathers raised the torch of freedom in 1775 has the world noted a more inspiring battle. No smaller David ever slung a shot at a more mighty Goliath and no greater fate ever hung on the result of a struggle.

We in America at present are not molested by the immediate threat of hostile armies and navies. For the past few years, however, we have been bombarded with false propaganda on the merits of totalitarian efficiency and of Communist equality. In the democratic methods that apparently are succeeding today in Finland we should take heart. We see a free, self-ruled people in arms, fighting along democratic lines, neither wasting a man or a shot, nor

degrading a single human soul, yet holding its own day after day against appalling odds.

The Finns have given the world an example of national solidarity in a crisis that is worthy of emulation. There are times and occasions when even the most democratic of peoples must be willing to forget party lines and to think only in terms of national interests. Especially is this true in matters of foreign policy and of national defense.

In our country it is fair to say that at the present time we see relatively little partisanship in these fields. On domestic issues we have our honest differences. That is the way it should be in a healthy republic. It becomes increasingly clear, however, that when the President or his able and loyal Secretary of State asks for support of our foreign defense policy the response becomes almost unanimous; and that when in his role as Commander in Chief of the Army and Navy our President discusses national defense, politics usually takes a holiday. May that spirit of national solidarity guide us through the present international crisis and the uncertainties that lie ahead.

Let us consider the strictly military lessons that have come out of the fighting in Finland. First, the Finns have shown remarkable leadership. Their commanders, from field marshal to lieutenant, apparently know the business of fighting and are capable of winning the hearty cooperation of their subordinates. Enlisted men, from the highest noncommissioned grades down to the lowest privates, have been imbued with a sense of responsibility and of confidence in themselves, their weapons, and in the commands of their superiors.

How unlike their adversaries. There, politics and purges stymie the officers in command and blind submission dominates the men in the ranks.

In our own Army there is no place for politics. We never ask a soldier for his party affiliation nor an officer for his political views. They are sworn to defend the country. They are pledged to support the Constitution. They are expected to obey the Commander in Chief placed over them by the American people and they do so gracefully and efficiently.

In preparedness no factor is of greater importance than leadership. We have provided our Regular Army officers with excellent opportunities for study. Foreign observers have pronounced our military schools the last word in theoretical training. Our practical courses in the past, however, left much to be desired. To correct the defect, we are concentrating this year, with the aid and support of Congress, on field training in some of our Southern States, which should add considerably to the experience and the resultant capacity of those who participate. We have reorganized five Regular Army divisions and are putting them in the field. We are getting ready for corps concentrations in the spring. We are providing opportunities for the development of leadership and technique for command and staff duty. We are improving the National Guard. We are developing our Reserves.

Important as is leadership, the caliber of the man to be led is of almost equal consideration. In the Finnish campaign, we behold an example of the individual soldier at his best. Each man, it appears, has a rifle and knows how to use it. Each man, it seems, has good common sense and is resourceful when left to himself. Each man has taken care of his physique and developed a constitution to withstand the rigors of arduous campaign. Again, how unlike their adversaries who lay emphasis on the mass rather than the individual and who fail to appreciate the dignity and the value of the individual man in peace and in war. The qualities that go into the Finnish soldier are the virtues that make the Finnish citizen.

Is there not a great lesson in individual preparedness that we can learn from Finland? Are we developing our athletics along the right lines? Are we sure we are not confusing a love for the sports spectacle with participation in athletics? How many of our young men could withstand the rigors of cold in the forests and swamps night after night and come up day after day fresh for combat? Let us hope the example of the Finnish citizen, ready for arduous service upon call, will encourage our young men to keep physically fit at all times and prepared to live out of doors in all seasons.

So far as our Army is concerned it, too, must be prepared to fight in winter as well as in summer, in the Arctic as well as in the tropics. Our territory includes Alaska, as well as the Panama Canal Zone, and we must be prepared to battle on either. Besides, we are pledged to hemisphere defense, and that means we must be prepared to participate in the defense of America under all the variable conditions that this continent may present.

I have already referred to our training activities in the Southern States. It may interest you in New York, and especially those of you up-State, to learn that at Fort Niagara and at Fort Ontario we are providing winter training. We have recently authorized the purchase of a limited quantity of skis, sleeping bags, and air mattresses for troops in these posts. At Fort Snelling, Minnesota, and at Fort Brady, Michigan, and, of course, in Alaska our soldiers already have become familiar with the ski, the sled, and the snowshoe.

We must aim toward the development of an army that can perform under any type of warfare that this continent may demand. We realize that modern war calls for planes and tanks, but we are not unmindful of the fact that in some theaters the horse or the mule may serve to better advantage.

Nor are we forgetting the role of the rifle. The ski cavalry may have attracted the most attention, but the individual with the rifle is the backbone of the Finnish Army. The Finn knows how to shoot and how to shoot straight. He has been brought up on the theory that he may be called upon to defend his own home and that upon his rifle marksmanship the fate of his people may rest.

Out of the mass of dispatches coming from Finland the importance of the man with the gun is illustrated daily. The story of one sergeant who, single-handedly, shot down 41 to 45 Russians who attempted to cross an open field before the Finnish lines is a most striking illustration of the value of rifle marksmanship.

The rifle, in an emergency, remains for us, too, the backbone of our national defense. Why should not we, therefore, emphasize more strongly the manly sport of rifle shooting so that we may again become the nation of sharpshooters that we were in colonial days?

While the rifle is tremendously important, it cannot win alone. An army must be equipped in the air and on the ground with modern weapons to meet all threats against its security.

In the field of equipment, Finland presents another valuable lesson. The Russians boasted that they would blacken the sky with planes and the snow with tanks. Well, they did, but so far they have proved ineffective. They tried to win with quantity, but apparently are suffering set-backs because they neglected quality.

In our armament program we are sacrificing nothing for quality. Our soldiers are citizens. They count in the life of our country. Not one of them should be sacrificed needlessly. We must therefore furnish them with the best types of weapons devisible. I am happy to report that the Army, industry, and the Congress are working together toward the development and the production of the matériel needed, both in quality and in quantity.

Finnish equipment, in the main, has proved itself superior so far, but what the Finns most fear is that the munitions may be used up or worn out without adequate replacement. They are faced with possible shortages and are shopping in the world's markets. At this time, however, all nations are either at war or building up their own defenses and therefore are compelled to hold on to what they have; and shopping for munitions is, indeed, difficult. I have every hope that the Finns will get what they need, but how much better off they would have been if they had had an adequate reserve of munitions on hand to meet their requirements for months and months to come.

I offer this comment in no criticism of the Finns. Small nations cannot afford the outlay for reserves, and Finland already has surpassed the most optimistic hopes. There is, however, a very important lesson for us to learn. We can afford reserves. We should strive to have on hand the necessary equipment for a million men. We are trying to educate American industry to make munitions for which there are no peacetime demands; but even if it became fully trained, it would be months and months after M-day before it could get into the mass production that a major war demands. To provide for a munitions reserve should therefore be a wise, long-range national-defense policy.

There are many more lessons to be derived from the war in Finland. Let me close with this one. Nature has been kind to the Finns. It has provided them with terrain and climate that should have discouraged a prudent invader, yet they were attacked. They are repelling their enemy because they were ready with an army that was well equipped, well led, and well trained.

Nature has been kind to us, too. We also have obstacles that should discourage attack. We need have no fear at present, at least, of an invader who is guided by prudence and good judgment. We must guard ourselves, however, against those who occasionally go berserk. They may lose in the end, but while on their rampage they can do a lot of damage. Let us therefore complete the organization and the equipment of our M-day troops, our Regular Army, and our National Guard, and let us train them for any possible emergency.

Finally, let us hope that the war in Finland will prove another turning point in the march of man toward a better life, and that the forces of evil that are plaguing the world will be pushed into limbo.

## Federal Agencies Need Curbing

### EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

EDITORIAL FROM A PHILADELPHIA NEWSPAPER

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a Philadelphia paper:

#### FEDERAL AGENCIES NEED CURBING

The manner in which so many Federal administrative agencies have abused their quasi-judicial powers has long demanded the serious attention of Congress.

A bill to correct this growing evil, introduced by Representative WALTER, of Pennsylvania, and the late Senator Logan, of Kentucky, had hard sledding at the last regular session. Since then the prospect for its passage has become brighter.

The reason is not far to see. Members of both Houses are beginning to realize that Congress has gone entirely too far in delegating authority to independent bodies to take over functions of legislators and the courts without attaching necessary safeguards.

Should this trend go unchecked, there is grave danger of "a government of men instead of a government of laws." The "laws," in too many cases, are being made by boards and commissions that were never intended to possess such far-reaching powers.

Some of these agency-made "laws" affect the lives of more of our citizens than many a statute enacted by Congress. They regulate business and industry, employers' and employees' relations, offering of securities and financial investment, trade practices, prices, marketing, wages, and hours.

Yet in a vast number of cases there is virtually no appeal from these edicts and regulations. It is time something was done about it.

The House committee's investigation of the National Labor Relations Board has produced the prime example of an agency that acts as if it were a law unto itself.

Until the criticism got too hot, the Labor Board refused employers the right of petition, although Senator WAGNER, who ought to know, said the law permitted this right. Then the Board said employers might petition, but only according to strict limitations of its making.

It is to be noted that the Labor Board did not admit it had been in error. It simply decided to be a bit fairer to employers without committing itself to anything. If it had resolved, on the other hand, to stick to its original policy, nothing could have been done about it under existing laws.

An important provision of this proposed measure would require a uniform system for most Federal administrative agencies in making new rules and regulations. Due notice would have to be given, followed by public hearings.

Businessmen, constantly running afoul of boards and commissions because of overnight changes in the rules of which they are ignorant, would appreciate the proposed safeguard.

No commission could then suddenly spring a "joker" or alter the rules in the middle of the game. In the words of Chief Justice Hughes, it would have to conform to the concepts and principles of rudimentary fair play which govern our courts.

But the real teeth in the Walter-Logan bill are provided by the proposal to permit any interested person to appeal to the courts to decide whether a new rule or regulation accords with the statute and the Constitution. He might also appeal from any order or decision of a Federal agency.

That "any" is highly important, for on account of legal hairsplitting regarding differences between positive and negative edicts, many N. L. R. B. orders cannot be taken to court by employers.

Almost daily one or another agency in Washington threatens or actually invades the rights of some citizen. The impression a visitor carries away, after making the rounds of these agencies, is of a group of bureaucracies combining the functions of judges, jurors, investigators, prosecutors, and legislators.

At least one of these agencies, the Labor Board, is specifically exempted from the necessity of observing the ordinary rules of evidence at its hearings. There are others also that seem to consider it their province to make their own laws.

It is easy to criticize these agencies, which have multiplied in recent years as the Federal Government has so vastly extended its services. But the real responsibility rests with Congress.

It is Congress that has so largely delegated its authority to new executive bodies, endowing them with unprecedented powers and discretion, and the people must look to Congress to correct the abuses to which its extraordinary complacency has given rise.

The opposition from those agencies which have had a taste of virtually unrestricted power and want more of it will be backed up by all the forces of entrenched bureaucracy.

The remedy is not to sweep away these boards and commissions, even if that could be accomplished, for many are not only performing useful service, but are indispensable to the functioning of our modern stream-lined system of government.

What is needed is a stricter definition of their powers so that they shall cease to overstep individual rights and privileges. To effect this object the principle of the Walter-Logan bill should be enacted before Congress thinks of adjourning.

## The Enemies Within Our Gates

### EXTENSION OF REMARKS

OF

HON. CLARENCE J. McLEOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

ADDRESS BY HON. NOAH M. MASON, OF ILLINOIS

Mr. McLEOD. Mr. Speaker, last Thursday evening I spoke at the Olympia before the Detroit Committee for Law and

Order and had the pleasure of introducing my colleague the gentleman from Illinois, NOAH M. MASON—a member of the Dies committee. Under unanimous consent to revise and extend my remarks, I include Mr. MASON's Detroit address:

The totalitarian nations of Europe, personified in Hitler and Stalin, have plunged that continent into a war that threatens to black out not only all democracy in Europe, but all civilization as well. The American people are interested in the European mess; we have our deep-seated sympathies, but we have wisely decided that the European mess is not our particular kettle of fish, it is not our affair.

However, these same totalitarian governments of Europe have had their agents, their Fritz Kuhns, their Earl Browders, their Pelleys, and others going up and down this broad lands of ours sowing the totalitarian seed of discord, seed that have sprung up into crops of race hatred and religious hatred, crops that have no business on American soil. These agents of foreign governments have cultivated, fertilized, and watered these un-American crops with money that was sent here for that purpose direct from Moscow, if not from Berlin. That is our affair, that is our kettle of fish; too long we have ignored the situation, and have done nothing about it.

Nearly 2 years ago the so-called Dies committee was set up. It was authorized to investigate these subversive and un-American activities, to throw the spotlight of publicity upon them, and to point out to the American people these subversive activities that are being carried on in their midst, practically unnoticed.

In spite of obstacles deliberately placed in the way of the committee, in spite of ridicule heaped upon the committee by high Government officials, in spite of the fact that the committee was denied the help and cooperation of the Department of Justice that had been promised the committee, help in the shape of legal counsel and trained experienced investigators, the committee has done a fairly good job of uncovering and exposing these foreign agents and the various subversive groups that have been at work trying to undermine and destroy our Government. I propose to tell you about that work.

The average American, when told about the dangers of communism, invariably shrugs his shoulders and says, "It can't happen here." The leaders of the American Legion and leaders of the Catholic Church of America have been very much concerned over the rapid spread of communism in this country during recent years, but they have met with the inevitable shrug of the shoulders and the statement, "It can't happen here." That was my attitude, and that was my answer until a year ago, when the sworn testimony presented, and the written evidence filed with the Dies committee, changed my opinion on the situation confronting this Nation so far as communism is concerned, and I say now just as emphatically as I can, "It is happening here," and I propose to present evidence to substantiate that fact.

One of the chief witnesses before our committee made the statement, "Communism has made more progress in the United States during the last 5 years than it had made in the 50-year period previous to that time." When asked how he accounted for this rapid progress he gave four reasons. I offer them for your consideration.

"First," he said, "this so-called depression has lasted so long that it has brought about mass discontent, and mass discontent makes fertile soil for communistic crops." That statement is easily understood, it does not need explanation. Our job is to put men back to work at decent wages and do away with this mass discontent.

The second reason the witness gave for the rapid spread of communism was, "High Government officials, through speeches, radio addresses, and written statements have deliberately created or engendered class hatred in this country of ours, and class hatred makes an excellent seedbed for communistic seed."

If you will review the speeches made during the past year or two by Ickes, by Jackson, by Hopkins, mouthpieces of the President, and the name-calls that they have been spreading over this country of ours, such as economic royalists, princes of privilege, Tories, Bourbons, etc., deliberately creating class hatred; indicating a whole group or class of people, our industrialists, by the phrase "economic royalists," when it only applies to about 1 percent of the group—you will know what that witness meant when he said high Government officials have been creating class hatred in this land of ours. These same men decry race hatred and religious hatred, but they deliberately set about creating class hatred. Class hatred is a twin brother to race hatred and religious hatred, and there is no place in this land of ours for any of these hatreds. Where one is created it inevitably engenders the other. Our investigators all over this country report that there is a surge, or upswamp, not only of class hatred, but of religious hatred and race hatred in this country of ours, plenty of evidence of it. And so those who sow the wind must expect to reap the whirlwind.

The third reason that the witness advanced for this rapid spread of communism was, "High Government officials have not only sympathized with, but they have actually encouraged Communist leaders in their activities in this Nation of ours." When asked for evidence upon which he based that statement, he smiled, and said, "What about this man Bridges on the west coast? He is an alien, a guest, as it were, in this country of ours. He is a Communist and your committee has his Communist card in your files." He has preached the overthrow of this Government by force from

public platforms, and you have sworn statements to that effect; and preaching the overthrow of this Government by force under our present law by an alien is a deportable offense. He has been picked up twice to face deportation proceedings. The first time the proceedings were canceled by the Secretary of Labor, and the second time they were indefinitely postponed awaiting a decision of the Supreme Court in the so-called Strecher case. The Strecher case was not a parallel case. It was based upon past membership in the Communist Party, while the Bridges case was based upon present membership and also preaching the overthrow of this Government by force. The Federal judge before whom the Bridges case would ordinarily have been tried, had ordered aliens deported under similar conditions. Special Judge Dean Landis, of the Harvard Law School, was selected to try the case.

Because he could not go beyond the evidence presented to the court, much of which was of doubtful value, and also because a great deal of evidence was omitted by the prosecuting agents in presenting the case against Bridges, the judge under the law could do nothing else but render a decision clearing Bridges of the charges brought against him. Wouldn't you say that was not only sympathizing with but encouraging Communist leaders in their activities? If that is not enough, what about the former Governor of Michigan, who, when the sit-down strikes were started in Michigan, called out the State militia to protect the sit-downers in their illegal possession of property and to prevent American citizens, 75 percent of the workmen who wanted to work, from going in and pulling the sit-downers out by force? Wouldn't you say that that was sympathizing with and encouraging Communist leaders in their activities, particularly when the sit-down strike technique was first used in France by the Communist leaders there, and it worked so successfully there that the Communist leaders of the C. I. O. adopted it and used it in those strikes in Michigan?

The fourth reason that the witness advanced for the rapid spread of communism in this Nation of ours was, "Federal funds have been generously used to advance the cause of communism in the United States." This statement was backed up by 3 days of testimony from the W. P. A. officials of the Federal Theater Project of New York City, testimony which proved conclusively that the Workers Alliance of New York City, a Communist outfit, controlled, dominated, and directed the Federal theater project of New York City. They had been writing, preparing, and presenting communistic plays in the city of New York, presenting them on high-school platforms and public platforms, and copies of the same were filed with our committee. I will sketch one, because it is a sample. This one is called *The Revolt of the Beavers*. The word "beavers" is synonymous with "workers."

This is a synopsis of the play:

A little boy and girl about 9 years of age get tired of school, play hooky; go out into the woods and play around until they get tired, fall asleep, in their sleep they dream, and in their dream they are transported by the north wind to some imaginary country near the North Pole called Beaverland. When they get to Beaverland they discover the poor, down-trodden, hard-worked beavers, forced to work long hours at very little pay, poor food, bad working conditions, while the chief beaver lives in all the luxury possible and is supported in his control over the workers by his trained army. A beaver professor organizes a revolt, imports arms, overthrows the government by force, the workers take over, and then they have heaven on earth in Beaverland, with frequent references to the situation in Russia and to what has been going on in Russia during the last 15 or 20 years. Would you not say that is a Communist propaganda play? Yet that is the kind of stuff that has been produced by the Federal theater project of New York City at our expense.

Then there is the play called *The Class of '29*, built around eight or nine college graduates who went out in the world, could not find jobs—became radicals. Free love is preached all through the play. One of the girls suggests to one of the young men that they live together without the blessings of matrimony, because of the situation. The play makes fun of religion and of home life, and ridicules most of the things we have been taught to hold dear. That is what our money is being spent for, and I believe it is high time the American people woke up to that fact. I am very glad to say that as a result of our investigations and findings, the Federal theater projects are no more, and Federal funds are not being used for their support.

Documentary evidence, acceptable in any court of law, has been filed with our committee to prove that the slimy trail of communism has penetrated into four phases of American life and society:

- (1) The schools of our Nation.
- (2) The American labor unions.
- (3) The churches and pulpits of the Nation.
- (4) Various departments of our Federal Government.

Communists and Communist sympathizers occupy key positions in several departments of the Government. The Department of Labor is honeycombed with them, you will find them on the pay roll of the Labor Relations Board, you will find them as assistants in the wages and hours law set-up. The practice of providing berths in the Government departments for "reds" should be done away with.

The strategy of the Communist leaders as explained to our committee is what is commonly referred to in Communist ranks as "the Trojan horse method." The aim is to get Communist leaders planted on the inside of legitimate organizations, such as labor organizations, youth organizations, Y. M. C. A.'s, and then to begin

the process of boring from within. At present the program has been changed somewhat by the Communist leaders. They now organize and set up legal organizations that work within the law as a part of the Communist united front. Within these legal organizations, front organizations or transmission belts, as they are called, they set up a holding company, or illegal organization, that works in secret outside the law, in an underground manner. These front organizations always have desirable objectives that serve as window dressing to attract and win the support of decent people, but behind this attractive window dressing is the illegal organization that carries out the Communist line, unknown and unsuspected by most of the membership.

The American League for Peace and Democracy is perhaps the best and most widespread example of a united front organization, a transmission belt. It has about 4,000,000 members, most of whom are entirely innocent of its communistic origin, its communistic activities, and its communistic objectives. I want to discuss this organization because it is typical of all organizations that are part of the united front.

The American League for Peace and Democracy had its origin in Moscow in 1933. Stalin called a meeting of the executive committee of the International to discuss what should be done to head off the new menace to communism—fascism. Japan had just seized Manchuria. Hitler had come into power in Germany. Mussolini was rattling his sword in Italy, and looking around for conquests. Moscow foresaw a military show-down with fascism in the near future, so Stalin decided he would need allies in the coming conflict.

Out of the deliberations of that meeting in Moscow in 1933 came the decision to set up a popular-front government in France and a popular-front government in Spain. The United States was not ready for a popular-front government, so they decided to set up the American League Against War and Fascism, as the first step toward a popular-front government in the United States. Earl Browder, America's representative at the Moscow meeting, brought the orders back here and commissioned Dr. J. B. Matthews to set up and head the new organization.

There are four classes of members in the American League: Communists, who occupy the strategic places of power and do most of the work; fellow travelers, who believe and act as Communists, but who do not carry membership cards for strategic reasons; stooges, often called dupes or decoys; and innocents, who constitute the great bulk of its membership.

The present objectives of American Communists, as given to our committee by former leaders of the American Communist Party are:

First. Destroy the party in power, the Democratic Party, by driving a wedge between the left wing and the right wing of the party. We on Capitol Hill know that the wedge is nearly halfway through now, and that the purge program of the President actually played into the hands of the Communists, and gave great impetus to the wedge that the Communists are driving.

Second. Establish the Farmer-Labor Party as the party in power, because Communist leaders occupy the strategic places in that party and will use those places of power and influence, once that party is in the saddle, to destroy the capitalistic system, and to bankrupt the Nation.

Third. A receiver will then be required to take over the bankrupt and chaotic National Government, which receiver by the very nature of the case will be the highly organized, militant, small group known as the American Communist Party. Then, according to their leaders, "We will establish heaven on earth in America, as our brothers have established it in Russia."

All I can say is, God save us from that kind of heaven; I want none of it for mine. "Fantastic," you say, "It can't happen here." I say, "It is happening here."

I have been asked, "What should be done about the spread of communism in the United States and how can it be checked?" My answer is: "The best way to stop the spread of communism would be to transplant all Communist leaders, pink intellectuals, parlor advocates of communism to red Russia, and compel them to live there in the midst of communism for a period of 3 to 5 years. If this were done, I guarantee that 999 out of every 1,000 thus transplanted would be permanently cured of the disease." Of course there are other things that should be done to check the growth of this red menace, such as:

1. Put the unemployed back to work in private industry at decent wages and thus remove the mass discontent, the fertile soil in which communism thrives.
2. Stop spreading class prejudice and hatred, which makes such an excellent seedbed for Communist seed.
3. Bring about a better and more equitable distribution of the products of labor.
4. Cultivate encourage develop the one crop we need in America—Americanism, patriotism—or whatever you want to call it.

If we will put forth our every effort toward the production of a real crop of Americanism there will be no room for these foreignisms. Americanism or patriotism is so well defined and expressed in the little poem entitled, "The Best Land," by Edgar Guest, that I close with his words:

"If I knew a better land on this glorious world of ours,  
Where a man gets bigger money or is working shorter hours,  
If the Briton or the Frenchman had an easier life than mine,  
I'd pack my goods this minute and I'd sail across the brine,  
But I notice when an alien wants a land of hope and cheer,  
And a future for his children, he comes out and settles here."

"Here's the glorious land of freedom. Here's the milk and honey goal,  
For the peasant out of Russia, for the long subjected Pole.  
It is here the sons of Italy and the men of Austria turn  
For the comfort of their bodies and the money they can earn.  
And with all that men complain of, and all that goes amiss  
There's no happier, better nation on the world's broad face than this.

"So, I'm thinking, when I listen to the walls of discontent,  
And some foreign disbeliever spreads his evil sentiment,  
That the breed of hate and envy that is sowing sin and shame,  
In this glorious land of freedom should go back from whence it came.  
And I hold it is the duty, rich or poor, of every man,  
Who enjoys this country's bounty, to be all American."

### The Sugar Problem

#### EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

ADDRESS BY O. S. WARDEN AND MEMORANDUM BY FLOYD HAGIE

Mr. HILL. Mr. Speaker, for the information of Members of the House, I wish to include in these remarks a portion of the address of President O. S. Warden, of the National Reclamation Association, at the Eighth Annual Meeting, and a few facts presented by Mr. Floyd Hagie, the association's secretary-manager, both of which relate to the sugar problem.

In the United States we produce only a fraction of the sugar we consume. I believe the figure is something like 30 percent. With the threat of war staring us in the face and the recollection of sugar scarcity of the past war, we have additional reasons why we should encourage the production of raw sugar in the continental United States.

We are very proud of the return of sugar-beet raising to the Yakima Valley in Washington State. Several years ago this promising industry had to be abandoned because of blight resulting from white fly. A blight-resistant seed has now been developed, and the Utah-Idaho Sugar Co. was persuaded to build a factory in Toppenish, Wash.

According to the estimate of the Bureau of Reclamation, we would be warranted in increasing the 14,310 acres now in sugar beets to 25,000. We owe it to the farmers to permit them to raise sugar beets, which is one of the few crops from which a farmer can secure the return of his investment. From the standpoint of soil improvement, the earth we have in the past used for potatoes needs the rotation it could have in sugar beets. Labor is another prominent item, and I think we should decide in favor of American harvest labor as against native harvest labor in Cuba.

I could continue to point out reasons why we should permit an increase in domestic sugar production, but at this time wish to direct your attention to the following information which was supplied me by the National Reclamation Association:

EXTRACT FROM THE ADDRESS OF PRESIDENT WARDEN OF THE NATIONAL RECLAMATION ASSOCIATION

The production of sugar beets, and their conversion into sugar, has become a matter of importance to this association—primarily because sugar beets are the leading cash crop upon reclamation projects in 10 or 11 States of the West. The present sugar-quota law expires in 1940. Production has already been hindered in the United States. A new law will be considered by the next Congress. To say that this is a ticklish subject does not justify evasion. Sugar is not one of our surplus crops; therefore the farmers of the United States have a moral as well as an economic right to preference. The home farmer in a dozen or more of the 48 States, the Hawaiian Islands, Puerto Rico, and the Virgin Islands—all under the American flag—seeks a progressively increasing acreage opportunity, under quotas or otherwise, and protection from sugar imports enough to insure the home production. There are practical difficulties in the way. We may as well face them pleasantly if we can, but neverthe-

less, firmly. Home labor has an interest and is entitled to consideration. American capital—large amounts—has become entangled in the Cuban sugar business; and you can depend upon it, a mortgage will follow its dollar a long way within this "good neighbor" doctrine that we hear so much about these days. Nevertheless, you will perhaps agree with me that the administration at Washington and the Congress of the United States ought to be a "cordial neighbor" of the sugar-beet farmers at home. The Federal Irrigation Congress, in session at Sidney, Mont., a few weeks ago, resolved that Representatives and Senators from Western States be urged to make every effort to secure the liberalization of quotas in the 1940 Sugar Act, to the extent that sugar-beet quotas may be increased so that farmers on reclamation-project farms may be practically unrestricted in the acreage that they may plant.

I hesitate to predict how the Congress will adjust these sugar-production issues. There is need of study, a complete study, a consideration of what is fair to the individual grower who now enjoys a satisfying acreage, fair to the new regions that need the privilege of raising a surely profitable cash crop, fair to the sugar factories in the United States, fair to existing home refineries, fair to American labor now employed in the industry. Clearly, western Senators and Congressmen have a responsibility. Personally, I have enough faith in the Congress to believe that it will be unable to look the American farmer in the face and say that he cannot raise as much as he may wish of a nonsurplus cash crop to pay the Government what he owes upon his reclamation farm.

#### MEMORANDUM ON SUGAR AS "ESSENTIAL WAR COMMODITY"

The Army and Navy Munitions Board lists sugar as one of the two agricultural products in a list of 37 commodities it regards as "essential" to the national defense. By "essential" the Board explains it includes commodities for which no procurement problems in war are anticipated, "but whose status is such as to require constant surveillance because future developments may necessitate reclassification as strategic or critical."

Since Continental United States produces less than 30 percent of the domestic consumption of sugar, the country is dependent on offshore production for the bulk of its supply.

As Hawaii and the Philippines provide around 28 percent of the domestic consumption, any interruption of communications in the Pacific would have a serious effect on the supply.

Approximately 43 percent is supplied by Cuba and Puerto Rico. While the danger of interference with water transportation from these islands to the mainland is remote, the possibility is suggested that demands on shipping resources might seriously affect the supply.

During the World War years of 1917-18 the per capita consumption of sugar in the United States dropped 12 to 13 pounds. The Philippines in those years supplied less than 2 percent of the total. The Hawaiian supply dropped from 16 to 12 percent from 1917 to 1918. Cuba supplied more than 50 percent of the total in the war years, increasing its shipments somewhat over the pre-war years.

The consumption per capita in the United States has now increased from an average of 85 pounds in pre-World War years to an average of around 98 pounds.

Wheat is the only other agricultural food commodity listed by the Army and Navy Munitions Board as essential to the national defense.

#### COOLIDGE ON SUGAR-BEET PRODUCTION

In a statement postponing action on requests for reduction in the Cuban sugar tariff in 1924, President Calvin Coolidge incorporated the following comment which has application to the sugar situation today:

"There are economic features of broad national importance, having the greatest bearing upon the welfare of our farmers and our consumers of sugar which are worthy of careful consideration before any steps are taken to disturb present conditions. Our agricultural production today is badly ill-balanced. We produce great surpluses \* \* \* and at the same time import some other agricultural commodities of which sugar is by far the most important and in which at times there are world shortages in supplies.

"It is important that as a Nation we should be independent as far as we may of overseas imports of foods. Further, it is most important that our farmers, by diversification of their production, shall have an opportunity to adjust their crops as far as possible to our domestic rather than foreign markets, if we would attain higher degrees of stability in agriculture. I am informed by the Department of Agriculture that the land in our country which could be planted with sugar beets if protection of the industry is continued, is capable of producing quantities of sugar far in excess of our domestic requirements. While we cannot expect to arrive at complete direct or indirect displacement of our excessive wheat acreage by an increase in sugar-beet planting, yet insofar as this may be brought about it is undoubtedly in the interest of American agriculture and, therefore, of our people as a whole. Furthermore, such diversification with sugar beets has great technical values in agriculture for its gains to fertility and other advantages.

"I am also impressed with the fact that there is a general tendency for consolidation of control in price and distribution in many commodities upon which we are dependent for import. I do not say that such foreign combinations in restraint of trade exist in sugar at the present time but the whole tendency of the development of foreign sugar production is in the direction of larger holdings. In the long run there lies in this, therefore, certain dangers to the consumer which can only be safeguarded by an assurance of competitive domestic supplies. The interest of the consumer in the long run will be served only by the ample supply of the product."

*Growers, acreage, and employment in domestic sugar areas planters in Cuba and Philippines*  
[Producing United States supply]

Producing area	Number of growers <sup>1</sup>	Average acreage <sup>2</sup>	Percentage of United States supply <sup>3</sup>	Number of workers <sup>4</sup>	Total acreage
Beet.....	70,000	13	23	190,000	930,000
Cane (domestic):					
Louisiana.....	11,500	23	6	20,000	260,000
Florida.....	25	800	10	2,500	20,000
Puerto Rico.....	12,000	25	13	90,000	300,000
Hawaii.....	3,050	45	14	45,000	130,000
Cane (foreign):					
Cuba.....	20,000	(?)	29	(?)	(?)
Philippines <sup>5</sup> .....	23,500	23	14	(?)	650,000

<sup>1</sup> Department of Agriculture estimates for domestic areas; Cuban growers in proportion to exports to United States (approximately two-thirds).

<sup>2</sup> Average acreage per grower in beets or cane.

<sup>3</sup> Average of recent years.

<sup>4</sup> Includes farm and industrial workers in areas; and continental refinery workers processing off-shore shipments.

<sup>5</sup> Less than 1 percent.

<sup>6</sup> 50 plantations control production with 3,000 growers on share basis.

<sup>7</sup> Cuban growers approximate 30,000, most of them small, as American capital controls 68.1 percent of production. United States takes two-thirds of Cuban crop and that proportion is included as producers for United States market.

<sup>8</sup> One-third of Philippine industry is controlled by American capital.

**SUGAR-BEET PRODUCTION OCCUPIES AS MANY GROWERS AS ALL CANE-PRODUCING AREAS—FARM AND INDUSTRIAL EMPLOYMENT ALSO MUCH LARGER PROPORTIONALLY THAN IN TROPICAL AND SEMITROPICAL SECTIONS**

There are more than twice the number of individual beet growers as there are planters of sugarcane on the continent and in the insular possessions, fairly complete data from the Department of Agriculture indicate.

The number of beet growers approximates the total number of planters, domestic and foreign, in all of the cane areas, participating in the American supply.

Although the beet area provides only 23 percent of the United States supply, the number of field and factory workers in the industry exceeds by 25 percent the total employment, agriculture and industrial, in the cane industry on the continent and in the insular possessions. Cane areas, mainland, and insular, under the flag, provide better than 33 percent of the United States supply.

The number of growers or planters in the several areas supplying the United States consumption as shown by the attached tabulation are:

Mainland beet, 70,000.

Louisiana cane, 11,500.

Florida cane, 25.

Puerto Rico cane, 12,000.

Hawaii cane, 3,050.

Cuban cane, 30,000, of whom 20,000 produce for the United States market.

Philippine cane, 23,500.

Total domestic cane, 26,550.

Total in all cane areas, 70,075.

As two-thirds of the Cuban sugar is marketed in the United States, that proportion of the estimated number of planters is included in the calculations for purpose of comparison with number of beet growers. Credit is given Hawaii for 3,000 growers on a share basis.

Data on the attached tabulation is summarized thus:

Beet (continental): 70,000 growers on 930,000 acres, producing 23 percent of United States consumption; employs 190,000 persons in fields and factories (160,000 on farms, 30,000 in factories). Average area, 13 acres.

Cane (Louisiana): 11,500 growers on 260,000 acres, producing 6 percent of United States supply; employs 20,000 persons on plantations, in mills, and refineries. Average area to planter, 23 acres.
